PASADENA PUBLIC LIBRARY

NEW YEAR'S NUMBER

Built by John W. Bate
in the
Model Efficiency Plant

Mitchell
SIXES

\$1460 For 7-passenger Six—48 h. p.
127-inch Wheelbase.
\$1150 For Mitchell Junior—40 h. p.
120-inch Wheelbase Six.
Both Prices f. o. b. Racine.

New-Year Attractions

100% Over-Strength
24% Extra Luxury

8 Mitchell-Built Bodies
31 Extra Features

We have to offer you this year some new results of the famous Mitchell methods. Some new attractions which we pay for out of factory savings.

These are due, like all the Mitchell extras, to John W. Bate, the efficiency engineer.

European Durability

Mr. Bate fixed for all Mitchell parts a standard of 50 per cent over-strength. That standard has long been considered extreme. But it gave to the Mitchell unique endurance. It meant safety, long life, small repairs.

Seven Mitchells built under that standard have averaged over 175,000 miles each, or some 35 years of ordinary service.

But three years ago Mr. Bate spent an entire year in Europe. The leading engineers there—in England, France and Germany—were adopting higher standards. They were aiming at lifetime cars.

So Mr. Bate resolved to attain in the Mitchell 100 per cent over-strength. That is, each part twice as strong as need be.

He has now accomplished that. Now, for the first time, we announce double strength in every important part.

A Lifetime Car

But double strength for American roads means more than double strength for Europe.

To find what it meant Mr. Bate has worn out fifty cars in tests. He has devised machines for applying to parts the most radical of shop tests.

Now over 440 parts in the Mitchell are built of toughened steel. Important parts are given great oversize. Parts which get a major strain are built of Chrome-Vanadium.

The result is a car which ought to render a lifetime of good service.

One Example—Springs

One example is the Bate cantilever springs. In rough-road service, springs break frequently. But in 18 months, used in thousands of Mitchells, not one Bate cantilever spring has broken. Not one leaf of one.

That same high standard now exists in every Mitchell part.

New Luxuries

Now we occupy our new body plant. With the yards it covers 14 city blocks. Under Mr. Bate's efficiency methods it will save us hundreds of thousands of dollars.

Out of this new saving we have added 24 per cent to the cost of our finish, upholstery and trimming.

Our finish coats are now fixed by heat, in enormous ovens. This gives

a deep, rich finish and a lustre that lasts for years.

We have added 50 per cent to the cost of our leather. Also 50 per cent to the cost of our cushion springs.

No other maker could possibly offer such luxury at the Mitchell price.

31 Extra Features

This year we give you 31 extra features. That means attractions which other makers omit.

There is a power tire pump, a new-type control, an extra-cost carburetor, a ball-bearing steering gear. There's an engine primer at the driver's hand. There's a light in the tonneau, a locked compartment for valuables. The headlights are reversible. The Mitchell includes 31 such extras without extra price.

Due to This Model Plant

All this extra value is due to this modern efficiency plant. This whole factory, covering 45 acres, was built and equipped under John W. Bate. By efficiency methods it has cut our factory costs in two.

Nowhere else, we believe, could a car like the Mitchell be built at anywhere near our cost.

See what extra value this saving brings to you. See the extra strength, the extra luxury and the extra features. You are bound to want them. But you cannot get them at the Mitchell price in any but the Mitchell cars.

See your nearest Mitchell dealer. If you don't know him, ask us for his name.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.

Price \$1460, f.o.b. Racine.

Mitchell Junior—a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor— $\frac{1}{4}$ -inch smaller bore than larger Mitchell.

Price \$1150, f.o.b. Racine.

Also all styles of enclosed and convertible bodies. Also demountable tops.

THE CAKE, THE CAT AND THE SOLDIER

By Rose Kidd Beere

92370

DRAWN BY E. J. ROSENMEYER

"F-O-U-N-D-I FOUND DEFICIENT IN MILITARY DISCIPLINE: THAT'S WHAT THIS SPELLS FOR ME," SAID MORRISON, COLLAPSING INTO A CHAIR

UP the iron steps of D company quarters Cadet Morrison bounded on his way to his room in the Eighth Division, just as the plebe mail carrier put the letters and papers for him and his roommate on their respective tables.

A hasty glance showed him that the hoped-for thick envelope, with the angular writing and a Poughkeepsie postmark, was not there to-day; in its place there was a letter addressed in an equally familiar hand and stamped with a Western postmark. It read:

Dear Robert. We are sending to all those who could not be here a tiny box of golden-wedding cake, to be kept as a sacred souvenir of the great event. You are not to eat it. Bring it home at furlough time, when I will put it away safely for you.

Few boys have golden weddings in their families, or such dear old grandparents. Hundreds came to pay their respects and show their love. Grandmother looked like a Dresden shepherdess, in a dotted Swiss, made exactly like her wedding gown. Her one regret was your absence.

Grandfather was fine, and fairly beamed on his parishioners. He says to tell you that fifty years ago he had no rival, but now a young cadet divides grandmother's heart with him, yet he has no jealous pang.

Grandmother says to tell you that, if you sleep on the cake, you will dream of your future bride. Aunt Mary adds for you to be sure she is a lady with ready money; for a second lieutenant can't marry on his pay, and the girl must have the shekels to balance the position you can give her. Wise Aunt Mary!

Somehow their golden wedding made me feel very young. When the guests were coming in I could actually imagine that I was little Eleanor Barr again watching "company" arrive, as I used to in the big Barr house at Ralston.

Your loving mother.

As Cadet Morrison finished the letter, his glance fell on a copy of the adjutant's monthly report to parents, headed by an extract from the regulations for the United States Military Academy, as follows:

"163.—No cadet shall apply for, or receive, money or any other supplies from his parents or from any person whomsoever, without permission of the superintendent."

With the mail had been left a notice to the effect that Cadet Morrison should submit a request to receive a small package, now in care of the officer in charge.

Morrison smiled as he proceeded to fill in the required form, but as he signed his name his eyes fell on these words in the form: "The package was not sent for by me, and I do not know its contents."

"Now, here's a go," he said, turning to his roommate. "I suppose that's a false statement, isn't it, when I've just read my mother's letter and have every reason to believe that it is the golden-wedding cake, the sacred souvenir, which I am not to eat?"

Cameron laughed. "Don't equivocate; tell the truth, no matter how painful."

"Well, what am I to say? I can't set forth the truth in official language: 'Said package may contain golden-wedding cake, as the undersigned has received advices to the effect that a portion of same is en route and may be expected to rendezvous at the U. S. M. A. upon or near herein specified date, the same not to be eaten.'"

"If I hint at cake, I'll get orders to turn it in at the mess hall, which would make the sacred souvenir of my grandmother's happy past a subject for gibe and jest and jeer at the hands of those rude upper classmen."

"What's the matter with the brief, simple, concise phrase, 'A wedding souvenir,' as a designation?" suggested Cameron.

"Aha! Great intellect, old boy."

So the statement went in, for the approval of the commandant of cadets, as follows:

The package was not sent for by me. I know its contents, which are a wedding souvenir.

Robert B. Morrison,

Cadet Private, Co. D, 4th Class.

Later, as he hastily opened the small box in the presence of the officer in charge, showing the tissue wrapping and ribbon, he said in a lowered tone, hoping to escape the notice of the men following him in line, "A wedding souvenir, sir."

But as he passed on, blushing furiously, he was uncomfortably conscious of the smile on the O. C.'s face.

"What am I to do with this sacred souvenir, to get which I have made a guy of myself?" he thought. "I can't take it to the mess room till Saturday, and it will make trouble if

the tactical officer finds it in my room; and I'm not to eat it! O mother, grandmother, you little know the grief you may have caused your loving child."

Arrived at quarters, he opened the box. Within, tied with white baby ribbon, were two small squares of cake, light and dark, marked "Bride" and "Groom" respectively.

"It's dry—they needn't have cautioned me about eating it," he mused, as he poked at it curiously. "What funny things the women do think up! 'Dream of your future bride,' grandmother says—just imagine my dreaming of a bride—me, a poor plebe, launched on a four years' sentence!"

Then Morrison looked round the room sheepishly. His roommate was out. Breaking off a small bit of each piece of cake, he slipped the two pieces inside the cover of his pillow, which surmounted the neatly folded blankets at one end of his iron cot.

"Of course I know who she is, but we'll prove it. Poughkeepsie isn't so far up the river that a girl can't come down in a dream, especially when wedding cake is set for it."

These gentle musings were roughly dissipated by a warning preliminary bugle note, which echoed through the corridors. Delaying only to wrap up the cake and to thrust it behind his washbowl, Cadet Morrison leaped down the stairs barely in time to save himself a "late" in ranks, as his section marched off to the classroom.

Two hours later, on his return, he was met by an orderly with a message that "Capt. Barr desires Cadet Morrison to report at his desk at once."

"A small box was found on your stand at

inspection of quarters this morning, Mr. Morrison. What have you to say?" demanded the captain, and eyed him with cold disapproval.

"It contains cake, sir."

"Cake!" exclaimed the officer incredulously.

"Yes, sir; wedding cake."

"Whose?"

"My grandmother's; that is, her golden-wedding cake."

"Provisions in quarters—you know the penalty!"

"Yes, sir, but I had permission to receive it."

"But not to leave it on your stand."

Saluting, Morrison took his way to his room; fury was in his glance and insubordination in his heart. For Morrison stood in slippery places. He was running close to the limit on demerits, and was consequently bending every energy to avoid any lapses from the strict line of military discipline.

He was within three of the fatal number, — one hundred and eight,—and the first of December, Cadet Emancipation Day, was still forty-eight hours off. For a week his gun had glistened, his uniform had been immaculate, his response to calls prompt, his bath book signed, his shoes dusted, his laundry list accurately made up in the prescribed manner, his light out at taps; and for seven long days he had carefully refrained from swinging his arms excessively in marching to meals and from talking in the academic buildings. To retain that leeway of three demerits was much to ask of the fates and upper classmen, but with only two more days to go he had begun to feel fairly safe.

And now this awful thing had come upon him out of a clear sky, unsought, unexpected,

undeserved, a piece of grandmother's wedding cake, frustrating all his good intentions.

With loud lamentations he fell upon Cameron's neck and called him to witness that he would die hard, and that, if retired to civil life through the indifference of his maternal relatives to military regulations, he would cause them to grieve that he belonged to them.

To all of his unavailing protests Cameron hearkened patiently, and then said, "Don't get into a blue funk; this only adds two demerits, which brings you to the limit of one hundred and seven. Don't get any more, and you're O. K. To-night you fall downstairs with a loud clatter, and I'll bruise you up scientifically, to look the part. Then in the morning you can burst into the hospital for the remaining twenty-four hours, and you'll be safe."

"When December first dawns bright and fair, you'll start afresh, with six long months in which to roll up another one hundred and seven, profiting, my son, let us hope, from the experience of this unhappy past, especially as to golden weddings. Behold how care free am I; I, with a safe ten to go. It pays to be good!" And Cameron paraded. "There goes supper call."

Morrison threw the small box into his laundry bag, the usual receptacle of "boodle," or contraband, and joined the ranks below. Some twoscore cadets were pushing to the limit on demerits, and counting the hours, not by figures on a dial, but by heartbeats; but the anxious ones could not have been distinguished by any lack of appetite as the corps filed into the mess hall and settled to the work in hand.

An hour later Morrison, walking rapidly with his head down to meet the bitter wind that swept across the area, turned the angle of D company's barracks on his way to his room.

On each side the snow piled high where paths were cleared, but fresh drifts had been swirled up by the eddying gale, and a soft, thick blanket covered the track beaten down by marching feet at nightfall.

Near the steps of his barracks crouched a small, dark object that gave forth a piteous "miaow" as he stooped to examine it.

"A kitten!" he cried, picking it up. "Now, where did you ever stray from on a night like this? You must have come far, too." And he peered along the row of austere, gray buildings. "Maybe from the engine room."

He looked doubtfully across to where the chimney was faintly discernible, but the guard-house clock said seven-fifteen, and as "assembly" would sound in ten minutes, there was no time to take the little thing to shelter. So, slipping it under the cape of his overcoat, he swiftly passed the guard and went up to his room on the fourth floor.

The scared, wet kitten cowered and blinked as Morrison brought it forth to the delighted gaze of his roommate.

"Well, say! Where did you hive it?" asked Cameron.

"In the drifts—I couldn't leave it to freeze to death," replied the Samaritan.

"We'll get skinned if the fac finds it."

"But he will not; it can sleep under my blankets, and I'll take it over to the engine room in the morning. What can we feed it?"

Morrison looked vaguely at the meagre furnishings of the room. "Tooth paste, shaving soap, pomade, gun oil," he enumerated, "all appetizing, but not wholesome for a kitten."

"Bay rum is stimulating, and the thing seems badly chilled," suggested Cameron.

"This is a blue-ribboner. There are some chocolates in the clothes bag, but cats don't like sweets. O joy—I know! Beeson always has a tin of cream secreted somewhere, for the compounding of good things."

And Morrison darted across the hall.

Warming the cream on the radiator, the two stalwart youths in gray uniforms watched the hungry, drabbed kitten lap up its ration.

While they were thus demonstrating their fitness for future commissary assignments, the footsteps of the tactical officer in the lower hall, on his tour of inspection, smote their ears; but when he threw open the door a moment later he met only the proper, customary sight in barracks at that hour—two cadets rising from their studies at the book-strewn tables to come to "attention."

With a perfunctory glance round the room,

he was about to pass on, when a scratching sound emanated from the region of the clothes bag. To the motionless forms by the tables it came with the force and clearness of a mountain gun.

"The cat's found the cake," thought Morrison, as he grew more rigid and felt his heart almost ceasing to beat. The rustle of tissue paper continued inside the bag.

"Are you troubled with mice, Mr. Morrison?" inquired the "tac," with his gaze riveted on the laundry bag.

"No, sir."

As his eyes followed the officer's stare, Morrison swallowed hard, for peering from the slit in the laundry bag was the black head of the kitten. Its ears were defiantly erect at having found an egress from the depths into which it had been so unceremoniously swept, its beady eyes were angrily inquiring why it had been snatched from its feast, and the small pink tongue was still searching its lips for traces of cream. Apparently undaunted in the face of an overwhelming force, and undismayed at the implied authority of the officer's uniform, it appeared quite indifferent to the fact that it was bringing woe upon its benefactor.

When the officer had found his voice, he asked, "Who brought that cat here?"

"I did, sir," confessed the culprit, squaring his shoulders beyond the usual "brace" to meet the consequences of his admission.

The officer turned and marched down the hall with clanking sabre, leaving demoralization in Room 810.

"F-o-u-n-d! Found deficient in military discipline; that's what this spells for me," said Morrison, collapsing into a chair. "If the cake left me any skins, the cat has eaten them up."

Cameron looked at him with concern. "Yes, the cat is certainly out of the bag now! You should have let the blamed thing freeze! This is no asylum for feline indigents."

"Yes, I know," murmured Morrison weakly.

"I told you this afternoon to go down and break into hospital; that was your only show."

"But I hate a malingerer, and I thought I'd pull through," Morrison answered, as he lifted the kitten from its hiding place and stroked it tenderly. "You're a base little ingrate. A whole week's laundry to clothe you and your fill of cream, and yet you must go nosing about for dry cake, and cut short a noble career!"

"Well," he went on as he poured out some more cream, "we'll have another round on it, pussy, and toast the cause of all our woe. Gentlemen, we drink this standing: 'To grandmother's golden-wedding cake.'"

Taps sounded across the area and lights went out from the long rows of windows. Morrison got into bed, found a soft corner in his gray blankets for the purring kitten, and slept the sleep of youth and perfect health—a dreamless sleep quite uninfluenced by the fragments of wedding cake in his pillow slip.

The next morning, as the tactical officer made his early rounds, the occupants of 810 cast a swift glance about them, to make sure that all was regular. Morrison gave his pillow a farewell jerk to smooth out an imaginary wrinkle, and came to "attention" as the inspecting officer threw open the door with a thump and entered.

The superior's practiced eye swiftly took in the details of the room and noticed the perfect order. He turned to go, but paused abruptly as his glance swept the floor. Both cadets started, as their eyes followed him and saw the cause of his hesitation.

There, in plain view, lay three large crumbs, each fully the size of a grain of rice, just as they had fallen from the pillow slip when Morrison had given it the last righting. It was the cake that he had slept on, which, in the fierce rush of reveille, roll call and policing of quarters, he had forgotten.

The officer glared from the crumbs to the card on the mantel, which bore conspicuously the name of the room orderly for the week—"Morrison."

"What is that?" he demanded, pointing to the crumbs.

"Cake, sir."

Once more an officer marched away with clanking sabre from what had now become the abode of despair; and to the disconsolate youth in 810 every jangle echoed, "F-o-u-n-d! F-o-u-n-d!"

"Have some golden-wedding cake on me, Mr. Cameron," said the unfortunate victim, with a sickly grin. "Those falling crumbs sounded the death knell of my military career."

"But you can explain some of it off."

"No, I'll not leave an account of my grandmother's golden wedding in the demerit records of the Academy."

But when, speedily following his words, an orderly appeared with two slips of paper calling for explanation, Cadet Morrison thought better of it, and responded in this wise:

West Point, New York, November 30, 190-.
The Commandant of Cadets.

Sir: With reference to the report, "Cat in laundry bag at P. M. inspection of the tactical officer," I have the honor to state that the report is correct.

I found this cat just before "call to quarters" last evening. It was suffering greatly from the cold, and, as it was too late to take it to the boiler house or other suitable place, I took it to my room.

This explanation is submitted by order of the Commandant of Cadets.

Very respectfully,
Robert B. Morrison,
Cadet Private, Co. D, 4th Class.

The second explanation in the same form set forth: "With reference to the report, 'Cake crumbs on floor at A. M. inspection of quarters,' I have the honor to state that the report is correct. These crumbs fell from my pillowcase after I had swept the room. I had placed a piece of my grandmother's golden-wedding cake in my pillow to sleep on, as requested by her. Very respectfully,"—and so forth, and so forth.

As "release from quarters" was sounding in the afternoon, an orderly gave three knocks on the door of 810. "Is Cadet Morrison here? Report to commandant!"

"*Dulce et decorum est pro wedding cake mori*," observed Morrison, swiftly rubbing his shoes with a towel and wielding his clothes brush vigorously.

"Don't you do it!" Cameron urged with vehemence. "Hand out a verbal of the whole thing to the com. Perhaps he's fond of weddings, even though he never figured in any of his own."

"How easy to advise a plebe to grow confidential with the com! Did you ever try it? He eats 'em alive—bell buttons and buckles, tradition says. If I ever come forth from the august presence at all, it will be in a frame of mind that welcomes a chance to resign."

But as he entered the commandant's office his braced shoulders and upright bearing bespoke anything except hopelessness, although he glanced down sharply to make sure that his heartbeats were not disturbing the fit of his snug blouse.

"Mr. Morrison," said the commandant sternly, "with only two demerits to run on

officer absently, with a queer note in his voice. And when Morrison replied, "Yes, sir," the officer, still far away, said, "I knew her—Miss Barr."

The hush of the wintry afternoon enveloped them; the boy, with swift astonishment in his face, was wondering, waiting, aware of something unusual, dimly understanding; the man, forgetful of his surroundings, was lost in a vision of the past, as memories crowded in upon him of a summer night, the breath of June roses, and a girl with this boy's eyes and sunny hair, a girl whose parents objected to a second lieutenant's pay.

A ray of yellow light stole in, shimmered through the folds of a stand of silken colors against the wall and touched the gold on the man's coat. The commandant recalled himself

with a start. "Yes, yes! Well, now, about this affair of the cake, Mr. Barr, ah,—Mr. Morrison,—it is most unusual, most unusual. I suggest that you submit a request for a reconsideration, and I will indorse it, recommending that the reports be removed."

Cadet Morrison drew a long, deep breath. "But remember, there are eight more hours until the first. Be careful—no more cats or cake."

The boy reached the door.

"Oh, Mr.—ah—Morrison, is your mother well?"

"Yes, sir," said Morrison.

And he went out of the room, quite happy again. But the commandant sat with his chin in his hands, and gazed dreamily toward the crimsoning west.

RETURNING LOAVES

By Janet Wessels Howell

THE din and clatter of roller skates upon the concrete driveway awakened Marcia Paige from a restless sleep. The white curtains at her windows hung straight and motionless in the lifeless air of the June morning.

"Where in all the world is there a hotter place than central Illinois when it is hot?" she said to herself. "Oh! Those skates again!"

She pressed her hands against her throbbing temples.

Richard's voice, from the adjoining room, sounded suddenly, as deafening and nerve-racking as the skates.

"Hey—you kid! Get out of our drive! What d'you think this is? The Hippodrome?"

for a spool of white thread—number 80? No, it's for me, Dick. If you don't go, I will."

Richard went down the stairs, unappeased, but wishing to show perfect willingness to do anything for his older sister, since she treated him decently and as if he had some rights.

As Marcia was combing her long, dusky hair before her dressing table, her eyes fell upon the framed sampler made by another Marcia more than a hundred years before:

Marcia Lovell
Her Sampler
Age 7, 1802

"Cast your bread upon the waters."

Ever since Marcia could remember, the sampler had hung in her room. It had always meant to her the picture of a child painstakingly setting prim little stitches of colored thread upon a piece of hand-woven canvas. Today it was the Scriptural admonition that struck her most forcibly.

What had she been doing all these last two years—the years since their mother's death—except trying to cast bread upon the waters? She had kept the household running, and had saved the home for the children,—that in the face of the disapproval of the relatives,—and she had made it possible for Stanley to continue his college course. Yet somehow she had failed. Richard and Alicia were daily becoming more quarrelsome and more difficult to deal with. She had failed—that was all there was to it! Perhaps she should have let Uncle Richard and Aunt Mary take the two children home with them—but to that thought her heart gave a shuddering dissent. No, she *had* to keep them together and in the home that she and Stanley had known. Then perhaps she should not have insisted that Stanley finish his last two years. And yet—well, he would be graduated by a week from to-day, and then, whatever might happen, he would have his degree. She was glad that he had gone on.

Turn the question over as she would, she was sure that her general plan had been right. She had simply failed in her own part of it. Somehow her influence over the children had not been so strong as it should have been. She and Stanley had never quarreled and fought when they were at the age of Richard and Alicia.

The breakfast bell put an end to her reverie. Down in the dining room she could hear Alicia explaining to Posetta in her most provokingly dictatorial manner just how grapefruit should really be served, and Posetta was saying in her mellow but sulky voice, "Miss Mahsha done give me mah orders herse'f!"

When Richard returned with the thread, he showed entire ignorance of Alicia's existence; and Alicia ate her breakfast daintily, addressing all her remarks to Marcia in an obviously polite and regal manner.

By keeping Alicia busy for the greater part of the day at hemming ruffles and by sending Richard to the woods with an ample luncheon, Marcia managed to preserve peace in the household for the most of Saturday. And after a somewhat cooler night the Sabbath dawned.

Sunday at the Paiges' was a day for church-going and quiet reading or walking. Alicia in her attractive dress still retained the air of a queen who, although somewhat misunderstood, was comforted by the knowledge of her royalty. In the hammock under the oak trees she fed her soul from a small volume of Tennyson, while Richard sprawled on a rug on the lawn, too busy with a new book about insects to care how anyone acted or felt.

It was Posetta's day off. The house was empty and quiet. As Marcia sat in a small rocker on the veranda, enjoying the truce, a glimmer of something white through the half-closed shutter of the mail box caught her eye. Had not yesterday's mail been brought in? She rose and opened the box. There were two letters—one was for her from Stanley.

"Letter for you, Alicia!" she called, holding out the other. "The mail evidently wasn't brought in yesterday afternoon."

She tore Stanley's letter open as Alicia

DRAWN BY ADA C. WILLIAMSON

ALICIA HAD TIPTOED TO THE DOORWAY AND WAS WATCHING MARCIA'S SUDDEN RADIANT LOOK

until the first of the month, it seems incredible that you should indulge in edibles in your room, or attempt to keep pets there overnight, unless you courted detection and dismissal, which I am loath to believe is the case. It occurs to me there may be details that do not appear in your explanations. This box of cake from home, to receive which, it appears, you made proper application, why was it not taken direct to the mess hall? 'Provisions in quarters' is a flagrant violation, you well know."

As the commandant paused, Morrison tried to find his voice; he could not tell the story, but the officer's evident misapprehension must be corrected.

"The provisions weren't provisions, sir," he stammered; "that is, the cake wasn't provisions,—it wasn't real cake,—er,—that is to say, not cake to eat. This will explain, if you will read it, sir." And with a flushed face Morrison tendered his mother's letter.

As the commandant read, his stern features slowly relaxed to a smile. The boy, watching breathlessly, stilled his tumultuous heart as he gathered hope from the changing emotions depicted in the face bent over the letter. But as the end was reached, the commandant looked up at him with a startled glance, then back to a quick reading of the final sentence, and again turned his eyes in a long, piercing study of the boy's features.

The smile faded, and color came suddenly under the brown skin and bounded up to the roots of the iron-gray hair. The fingers, playing idly with a pencil, closed sharply; then the commandant looked through and past him, and Morrison saw the keen eyes melt and soften in a far-away gaze.

"This is from your mother?" asked the

The clatter of the skates ceased. Marcia opened her eyes and awoke to a realization that it was Saturday: at least there was no school to teach, although there was much sewing for Alicia that she had promised to finish. She looked at the little white clock on the dresser. Seven o'clock, and as hot and sticky a day as she ever remembered. Richard and Alicia were already stirring. Through her open doorway Marcia caught a glimpse of Alicia at her mirror, holding long lengths of the sheer pink and white material against her throat; Alicia evidently was anxious for her older sister to rise and begin work on the new dress.

"I think I really am getting better-looking—don't you?" she called to Richard, as she draped the organdie across her slender shoulders and turned to catch the effect in the glass.

"Getting a little more used to your looks—that's all!" Richard muttered in reply.

Alicia's chin went up with a snort of disdain, and the day was begun, as so many days of late had begun.

Marcia wearily dragged herself out of bed. "My brush is gone!" Richard exclaimed. "Al, you been using my brush again? What'd I tell you last time? Marsh, can't she leave my things alone?"

"Here's your old brush, stingy!" Alicia retorted. "I don't want it!"

Marcia pressed her fingers against her aching eyes. Obviously she must separate Richard and Alicia as soon as possible.

"Alicia, dear," she said, "will you go down and tell Posetta to be sure to get plenty of ice to-day? It's going to be terribly hot on Sunday; and then see if you can help a little with the breakfast table. Dick, would you mind taking your wheel and going round the corner

EXTRAVAGANCE is one of the words that remain loyal to their derivation. It means wandering beyond bounds, and is most often used, as I use it, with reference to the expenditure of money.

What are the bounds, and who sets them, within which individual citizens may spend money? In reference to that question it is interesting to notice that in many countries the experiment has been tried of regulating and limiting by law the objects and amounts of personal outlay. The motives were sometimes military; the rulers believed that overindulgence in luxuries weakened the bodily strength and sapped the courage of the people. That was the case with the Greeks, especially the Lacedaemonians, and also at different times with the Romans, the English and the French.

SUMPTUARY LAWS

It was the opinion that citizens would be less able to respond to the demands of the state for revenue if they were allowed to waste their substance in gratifying artificial desires. Sometimes again the motives were moral. Indulgence in excesses was thought not only to be a vice itself but to lead to other vices; and therefore the government was empowered to regulate and control the habits of the people. That was the Puritanic idea.

Those laws were called "sumptuary." They aimed at various specific things, all of which, however, were of the same general kind. They covered excessive expenditures for buildings, for funeral solemnities and for sepulchral monuments; they limited the number of guests at banquets and marriage feasts, and also the character and extent of the courses to be served; and they forbade the use of gold dishes at private entertainments.

The sumptuary laws also applied to the apparel and adornment of women; they regulated the use of gold and silver embroidery, jewelry, dresses of more than a single color, silks and fine linens, and even costly hairpins and children's dolls. Sometimes they forbade "fantastic and deforming fashions," such as the wearing of long, pointed shoes. Brides were not permitted to have excessive dowries.

UNPLEASANT, BUT NECESSARY

The men have not always escaped. Some of the laws above mentioned applied to them, although, as we read in Livy, it was the women only who broke into revolt on account of such restrictions.

Laws of that kind have now been generally abandoned, partly because the idea of individual liberty has broadened, partly because a sounder view of the proper functions of government has become prevalent. Yet, under the stress caused by the great war now raging,

OUR NATIONAL EXTRAVAGANCE

By the Hon. Judson Harmon
Attorney-General in the Cabinet of President Cleveland

some countries have already resorted to them again, and others are beginning to advocate them.

But although in our times, under normal conditions, the bounds beyond which expenditure becomes extravagant are no longer fixed by law, it does not follow that there are none. They are now established by the common judgment of mankind founded on long experience. They are not arbitrary like those prescribed by authority, but vary from time to time according to circumstances and general conditions. And disregard of them, although not punished as a public offense, is followed by the more certain penalties imposed by the natural law of cause and effect.

The directions that extravagance takes are still the same as those it has taken, because, in its essentials both of strength and weakness, human nature does not change. The commonest form of extravagance is spending more than you can afford for what are not really necessities. That is a very elastic term. It is said that what were luxuries in one age of the world become necessities in another; but it is easy to deceive yourself on that subject. You should remember that you do not really need a thing the lack of which causes you no worse suffering than that of ungratified desire or unsatisfied pride.

A THRIFTLESS NATION

SELF-DENIAL is a fundamental virtue, especially for all who have their own way to make in the world; happiness for the great majority of people depends on the whole-some restraint of desires rather than on their gratification, because, when unchecked, those desires are forever stretching out beyond present reach. It seems strange that, especially in our country, people shrink from saying "I can't afford it," when economy means safety and contentment, whereas false pride brings danger and unhappiness. Fear of being thought poor or stingy has brought misery, and often crime, into many a household.

The average wages, salaries and incomes are higher in this country than in any other, yet our savings banks do not make a creditable showing. Fourteen countries greatly outrank ours in the proportion of savings accounts to population. In thrift, as indicated by the savings banks, we stand at the bottom of the list of the principal nations.

Of every hundred of our citizens sixty-six leave at their death no estate at all. Only nine leave as much as \$5000. The average estate left by the other twenty-five is less than

\$1300. Ninety-seven out of every hundred lose their earning power at the age of sixty-five; and as most of them have saved nothing, they become dependent on relatives or on the public. It is estimated that there are one and one fourth millions of such destitute persons in this country, most of whom might have escaped that sad fate.

Let every young man who has to make his way unaided realize that to say "I have money in the bank" is a certificate of character and ability.

There is no doubt that, barring accident and disease, almost every family not dependent on mere unskilled day labor could lay up some provision for the future by cutting off waste and steadily practicing unselfish self-denial. There must be a choice between passing desire and lasting well-being. The day of small things must not be despised; all growth is from little seeds. Dimes are the germs of dollars. It is said that ten million people, spending \$1,000,000, attend the motion-picture shows every day. They sow the dollar seed, but not in their own gardens. The harvest is rich, but it is reaped by the proprietors and by the actors, whose reported gains are fabulous.

Of the families that, according to the most recent figures, had incomes ranging from \$1200 to \$1800 a year, almost one and one fourth millions have automobiles. There is a report of a single bank that holds twelve hundred mortgages given for the purchase of pleasure cars.

But are families of small means to have no pleasures? The answer is a proper definition of pleasure. A rational person can certainly get no real enjoyment from any outlay that leads to a hand-to-mouth existence; he has no safeguards against misfortunes that are sure to come sooner or later to everyone.

THE SATISFACTION OF SAVING

AMONG all material pleasures there is none so great as that which springs from a store laid by for future wants, especially for the needs of those for whose well-being you have become responsible. And when you have gathered that store by steadfastly refusing thriftless self-indulgence, you have a satisfaction that outweighs and outlasts all fleeting joys. I speak from my own experience, and I can call to witness the thousands of others who have traveled the same road.

But whether you can afford an expenditure, in the sense of having the money to spare, is not the only test of extravagance. There are

bounds that even the well-to-do and the wealthy may not pass with safety.

Those who have built up a competence or wealth, course upon course in solid fashion, are seldom to be charged with extravagance. It is those to whom riches have come by inheritance or by some sudden stroke of fortune that are too often guilty of it. They do most to verify the proverbs about the quick parting of fools and their money, and the return of the third generation, if not the second, to toil in shirt sleeves.

"ECONOMY THE SOURCE OF LIBERALITY"

STRICTLY speaking, all mere luxury is waste. But there may be and often is wanton wastefulness in luxury when a reasonable indulgence in it might be justifiable. That is certain to react most harmfully on soul, mind and body. It is not the accumulation, but the waste and misuse, of wealth that makes men decay.

The greatest luxury that life affords is helpfulness, and, as Gibbon says, speaking of the Romans, who were decaying from extravagance, "Economy is the source of liberality." Who does not regret the limit of his means in these days when in so many lands the innocent and the helpless are suffering and dying by hundreds of thousands? And how many Americans have lost by extravagant self-indulgence the power if not the will to help?

PERSONAL PREPAREDNESS

THE nation is now wrought up about "preparedness." Our ocean ramparts no longer suffice for our security against attacks. We must be ready to defend our homes and our liberty, because helplessness and wealth invite attack, and provocation can easily arise. But martial preparation on land and sea will not fully protect us if trouble should come. The sharp and sudden call for heavier contributions in money that the people of the warring nations have felt, the severe retrenching in family expenses that they have had to undergo, have been hard for them to bear. Those sacrifices would be harder for us than for any other people, because in America extravagance is more widespread and rampant than anywhere else in the world. It reaches down even to school children.

So if the government owes it to the people to be ready against the day of trouble, surely the people owe it to the government to be ready to meet the back fire of war if it should come to afflict the land. What is spent in military preparation will, we all hope, be wasted, except in so far as it secures us peace. Personal and household preparedness, which is the duty of every citizen, will not only cost nothing but will bring to thousands of homes lasting prosperity and contentment.

departed for the hammock with hers. Dear old "Stan"—working away at college in the heat of this awful June, and yet, in the midst of all the turmoil of finishing, taking time to write fat letters of encouragement to his sister.

"Dear Sis," the letter ran, "I am sending you an invitation to the graduation 'doin's,' for, even though I know you can't come to see my finish, I thought you might like to see the invitation."

There followed a humorous account of the festivities and the "grinding" of the last week before graduation.

Stanley was finishing with honor. More than that, he had finished the course in three and a half years—he would have finished in February if he had not missed a whole semester because of typhoid. He did not say that he was graduating at the head of his class—Stanley never talked about himself. She got her information about his success and his popularity from her superintendent of schools, who was a warm friend of Stanley's and in close touch with many of the professors at the university.

And he was graduating—and she would not be there to see him. A new sensation of self-pity swept over her. All these two long years she had worked to keep Stanley in college, and now she could not even have the joy of seeing him graduate! More bread cast upon the waters, returning bitter!

Alicia came slowly from the hammock, with her letter clasped to her breast and her eyes wide and starry.

"Marcia," she cried, "am I dreaming? Honest, did I do it? Pinch me."

One glance at the girl's rapt face, and Marcia reached for the letter, with all thought of her own bitterness gone.

"Why, Alicia—child!" she exclaimed, looking up from a hasty reading. "I didn't know you had even entered! Why, you dear, delicious angel! Dick, come and hear Alicia's good fortune! She entered the Evening News story contest and has taken first prize!"

Richard came forward eagerly; all differences were forgotten. "Honest, Al?" He could

never write even the simplest theme without hours of writhing and anguish of soul. "What you going to do with your ten dollars?"

"Why," said Alicia with sudden inspiration, "buy Stanley a graduation gift. Mayn't I, Marcia?"

"You surely may."

"With all of it?" asked Richard.

Alicia nodded gravely. Success always humbled her and made her generous. They spent the rest of the day in quiet rejoicing. During the evening meal Alicia looked up suddenly at Marcia.

"Did I dream it?" she half whispered.

"Good night!" ejaculated Richard. "I guess if I'd done it I'd know it! What are you going to get for Stan?"

But Alicia was dreamy and noncommittal. It was not until the following morning at school that Marcia's resentment at not being able to see her brother graduate returned.

Life seemed flat and flavorless, her pupils unbearably dull and the day hot and stifling. At breakfast Alicia had still been silent, and Richard, entirely practical himself and not understanding the temperamental heart of his sister, was by this time inclined to scoff at her a little. It was after the second class was over that a teacher from across the corridor put her head in at Marcia's door while the pupils were passing.

"Stan graduates this week, doesn't he? Going? Oh, that's a shame! Drat school-teaching, anyway! This is my last year of it."

Her slang, for Marcia had a very strict idea of what a teacher's language and deportment should be, her white shoes, her stylish white linen dress, her conspicuous diamond ring—her whole smart, flippant personality seemed to rush at Marcia in one maddening swirl. Her cheeks burned as she turned to her empty room.

It was her vacant period, —no class for forty-five minutes,—and she could have the time to think bitter, envious thoughts.

"Miss Paige, Mr. Selew wishes to see you.

This is your vacant period, isn't it?" The secretary to the principal had entered noiselessly and broken in upon Marcia's reverie.

Half startled, she rose. Why should the principal be sending for her? What had happened?

Never before had she been summoned, although sometimes, very infrequently, she had gone to his office to talk over school matters. Had something gone wrong with her work? Or perhaps it was about Richard? A hundred possibilities crossed her mind as she hurried down the stairs.

Mr. Selew was busy at the telephone when she reached his door, but he nodded and motioned to her to enter and be seated. Several minutes dragged themselves out while he very curtly gave some one at the other end of the line a concise statement of facts and a choice of two and only two lines of action. At last he hung up the receiver and turned to the girl.

"Now, about what I sent for you for. Stanley graduates this week Thursday, doesn't he? Thought so. Well, I don't usually urge my teachers to take a day off at this time of year, but I happen to be interested in Stanley, and I've an idea he'd enjoy the event more if some one of his own folks could be there."

As Marcia took in the full meaning of what he was saying, tears sprang into her eyes. Offering her—her, who had been so resentful—offering to let her go to Stanley's graduation!

Turning to his desk as he spoke, Mr. Selew continued brusquely: "Mrs. Selew is the one who thought of it. She had your work here before she was married, you know, and she rather thinks she'd like a day or two of teaching again, just for the change. Well, I guess the matter's settled. Tell Stanley we're thinking of him. By the way, I noticed in the paper that you have a literary genius in the family. You are certainly doing great work with Dick and Alicia. Get big returns on them some day."

He evidently considered the interview at an end. Marcia was speechless. She tried to

stammer out some sort of reply, but Mr. Selew had turned again to his work.

All the rest of the day Marcia wanted to reach out and touch the students in her classes. They seemed so dear somehow, so much hers. The whole world seemed sweeter and cleaner and fresher. Of course she could not go. She would have to make some sort of excuse. It was no short trip to the university, and there would have to be new gloves as well as railway fare.

No, she could not go, but the world was a good old place, after all. She would help Alicia select something nice for dear old Stan, and then they would all three write a long letter for him to have on his graduation day. The rest of the day passed swiftly.

When Marcia reached the rambling house that she had known as home all these years, Richard's beloved wheel was standing against the curb; Alicia was curled up in a big wicker chair by the open living-room window.

"A note for you on the dining-room table," she called, "and Posetta's out and won't be back till five!"

Marcia went into the dining room and picked up the envelope addressed to her in queer, crooked printing. Richard came in and crossed the room hurriedly to the kitchen, whistling carelessly. The back doorbell rang.

"Answer it, will you, Dick?" Marcia called, slitting the envelope of the strange-looking missive.

As she opened the page of cramped and crooked printing, out fell a railway ticket. She read:

Miss Marcia Paige. You are hereby commanded to go and see your brother graduate. This is the present we wish to send him.

(Signed) Alicia and Richard Paige.
P. S. I have rented my wheel for a month at two dollars and a half, and will get paid in advance to-night.

Alicia had tiptoed to the doorway and was watching Marcia's sudden radiant look of fearful joy, and Richard, stumbling in from the kitchen with two loaves of bread in his hands, and looking as if nothing in all the world had happened or were ever likely to happen, said

in his most offhand manner, "Mrs. Smith—returned two loaves—borrowed 'em yesterday. Never knew 'em to return anything before."

"But bread," said Marcia, laughing almost

hysterically as she reached out one arm to Richard and one to Alicia, and drew them close to her, "bread *always* comes back—even when you only lend crumbs!"

on Owens' part, a mistake pure and simple. He should have reduced the warranty bearings to agree with the date of his survey or *vice versa*, so as to have all bearings in his description show a uniform date."

"You say," Brill inquired calmly, "that Owens made a mistake?"

"There's no doubt of it."

"Prove it."

"I will prove it if Clem Owens can talk or his notes of survey can be found. Mr. Brill, why do you insist on taking so unfair an advantage of this man over a mere technicality? Why do you insist on making him trouble when his rights are so perfectly apparent?"

"I'll tell you why, Mr. Oakford. Because Stanley Orchard has made trouble for me for nineteen years. Now I can turn the tables."

Oakford turned away impatiently, seized the chain and began to fold it up.

"Maybe you have got him where you can crowd him to the wall," he said. "I don't know. That will be for a lawyer to say. But if you have and if you do it, it will be the most contemptible thing I ever ran across."

At that moment Orchard and Ralph came up.

it for a minute or two. "A little more than thirteen rods," he replied. "You'll have your fifteen rods left, front and rear; but he'll take your house and barn and garden, and the best part of your meadow. It's unbelievable! Come, let's go find Clem Owens."

So they harnessed the horses and started, all three of them, for Little Bethel. They said nothing to Mrs. Orchard concerning the object of their journey; it would be time enough to break the news to her when they returned, should their search prove unavailing.

Clem Owens lived, if a man in his condition can properly be said to live, with his married daughter at Little Bethel. He was seated on the veranda in an easy chair when Orchard and his companions drove up; and he looked wonderingly at them and a little startled as they came up the path to the house and shook hands with him.

"We want to find out something about the division line between Orchard and Brill," said Oakford. "You remember running it, don't you, about nineteen years ago?"

Owens dropped his head slowly, but said nothing.

"Can you give me the bearing of the line that you established between them?"

The paralytic made an effort to speak, but the sound of his voice died in his throat.

"Was the line at right angles to the warranty?"

The sick man turned his head slowly, but whether he intended the movement to be a negative reply to the question no one could say.

Oakford persisted. "Did the line you established have a present bearing of north forty east?"

Owens' chin sank to his breast in what appeared to be an affirmative reply. He made another vain effort to speak.

"Have you the old notes of survey—the notebook you used that day?"

The old man looked slowly to the right and left of him as if in distress. Then his lips trembled and his eyes filled with tears.

"I'm afraid it's hopeless," said Oakford.

"Maybe there's some one here who knows something about his books and papers."

At that moment Owens' daughter, Mrs. Dabney, came out on the veranda, and Oakford explained to her their errand.

"I don't believe he has those books," she said. "When we brought him here we brought every book and paper and scrap he had, but those books were not among them. I know, because I've looked. Adam Brill was here not three days ago and wanted the same thing, and I couldn't find it for him. Of course poor father couldn't help us any."

"Oh," said Oakford, "Mr. Brill has been here, has he?"

"Yes, I think it was day before yesterday."

"And he took nothing away with him?"

"Nothing."

"Would you mind letting us see Mr. Owens' notebooks and papers? Perhaps,

being a surveyor myself, I might be able to find something where others have failed."

They followed Mrs. Dabney into Owens' room and looked over his books and papers, which were carefully arranged in a small cabinet; but they found nothing. The oldest notebook there contained records only fifteen years back. Nor was there any draft or sketch or memorandum of any kind that had a bearing on the case.

"If there's anyone on earth," said Mrs. Dabney, as they came back to the veranda, "who might be able to give you any information about these things, it's Old Tompkins. He used to go with father a great deal, you know, on his surveys, and he was frequently at father's house. But I really don't believe he could tell you much about it if he ever knew; he's so far in his dotage."

It was evidently useless to pursue the inquiry further, as far as Owens was concerned.

"I guess the old books are gone, Clem," said Oakford. "I'm sorry to have troubled you, but we wanted them very much."

The old man pulled himself partly up in his chair and made a tremendous effort to speak; but it was unavailing, and he sank back, trembling and exhausted.

"Poor father!" exclaimed Mrs. Dabney, wiping the sudden perspiration from the sick man's face. "He wants so much to tell you. Never mind, father; you've done your best."

And he had, but his best was of no avail. His visitors shook hands with him, thanked his daughter for her trouble, went down the path to the roadside, entered their wagon and drove away. At the edge of the village they caught sight of Old Tompkins hobbling toward them along the side path. How the survey of the morning had escaped him no one was able to explain. It was the first time within the recollection of any of them that he had not been on hand when anything of the kind was being done. When they came abreast of him, they stopped and hailed him. Leaning with one hand on his cane and shading his eyes with the other, he scrutinized them closely. When he discovered who they were, he came up to the side of the wagon and rested his elbow on the nearest fore wheel.

"Why'n't you tell me you was goin' to hev

NORTH FORTY EAST

By Homer Greene
In Ten Chapters. Chapter Four

TWO weeks later John Oakford drove to Bethel with Ralph to make the survey of Orchard's land that the bank demanded before granting the mortgage. They began in the public road and ran up the line that separated Orchard's property from the lots that he had sold. Coming to the boundary of the Wilson warranty, they traced it northwesterly to the stake-and-stones corner set by Clem Owens in 1867 to mark the beginning of the division line between Orchard and Brill. There they found Adam Brill, with his son, Nathan, awaiting them.

The two boys greeted each other cordially, and Nathan congratulated Ralph on the prospect of his going to the university in the fall. Between the two fathers there was a cool "Good morning." And although Orchard was about to assume the most serious financial obligation of his life, there was a twinkle in his eye and a note of triumph in his voice, for he felt that he was even with Adam Brill in the matter of educating his son, and that Brill knew it and resented it.

From the elevated spot where he stood Oakford cast his eye down to the pond that Orchard had made, and to the narrow defile in the distance through which the brook dashed down to the meadows below. Even now, in July, after several weeks of severe drought, the volume of water thrown out by the spring was undiminished and the pond was full. The party on the hill could hear the tinkling rush of the brook.

"That's a fine spring you have there, Orchard," said the surveyor. "You could build a dam that would hold back three times as much water as you now have in the pond, and create a power that would be worth something to a mill on the flat."

"Yes," replied Orchard triumphantly. "I reckon I've got a good thing in that spring and brook. I bought it for a hundred dollars nineteen years ago. I calculate it's worth about three thousand now; eh, Adam?"

Brill did not reply; but a quick color flamed in his pallid cheeks and a scowl deepened the crease between his eyebrows. Stanley did not seem to notice the danger signals, for he went on volubly:

"The day Clem Owens ran this line, I said that I'd make a water power of that spring and brook, and I reckon it ain't any too late to do it yet."

Still Adam Brill made no response. At Oakford's direction Ralph had cut a new stake and had driven it into the centre of the pile of stones that marked the corner, to replace the old one that had rotted away. Then the surveyor set up his instrument over it, sighted back along the warranty line, turned the angle and pointed his telescope down the hill. He did not seem to be satisfied with his direction, and taking Orchard's deed from his pocket, read carefully the description contained in it. Then he again examined his instrument, checked up the needle by the vernier, and stood back apparently bewildered.

"I don't quite understand this," he said. "Mr. Brill, have you your partition deed with you?"

"I have," replied Brill. "I thought you'd get into trouble over this line. That's why I came here and brought my deed."

He handed the paper to Oakford, who looked it over carefully.

"It's very strange," said the surveyor, "but both these deeds describe a right-angle corner here, for the division line runs N 40 E, or parallel to the side lines. But if we run the line down at right angles to the warranty, we take the spring and pond away from Orchard. That's not right. Your line comes west of the spring, doesn't it, Mr. Brill? You don't claim that land, do you?"

"I claim," replied Brill with a satisfied smile, "whatever my deed calls for."

Oakford turned to Orchard. "What have you got to say about this?"

Orchard was apparently not perturbed; he did not see the seriousness of the situation. "There is where Clem Owens ran the line. I remember it very well, and so does Adam. We started down the hill on a right angle and found it would take the spring away from me. So we came back here to this corner and ran a

new line west of the spring, and I agreed to pay Adam a hundred dollars for the extra land."

"Which you never paid," interjected Brill.

"Sure I paid it. Didn't you take my mare, Nance, for the hundred dollars?"

"Yes, and she died on my hands in less than a fortnight."

"That wasn't my fault, Adam," said Orchard.

"It was; you knew she was diseased. But

"DON'T IT JES' LET ME GIVE YE THE PASSWORD AND YE CAN GET IN"

that doesn't matter now. This deed says the land is mine, and I propose to have it."

"Gentlemen," interrupted Oakford. "Please stop quarreling and let's get this thing straightened out. You say," turning to Orchard, "that Owens abandoned his right-angle line, and ran a permanent division line west of the spring, all the way through to the public road?"

"Exactly," replied Orchard. "Just where the line is to-day. Just where my stone wall is down on the flat."

"Is that right, Mr. Brill?" asked Oakford.

"I'm not interested in Orchard's stone walls. These deeds are the best evidence of what I bought and sold. Wherever these deeds say the line runs, there it runs, and that settles it."

"Maybe it does and maybe it doesn't," retorted Oakford. "It seems to me, Mr. Brill, that you are taking a very remarkable attitude in this matter. I propose to find out what the trouble is here. And if I find that Orchard's rights are being invaded, I shall protect him."

"And it strikes me," replied Brill tartly, "that your business is to run lines according to deeds. And if you can't do it, I'll find some one who can."

Oakford did not reply. Instead he turned to Orchard and asked:

"Did Owens leave any mark on this division line that you can identify to-day?"

"Yes. He cut a cross in the top of the rock on the ledge this side of the spring."

"Show it to me with the flag. Ralph, you go with him."

Father and son clambered down the steep hillside, and soon had the signal pole, plainly visible from the corner on the hill, standing on the cross in the rock. Oakford turned his telescope on it and read his needle, and then figured for a few moments quietly in his notebook. Then he closed the book sharply, put it into his pocket and turned to face Brill.

"I understand the situation now," he said. "I find that the bearing of this line, when Owens ran it, was north forty east, the same bearing that the side lines were years before at the date of the original survey on the warrant. He has made them all the same in his deed, without regard to the many years of difference in the dates of survey. That accounts for the difficulty here. It was an inadvertence

"Well," said Orchard, "what did you find?"

"I find," replied Oakford, "that Owens made a mistake in his description, and that Mr. Brill proposes to take advantage of it."

For the first time that morning an anxious look came into Orchard's eyes.

"Can he do it?" he inquired.

"I don't know. If he can, you will lose not only your spring and pond and brook, but your house and garden and meadow as well."

Orchard turned to Brill. "Adam," he said, "do you intend to rob me of my property?"

Brill replied deliberately with a question on his part. "Let me see. About a year ago you declared war on me, didn't you?"

"Yes, but not guerrilla fightin'."

"No matter; you've fought me with the meanest weapon a man can use, a slandering tongue. I've got you in my grip now. I shall hold you there. A little while ago you were going to show me that, if I have money in my family, you have brains in yours. Now is your opportunity to show it. It'll take more than a college education to prove that property to be yours. I know, for I've had the matter looked up. And it'll take more of a title than you can show to raise a mortgage on it. You'll have to sell another foundered horse to get money to send your son to college. Come, Nate, we've no further business here to-day."

He pocketed his deed, turned round and started toward home. The two boys, who had been silent witnesses of the controversy, stood side by side. Nathan, with a white face, turned to Ralph and was about to speak; but Ralph held up a warning hand.

"Don't!" he said. "Don't say a word. You'd better go. You'd better go quick before I say something I'll be sorry for."

So Nathan turned and followed his father. Orchard stood for a moment as if dazed.

"What's to be done?" he asked, finally.

"Go to Clem Owens," replied Oakford, "and find his notes of this survey."

In single file, anxious and unstrung, the three men followed the path down the hill and across the flat to the public road.

"Suppose Adam's right about it," asked Orchard, "how much of my land will he get along the road?"

Oakford took out his notebook and figured in

a survey this mornin'?" he asked querulously. "Might 'a' done suthin' fer ye."

"Sorry, Tompkins, but we didn't have time to notify you," replied Orchard good-naturedly. "We've just been down to see Clem Owens. The old man's pretty bad off, isn't he?"

"I should say so. Can hear ye and un'erstand ye and can't talk. That's wuss'n bein' deaf and talkin'."

"Sure it is," assented Orchard. "Used to go round with him a good bit when he was surveyin', didn't you?"

"Never missed a survey."

"Good record, that is. Ever know where he kept his books that he used in surveyin'?"

Orchard thought he was approaching the subject diplomatically.

"Well, now," was the equally diplomatic response, "mebbe I did and mebbe I didn't. What you want to know fer?"

"Oh, there seems to be a book or two missing back about the time he ran that line between me and Adam Brill. Never knew what became of them books, did you?"

"Now, Stanley, w'at I kin tell and w'at I will tell is two different stories. Them books," looking up archly, "is wuth money."

"Sure they're worth money," assented Orchard. "That's why we want to find them. Can you give us a clue and get the reward?"

"Stanley, they was things Clem Owens told me confidential 't I wouldn't let on to my best friend. Them things is locked up in my breast."

"What are those things, Tompkins?"

The old man revealed the toothless cavern of his mouth in an irritating laugh. "Don't ye wisht ye knowed?" he cackled. "Wild hosses wouldn't drag 'em out of their secret abidin' place, Stanley. No, nor wild beasts, nuther."

"O shucks! I don't believe you know anything."

"Don't I! Jes' let me give ye the password and ye can get in."

"All right! Out with it!"

"Nawth fawty east." He threw back his head and laughed spasmodically. "Don't that aggrivate ye? Nawth fawty east!"

"Oh, come on!" exclaimed Oakford impatiently. "We can't get anything out of him. He doesn't know anything."

"I'm not so sure," replied Orchard. "But if he does know, he won't tell till he gets good and ready."

It was long after noon when the three travelers reached the Orchard home, where Mrs. Orchard was apprehensively awaiting them. She had scented trouble when they started for Little Bethel. Now, as she looked at their faces, she was sure that some calamity had overtaken them.

"What is it?" she asked as they came up to the porch. "What has happened?"

Orchard put his arm round his wife's waist as they walked into the house.

"Don't be frightened, mother. Maybe it isn't as bad as it looks. There's some trouble about the line between me and Adam Brill. He claims to own the property that the house is on, and the pond and the spring. We can't mortgage it till the title's settled."

"And can't Ralph go to college, then?"

"Not this fall, mother," replied Ralph, taking the words out of his father's mouth. "But some other fall, maybe."

He spoke cheerfully. He could not afford to show his disappointment, grievous as it was. And yet his disappointment over his own ill fortune was mild in comparison with the grief he felt for his parents and his resentment against Adam Brill.

Mrs. Orchard, overcome by a sudden weakness, had dropped into a chair.

"Tell me about it," she said to Oakford after a minute.

So Oakford sat down and made a rough sketch of the property lines, and explained to her the basis of Brill's contention.

"And do you think," she asked, "that the law will give him that much of our property?"

"I don't know, Mrs. Orchard. It's a very serious matter. We shall have to consult a lawyer and act upon his advice."

Whatever she felt in her heart, Mrs. Orchard spoke no word in condemnation of her neighbor. However shocked she may have been at the possibility of losing their property, her greatest concern was for Ralph, who would not now be able to enter on a school career.

When Oakford was ready to start for Mooresville, she said to him:

"Will you let Ralph stay here with us to-night? I want to talk with him for a little while—alone."

So Ralph stayed at home that night, and his mother did talk with him for a little while—alone. And many a time, through the long years that followed, he fondly remembered that night's talk; for it is wonderful what sweetness a sweet heart can extract from the bitterest cup of disappointment and sorrow.

TO BE CONTINUED.

AFIRE UNDER HATCHES

By Albert W. Tolman

THE old, battered coasting schooner Adventure, with eleven hundred casks of lime in her hold, hove to with the mainsail double-reefed in a southeast "howler," was wearing ship. It was eight o'clock on an August night. Capt. Ezra Sidelinger held the wheel. His nephew and mate, Cheney Sykes, and the cook, Eben Perkins, had just come on deck to begin their watch.

Round flew the spokes. The vessel danced about, curtsying, before the wind.

"Look out!"

The mate's sharp warning was too late. Over came the boom, struck Capt. Ezra on the head, and knocked him senseless into the lee scuppers. Cheney sprang to his uncle's side.

"Take her, Eben!"

While the cook brought the schooner on the other tack, Sykes tried in vain to rouse the old man.

"Put the wheel in the becket and lend a hand!" Sykes ordered at last.

With difficulty the two lowered the limp, heavy form down the companionway and laid it on the cabin floor.

"That clip would have stunned an ox," said Cheney; "but he'll come to after a while. We'll have to leave him now, and look after the vessel."

The Adventure, bound from Rockland for Boston, had run into the gale some hours after she passed Monhegan. At seven o'clock, after shortening sail, she had been compelled to heave to. She was then about twenty miles off Portland.

DRAWN BY W. F. STECHER

SCREAMING SQUALLS DROVE THE VESSEL ONWARD. RAGING WAVES WASHED OVER HER RAILS

Davidson, a Russian Finn from the granite quarries, had reached middle age; but he could speak only broken English and knew little of navigation. So all responsibility fell on Cheney.

After ten minutes on deck, the mate went down into the cabin again. Uncle Ezra still breathed heavily; he had not moved.

A faint, pungent odor came to Cheney's nostrils. What could it be? He straightened up and sniffed. It certainly smelled like spruce smoke. He put his face close to the bulkhead of the hold and sniffed again. He was not mistaken; it was the smell of burning staves. What that meant the mate knew only too well. He leaped up the companion stairs.

"She's sprung a leak, and the cargo's on fire!" he shouted to Perkins. "Let's try the pumps!"

They shipped the brakes and pumped for dear life. Again Cheney ran down into the cabin. The smell was stronger, and he now heard a crackling sound. The Adventure, hove to off a lee shore in the worst gale of the season, was threatened with the direst calamity that can befall a lime vessel.

It may seem almost incredible that a bad leak should cause a fire; yet scores of coasters have been destroyed in that way. The water, rising over the floor of the hold and penetrating the lowest tier of casks, slakes the lime and

produces an intense heat, which at first chars the wood, and then sets it blazing. Unless the fire can be drowned or smothered, the vessel is doomed. It did not take Cheney long to decide what to do.

"We must plaster her up and run for land!" he muttered.

Davidson, who had been forward on lookout, was set to pumping. Cheney and Eben dragged Uncle Ezra up the companion stairs and laid him on the cabin roof; they covered him with blankets and lashed him to the skylight, so that he should not roll overboard. Then they brought up the axe, the lanterns and a chart. By this time the smoke was perceptible and the cabin was growing warm. Cheney blew out the lamp.

"Might cause an explosion when she fills up with gas," he explained. He shut the door and started to pull the slide over.

"Hold on a minute!"

He went below again, and presently came up with the box in which lay the Adventure's cat.

"Time to be moving, pussy. Your nine lives wouldn't last long down there. Now, let's plaster her up as quick as we can."

Every lime coaster carries several casks on deck for just such an emergency. Eben and Cheney dumped the contents of one of them on the main hatch, shoveled a hollow in the heap, and poured into it a pail of salt water. As the lime slaked, they plastered over the entire hatch, carefully covering every crack through which the heated air from the hold might escape. They did the same to the forward and lazaretto hatches, cabin doors, skylight, windows and stovepipe, in the hope that the gas and dead air might smother the fire.

"Tight as we can make her," Cheney said at last. "Now, let's have a look at that chart."

Unrolling the sheet under the binnacle light, he put his finger on a red pencil mark. "I figure we're about here. Fifteen miles north-west ought to raise Cape Elizabeth lightship."

Eben was nervous and excitable; the mate noticed that his hands were shaking.

"Keep hold of yourself, Eb; no use to lie down till you're knocked down. The cargo's gone, sure; and I'm afraid the old Adventure's made her last trip. When the fire breaks through, she's done. There's no use lying hove to any longer. She'll simply burn up out here, and we'll all go with her. The boat wouldn't live two minutes in this sea. We've got to crack on every stitch she'll carry, put her before the wind and make for shore. It's our only chance. I'm going to fight her through to the last second. I'll put her into Portland, or on the rocks. Now, let's get sail on her."

Spurred by the thought of the fire underneath, they shook the reefs out of the mainsail and hoisted foresail and jibs. The Finn was green and slow. It was not enough to give him an order; it had to be explained to him before he could obey it. But at last the sails were set, and Cheney headed the schooner for land.

"I'll hold the wheel a while," he said, as the Adventure plunged headlong through the seas. "You two keep the pumps going."

Cheney had been coasting several years, but always in subordinate positions. Now that four lives depended upon him, he felt the burden of responsibility.

Screaming squalls drove the vessel onward. Racing waves washed over her rails. Ropes strained and blocks creaked as the gale whistled through the shrouds. Cheney steadied the spokes of the wheel. With his eyes on the compass, he kept the needle true. From time to time he glanced at the silent figure on the house, then beyond at the toilers at the pumps, and at the wild seas ahead.

At the end of half an hour he called Eben to the wheel and went forward to take his turn at pumping. He put his hand on the cabin. The wood felt hot. The deck also was hot, in spite of the water that swashed across it. What must the heat be under those four inches of spruce plank! The water, gaining on the pumps, was setting cask after cask on fire as it rose. The hold, Cheney knew, was seething with hot gas and flame, a living volcano.

How long would the tight deck resist that tremendous pressure? Already it was rounding up. Somewhere, at the weakest point, it would give way. There would be a muffled explosion, a spurt of fire, and the whole schooner would burst into flame.

Taking a lantern, Cheney examined the lime on the main hatch. It had dried and cracked from the intense heat underneath. With Oscar's help he slaked another cask, and again plastered up the seams. Painstakingly he treated the other hatches in the same way. The slightest opening, if neglected, might become a crater. He took the wheel again. The Adventure was tearing through the rollers: her straining sails seemed to lift and throw her landward. Cheney had never known her to go so fast. Yet in his impatience she seemed to be barely crawling.

"Come on! Come on! Faster! Faster!"

Eben left the pump and staggered aft.

"You'll take the sticks out of her!" he gasped. "How many knots is she making?"

"Nine or ten, I should say," answered the mate. "We ought to hear or see something pretty soon."

A fiercer blast whooped by. The schooner cringed and reeled. Something forward was rent away and flew off, a gigantic shadow, into the gloom. Eben stared after it.

"I thought that jib would go before long," Cheney said. Again he gave Eben the wheel and went to the pump.

The deck was growing hotter and rounding up now in several places. The tar in the seams had softened. Cheney imagined he could hear a sullen crackling. Surely the vessel could not last much longer.

Ahead the sky was pitch black and thick with rain. They were rushing toward the rocky coast at ten miles an hour. Something must show up soon. Once more Cheney and Eben changed places. The cook's teeth chattered; he shook with cold and fright.

"Watch sharp, you fellows!" shouted Cheney. "Let me know the second you see a light or hear a whistle."

It was the mate who heard it first—a low, booming whistle.

"Stop the pumps!"

The clanking ceased. Again came the faint and metallic oo-oom-m-m! There was no mistaking that sound! "Hurrah!" shouted Cheney. "There's the lightship!"

Louder sounded the whistle, and soon a white flash was intermittently stabbing the gloom over the port bow.

"Keep 'em going, boys!" the mate cried. "Only a few miles now to Portland Head!"

But his heart was not half so cheerful as his voice. The light crept by and vanished behind. The whistle died away. Again all was black. Cheney lived from minute to minute. How much longer would that swollen, scorching deck cheat the flames? Eben slaked another cask of lime and filled the cracks in the drying mortar. If the fire burst through now, or if anything broke, they would soon be pounding to splinters on the ledges.

Cheney strained over the wheel and peered forward, alive to all the elements of the situation—the driving scud, the hissing of the waves, the merciless gale behind; the old schooner with her rotten ropes and sails racing in toward the unseen rocks; the disabled captain, senseless, perhaps dying; the water rising steadily below in spite of the pumps; and, worst of all, the fire, eating its way upward in the dark, licking the sides of the hot casks with its sharp, red tongues.

A bellowing trumpet, a fixed light on the port bow: Portland Head! Almost at the same moment a flash to starboard: Ram Island! Brighter and brighter the lights shone. Hardly daring to trust his senses, Cheney headed between them. Presently he was running up the channel. Soon the Adventure rounded Bug Light, and glided behind the sheltering arm of the breakwater.

Compared with the hurly-burly outside, it was as quiet there as a millpond. Across the harbor glimmered Portland. Eben stumbled aft, with Oscar following.

"You've saved our lives, Cheney!" he cried. "Make ready to drop the port anchor!"

Commanded the mate. Two minutes later he sang out, "Let go!" There was a plunge, a grinding rattle of the chain; the schooner stopped and slowly swung round. It was all over but abandoning the vessel.

"Lower away the boat!" he ordered. While Eben and Oscar were busy at the falls, he began unlash the captain. Suddenly Uncle Ezra came to himself and started up, staring and muttering.

"How my head aches!" he groaned. "What's the trouble?"

Hastily Cheney explained.

"Come on, Uncle Ezra! I'll help you into the boat. I'm sorry, but we've done all we can for the Adventure. Don't forget the cat, Eb."

"Lose her now, after she's safe in harbor?" exclaimed the captain. "Not by a long shot! The lime's gone; but we can scuttle the schooner and keep her from burning up. Where's the axe?"

He rose stiffly. Under his directions Cheney and Eben jumped into the boat and rapidly cut a half dozen holes amidships on either side just at the water line. Slowly the vessel sank, until she rested on the flats with the water running over her deck.

The tide was high, and the Adventure's cargo remained under water three or four hours. Before the ebb uncovered it again the fire was extinguished.

*Through snow-bent branches
flits the blue-coat jay;
The dawns are pale, the
nights are keen and clear;
And, trudging earthward
down the Milky Way,
Old January brings another
year.*

FACT AND COMMENT

THE man with steady habits and with a steady job always looks at you with a steady eye.

Belittling Work that Others do
Will gain no Praise or Prize for you.

WE hope that the present high price of paper will not keep people from turning over a new leaf.

SOME of the dieting and fasting tests that attract so much attention really prove nothing except that, with the help of a strong will, the human body can stand a great deal that it ought not to be asked to stand.

FOR thirty years Liberty Enlightening the World, the gift of the French people to America, has been on duty, as it were, only by day. Henceforth the torch that the great figure holds aloft will be lighted, and will send forth its flaming message far into the night. There never was a time when the world needed that message more.

THE New York Board of Health is emphasizing the need of a midwinter "Open Window Week." It is curious that so many persons have to be taught that the fresh air, which is free to all, is the most valuable agency in safeguarding their health, that it is the main resource in curing pneumonia, and that in tuberculosis its healing power is rivaled only by sunlight.

IN the presidential campaign it was frequently mentioned that both Mr. Wilson and Mr. Hughes are the sons of clergymen. Two earlier Presidents were also the sons of clergymen—Arthur and Cleveland—and so was Henry Clay, who narrowly missed the presidency. Of other famous Americans, Samuel F. B. Morse, the Field brothers, the Beechers, Emerson, Holmes, Lowell, Bancroft, Parkman, Gilder and Henry James all had fathers who were clergymen.

BY a recent proclamation President Wilson established the Pisgah National Forest in western North Carolina as a national game preserve—the first to be created east of the Mississippi River. Most of the new reservation consists of what was formerly the estate of Mr. George W. Vanderbilt. It is heavily timbered and will afford for deer, black bears, raccoons, wild turkeys and other game an ideal refuge and breeding place whence the neighboring forests will in time replenish themselves.

EVERY lover of nature will be glad to know that at last the greatest of the California big trees are safe, at least from the axe, and probably from fire. By the gift of \$20,000, the National Geographic Society has enabled the government to take over the Giant Forest—a tableland about two miles in diameter in the heart of the Sequoia National Park. The tract includes the largest trees in the world, one of them $3\frac{1}{2}$ feet through at the base and 279 feet high. They are also the oldest living things in the world.

PERHAPS the most striking thing about the political overturn in England is the "newness" of the men who have come to the front. The old "governing classes" are slenderly represented in the ministry, which is full of self-made business men; of the war council, only one, Lord Curzon, is of the old aristocracy, and only one other, Lord Milner, is a university man and a churchman. Mr. Lloyd-George, Mr. Bonar Law and Mr. Henderson have all come up from middle-class, nonconformist homes, two of them at least through years of actual poverty. And behind them stands Lord Northcliffe, perhaps the most influential of them all, who like them

has no hereditary association with aristocracy or political power. A great crisis searches out the men it needs, and finds them oftenest in the social strata that lie well down in the body of the people. That is one of the justifications of democracy.

GERMANY TRIUMPHANT IN ROUMANIA

THE conquest of Roumania was an exceedingly workmanlike performance on the part of Marshal von Mackensen and Gen. von Falkenhayn; it reminded the reader of those whirlwind campaigns that the Prussian army under the elder Moltke was in the habit of making, although it has not, like them, resulted in the destruction of the enemy's army as well as in the taking of his capital. Supplied with a vastly superior artillery, and faced by no generals of a strategic ability equal to their own, the German commanders found the exploit hardly more difficult than directing an annual field manoeuvre in the days before the war. It is said by some that Germany, foreseeing the inevitable, forced Roumania prematurely into the war at a time when the Roumanian guns had little or no ammunition; for the guns were all of Austrian or German make, and the only ammunition obtainable was Russian, French or English and did not fit. That may or may not be true; what is certain is that the German plans, whatever they were, worked smoothly and rapidly forward to a very impressive victory.

That victory is important because it shakes the prestige of the Allies, already low in the East, and because it places in German hands a country rich in grain and oil—supplies that the empire stands in constant need of. It rivets more firmly than ever German control on the Balkan Peninsula. Greece is the only country south of the Danube that is neither allied to Germany nor has been conquered by it, and Greece with Constantine on the throne is as useful to Germany as an open ally. Constantine no longer pretends to anything except a forced neutrality, and Sarraïl and his generals at Saloniki are helpless to engage in any really active campaign, lest the Greek King take advantage of their preoccupation with the enemy to throw his army against their rear. There can be no serious challenge to German command of the Near East so long as the Kaiser's brother-in-law rules in Athens.

But the conquest of Roumania does not of itself bring the end of the war any nearer. Germany, as its proposals show, is ready for peace. Checked in its ambition for a complete victory, it has nevertheless seized in the East all, and more than all, that it needs to satisfy the dream of the Pan-Germanists. On the other hand, the Entente powers, at the time of writing, show no signs of surrender. Their military prospects, which seemed bright last summer, are again dubious; Germany is not to be worn down so quickly as their leading men thought. But the important changes in the government that have occurred in England, in France and in Russia are all meant to bring about a more active and unrelenting prosecution of the war. The Entente Allies still believe that in the end they can exhaust their enemies. Until they are convinced that they are wrong, they are not likely to listen to any proposal of peace.

NATIONAL FINANCES

WAR is expensive not only to the nations that are fighting but also to those that are not. Notwithstanding the fact that our national taxes are higher than ever, the income of the government during the first five months of the fiscal year—that is, from July 1 to the end of November—was more than \$100,000,000 short of the amount needed to meet the expenditures. The Secretary of the Treasury estimates that when the next fiscal year ends, on June 30, 1918, the deficit will be \$185,000,000. Indeed, we shall be fortunate if it is no more than that.

To Mexico and the great conflict in Europe must be charged the principal part of the shortage. The war requires greater activity on the part of our naval vessels, adds to the expense of communicating with representatives abroad and with foreign governments, and therefore indirectly increases the cost of our government. The disorder on our southern boundary and the demand for more adequate defense, born of apprehension for what may happen after the European conflict ends, have swelled the appropriations to unheard-of magnitude.

How is the deficit to be met? The government has not yet formed a definite plan, but it must form one. The Treasury has usually had

an ample reserve in hand against emergencies, but the present reserve is not large enough to meet the impending demand, and, if it were, it should not be used for that purpose. To deplete it for current expenses would be indefensible. The quickest and easiest way to obtain the money would be to borrow—in other words, to offer a loan. But in such times as these, and in view of what the future may hold, it might be imprudent to resort to our borrowing power, upon which we may need to draw largely hereafter. The wiser course is to raise the money in the old way, by taxation. It has been suggested that the income tax exemption limit might well be lowered, and the suggestion has something to recommend it. Applying the tax to all persons whose incomes are more than a thousand dollars a year would produce a good many millions.

There will be other suggestions, but after all the only way to pay for what the government gives us is to pay for it; and that means that in the end the money must come out of us, the people. There may be easy ways of paying taxes, but no one has ever found out what they are.

READY-MADE THOUGHTS

THE world—men, women and children—turns, at least in America, more and more to ready-made clothes. Of course, as the number of those who demand such things becomes larger, the supply becomes better. Production on such an immense scale insures something that will fit any need. There is a great saving of time, of strength, of physical and mental effort. Repeated sessions with a tailor or a dressmaker are wearisome to hurried nerves and muscles; but to walk into a shop and walk out again freshly, if not quite perfectly, arrayed, gives a joyous sense of the triumph of spirit over matter. Then, too, the democratic instinct is, not to accentuate differences, but to remove them. To dress and to live very much as others do is easier and kinder.

The same tendency is manifest in thought. More and more we incline to take our thoughts, and still more the dress of them, from others. Universal common-school education has great advantages; but it has this disadvantage, that it tends to diffuse ready-made thinking, to extinguish originality and independence under a vast garment of commonplace. A still more energetic distributor of ready-made thoughts is the newspaper, which from Maine to California disseminates stock words, stock phrases, stock ideas.

Well, we all get most of our thoughts from others. How can we help it? The rush of life leaves us little time to think. And even if it left us much, the most of us are perhaps somewhat inadequately provided with the necessary machinery. But two points at least are worth remembering in this matter: First, let us try to have a thought of our own occasionally, or, if that is impossible, to make ready-made thoughts our own by testing them and adapting them and seeing that they are really true for us. Second and far more important, let us realize that our thoughts are ready-made, and be humble and quiet with them, and not make the world smile by pompously parading ideas as our own that mankind accepted or rejected ages before we were capable of thinking of anything.

THE LLOYD-GEORGE GOVERNMENT

SOMETIMES the proverb that Lincoln quoted so effectively, "Don't swap horses while you are crossing a stream," may well be disregarded. Suppose the horse goes lame in the middle of the stream! That may not be what has happened in England; nevertheless, the English people have made up their minds that a faster horse will get them across the stream sooner and safer.

The Asquith cabinet, formed by a loyal coalition of Liberals and Unionists, has been forced to yield office, not by an adverse vote of the House of Commons, but by the pressure of a vague but potent public opinion represented by certain influential newspapers and men. Exactly what took place in the secret conferences that led to the crisis may never be revealed. The movement, which was undoubtedly inspired by pure patriotism as well as by widespread impatience at the slow progress made in the field, has brought to the front the most energetic public man of his time in the British government service. It remains to be seen whether Mr. Lloyd-George, besides being the most energetic man of his time, is also the wisest, whether the public impatience that has put him into office was altogether justified, and whether the change that it has brought about

will remove the grounds of impatience. But those matters only the future can decide.

The old government was a coalition in which the high offices were carefully apportioned between the two parties. The aim of the new premier was to set up a national government in which every man should be the best man that he could find for the place, no matter what the man's former political associations had been. Whether he has succeeded in doing so is again a question that only the future can answer. His plan to seek business ability rather than political eminence for the high offices of state seems to have been thoroughly carried into effect; for of the men who now take office for the first time the list of those who have made their mark in commerce or manufacturing is long and impressive. The fundamental idea in the movement for a change was to create a small body of men that should have the same authority over the war that single dictators have had in many wars of the past. The cabinet of five men in the place of a cabinet of twenty-three is the answer to that demand.

For a time at least the new government will encounter no hostile opposition. There will still be a friendly opposition, composed chiefly of Liberal members, who will offer mild criticism, but who will ultimately vote with the government. And that is well, for criticism offered in the right spirit is helpful. How long will those conditions last? Only so long as the new government succeeds in making the progress that the country demanded from Mr. Asquith. Success will be the test of this ministry as it was of the last, and the test will be all the more severely applied because the new government has a freer hand.

OUR RAILWAY PROBLEM

AS everyone expected, President Wilson's message to Congress deals principally with the railway situation. Of the programme that he presented last summer, only one recommendation was then enacted: the eight-hour law thought necessary to save the nation from the immediate danger of a strike. He now asks Congress to put through the rest of the plan, which includes increasing the membership and the powers of the Interstate Commerce Commission, providing for full public investigation of every dispute before a strike or a lockout can be lawfully attempted, and giving the Executive power to control and to run the railways for military purposes.

The second item will meet with strong opposition from the railway brotherhoods. Compulsory investigation robs the workman of his chief weapon, the strike. After his recent discovery of how effective even the threat to strike can be, he is less likely than ever to give up the weapon without a struggle. Besides, compulsory investigation, when tried elsewhere, has not been wholly successful. It is a palliative rather than a remedy. If we relied upon it, we might find that, when the hour of need came, it proved unworkable.

Those are the aspects of the railway question that are immediately before Congress, but they are almost overshadowed by the larger issues in the background.

The Adamson law is before the Supreme Court, which will interpret it and say whether or not it is constitutional. Considering the haste in which the law was passed, and the circumstances that led to its being passed, the railways could hardly do less than make such an appeal; but if the court decides against the brotherhoods, the men will be so dissatisfied that they may renew the crisis of last summer. By affiliating themselves with the American Federation of Labor, the brotherhoods have brought into line all the railway shopmen, switchmen, telegraphers and other employees who did not benefit by the Adamson law, and all of them are now expected to work together in a determined effort for an eight-hour day for all railway men.

The chronic difficulty of a regulation and control divided between the national and the state governments seems at last to have reached a crisis. The railways declare that being controlled by forty-nine different masters has become intolerable. That point is likely to prove one of the most important matters that the Newlands Congressional Committee will have to consider; but after all, it is only one aspect of the main problem that faces the nation, which is that it must look at its transportation system as an instrument of national service, and provide for it accordingly. The first and the third of President Wilson's recommendations assume the need, and the tendency of events in the last decade has been in that direction. In most of its parts, our railway

system is a splendid monument to American courage and industry, but the next duty of the country is to bring it into some sort of unity, so that it may serve the nation as a whole.

CURRENT EVENTS

CONGRESS.—The bill to restrict immigration, which makes the ability to read one of the tests to which future immigrants must conform, passed the Senate on December 14 by 64 to 7. It was sent to conference. The judiciary committee of the House reported the proposed constitutional amendments—nation-wide prohibition favorably, and the one for the enfranchisement of women without recommendation.—Senator Willard Saulsbury of Delaware was elected president *pro tempore* of the Senate.—The Secretary of War, appearing before the military committee of the House, and Gen. Wood and Gen. Scott, appearing before the military committee of the Senate, all agreed that the militia system was not a satisfactory means of national defense, and the two officers declared that some form of universal military training was needed.

RAILWAY SITUATION.—On January 8 the Supreme Court will hear arguments on the constitutionality of the Adamson law. Conferences between representatives of the railways and of the brotherhoods to see whether the points at issue could be settled by agreement rather than through the courts were not successful. Neither party is pleased with the Adamson bill; for the trainmen, who believed it to be a triumph for their contention when it passed, are now alarmed lest it lead to the supplementary legislation favored by President Wilson, which would make a general strike illegal without an impartial investigation of the situation.

MEXICO.—The joint commission met again on December 18 to hear what Gen. Carranza had to say to the protocol signed by the commission several weeks before. The Mexican commissioners did not bring the news that he had ratified the protocol, but intimated that he would do so after he had made a statement of his policy concerning the relations between Mexico and the United States, in reply to the similar statement drawn up by the American commissioners and attached to the protocol.—It was reported that Villa had sent to Washington a proposal to guarantee the safety of Americans and other foreigners in Mexico if the United States would not interfere in his campaign against the Carranza government.—News reached El Paso that Villa had caused the death of Dr. Fisher, an American physician of Santa Rosalia, and Howard Gray, an American who lived at Parral.—Sixteen thousand of the militia now on the border were ordered home on December 18.

DANISH WEST INDIES.—On December 14 the people of Denmark voted by referendum on the proposal to sell the Danish West Indies to the United States. They favored it by a majority of nearly two to one. On December 20 the Danish Folkething passed the bill that ratifies the sale.

AUSTRIA.—Another cabinet crisis has occurred in Austria. Premier Koerber is out and Count Clam-Martinez has been asked to form a new ministry.

RECENT DEATH.—At Cambridge, December 16, Prof. Hugo Münsterberg, the psychologist, aged 53.

THE EUROPEAN WAR

(From December 14 to December 20.)

The eyes of the world were on the responsible statesmen of the Entente powers this week, for everyone was eager to know how they would receive the suggestion of a peace conference officially made by the Central powers. It became known that the German and Austrian proposals did not outline the terms on which those governments would stand, but merely urged the importance of putting an end to the destruction of life and wealth that the war is causing.

The proposal did not arouse any enthusiastic response in France, where the public men almost unanimously declared that they felt that it was ill-timed and intended to sow dissension among the Allies rather than to accomplish a real peace. The Russian Duma also voted against entering into any peace negotiations at present, on the ground that a peace made now would determine nothing, and could be followed only by another more terrible war within a few years.

On December 19 the new British premier, Mr. Lloyd-George, gave the answer of his government in a speech in Parliament. He declared that the Allies would not enter a peace conference with a Germany that proclaimed itself victorious, and that no peace could be considered that did not provide for

complete restitution of invaded countries, full reparation to them and effectual guarantees against another war. He saw no safety in any compromise with the militaristic system that Prussia, and Germany under its guidance, represents. Mr. Asquith followed the premier with a speech no less firm in tone.

On December 20 it became known that President Wilson had dispatched a note to the belligerent nations, urging them to state publicly the terms on which they would be willing to consider peace, in order that a concrete basis for negotiation might be arrived at. The President added that it must not be supposed that his note was suggested by or was intended to supplement the overtures of the Central powers.

While the statesmen were discussing peace, the soldiers, whenever the weather permitted, continued their activities in the field. The French under Gen. Mangin struck another brilliant blow in front of Verdun, pushed their lines forward nearly or quite two miles east of the Meuse, and took more than 11,000 German prisoners and 81 guns. On that side of the river the French have now regained almost all the ground taken by the Germans in the long and terrible Battle of Verdun. The Germans made some spirited counter-attacks, but Paris declared that the French held all the ground they had gained.

In Roumania the retreat of the defeated Roumanians continued behind the line of the Buzeu River, which the Germans forced on December 14. Paris learned a few days later that the beaten and disorganized army had fallen back behind the Sereth and Pruth rivers and were to rest and reit on Russian territory, while the Russians took over the line across Roumania, and would try to dig in and hold it against the German advance. Their line of defense was believed to follow the Rinnic and Sereth rivers. The Russian forces in the Dobruja were also reported to be falling back and crossing the Danube between Braila and Galatz. Berlin declared that the Roumanians had lost 300,000 men and virtually all their guns and military supplies.

There were German offensives reported from the fronts in Galicia and Volhynia, but they led to no important results.

Athens sent word that the crisis in Greece had been averted again by the King's unreserved assent to all the conditions of the Entente powers. The reply of the Greek government denied that any hostile troop movements had been ordered, and promised that none should be ordered. It also promised not to transport any war material into northern Greece, and agreed to give every satisfaction for the attack made by Greek reservists on

THE BENT AND TWISTED FRAMEWORK OF A WRECKED ZEPPELIN

British and French marines in Athens. Mr. Lloyd-George told Parliament during the week that the Entente powers would recognize the diplomatic agents of the Venezelos government, as representing the districts it controlled.

The British force in Mesopotamia has become active again as better weather approaches; it is advancing against Kut el Amara, and was said to be within two and a half miles of the town on December 15.

The British horse transport Russian was sunk in the Mediterranean, probably, although not certainly, by a German submarine, on December 14. The ship had no cargo at the time. A number of the crew and seventeen American horse tenders were lost.

The Prinz Friedrich Wilhelm, which had been lying at Vardo, Norway, ever since the beginning of the war, ran out and tried to make a German port, but it went ashore in the Great Belt off the Danish coast. The cargo is said to be worth \$5,000,000.

The Entente governments have finally agreed to give a safe-conduct to Count Tarnowski von Tarnow, the new Austrian ambassador to the United States. The American government has not yet consented to receive Fuad Bey, the new Turkish ambassador, and it is said that it will not do so unless Turkey pays heed to the representations of this country concerning the treatment of Americans and naturalized Americans in Turkey.

Mr. Lloyd-George declared that his government was considering taking over all British shipping, in order to assure the Entente nations and their armies sufficient supplies. Such a policy would still further restrict the cargo space available for American shippers.

If it isn't an Eastman, it isn't a Kodak.

There's winter sport too—in a

KODAK

Outdoors with skates and skis and coasting, when the trees are snow laden and great drifts tell the tale of last nights storm, there are pictures well worth taking.

And indoors there are group pictures and home portraits, by daylight or flashlight and in the long winter evenings, when rain and sleet make the outdoors impossible, there's good fun in developing and printing. Every step is simple by the Kodak system.

SIMEON IN THE TEMPLE

By Jeannie Pendleton Hall

WHITE doves that circled round the blue
Within the outer courtyard lit,
They preened their breasts where travelers
threw
Their grain, and strove for it.

The thin, gray, sacrificial smoke
Trilled from the altars, for to-day
A many met there—country folk
Come up their vows to pay.

But I scarce marked them—scarce had
known
(So great the thing I had come to see)
How spent I stood; how on the stone
My staff smote wearily.

Till came that group; for, past surmise,
I knew the craftsman, plain and mild,
The gentle mother, violet-eyed,
Clasping the Holy Child.

Now when that lovesome Child I knew,
And lifted Him, and sang God's grace
The Holy Babe, as children do,
Fondled my wrinkled face.

Mute and amazed did all men stand
To hear the mysteries I did speak,
For 'twas a little, little hand
That played about my cheek:

No rose-plink shell by Galilee
More silken-soft when winds are calm,
But I—I saw, and wept to see,
Nails in each tiny palm!

STAIRS OR ELEVATOR?

GEORGE had graduated with honors from the university, and he felt that he had the world at his feet until Mr. Farnsworth, his father, called him into his private office in the big Farnsworth department store.

"Well, George," said Mr. Farnsworth in his businesslike way, "you are now out in the world and ready to make your way, I suppose. What would you like to do?"

"I'd like to go into business with you," the young man replied.

"Will you take the stairs or the elevator to the top floor where the private offices are?" asked his father.

"What do you mean, dad?" queried the boy.
"I mean," replied the father, "will you start at the bottom, take the place of an ordinary clerk and work your way up, or do you want to step into a place of some authority just as you are now?"

"Why, naturally," said George, "I'd like to take the elevator, for I think that as your son I ought to have some advantages over the outsider, and I think I could fill a manager's position."

"George," said his father, "I'm disappointed in you, and if you weren't my son I'd refuse to give you a chance even to try to make good. You remind me of a youngster who applied for a job as office boy in a downtown firm a little while ago. They asked to see what sort of hand he could write. It was such a hopeless scrawl that they told him he had better take lessons in writing. The youngster said he didn't see why, for he was going to become a manager, and his stenographer could look after that part for him."

"That is the trouble with so many young fellows these days. They all expect to be managers, and want to dodge the steps from the office boy's job to the manager's desk. The result is, they never arrive."

"Many a preacher thinks he can slide through somehow to a leading pulpit by taking a high-school course and a theological training, omitting college; and he finds himself intellectually bankrupt at forty in some backwoods town."

"Many a budding physician thinks he will somehow become a noted surgeon, although he loafs through his medical course. There is a reason for success, my boy. The most successful paper makers in this country to-day come from three generations of paper makers."

"As I think of what you have to learn, you remind me of an eagle on the edge of the nest with every pinion and feather in trim, but without the toughened fibre that will come from battling with the winds amongst the crags. I'm not much of a preacher, but if I'm not mistaken an unauthorized messenger once ran to King David to report to him the result of a battle that was not yet over. When he arrived in the king's chamber he was so out of breath and so ill-informed that he could say nothing, and had to wait until the regular messenger arrived. If you take the stairs route to the directors' table, you will have plenty of time to think of what you are to say when you get there. Which shall it be?"

"I think I'll come up by way of the stairs," said George.

A MILITANT CHRISTIAN

BRANDISHING a revolver in one hand and a bottle of "moonshine" liquor in the other, a brawny mountaineer dared constable or sheriff or sheriff's posse to arrest him. And this he did within the shadow of the county courthouse at Salsersville, Kentucky. Less than two hundred feet away was the county jail, and the big fellow defied anyone to attempt to lodge him behind the bars. To emphasize his remarks, he raised the revolver skyward and blazed away. There were fifty men within hearing of his challenge, but none of them dared to face the brandished revolver.

"Put down that gun!" shouted one man. "Put it down before you hurt some one."
"Yow!" shouted the brawny mountaineer. "Come and take it away from me!"

"You'll wind up in jail!" warned another.
"Come and put me there! Dare ye to! Dare the whole town to try it!"

Just then the preacher, a young man from Princeton Theological Seminary, who had not been long in the mountains, came out of a store. The minister was tall and athletic, careful, almost fastidious, in dress. The natives thought him a "tenderfoot."

"Whoop!" shouted the man in the street. "No one dares to arrest me!"

He swung the revolver in a circle, covering the people standing on the store porches.

Quick as a flash the preacher sprang out into the

street and made for the man. A dozen men reached out to stop him, but it was too late. He reached the side of the drunken man in a twinkling. His athletic training stood him in good stead. One blow of his fist knocked the revolver from the man's hand. In another instant the pastor's muscular arms had wrapped round the mountaineer and pinned his arms to his sides. Before the fractious one realized it, he was being carried bodily toward the jail door, and the preacher had won his spurs in the eyes of the mountain people. Never again was he considered merely as a bookworm and student.

Not long afterwards a man who lived several miles from the village stood out in front of the courthouse and began to defy the authorities and citizens in general. The young minister happened to be standing on the porch of one of the stores. The man saw the preacher looking at him. Without further ado the noisy citizen climbed upon his mule and rode out of the village as quickly as the beast could take him. He had heard of the other incident.

This clergyman has decided to end his days among the people of the mountains. He has found them a warm-hearted folk and wonderfully loyal friends. But he is more than a preacher. He lives on a farm alone—he is a bachelor—and cultivates a little bottom land and a larger portion of steep hillside. Always he is making experiments, trying some new thing in the way of farming, testing and confirming experiments made elsewhere, and trying to adapt them to mountain agriculture. Ideas that are good he passes on to his fellow mountain farmers, and the amount of good he has done is incalculable.

He receives no salary, and has relinquished all help from his church board because he can make enough from his farming to supply his needs. He goes far back into the mountains, and preaches in neighborhoods that seldom hear the voice of a minister. In cases of sickness he is always ready with a word of comfort.

The world knows nothing of the work of this quiet man whose life for the remainder of his years will be buried far back in the mountains; he asks no remuneration here; but the people among whom he has cast his lot love him. And what more can a man ask?

ROPING A PANTHER

WHILE I was traveling through a Western State, writes a Companion reader, I met a ranchman whose face was disfigured by three long, ragged scars that started below his left eye and ran across his cheek and over the jawbone. One evening I ventured to ask how he had got them.

"Roping a panther," he replied.

"Roping a panther?" I repeated.

"It does sound foolish, doesn't it?" he answered.

"Well, those scars and these others here show that it was." As he spoke he opened his shirt and showed a badly mutilated right shoulder.

"When I was about sixteen," he began, "my parents sent me out to spend a year or so with my uncle on his ranch. My uncle gave me a cowboy's outfit and told me to enjoy myself. For about six months that is exactly what I did."

"Nearly everyone packed a gun in those days, and I had not been there long before my uncle gave me a six-shooter and a rifle and taught me how to use them. By the time I had been there a year I could ride, shoot and throw a rope nearly as well as the other boys."

"In addition to my rifle and revolver, I carried a large hunting knife in my belt. The boys made lots of fun of this knife, calling it a pig-sticker or a toad-stabber, but I persisted in carrying it in spite of them."

"One morning I was about to start for Sandy Creek coulee to hunt for deer when my uncle came out of the house and asked me to watch out for some cattle that had strayed. While we were talking he had looked over my outfit, and now he said, 'That cinch strap is nearly worn in two; you had better attend to it.'"

"The strap was badly worn, and, as I was riding a 'centre-fire' saddle, I had only one cinch to depend on; but I was in a hurry and said, 'Oh, that will hold for quite a while yet.'"

"Jack," he said earnestly, "remember that a cowboy's safety depends on the strength of his saddle rigging."

"I'll fix it as soon as I get back," I said, and rode off before he could say any more.

"Sandy Creek was dry at that time of year, and I kept the pony on the sand, where he made very little noise. The wind was blowing down the coulee, and I stood a good chance of running on some game. We had been travelling up the coulee for perhaps half an hour when, on turning a bend where the rock walls were very steep, my pony shied so suddenly that I was nearly thrown. I looked round to see what had startled him, and was surprised to see a mountain lion on a ledge of rock in front of me. He was fairly cornered, for the wall behind him was too smooth and precipitous to be climbed, and the bend of the wall prevented him from passing me."

"I had never been so close to a panther before, but I knew that the creatures were cowardly unless wounded or very hungry, and I was not afraid."

"I could have shot him easily, but I thought how easy it would be to throw my rope round his neck and capture him alive. The panther was spitting and hissing like an angry house cat, but made no move to get away."

"I swung the rope a few times round my head and then threw it. It looked for a minute as if it would catch the panther just as I wished, but as it looped out over his head he sat back on his haunches and cuffed at it like a kitten at a string. The rope fell with one of his legs through it and tightened back of his shoulder."

"My pony had been restless since he first caught sight of the panther, but I had been able to keep him steady so far. But when the rope tightened on the lion, he began to roll round and snarl and spit until you would have thought that he was having a fit. The sight was too much for the broncho, and, taking the bit in his teeth, he spun round and was off down the back trail like a shot; the panther bounded and rolled along behind us like a rubber ball."

"Before we had gone far the pony jumped a small ditch and the weak cinch strap broke. Before I realized what had happened, I had rolled off over the horse's hips like a bag of meal. The fall did not hurt me much, but I was dazed. I scrambled to my feet, but the panther had got his bearings first, and when I got to my feet he faced me, crouching and ready to spring."

"I reached for my revolver, but the fall had jarred it from the holster. I stepped back quickly, tripped over the saddle, and fell again. Before I could get up, the panther sprang; as he landed, his

claws tore across my cheek, and he sank his teeth savagely into my shoulder."

"I struggled to free myself, and in doing so my hand hit the handle of my hunting knife. I pulled it from the sheath and struck blindly at the panther. The warm blood gushed over my hand, and then everything turned black."

"When I regained my senses, Curly Welch, one of my uncle's punchers, was nearly drowning me with water that he carried from the creek in his hat. 'Decided to come back, have yuh?' he inquired with a relieved grin. He was an irrepressible, happy-go-lucky fellow, and he laughed heartily over my disheveled appearance, although all the while he was washing and bandaging my hurts as well as he could."

"My, my, son, but you sure are all mussed up!" he chuckled. "What kind of a jamboree have you and this here catamount been having, anyway? Looks like the little old scalping knife saved your bacon this time all right."

"When he mentioned the panther I sat up and looked round. There he lay, stone dead, with my hunting knife sticking in his side. That one lucky blow had found his heart."

"Curly had seen my horse come out of the coulee, running wild, without the saddle, and, suspecting that something was wrong, he had ridden up the coulee to investigate. He put me on his horse and then led it to the ranch, where my wounds were dressed, and inside of a month I was as well as ever, except that what few good looks I had were badly damaged."

A WELL-NOURISHED CHILD

"Jungletown and return, please—half fare."
—Drawn by Clifton Meek.

THE ART OF LETTER WRITING

IT would be hard to find a more forceful indictment of the habit of writing careless and inadequate letters than the comparison that Mr. Denis Garstin makes in Friendly Russia between the letter that his Russian maid, Olga, dictated and the letter that an American schoolboy sent to his uncle in Russia. Mr. Garstin says:

Olga produced some paper that she had been hiding from time to time. She had already begun with an address to her mother that I could not read. I began again below.

"Dear Little Mother. I bow toward thee. Afanasi Stepanovitch bows toward thee. Marya Filimonovna bows toward thee. I am well. An Englishman writes this letter. He lives here. Vera Aleksandrovna [the lady of the house] is well. Dmitri Ivanovitch is dead. I bow toward Yevgenia Petrovna. I bow toward Arina Petrovna. I bow toward Marya Petrovna."

"Good gracious, Olga!" I said. "Are you going to bow toward everyone you know?"

"Of course," said Olga.

"Are there many more?"

"A great many more. It will be a long letter, like those you write."

It was. Her three sisters and four brothers were married, and each had children. Olga bowed toward each by name. Then there came the neighbors and their families, the village friends, and more relatives who might be there on a visit. Olga bowed conscientiously to each.

"And now?" I asked, feeling that all concerned had earned some news at last.

"I will write my name," said Olga. "It is a very good letter. They will be pleased, there in my home."

In that desolate part of the Crimea where I lived the only means of communication between us and the outside world was a steamer that stopped in calm weather in the bay as it coasted along from Odessa to Batum. The agent for the steamship line was a fat, weary man with a walrus moustache. He always seemed to go to sleep while I stumbled through my Russian sentences. He would open his eyes to answer my question, and close them again for my next inquiry.

But one day he surprised me by asking me to come with him into the dwelling room. Tania, the agent's dark, pretty daughter, seemed especially nervous. The others had evidently given her the task of broaching the subject to me. I noticed her toying with a letter, and I guessed what she was trying to say.

"Olga Petrovna has made me her letter writer now," I said. "We are very proud of that letter, Olga and I."

All the family nodded at Tania to show her the opening fate had given her. Tania frowned at them, then turned to me.

"My father's brother went to America some years ago. Russia was unhealthy for him, as Pushkin says."

We all laughed merrily at the joke. The agent nodded approvingly at his daughter. She continued, a little flustered, "And—and—oh, I forget! Here is a letter from him, but we cannot understand what he says, and—"

"Shall I try and read it?" I asked.

She gave me the letter, and I read it through quickly to myself. "It is not from your brother," I said to the agent. "Your nephew has written it."

"Ivan Sergievitch?" he asked.

I looked at the signature a second time. "Er—yes—yes," I said dubiously.

"I remember him as a baby," said the agent's wife. "He has blue eyes."

"Does he bow to me?" asked Tania.

"You must remember," I said, "that he has grown up in America and forgotten Russian customs."

"Yes, yes," they insisted, "we understand that, but tell us, what does he say?"

I translated the letter into Russian as well as I could, and I hated the business. It ran:

"Dear Uncle. Poppa is real ill, and is mighty sore he can't scribble a note to you right away. But he cannot. You might as well put a broncho to sort out crockery. Pop's all nerves. I am still at the technical school, and am doing well. Hope you are all keeping fit. Love to all."

"Your loving nephew, Jack S. Johnson."

I knew that I should never be able to explain that "love to all" to the Ivanoffs. I never did.

HOW SEDALIA WAS NAMED

A READER of The Companion who was interested in our account of the way the town of Rolla, Missouri, got its name, has asked us if we can tell the origin of that other attractive name, Sedalia. It happens that we can; and our readers will agree that the circumstances surrounding the naming of Sedalia were no less curious than those out of which grew the name of Rolla.

The city of Sedalia was both founded and named by Gen. George R. Smith, who was a distinguished citizen of Missouri during the years of the Civil War and the periods immediately before and after that struggle. He was a Virginian by birth and a Kentuckian by upbringing; as a young man he came to Missouri and settled at Georgetown, which is three miles north of the present city of Sedalia. He was prominent both in politics and business, and was instrumental in the building of the Missouri Pacific Railway from St. Louis to Kansas City during the fifties of the last century.

He could not induce his fellow townsmen to make the necessary effort to have the railway pass through Georgetown, and foreseeing that that would condemn the village to decay, he bought a large tract of land beside the railway tracks and laid out a town site there, from which, in course of time, has grown the flourishing city of Sedalia.

When it came to furnishing a name for the new settlement, Gen. Smith determined to christen it Sedville in honor of his younger daughter Sarah, whose pet name in the family circle was "Sed." One of his friends, Mr. Josiah Dent of St. Louis, suggested that "ville" was a commonplace termination, and that Sedalia would be a more beautiful and unusual name. Gen. Smith approved of the suggestion, and Sedalia came officially into being when he and his family, the first inhabitants of the new town, moved thither in 1859.

THE GENTLE ART OF MAKING FRIENDS

ONE of Chief Factor Smith's clerks, says Mr. Beckles Willson in his account of the early life of Lord Strathcona and Mount Royal, remembers that Mr. Smith always was very courteous and very frugal. He never lost his temper. Once at Northwest River an old employee named Irvine was nailing down casks. Mr. Smith came along and said, "You are putting too many nails into those casks. You mustn't put in so many nails."

The man lost his temper. "I've always put in that many nails," he said. "I've been twenty years here. If you know my job better than I do, I'd better go."

"No," said Mr. Smith calmly, "just put in fewer nails!" As the man continued to grumble, the factor asked him to meet him at the fort at a certain hour. At the time appointed Irvine went, and listened for half an hour to a stern lecture on his disobedience and insubordination. He was brought to reason and remorse.

"And now," said Mr. Smith, shaking hands, "we'd better step this way." The man thought he was going to be discharged. "Mrs. Smith is waiting for us," went on the chief factor. "She would like to offer you a little refreshment before you go." So they adjourned to the sitting room, and Irvine was cordially entertained. "We'll just forget all about the other matter," said the chief factor good-humoredly.

The man was completely won, and thereafter became Donald Smith's friend and champion.

SPREADING ENGLISH CULTURE

HINGES deserves a word, says Capt. W. H. L. Watson of that Belgian town in his Adventures of a Dispatch Rider. When first the corps came to Hinges, the inhabitants were exalted. The small boys came out in puttees and the women put ribbons in their hair.

Now, if you pronounce Hinges in the French fashion, you give forth an exclamation of distressful pain. The name cannot be shouted from a motor cycle. It has its difficulties even for the student of French. So we all called it plainly and bluntly Hinges, as if it were connected with a door. The inhabitants noticed this. Thinking that they and their forefathers had been wrong,—for surely these fine men with red hats knew better than they,—the English pronunciation spread. The village became 'Ingees, and now only some unfashionable dotards in Bethune preserve the tradition of the old pronunciation.

It is not only Hinges that has been thus decently attired in British garb. Le Cateau is Lee Cattoo. Boescheppe is Bo-peep. Ouderdon is Elderdawn.

A HOPELESS INQUIRY

A STRANGER was questioning Helen, trying to get her to say her father's first name.

"What does your mother call your papa?"

"She calls him my daddy."

"Yes, but when she wants to speak to him, what does she say?"

"She says, '669, please,'" was Helen's reply.

"I don't mean when she calls him at the office. When she tells him to get up in the morning, what does she call him?"

"She says to be ready in about four minutes."

AND THE DISH, TOO

DOMINICO, a famous harlequin of Paris in the seventeenth century, going to see Louis XIV at supper, fixed his eyes on a dish of partridges. The king, who was exceedingly fond of his acting, saw the look, and said, "Give that dish to Dominico."

"And the partridges, too, sire?" asked the harlequin.

The king smiled at the artfulness of the question, and replied, "And the partridges, too."

The dish that held the partridges was of gold.

THE STORY OF CHUB

BY IRVING PALFREY

CHUB is a turtle. When this story begins he was sunning himself on a bit of beach that bordered a little pond in the woods. His mother was near by, for Chub was only a little fellow, no bigger than a fifty-cent piece, and she had kept a close eye on him from the time he first came out of the sand a few months before. Chub longed to set out and see the world for himself, but his mother always said:

"Don't be in a hurry, Chub, to seek adventure. If you will only wait long enough, perhaps the adventure will come to you."

And sure enough, while Chub and his mother were sunning themselves on the sand the adventure came—in the form of a small but very active boy who was walking in the woods with his mother. They had a luncheon basket and a bunch of wild flowers that they had been picking.

When Chub's mother saw them, she called out, "Come, come, Chub Turtle! The water is the best place for us!"

Straightway she splashed into the pond as fast as she could go, but Chub lingered on the sand. All would have been well if he had obeyed his mother; but he disobeyed her, and so he had only himself to blame for what followed.

When Mother Turtle splashed into the water, the boy—whose name was Sonny—left his mother and came running to the shore. His eyes fell on Chub, and quick as a flash he pounced on him and picked him up.

"Oh, look, mother! Look!" he called. "See the baby turtle! I am going to take it home! Please say that I may!"

Sonny and his mother took a little tin box

ONE DAY AT A TIME

A NEW YEAR'S BANK

BY PAULINE FRANCES CAMP

"I have a bank," said Billy Bly.
"What do you think goes in it?
All pleasant words and deeds that I
Can crowd into each minute.
The interest is happiness,
And I am sure it pays!
The bank? You all know that, I
guess—
The year, with all its days."

WHEN THE NEW YEAR GAVE A PARTY

BY NANCY BYRD TURNER

*The New Year gave a birthday feast,
And who, do you think, was there?
The April Fool on a straight, high stool,
Next the wild March hare;*

*Ground hogs and June bugs and dog-day dogs,
A witch and a Halloween elf;
A Thanksgiving turkey, and old St. Nick,
And the young New Year himself.*

*The May Queen sat at the table's head,
At the foot, St. Valentine,
With dainties enough between them spread
For a hundred folk to dine.*

*They ate, they drank, they laughed, they joked
Till they cleaned the board; and all
Came back in time—so runs the rime—
To pay their party call!*

from the lunch basket and put Chub into it, and with him some wet moss and sand to make him feel at home. Somehow, Sonny seemed to know that the baby turtle's name was Chub, and he was so kind to him that the little turtle did not mind being a prisoner, although he knew that his mother would worry about him.

That was the first of Chub's adventures, but in the days that followed he had many others that he will remember as long as he lives. Sonny put the tin box that was Chub's home into a warm window, and caught flies for him to eat and brought water to keep the moss damp, until he and Chub became very good friends. One time Binx, a big yellow cat, came and looked into the tin box. Chub was a little frightened when Binx smelled of his shell and turned him over with a soft paw; but Binx was too wise a cat to mistake Chub for a mouse, and soon went off about his business.

Chub did not have to stay in the tin box all the time. Sonny often took him in his hand and carried him round the house, and one day he put him into a little wagon and hauled him up and down the driveway in the back yard. When Rodney and Dwight, two of Sonny's friends, saw Chub, they said at once that they, too, wanted a turtle, and promptly made plans to go to the pond to hunt for some of Chub's brothers and sisters. While they were talking it over, an automobile came chug-chugging along the driveway. Sonny ran to get his wagon out of the way, but in his haste he upset it and spilled Chub into the grass.

That was a most exciting adventure. Chub was not hurt, but he was afraid some one would step on him; and what should he do if Sonny did not find him? The three boys hunted and hunted for Chub a long time. They looked everywhere except in the right place, and they might never have found him at all if Binx had not come to help them. Binx had keen eyes and a sharp nose that led him straight to the spot where Chub was, and in a moment more Sonny had the baby turtle in his hand and was carrying him to the safety of the tin box.

A few days after that Sonny and his mother

took their luncheon and went for another walk to the woods where the pond was.

"I'll take Chub along," said Sonny. "I'm sure he will like a picnic, too; and perhaps we can find another baby turtle to bring home with him."

But it did not happen at all as Sonny planned. While they were beside the pond he took Chub from the tin box and put him down on the ground.

"Be careful, Sonny!" called his mother. "Don't leave Chub there, or he will go into the water!"

"Oh, no, he can't get away," said Sonny, and he watched the baby turtle crawl very slowly along the sand.

But suddenly Chub knew that he liked the woods and the sandy beach and the water better than a tin box, and before Sonny could seize him he had hurried into the water and disappeared.

Sonny looked and looked, but Chub did not come back.

"It's all right," Sonny said at last. "Probably he will be happier there, and I'm sure his mother will be glad to have him home again."

So it came about that Chub, who had become a prisoner because he did not obey Mother Turtle, got his liberty again because Sonny did not obey his mother. Chub has often told the story of his adventures to the other little turtles, but he suns himself now on a log or a lily pad, rather than on the sandy shore where some one might come along and pick him up.

THE SNOW FAIRY

BY ANTOINETTE DeC. PATTERSON

THERE was nothing Angela liked better than coloring the pictures in story-books. As she was really clever with her brush and very neat, her mother did not in the least object; indeed, she had said that when Angela was a little older she should have lessons in painting.

The picture that Angela decided to color on this very cold afternoon was one that illustrated a story about a snow fairy. She would just have time to finish it before it grew dark,

for besides the blue sky and a few fir trees there was little else to be done. It would be best, Angela thought, to leave most of the paper white, to represent snow. To be sure there was the fairy herself; but she hardly counted, being only half as big as the icicles that she was hanging to from a fir branch. Besides, her gown must be left white, too, like the snow. So there would really be only her long, fair hair and the star on her forehead, which would take but a dash or two of paint.

The picture was finished before dark, and her mother said it was the best work that Angela had done.

That night Angela went to bed feeling very happy, for next month she was to begin her painting lessons.

The little girl pulled up the warm, woolly, comfortable close round her ears,—so cold had the weather grown,—and soon she was fast asleep. And then it was that the Snow Fairy stepped out of the book and stood on the bed within a few inches of her nose! In the bright moonlight Angela could see her plainly.

Angela was delighted. "But are you not cold?" she asked. "And would you not like to get under my warm covers?"

The Snow Fairy laughed, and the laugh seemed like the tinkle of dolls' sleigh bells. "I cold? Why, dear child, I melt away whenever I come out of the book if it gets the least warm. If it were not for that wide open window I could never stand the heat of this room. But I'm glad it's cold enough here for me to stay a moment, for I want to tell you how much I like your last picture,—you got just the right shade of gold for my hair,—and to let you know that I, too, can paint! Jack Frost taught me. When he is very busy he often gets me to help him."

Angela clasped her hands. "Dear, dear Snow Fairy," she begged, "won't you please show me one of your pictures sometime?"

Again the fairy gave her silvery little laugh. "When you get up in the morning," she said, "go right to the window that faces north, and there you will see one of my pictures. It is all in white and silver—and oh, how I wish I could use color as you do! But just standing on this bed is making me warm, so I must go right away. Good-by, dear child! And the tiny creature was gone.

It seemed only a few minutes after that before it was morning. Angela rubbed her eyes. "What a funny dream I had last night!" she thought.

Nevertheless, she went to the north window and there, covering the big wide pane, was the most wonderful fairy forest! A road wound through it, on either side of which grew silver and white flowers, and tall ferns. Some of the trees were like palms, and others seemed hung with moss.

The picture was so beautiful that Angela stood a long time gazing at it, and then she began to wonder whether, after all, her experience of the night had been only a dream.

"Indoor cheer all the year!"

The first winter spent in a radiator heated home awakens the same keen delight that a tropic climate bestows upon the traveler from winter lands. Radiator climate soon becomes so necessary a part of the home life that the whole family wonders how it ever got along without their comfort-guaranteeing outfit of

AMERICAN & IDEAL RADIATORS & BOILERS

Radiator heating will work a wonderful transformation in your house. Its living space will then equal 100% of its entire space right up to the glassed-in porch. No more cold halls or frigid rooms on the windy side.

Sweeping, dusting, scrubbing, and the frequent cleaning and washing of draperies, are all much lessened where radiator heating takes the place of stoves and hot air furnaces, because the heat does not come dust-laden from loose joints.

Benjamin Franklin said: "Beware of little expenses—a small leak will sink a great ship." Stoves and out-of-date methods of heating are extravagant, causing daily little wastes at the coal bin which for a season's warming represents at 6% much money that could have been saved by an IDEAL Boiler and AMERICAN Radiators.

Get the heat that costs the least

Insist on IDEAL Boilers and AMERICAN Radiators. Fully guaranteed and cost no more than inferior makes. They need no water works supply, as same water is used for years. Easily put in old buildings.

Our catalog "Ideal Heating" (free) is a volume of concise heating and ventilating information which every owner or tenant—small or large—in town or country—ought to have. Write us today. All inquiries cordially welcomed. No obligations to buy.

A No. 5-22-W IDEAL Boiler and 47 feet of 38-in. AMERICAN Radiators, costing the owner \$235, were used to heat this cottage. At this price the goods can be bought of any reputable, competent fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

\$150 Stationary Cleaner

Ask for catalog of ARCO WAND Vacuum Cleaner. First genuinely practical Cleaner on market; is connected by iron suction pipe to all floors; and will last as long as your building.

THE MEDICAL TREATMENT OF WILD CREATURES IN CAPTIVITY

THOROUGH scientific medical treatment of captive wild creatures had its beginning at the Zoological Garden in Bronx Park, New York City. A medical staff of three men was put in charge of the garden, and the regimen they adopted was something entirely new in the treatment of captive animals.

By ten o'clock every morning the head keeper of each department makes a written report to the veterinarian of the condition of every animal under his care. If any animal is sick, the veterinarian visits it, takes its pulse, respiration and temperature when possible, diagnoses the ailment and prescribes a treatment. Of every such case he makes a written record, and these records are filed.

Thus the veterinarian keeps track of the course of each animal's illness and of the treatments prescribed. Whenever an animal dies, he holds a post-mortem examination. A complete record of this examination is also kept on file.

To prevent rather than to cure disease is the aim of the medical staff at the Bronx "Zoo." Therefore, since most captive animals are afflicted with intestinal parasites, almost every new inmate of the Zoo is given generous doses of parasiticides upon its arrival; and the food of all animals, excepting those that will eat only raw flesh, is parboiled and thoroughly cleaned.

The diseases most common among captive wild creatures are intestinal troubles, parasites, skin diseases and pneumonia. At times also there are isolated cases of various other ailments. A certain course of treatment is prescribed for all creatures suffering from the same kind of disease, although there must be slight variations according to the temperaments and vitality of the individual patients.

Intestinal troubles caused by eating either too much or too fast are common to all cats, some hoofed animals, bears and wolves, small mammals and monkeys. The general treatment is to administer soothing, sedative and astringent medicines, such as tannin, subnitrate of bismuth, and pepsin.

The carnivora habitually bolt their food. The result is almost always indigestion. The same is true of the monkeys, who are notorious gluttons. Birds suffer from indigestion because the food that it is necessary to give them is frequently ill adapted to their needs and ferments in their stomachs. The American deer suffer from a similar ailment; for, when allowed to graze, they invariably eat too much. Unfortunately, the doctors can give them little relief; for the deer have four stomachs, and the physicians have not yet found any way to compel their remedies to choose the particular stomach that is afflicted. When the medicine reaches the site of a deer's indigestion, therefore, it is by good luck rather than by good management. Strangely enough, there is not the same trouble with Asiatic deer.

Meat-eating animals, such as the cats, bears and wolves, small mammals, snakes and fish, most frequently suffer from intestinal parasites. Animals found to be infested with parasites are starved for two or three days, and then given doses of oil of male shield fern, areca-nut oil or santonin. These medicines, which kill the parasites, are given in milk, or in powdered form.

Skin diseases are confined to the smaller cats, small mammals and the pachyderms. The remedies are similar to those used to kill internal parasites, but they are applied externally in the form of ointments. The badgers suffer from a peculiarly severe skin disease, a sort of suppurating eczema. Fortunately it yields readily to treatment.

The elephant, although he has a hide almost impervious to rifle bullets, does not resist well the attacks of the microorganisms that swarm on his body. Through even the smallest fissures of his tough hide they bore their way to the tender skin beneath and there set up a severe irritation. To prevent this, it is necessary to keep the elephant's hide from cracking. In his native state the elephant, by swimming and by wallowing in the mud, keeps his hide soft and pliable. In captivity, however, his epidermis tends to become hard and to split open. This tendency is overcome by thoroughly oiling and massaging the creature's hide twice a year with coconut oil.

Pneumonia affects the cats, small mammals, birds, sea lions and monkeys. In these creatures, as in man, the disease cannot be cut short, and must run its course. The treatment is to give the sick animal plenty of light, fresh air and warmth, with nourishing foods and stimulants. Strychnine and digitalis, with eggs and milk, are often given to the larger animals, and the smaller creatures are stimulated with brandy.

In treating a sick bird it is necessary to isolate the patient, else its fellows, recognizing with an almost human intelligence that a sick member of the flock is a menace to all, would set upon the afflicted one and peck it to death.

The sea lions contract pneumonia during changes of season. They are given stimulants and cod-liver oil; but because of their savage disposition when sick and their reluctance to eat they are difficult to handle. Hot salt-water baths are helpful in these cases.

The monkeys, on the contrary, are easily handled. In addition to receiving the general treatment prescribed, they are almost always covered with warm chest jackets and frequently wear mustard plasters.

It has been discovered by the medical staff at the Bronx Park Zoo that the disease hitherto called cage paralysis is in reality osteomalacia, an affliction common among domestic cattle, and formerly supposed to be confined to them. The disease principally affects monkeys. It is marked by a loss of line in the bones and symptoms like those of paralysis.

The veterinarians try to overcome the disease by supplying more lime to the affected bones. They give it to the monkeys with their food in the form of bone dust and limewater. They also feed the monkeys canned salmon in order to supply phosphorus. The treatment is successful if it is begun when the animal is first affected.

The sea lions are sometimes afflicted with the terrible filaria, a parasite common in the Chinese. This long, thread-like worm works its way into the heart, and, gradually tightening about the heart valves, produces death with frightful convulsions. The filaria is supposed to come originally upon a fish diet, and the Chinese are also fond of sea food. No way to kill this parasite has yet been discovered.

"Aw—this ain't Beech-Nut Peanut Butter."

ASK Mother if she knows the reason why you like Beech-Nut Peanut Butter so much better than other peanut butter. Ask her if she knows the reason why it tastes so good. And why it is so smooth and free from grit.

Ask her, too, if she knows that a Beech-Nut Peanut Butter sandwich will feed you just the same Strength, Heat and Energy that a glass of rich milk contains.

PENROD AND SAM

A New Book
By Booth Tarkington

EVERYONE fears that the time will come when Penrod will grow up. That dread time, however, is not yet. The new collection of Penrod stories, Penrod and Sam, continues the exciting early history of a "limited bachelor set," which consists of Messrs. Penrod Schofield and Samuel Williams, attended now and then by one Herman, colored.

Penrod is the same young irrepressible—he has not changed a hair. Still at the magic age of twelve, he enters such glorious places as the "gentleman's dressing room," and continues to learn something of the ways of love, particularly as they relate to the heart of Marjorie Jones.

He here stages a "movie" show with indescribably funny results. The reader becomes acquainted, too, in these pages with a remarkable cat, "part panther or something," a cat which though wanted by the police was not found. There is also a severe outbreak of cavalry in the Schofield neighborhood, an outbreak that rivals the great war. A dramatic incident occurs to Herman, terrified at finding himself in "White Folk's House."

At times Penrod's heart is embittered with critical disapproval of the Creator's methods—but why go on?

Get Your Copy Free SPECIAL LIMITED OFFER

Send us one new yearly subscription for The Youth's Companion and we will present you with a copy of Booth Tarkington's latest novel, Penrod and Sam, author's regular \$1.35 copyrighted edition, sending the book to you postpaid.

NOTE: The book is given only to a present subscriber to pay him for securing a new subscription. Act promptly, as this offer is for a limited time only.

NATURE & SCIENCE

POLIOMYELITIS.—The value of an epidemic depends upon the degree to which it stirs people to intelligent and effective action. But, as a recent issue of the Public Health News of the Department of Health of New Jersey says, there is danger that the relative importance of infantile paralysis may become greatly exaggerated in the public mind. As a cause of sickness and death, it is not nearly so important as any one of a number of other diseases. Diphtheria, for example, takes a much greater toll than infantile paralysis does. Through the action of a specific toxin, diphtheria also sometimes causes paralysis. Scarlet fever, typhoid fever, measles and even whooping cough are each much more important as causes of death than infantile paralysis. Scarlet fever often causes permanent deafness in those who recover. Tuberculosis is many times more important than infantile paralysis in respect both to the amount of sickness it causes and to the number of people it kills. As for babies, diarrhoea carries off more of them during a hot summer month than infantile paralysis will ordinarily take in a dozen years. Yet there is no excitement over any one of those diseases. Some of them are far more nearly preventable than infantile paralysis, because much more is known about them. Typhoid fever, for example, is a disease that need not exist at all if all that is known about it were actually utilized; enough is known about diphtheria to cause it to disappear if the knowledge were practically and thoroughly applied; and diarrhoea among infants might soon be made a medical curiosity if everyone should act on the knowledge that the medical profession has of the principles of caring for the health of babies.

NEW RAILWAY SIGNALS.—The Pennsylvania Railroad has adopted a new system of signaling with electric lights that does away with semaphores and colored signals. All the signals, both by day and by night, are given by rows of white lights that correspond to the positions of the arms

of a semaphore. The lamps are comparatively small—only 12-volt, 6-watt—with tungsten horizontal helical filaments, but they are visible for a long distance because they are placed in the exact focal centre of small, wide-angle lenses. On the electrified section of the Pennsylvania Railroad from Philadelphia to Paoli, where the new system has been in use for eighteen months, the engineers say that the lights are more easily seen than semaphores or any other signals on the line. With semaphores the indications are by positions in the daytime and by color at night. With colored lamps all indications are by color. With the new position-light signals all indications are by position. The signal engineer of the Pennsylvania Railroad predicts that the new system will supersede the semaphore signals, which are now used almost universally.

THE MYSTERY OF MARS.—At the recent annual meeting of the American Astronomical Society at Swarthmore College, Prof. E. C. Pickering of the Harvard Observatory, in discussing the possibility of there being life on the planet Mars, declared that statements on the subject are nothing better than conjecture. In the absence of proof that Mars is peopled it is not warrantable to assume that it is. "The principal work on the subject of Mars," said Prof. Pickering, "has been done by the Lowell Observatory at Flagstaff, Arizona, but even the specialists there have adduced nothing definite as to habitation. It has not been determined whether the lacerations or so-called canals on the surface are the work of beings or of nature. The difficulty of proving that the planet is inhabited may be realized when you learn that the most powerful telescope brings Mars apparently to within forty thousand miles of the observer. Owing to the atmosphere, it is unlikely that the telescope can be improved upon at present. While we cannot say that Mars is inhabited, on the other hand we cannot say that it is not." Prof. Pickering said that, generally speaking, astronomers are losing interest in the subject and hold out little hope that experiments designed to settle the question will succeed. Discussing in a general way the science of astronomy, he said that, in contrast to most pursuits that require the continued use of the eyes in observing minute objects, astronomy strengthens the optic nerve. As an illustration, he said that few men of science can see the canals of Mars through the most powerful telescopes until after five years of assiduous practice.

WRECKED BY WHALES.—The Steamboat Inspection Service has reported a most extraordinary accident at sea. Early in June, while the motor vessel W. S., of twenty gross tons, was making a quiet passage from San Diego, California, to Mazatlan, Mexico, with a cargo of general merchandise, a whale came up under the vessel when it was about seven miles west of San Geronimo Island, Mexico, and knocked a hole in the craft, which filled so rapidly that it quickly sank. The crew took to the lifeboats ten minutes after the accident, and were picked up later by another vessel. No lives were lost. The incident recalls the disaster that overtook the Waterloo, a British grain vessel, over sixty years ago in the North Sea. The vessel was moving slowly along when the lookout sighted a large whale to windward, partly out of the water, and swimming toward the vessel at a rapid rate. Ten yards away from the ship the whale dived and struck the hull so violently that the ship keeled partly over. The whale then rose to the surface and plunged downward headforemost, and the tail in its final flourish nearly touched the foreyard. Two hours later the vessel began to settle; the crew and the captain barely had time to launch the boats when the ship cap-sized and went down by the head.

Once upon a time— The New Version

The music-hour has taken the place of the story-hour at dusk—the Columbia plays for the children now when evening shadows fall.

Far more fascinating than fairy tales, and always a mystery to childish minds, the music of the Columbia Grafonola has a magic appeal for children.

Not simply because it is *music*, but because it is such "real" music—real singing and playing by real, human people, with the vivid, human quality of *life*—that children feel so keenly the charm of

The Columbia Grafonola

The Columbia brings the hearer into intimate, personal touch with genius. Its tone—clear and natural; round, full and *true*—creates an impression of *presence* and personality.

Peculiarities of voice and expression, of touch and technique and temperament, are presented with an effect of reality that means instant recognition.

A great artist's record is more than a record on the Columbia Grafonola—it is the artist *himself*! Hear the Grafonola—compare, and *prove* it. Comparison is convincing.

New Columbia Records on sale the 20th of every month.

HEART STRAIN

BY heart strain we mean a temporary dilation of the heart caused by some excessive muscular effort—usually made by a person of sedentary habits unused to hard labor. The heart may have been already in a weakened state through disease of one of its valves or fatty degeneration of its muscular wall, although it may have been apparently healthy; or, although not actually diseased, it may have been weakened and made irritable by excessive tobacco smoking.

The dilation is brought about by a sudden increase of blood pressure in the heart cavities, which is in turn the result of the obstruction to the flow of blood through the tissues or in the lungs that attends the strong contraction of the muscles and the holding of the breath. Lifting a very heavy weight, running after a car, or any other sudden increase in muscular effort may be enough to strain the heart. The affection is not uncommon in boys who return to school or college after the summer vacation and resume their athletic contests before they have got back into training; sometimes it occurs in the well trained when they are temporarily run down with a "cold" or a bilious attack.

The signs of heart strain are great shortness of breath, pain or distress in the region of the heart, and a marked feeling of weakness or faintness. The front of the chest, where the beat of the heart is to be seen, is usually tender to the touch, although steady pressure with the flat of the hand is grateful. The pulse is irregular and rapid. It is not possible to say how long such a condition will last, for its duration depends on the intensity of the strain, the state of the heart before the strain and the treatment the condition receives. Generally, complete rest in bed for a day or two and staying quietly at home for another day or two will bring back tone to a normal heart; but if the strain was very severe, a heart tonic may be necessary to help the organ to recover its strength and poise.

Since a strain untreated or wrongly treated may result in a permanently injured heart, or even in death, it is advisable to seek medical advice immediately in all such cases.

BY-PRODUCTS

IT was Bess who first discovered that sister was making cake—cake with the delicious icing that was almost as nice as ice cream itself. And Bess, being the most loyal little soul in the world, flew straightway to summon Bennie. Three minutes later the two were standing anxiously at sister's elbow, watching with critical eyes the icing of the loaf.

"It's all covered now, sister. I can't see the least hole." That was Bess.

"Seems as if it's awful thick on that side. Don't you think you could scrape off a little mite?" That was Bennie.

"I might just as well stop, now that you two are here," sister said, laughing. "There, take them!" and she surrendered bowl, spoon and egg beater. The children flew to the doorstep. They were strictly honorable always, taking turns in scraping off mouthfuls of the treasure that adhered to spoon and bowl. Miss Jessup, the boarder, coming up from the garden with her hands full of sweet peas, stopped to laugh at the two happy, sticky faces.

"A kitchen by-product!" sister called gayly from the pantry. "Hadh't you happened upon it before? I think the children believe the icing on the egg beater has a particular flavor that it never quite achieves on the cake itself."

The boarder stepped across the sill into the kitchen.

"That's precisely it," she declared. "For days I've been trying to get it into words. It's your by-products that are so wonderful."

Sister's pleasant eyes looked at her in perplexity. "What do you mean?" she cried. "Remember I'm a country girl and can't understand the learned dialects."

"Do you really want to understand?"

"I should say I do! If you knew how I long to understand—oh, everything!"

This time the laughter had slipped out of sister's voice and a longing slipped in that the girl never meant to betray. The boarder smiled to herself over something—then she spoke slowly, as if she were searching for her words.

"I mean this: Those children are having one of the good times no money could buy for them. When they grow up it will be one of the things they will always remember. Nothing, I'll wager, will ever taste so good to them as the icing they 'lick' off the egg beater. It isn't the icing alone—it's because sister understands, and likes to give them the treat; and it will be all tangled up with memories of summer mornings on the doorstep and winter mornings in the kitchen. And that's the kind of by-products you are giving people all the time. Boarding isn't supposed to include the freedom of the garden and sweet peas with the dew on them; nor the dearest sharing of home ways and things. It is all the lovely by-products

of yours that make me think you one of the most successful women I ever knew, Rachel Kinsley." "Why—" Rachel gasped. And then she could not go on. But her eyes were answer enough for the boarder.

A FAMOUS CLOWN

ONE of the famous people who have passed away since the war began is the famous Russian clown, Anatole Durov.

Durov held that, whatever your vocation, the only thing that brings you success is work. Accordingly, he became the most industrious, successful and beloved clown in Russia, and probably the richest clown in the world, too, for when he died, not long since, he left a fortune of a million dollars, and a collection of trained animals that brought visitors to his home from all over the world.

Born of an ancient and noble family, he was a pupil of the renowned Cadet Corps, but before his graduation he ran away and joined a circus.

But he had no ambition to be an ordinary clown. He kept in touch with politics, with everything that took place in Russia, and applied to it his wit. Soon he became an unlicensed censor of Russian society in motley. Evil he rebuked by jest and gibe. No man was in too high a place for his tongue, and furious officials once brought about his exile. Russia loved him too well for that, however, and soon he was back in the ring. To show that he meant to be more discreet, he appeared with a padlock attached to his mouth.

He was a very famous animal trainer. The pig was his favorite pupil, and it is said that his pigs could do almost everything that human beings can do except talk.

A team of trained pigs drew him about the streets, and so did he love them that a pig's head with a "D" to the left was the device upon his seal.

He used to enjoy telling how, when he was on tour in Germany, one of his pigs ran away and came finally to a farm not far from Berlin. The farmer, who was a kind man, gave the tired-looking beast food and drink. To his consternation, the visitor solemnly mounted an upturned barrel, looked gratefully at its host, and stood on its head as a token of appreciation.

WASHINGTON'S PENSIONER

ONE of the recipients of Washington's bounty was his old neighbor, Capt. John Posey.

Posey sold Washington not only his Ferry Farm but also his claim to Western lands. He became financially embarrassed, in fact, ruined; his family were scattered, and he made frequent applications to Washington for advice and assistance. Washington helped to educate a son, St. Lawrence, who had been reduced to the hard expedient of tending bar in a tavern; and he also kept a daughter, Milly, at Mount Vernon, as a sort of companion to Mrs. Washington. The captain once wrote the following delightful letter, which is quoted by Mr. Paul Leland Haworth in George Washington: Farmer:

"I could (have) been able to (have) Satisfied all my old Arrears, some months AGoe, by marrying (an) old widow woman in this County. She has large soms (of) cash by her, and Prittey good Est.—She is as thick as she is high—And gits drunk at Least three or four (times) a weak—which is Disagreeable to me—has Viliant Sperrit when Drunk—Its been (a) great Dispute in my mind what to Doe,—I beleave I shud Run all Resks—if my Last wife, had been (an) Even temper'd woman, but her Sperrit, has Given me such (a) Shock—that I am afraid to Run the Resk again."

Evidently the captain did not find a way out of his troubles by the matrimonial route, for somewhat later he was in jail at Queenstown, presumably for debt, and we find in one of Washington's cash memorandum books under date of October 15, 1773: "By Charity—given Capt. Posey," four pounds. One of the sons later settled in Indiana, and the "pocket" county is named after him.

FARMING IN MEXICO

THE American farmer and the Mexican farmer have nothing in common. The Mexican farmer, says a writer in World's Work, is a king among millionaires, a modern survival of the feudal lord of the land. He says:

You look across a level plain and you see a magnificent house of stone, cement and timber, covering sometimes as much as half an acre. Surrounding it are other houses—hundreds of them—but all small, constructed of adobe, brush or even of cornstalks. You are not looking at a town, but at a ranch settlement. In the great house, which costs more than all the little ones put together, lives the *haciendado* and his family. In the little houses live the peons.

The typical farm in Mexico is not of one hundred and sixty acres, but of a million. In the State of Morelos twenty-eight *haciendados* own all the agricultural land. Twelve own nine tenths of it. The greatest part of the agricultural and grazing lands of Chihuahua is owned by one family.

The million-acre farm is mostly fallow. Although it is naturally a rich agricultural country, Mexico does not produce enough corn and beans to feed its own peon population. Modern machinery is needed, but modern machinery will never be used extensively as long as the labor of the peon is so cheap that his primitive methods are less costly than machine methods.

NO QUARTER FOR HIM

MRS. JONES was standing in the doorway talking with old Mr. Ham, a neighbor. They were speaking in uncomplimentary terms about an impostor who had lately passed through the village, swindling right and left.

"He'd better not come round here again!" exclaimed Mrs. Jones indignantly. "If he does, I'll give him no quarter."

"Quarter!" shouted the enraged old man, "quarter! Well, I guess not! I wouldn't give him ten cents!"

THE INCONSIDERATE MICE

A MORE kind-hearted and ingenuous soul never lived than Aunt Betsey, but she was a poor housekeeper. On one occasion a neighbor who had run in for a "back-door" call was horrified to see a mouse run across Aunt Betsey's kitchen floor. "Why on earth don't you set a trap, Betsey?" she asked.

"Well," replied Aunt Betsey, "I did have a trap set. But land, it was such a fuss! Those mice kept getting into it!"

Swift's Four Cut-out Calendar Dolls

Send to-day for your set

These big darlings, each with four beautiful costumes—all sixteen richly colored—are more than 18 inches tall, big as live new babies, can stand alone! Each doll is worth 25c. You will say you never saw such unusual calendars, even in the famous Swift "Premium" series.

How your children will love them! How their little hearts will thrill with joy, when they dress and undress these big beauties!

You too must be stony-hearted if you will not find yourself smiling every day of 1917 as you look at these winsome little faces, and enjoying each season's change to a gay new costume.

Their Characters and Costumes

Who could resist Dashing Donald, the handsome boy doll, in any of his three gay sporting suits or his surprise costume?

Coy Clarabel with her bashful brown eyes, red lips and curly black hair would melt the heart of an iceberg. Nothing could be more

fetching than her red, blue and green costumes.

Everyone loves Sweet Sylvia for her dewy violet eyes, and hair as golden as her nature. How pretty she looks in her white, rose, blue and red costumes!

As for Merry Myrtle, her brown hair and twinkling blue eyes are irresistible. In a pretty blue or pink or tan or scarlet costume she is sweet.

Send for these calendars—daily they will remind you of the rare quality of

Swift's "Premium" Ham and Bacon

How to Get the Calendars

One doll with four costumes forming a complete calendar for 1917, will be sent to any address in the United States for 10c, in coin or stamps, or—Trade Mark end of five Swift's "Premium" Oleomargarine cartons, or—4 labels from Swift's "Premium" Sliced Bacon cartons, or—4 covers from Brookfield Sausage cartons, or—6 Maxine Elliott Soap Wrappers, or—10 Wool Soap Wrappers. [If you live in Canada send ten cents extra on each doll ordered to pay duty.] NOTE:—All four dolls—with four costumes for each, making four complete calendars, sent for 40c or four times the number of labels or wrappers required for each doll.

Swift & Company, 4121 Packers Ave., Chicago

BLUE STREAKS

Tires of Miles and Smiles

\$2.50 each

"Let us make a bicycle tire to sell at \$2.50 each. Let us make this tire the best tire the great Goodyear factory can build, and let us guarantee it to the boys of America."

No sooner had The Goodyear Tire & Rubber Company decided upon this important step, than those handsome, speedy, lasting Blue Streak Bicycle Tires were seen on the bikes of the fellows you know. Happy fellows, too, pedaling in the sunshine, far away from the shadows cast by the Gloom Twins—"Tire Trouble" and "Tire Expense."

Lighten your heart and speed up the good old bike!

Get Blue Streaks from your dealer and whistle while you ride.

The Goodyear Tire & Rubber Company
Akron, Ohio

HOW IT COULD HAVE BEEN PREVENTED

The above illustration will prevent hundreds of disastrous skidding accidents, because it will make negligent and inexperienced motorists *think and act*. On the next rainy day they will be prepared for wet, slippery asphalt and treacherous mud—their tires will be equipped with *the only positive safeguard against skidding—*

Weed Anti-Skid Chains

These Facts Should Persuade You to Think and Act Now, Before It's Too Late:

Dealers who sell the most tires are the largest sellers of Weed Chains, and they recommend Weed Chains regardless of what brand or type of tire they sell. Every car manufacturer uses Weed Chains on his service, demonstrating and test cars.

The great taxicab companies, the delivery services of big businesses in every line—all the great well informed

organizations who operate large fleets of cars—use Weed Chains.

They all use Weed Chains to save lives and property. They do it to save themselves from damage suits. They know how often skidding causes disastrous accidents and how much it costs to repair the damage. They all know, through experience, that there is no substitute for Weed Chains.

Weed Chains are sold for all brands and types of tires by dealers everywhere. So stop at your dealer's today and "Weed Chain ALL FOUR TIRES To Safety", before it's too late.

AMERICAN CHAIN COMPANY, Inc.

Sole Manufacturers of Weed Chains

From a portrait of Lord Chesterfield with part of a letter written by him to his son on July 30, 1747

but take care to be clean, well dressed, and genteel.
Do you take care to keep your teeth very clean, by washing them constantly every morning, and after every meal? This is very necessary, both to preserve your teeth a great while, and to save you a great deal of pain.
Mine have plagued me long, and are now falling out, merely for want of care when I was of your age.
Chesterfield

LORD CHESTERFIELD, one of the most famous men of English history, wrote this letter to his fifteen-year-old son at the time that our own GEORGE WASHINGTON was also just fifteen years old.

170 years have passed since then; but Lord Chesterfield's advice holds good today—and with this great advantage—you have Colgate's Ribbon Dental Cream to help you in the care of your teeth.

Colgate's Ribbon Dental Cream is as good to the taste as it is good for the teeth. Its use is a health-building habit.

Try it today.

Sold everywhere, or a trial tube sent for 4c in stamps.

PASADENA PUBLIC LIBRARY

THE double doors between the library and the living room stood open—as the doors in Great-Aunt Olivia's house always did. Leaning back comfortably among the cushions on the big leather couch that faced the fireplace, Dorothea was perusing a blue volume at ease. Great-Aunt Olivia was having a house party, and Dorothea, who had been the last guest to arrive, had come at a moment when the others were away on a walk through the woods. The book had proved to be thrilling enough to hold her to her nook in spite of the enticements of a fragrant June morning.

The end of a chapter and a sound from the next room came at the same moment. Dorothea, concealed from view as effectively as if there were no open doors, lifted her eyes to the long mirror over the mantel. In its faithful reflection she saw the ordered array of the living room, with rugs, tables, chairs at parade rest as the servants had left them. At the end of the living room three windows opened on a terrace above the sea. Two of the windows reflected in the mirror showed blue sky and waving vines; the third framed a young man's face.

It was a dark, boyish face, set with coal-black eyes and topped by hair as black and straight as an Indian's. The eyes searched the room for a second; then a brown hand pushed up the screen and a khaki-clad leg swung across the window ledge. Closing the screen behind him, the young man crossed swiftly and stealthily to an old Dutch chest. From the top of the chest he took down a pink wooden elephant and began to fiddle with one of its legs. A little door in the elephant's side flew open, and the young man hastily stuffed something inside—what, Dorothea could not see. Then he shut the tiny door and at a noise outside hastily replaced the elephant on the chest and in three noiseless strides vanished through the living-room door. The girl felt rather than heard him swiftly cross the hall; then came an outburst of voices at the front door, among which she could distinguish her cousin Fred's.

"Where've you been, old man? I say, how'd you get here, anyway?"

For a minute Dorothea continued to question the mirror thoughtfully, but it had nothing more to tell. Returning the blue book to the shelf, she strolled into the living room to interview the pink elephant.

To be sure, she had already interviewed it once that morning, but that was merely a friendly call to renew old acquaintance. Who was this person who knew the secret of the pink elephant? Did not its very pinkness proclaim it hers? Dorothea put out her hand to this memento of a childish experiment with a dye pot of her great-aunt's, hesitated, and withdrew her hand. Whoever the young man was, he had thought himself alone. She resolutely returned to the blue volume.

Half an hour later, when the luncheon gong rang, she found that the young man with the boyish face was Bruce Allen.

"So you're the girl who was always coming just when I had to go home, or going home just before I came," he said to her. "I used to hear a lot about you from Aunt Olivia."

"Good things?"

"Not my sort. You liked to sit in the library and read."

"And you liked to tear up the turf—Aunt Olivia's precious turf."

"A fellow had to swing—at least I did. Don't forget you painted the pink elephant."

"That's unkind. How well did you know the pink elephant?"

"Inside and out. And you?"

She nodded. "I don't think the others understand how intimate a person can be with him."

"Good reason why. They didn't live here so long as we did."

Their common knowledge of the pink elephant made her feel almost "chummy" with

Bruce Allen. And he had not turned a hair on finding that she knew of the secret spring. What was it that he had hidden, anyway? She almost asked him outright. Instead she remarked, "It's queer that we had to wait till we grew up to meet each other."

"That's so, too. What do you say to a sail this afternoon?"

"I say yes, thank you. I love sailing."

"Good," said Bruce emphatically. "Aunt Olivia's boat's not so bad."

His black eyes twinkled at her understandingly, and Dorothea's gray ones smiled back. She liked him. She did not know when she had liked a boy so much. She found herself wishing that those old visits had now and then overlapped; but in that case, Dorothea reflected, he and she would probably have fought like cats and dogs for exclusive proprietorship of the pink elephant. When she got a chance she would ask him about what she had seen that morning; there were altogether too many people round now.

The girl soon discovered that there were likely to be too many people round as long as the house party lasted. Grace and Jane saw her and Bruce heading for the dock and hastened after them. "Going out? We want to go, too."

"Come on, then. Yi-yi! Fred, old boy!"

Nearly all Great-Aunt Olivia's house party went sailing that afternoon. Dorothea had a good time, for, as she had said, she loved sailing. She also absorbed knowledge. In her heart she rather scorned the other girls for

their open and undisguised admiration of the young man with the black hair.

"What makes you all so crazy over Bruce Allen?" she asked Grace, as they walked up from the dock together.

"Isn't he perfectly grand?" Grace's fluffy head bobbed an emphatic accent to her words.

"He's nice enough," Dorothea admitted.

"Nice enough! Just you wait, Dorothea; you only came last night. Though I must say I hadn't been here five minutes before—"

"Don't you know about him, Dorothea?" Jane cut in from the other side.

"I know that he is Great-Aunt Olivia's brother's wife's nephew. That's all, I think."

"It's plain you didn't see the football games last fall," said Jane.

"He's only a junior now, but he's already the best man on the varsity. Fred says he can have anything he wants of their class."

"He's not the least bit stuck up about it."

The enthusiastic sentences pelted Dorothea from both sides.

"It won't be your fault if he keeps unstuck up," thought the listener, with a hardening heart. Admiration of Bruce Allen was altogether too common.

But when his swift feet padded behind hers on Great-Aunt Olivia's gravel and his black eyes questioned her gravely, she found it difficult to be adamant.

"Hope you didn't mind taking 'em along."

"Not a bit. Did you?"

"Too much conversation."

Dorothea laughed in spite of herself. "I

agree with you there. But the sail was fine."

"There's no time in the day for sailing like before breakfast."

"Now how in the world did you find that out?"

"By experience."

"Same here."

"Good! I thought you looked like that kind. Come out some morning before the bunch gets up."

Dorothea capitulated. "It's a thing I've always pined to do—go sailing before breakfast."

"Done, then. I can't to-morrow. Promised Fred to go fishing. How does the next day suit you?"

It suited her perfectly. Moreover, it promised the best of all possible opportunities to discuss the episode of the pink elephant. But by the time the appointed morning dawned, Dorothea had no secrets to share with Bruce Allen, least of all the fact that she had seen him hide an unknown something in a miscelaneous carved animal on Great-Aunt Olivia's Dutch chest. Dorothea was astride a seesaw of horrified assurance and abased self-distrust, alternately scorning her suspicions and cowering before them. A horrid fear had taken the place of her customary cool poise.

"It's gone, Dorothea," Great-Aunt Olivia had said with a worried frown. "That is, I couldn't find it in that drawer, and now you see you can't. So I suppose I didn't put it there, though I was sure I slipped it into that yellow handkerchief case yesterday morning when Bruce came to tell me that Tim had the horse ready. You know I never leave money round in sight of the servants; it's against my principles. Well, well, I wonder where I did put it? Twenty-dollar gold pieces scare me, my dear, ever since I gave a five by mistake to a woman who called at the door and asked me for help in building an orphan's home in Patagonia. Try that blue bag, will you, dear? It's a laundry bag, but I never can tell—no, I knew it couldn't be in there. And Mary is absolutely trustworthy. Of course the thing will turn up in time, if it's still here, and it must be somewhere. Don't mention the matter to anyone, child, and don't worry."

Great-Aunt Olivia might as well have told the sphinx not to look mysterious. Dorothea felt a little sick. As she fled, her thoughts traveled in a vicious circle—Bruce Allen on Great-Aunt Olivia's threshold; the coin slipped into the yellow handkerchief case; the boy stuffing something—was it wrapped in a handkerchief?—into hiding in the pink elephant. It all dovetailed hideously; but she did not open her lips to Great-Aunt Olivia.

Instead she fled straight to the living room,—luckily it was empty of people,—and this time she did not draw back her hand from the elephant. The minute she touched it she made a discovery. The elephant was warm. It scarcely needed a gentle pressure on the hidden spring to reveal the fact that it was also empty. Dorothea stood still, wondering. That the elephant had been intended only as a temporary hiding place was easy enough to guess; but why should anyone choose, of the sixty times twenty-four minutes in a day, the one minute just before she came to remove the treasure? Perhaps the person who put it there had recently discovered that some one had missed it? But in that case, why remove it—unless, indeed, he feared that Dorothea, knowing the secret spring—But she had told him she knew about the spring five minutes after she had met him. The snarl was more tangled than it looked.

Perhaps the moment had come in which to tell Great-Aunt Olivia what she had seen, but Dorothea shrank from doing that. A mental vision of twinkling black eyes and of a friendly smile made her hesitate. Dorothea felt that she needed more proof. A twenty-dollar gold piece is not the easiest thing in the world for anyone to part with at a little seaside village. Bruce Allen could not have

accomplished it in ten minutes; therefore he must still have the coin in his possession. There was nothing to do except turn herself into a detective.

Thereafter Bruce Allen found himself with very little time at his unguarded disposal. As a watchdog Dorothea made Grace and Jane look like *papier-mâché* puppies. His first movement toward the boat precipitated a sailing party; his careless mention of business in the village brought the whole crowd to their feet; his most artfully planned disappearance found Dorothea and Fred, or it might be Dorothea and Grace and Jane, or Dorothea and some one else tagging at his heels. There was no getting away from girls since Dorothea had arrived.

She had not looked like that sort. The sort she had looked like, Bruce Allen found her now and then of an early morning when the Sea Gull flew before the wind over a ruffled sea. For Dorothea decided that before-breakfast sails were the best way of accounting for Bruce Allen's whereabouts in the early hours, and sometimes in his company she forgot that he was a thief. He did not look or act like one. But when that thought began to comfort her, she remembered that in books thieves never did look the part. And certainly he tried hard to get away. Sometimes, in company with Fred or with another boy, he succeeded. His success would have mattered more if Dorothea had not known very well how to pump a boy.

When she did not forget that he was a thief, Dorothea was very unhappy. More than once she sobbed herself to sleep. "I don't want him to be a thief," she murmured into her damp pillow. "I don't want him to be a thief." The altogether disconcerting discovery was that his being a thief did not remove him from her field of interest. She liked him still. The knowledge that she liked him horrified Dorothea. Thoroughly ashamed of herself, she redoubled her activities as a detective.

And then, as if to show her how easily it could be managed when he really wanted to manage it, Bruce Allen disappeared. He was not in the house or on the tennis court. So far as anyone knew, he had not gone to the village. The Sea Gull rode at her moorings. A dozen haunts failed to yield him. Dorothea fidgeted between the house and the dock.

"You might just as well give it up," Grace said to her. "You won't find him."

Dorothea sighed. "I suppose so, but I hate to give it up."

"You're fearfully open about it, Dot," said Jane. "If I wanted a boy round as badly as you want Bruce, I'd try to conceal it."

Dorothea's gray eyes turned from Jane to the other girls on the terrace. So that was the way they saw it.

"They like you better if you don't tag them, Dot," Grace said good-naturedly.

"Anyone here want to play tennis?" called Fred.

Dorothea wheeled on him. "Where have you been? Where's Bruce?"

"Gone up to Boston for the afternoon. Have a game?"

"No, thanks. I'm tired." She stopped by Grace's chair as she went in. "I don't care whether they like me or not."

Dorothea mounted sadly to her room and cried. She ought to have told Great-Aunt Olivia. This amateur detective business was beyond a girl. She would tell her now—to-morrow, perhaps. Already it was too late.

The twenty-dollar gold piece was probably safely disposed of.

She came to supper with the faintest suggestion of redness at the rims of her eyes and a disposition utterly battered and weary. Bruce Allen smiled at her from across the table. Dorothea ignored him. She made no move after supper to discover what he was planning to do. With a book she retired to the terrace to read.

Bruce himself hunted her out. "The whole crowd's going to Gloucester in the motor boat."

"I hope you will all have a very good time."

"Aren't you coming?"

"Not to-night. My head aches."

"Do your head good to be on the water."

"I doubt it. Anyway, I'm not going."

"Sure? You haven't got a grouch, have you?"

She shook her head.

Then she acted on impulse. "What was it you hid in the pink elephant last Tuesday morning?"

"How'd you know I hid anything in the elephant?"

"I was reading on the couch in the library. I heard you at the window. Then I saw."

"Ho! On the couch opposite the mirror? Dead give-away, wasn't it? Hope you liked my stealthy entrance. Fred and I had a parley-vo over a pin of his. The old codger made such a fuss about the thing I said I'd take care of it for a couple of days—to give him a rest. He got his rest all right enough. Went through my things till you'd have thought a dog had pawed 'em. Why didn't you open the beast up and see?"

"Oh, because—was the pin wrapped in a handkerchief?"

"Piece of tissue paper. So it wouldn't rattle."

"I see," said Dorothea. "Thanks."

"Is there any other little piece of information I can give you?" asked Bruce, politely.

"Not to-night."

"And you won't come? Better think twice. There's going to be a moon."

"I'd rather read—to-night."

He was off, striding swiftly through the bushes.

Words, words! Anyone could say words, thought Dorothea. She read for an hour without turning a page.

"Oh, by the way," Great-Aunt Olivia said casually at breakfast the next morning, "I found what we were looking for the other day, Dorothea. Found it in the toe of the glass slipper on my dressing table. You remember I knew I'd put it somewhere, but just where —"

"You—you found it?" gasped Dorothea.

"I always expected to. I suppose I'd forget my head some day if it weren't fastened on. That's why I'm telling you now. I've forgotten to tell you for two days already. I thought I'd lost a coin," she explained to the table at large, "and as it was a good deal of money I asked Dorothea to help look for it."

"I'm very glad you have found it, Aunt Olivia."

Dorothea's voice sounded strange in her own ears. Under Bruce Allen's keen gaze she found herself blushing hotly.

He cornered her on the terrace after breakfast. "What did you think it was I hid in the pink elephant?" he asked, relentlessly.

"I won't tell you. Yes, I will, too—to

punish myself for being so silly. Great-Aunt Olivia's twenty-dollar gold piece."

"Twenty, was it? No wonder she wanted to find the thing. Was that what you've been tagging me round for this week?"

"Of course. Why else should I tag you?"

"No reason on earth. But I thought—never mind what. So you took me for a thief?"

"Don't talk about it. I'm going in to read."

"You read too much. Better go sailing."

She stared at him. "What did you say?"

"I said you'd better go sailing."

"With you?"

"But I'm not a thief."

"Oh, I know that! But you don't want me to go sailing with you after what I thought?"

"Oh, come now! It was the books. They added your brain, you know. As far as that goes, I thought things, too."

"You?" She was astonished to see a flush on his dark face. "What did you think?"

He chuckled. "Thought you were gone on me. A fellow feels like a fool to say it out loud in broad daylight. Let's get the sillies out of our systems. Come sailing."

Dorothea jumped to her feet. "Oh, I will!" she cried. "And you are nice. You're nicer even than I thought anyone could be."

He smiled. "Now I suppose I'm to split the difference between that and —"

"Don't!" she cried. "If you really want me to go sailing, you won't so much as mention the pink elephant."

"Let's talk about a luncheon, then," he said promptly. "Do you suppose Mary would put one up for us if you asked her?"

AN IMPORTANT LETTER

By Mary E. Mitchell

WHEN one morning before breakfast near the end of the Christmas holidays, Mr. Scott called his son, Gerald, into the library, the boy found him seated at his desk, hurriedly sealing and stamping some letters.

"I've just received a telegram," said Mr. Scott, without stopping his work, "that calls me West immediately. I shall leave on the nine-o'clock train. I'm very sorry to go to-day, for I'm expecting an important business letter. The letter is private, and as I didn't care to have it go to my office I had it directed here. It's from Longley in reference to a railway case, and will probably come on that ten-thirty train. Let me see, school doesn't begin till Monday?"

"No, it doesn't, father."

"So much the better. Well, what I want you to do is this: Go to the post office this morning and get the mail. Don't leave it to Jackson, but go yourself. Bring the letter home and read it carefully. To-morrow, at eleven precisely, telegraph me in as few words as possible what Longley says. It's a serious matter to intrust to the care of a boy of fifteen, but in your mother's absence it seems the best thing to do, and I've generally found you pretty trustworthy. Now, Gerald, be very careful in this matter, for it means six or seven thousand dollars to me."

"I'll do my best, sir," answered Gerald, much impressed.

"You'll have to telegraph to Cranston," went on Mr. Scott. "That is the first place I am sure of, where the message can meet me. I shall be at the Central Station at eleven, Eastern time, ready for your message."

Gerald wrote down his directions in a notebook, and then the two went in to their breakfast.

Mr. Scott's law office was in the city of Hillsbury, but he lived at Pine Ridge, an attractive suburb. His house was on the outskirts of the place, set back from the street, with a broad slope of lawn in front. It was about three quarters of a mile from the post office, which was in the little railway station.

When Gerald started for the mail the sky was gray and the air chilly. "Feels like snow," he said to himself, as he buried his hands in the pockets of his reefer.

The ten-thirty train was just puffing away as the boy entered the station, and so he had to wait while the old postmaster laboriously sorted the mail. At last Gerald got his letters. There was a considerable package of them—some for his mother, some for Aunt Helen, one for himself and one for his father.

Gerald felt very important as he scanned the bold writing on the envelope of the letter to his father. The other letters he buttoned inside his jacket, but he carefully stowed his

WITH HIS HEART THUMPING HE TOOK THE JACKET FROM ITS HOOK, SEARCHED IT, SHOOK IT—BUT NO LETTER

father's into a deep outside pocket, where he could constantly feel it with his mittened hand. He ran most of the way home.

When he reached the stone posts that marked the entrance to his father's yard, he stopped, breathless. Miss Dole, a pretty neighbor, rosy in her furs, passed him. Afterwards Gerald remembered that as he took his hand from his pocket to raise his cap he felt the letter crackle.

Just at that moment Jupiter, his big St. Bernard, came bounding to meet him. "Good old dog!" called Gerald. And the great creature sprang upon him and rolled him over in the snow.

"Want a frolic? Well, old boy, here's for it!" And over and over tumbled Gerald and the dog.

Then came a race across the lawn. Jupiter, frantic with delight, leaped and barked. In the midst of the romp Gerald heard some one call his name from the house.

"Gerry, O Gerry, come in quick!"

"Down, down, Juve!" commanded Gerald, trying to quiet the dog as he ran to the house.

His sister, Florence, stood in the open doorway and shivered in the cold wind. "O Gerry, I'm so glad you've come!" she exclaimed. "You had just got out of sight when mother telephoned that Aunt Mary is worse. She wants you to drive right over and bring Aunt Helen and a lot of things, which I've packed

in a big basket all ready for you. Jackson is harnessing, and you had better start right off."

"It'll be an awfully cold drive," said Gerald. "I wish we could go by train."

"You know there's only one train up that stops there, and that's gone long ago."

"All right. Here's the mail!"

Gerald ran to his room, took off his reefer and hung it in his closet. Then he put on a long, heavy ulster and a thick cap, which drew down over his ears. As he was tucking Aunt Helen into the sleigh with the soft fur rugs, he thought with a start of the letter.

"It's as safe in my reefer pocket as it would be anywhere," he said to himself.

Aunt Mary lived in Berkeley, eight miles away. She was ill, and for the last three days Mrs. Scott had been with her.

The wind blew cold in the travelers' faces, and they had not gone far before snow began to fall. Faster and faster the flakes drifted down; by the time Gerald and his aunt had reached Berkeley a blizzard had begun in earnest.

Gerald did not reach home until late that evening. He had found Aunt Mary better, and except for the blizzard he would have been free to start for home at once; but the drifts were piling up so fast that his mother would not let him drive back, and so he had had to wait for the eight-o'clock train. Aunt Helen stayed in Berkeley with his mother.

He was drowsy when he got home after his day of travel, and went to bed at once.

"I couldn't read that letter to-night if I were paid for it," he said to himself as he sleepily undressed. "And as for making any sense out of it —"

All night the storm raged and roared round the house, and the snow came thick and fast. Toward morning the wind changed and blew all the clouds away, leaving a clear, blue sky and a white, sparkling world.

When he was dressed, Gerald went to his window. "What drifts!" he exclaimed.

"That means some shoveling for Jackson and me! I had better see to that letter the first thing."

He went to his closet and put his hand into his reefer pocket. The letter was not there!

With his heart thumping he took the jacket from its hook, searched it, shook it—but no letter. He carefully examined the closet and then the room. Still he found no letter.

Then the breakfast bell rang; it was a pale, frightened boy that greeted his sister in the dining room.

"Why, Gerry! Are you sick?" she exclaimed.

"Florence, has anyone been in my room since yesterday noon?"

"Not a soul, Gerry. Why?"

Gerald told her about the letter.

"You must have dropped it on your way from the station," said Florence.

Gerald thought for a moment with knitted brows. "I remember feeling it crackle when I spoke to Miss Dole. I must have drawn it partly out of my pocket then, and in that frolic with Jupiter it fell out."

"Then it's somewhere in the yard," said Florence.

"Yes—and under what!" responded Gerald in despair.

They both went to the window. It did indeed seem hopeless to think of finding anything under that weight of snow.

"Well, it can't be helped now," said Florence. "Come, eat your breakfast."

"Do you suppose I can think of breakfast now! Why, Florence, that letter is worth thousands of dollars! Besides, it is a trust to me. Oh, if I had only seen to it immediately!" And Gerald groaned. "There's only one thing for it. I've got to shovel that whole lawn over. Where's Jackson?"

"Why, you know he's gone to Berkeley to get the horse and sleigh!"

"I forgot. Then I've got to do it alone, and do it before eleven o'clock, too! It'll be a close thing. I mustn't waste a minute."

He stepped into the hall, but Florence ran after him. "Now, Gerald, be sensible! You certainly can't work without eating—you would give right out. The time you spend over a good breakfast won't be wasted."

"You're right," said Gerald.

The hot meal put new life into him, and when at last he started out in his heavy sweater and warm woolen cap he was hopeful.

"I'll shovel out the driveway first," he said to himself. "Perhaps the letter dropped out at the entrance."

The work was especially hard, for he had to examine each shovelful of snow that he took from near the ground. He made his way slowly and laboriously down the long driveway and cleared a wide space about the posts, but no letter rewarded his efforts.

"Now I shall have to go by guesswork!" he

said with a sigh, as he looked over the broad expanse of lawn, which had never seemed so vast as it did now.

He found as nearly as possible the place where he had frolicked with Jupiter, and marked out with his eye the course of their dash across the lawn. Then he began to shovel.

His arms ached and his back seemed ready to break; his feet were wet and cold. Serious doubts presented themselves to his anxious mind. Suppose that Jupiter had found the letter and carried it off, or even chewed it up? Perhaps the wind had blown the letter away where it would never be found.

Gerald set his teeth hard and worked on. He was doing all he could, and he must do it to the end. Florence, all bundled up, came out to encourage him and to beseech him to take a few moments' rest. But Gerald would not listen to any such appeal.

"I can't stop one moment," he said. "It's after ten o'clock now."

His sister went back to the house and soon returned with a steaming cup of coffee, which warmed and cheered the boy.

But his task was a hard one. It seemed that his weary arms could not lift another shovelful. The bright light on the snow made him feel sick and dizzy. Some of his comrades went by and shouted to him to join them. Gerald shook his head without speaking.

"You've a queer notion of fun if that's what you are cleaning off that lawn for!" called one boy.

Gerald looked at his watch. Half past ten o'clock! He worked on. The quarter sounded from the church tower in the village. When he heard it he flung down his shovel in a fit of despair.

"It's no use!" he exclaimed. "How shall I ever tell father?"

His eye fell on a chestnut tree near by, and he suddenly remembered that Jupiter had thrown him against the trunk of it. He took up his shovel again.

"It's no good!" he muttered hopelessly. "But I'll go round that tree just once, and then I'll have to go and telegraph father that I've lost his letter!"

As he was scraping about the roots in a half-hearted way, a glimpse of something red made him stoop quickly. It certainly was a postage stamp, bright against its white background.

With trembling fingers he brushed away the loose snow that hid the envelope. It was the lost letter!

Gerald could hardly believe his eyes. After his long, fruitless search the envelope seemed a delusion of his weary brain. But there it was, uninjured by its packing in the dry snow, held safe by the root of the tree until the fortunate stroke of his shovel had brought it into view. Gerald recognized the bold, dashing hand of the address.

There was no time to lose. It was a few minutes of eleven. Grasping the letter tight, as if he were afraid it might again vanish, he rushed into the house.

"I have it!" he shouted to Florence, who clapped her hands with delight.

Gerald threw himself down into a chair by the library table and tore open the envelope.

COURTESY OF THE AMERICAN-SCANDINAVIAN REVIEW

AN ICELANDIC FARM

A slip of paper and a card fell out. The paper was typewritten and read as follows:

Hillsbury, December 29, 1896.

Mr. E. G. Scott.

Dear Sir. Having put upon the market a new commodity that we think deserves notice, we have the pleasure of sending to our patrons the inclosed card as a special inducement to purchase.

Yours most respectfully,

L. H. Sibley,

Retail Grocer

2 Lawson Block.

The card told its own story in fancy lettering:

Save the Tin Tags! Every half-pound package contains one. This card, with ten tin tags attached, entitles the holder to one-half pound of Taylor's Tasty Tea!

The strain had been too great. Utterly overcome, Gerald laid his head down upon the table and wept for very wrath and weariness.

That night Gerald received a post card from his father:

Dear Gerald. This is only a hasty line to let you know that I found my important letter at the post office on my way to the train. It had come by the midnight mail. So you need not be troubled in any way about it. Love to all. Father.

REYKJAVIK—THE TOWN OF TIN HOUSES

THE WONDERS OF ICELAND

By H. de Vere Stacpoole, *Author of The Blue Lagoon*

WE had left Leith Harbor in rain, but the clouds cleared away before we got abreast of Peterhead, and as we rounded the north coast of Scotland we steamed into a world of sunlight and calm summer sea.

On the evening of the fourth day out of Leith I was standing in the bow when the first officer came up to me and, pointing straight ahead, said, "That's Iceland."

He was pointing to what at first seemed a trace of cloud in the blue of the evening sky, a gray pavilion sketched above the haze. It was Vatna Jökull,—the great ice dome, chief of all the Icelandic mountains,—signaling his magnificence to us across eighty miles of sea. But he was not the first sign of land that we had seen. At noon that day a white tern had crossed our bows, and a burgomaster gull had come to inspect us; coveys of puffin had dived before the advancing ship; great gannets, crying as they fished, had followed us.

A STRANGE AND MYSTERIOUS PORT

THAT is your first impression of Iceland—a vision of ice in the sky and a vision of bird life that you can get nowhere else in the world. The next day, as you steam along that tremendous south coast, that petrified lava storm, where the hills, valleys and crags show scarcely a sign of life or movement, you get your second impression.

At nine o'clock in the evening we rounded the southwest cape, entered the vast Faxa Fjord and headed straight for Reykjavik. Daylight was still broad on the world, gulls followed us like a snowstorm, and we could see Snaefell cutting the sky with his twin cones eighty miles distant across the tremendous bay.

I have landed at many ports in the world, but I have never landed at a stranger or more mysterious port than Reykjavik. It was almost midnight, yet the light was the light of afternoon; the landing stage was crowded with people who had come down to welcome the ship, yet from all that crowd there came not a sound.

They moved aside to let us pass, but they said nothing.

The men seemed of the ordinary Danish type, but the women, all wearing the national dress, were a type apart. The Icelandic woman rarely smiles; her expression is mournful, resigned, yet uplifted; you might fancy that yesterday some great national hero had met with a tragic death and that she was mourning him.

Above all lands, Iceland is the place of surprises, and halfway up the street on the way to the hotel we met our first surprise—a Boy Scout. An elephant would not have seemed more out of keeping with the volcanic hills, the

corrugated iron houses, and the midnight day of that strange land. The day that we spent in Reykjavik before we left for Thingvalla and the geysers was a veritable packet of surprises; and the town itself, when closely examined, was the greatest surprise of all.

At first glance Reykjavik seems merely a town of tin houses set on the sea edge of a lava plain, with a weird range of volcanic mountains behind it. In the old days, when the nine cones that you can count on the sky line were all ablaze and answering to the flame of Snaefell across the bay, when the saurian fought the saurian on the black volcanic beach, the plain of Reykjavik must have presented a picture that the imagination may only reconstruct in part. But even to-day, when you approach Iceland from the sea, the country is desolate enough to make Reykjavik seem like a lonely city of the wilderness. What manner of people can possibly live there? you ask yourself. How, in the long winter evenings, do they amuse themselves, and how in the midst of that desolation do they exist?

A day in Reykjavik answers all those questions, and gives you, moreover, a picture of high civilization. That town of tin houses is in reality a highly organized little city. When you stand at the post office and look up at the countless telegraph wires, you can almost imagine yourself in a large American city. The telephone links the metropolis with seacoast towns and with nearly every hamlet in the land.

You meet a man reading a newspaper—it is the Vizir; you meet another man reading a newspaper—it is the Isafold; a newsboy pursues you with the Fjallkon; you buy a box of matches, and the man wraps it up for you in a sheet of yesterday's Ingolfur; you step out of the shop and you are asked to buy a woman-suffrage newspaper—the Kvinnabla.

I had come away from London to escape politics, among other things. The first place I was taken to in Reykjavik was the Parliament House—a stone building situated in the public square. Parliament was in session, and a man was addressing it whom, had he not

been speaking Icelandic, I might have mistaken for an Irish member of our House of Commons. There I met a local author of repute, who took me the next day to the theatre to see a play by a local dramatist. He also introduced me to an artist, who sold me a picture; then I remembered that Thorvaldsen was an Icelander.

The author took me for a walk and pointed out various men who to look at were fishermen but who in reality were poets. Through him I came to know that nearly every Icelander is a poet, and that this town by the Icelandic sea is a town of wonders, a centre of high civilization, a home of pure ideals, of hospitality, of simplicity in its best form, of kindness, and of the three arts.

Then, taking me by the arm, the author led me into the restaurant of Zoëgas Hotel. It was the full tourist season, and the place was crowded. It was a revelation of the call that Iceland makes to Europe. Here was an English lord, out for the salmon fishing; a professor of Vienna University, come to see the geysers; two Swiss guides, come for a mountaineering expedition with Baron X of Berlin; Spaniards, Italians, Swedes, Norwegians, Germans, a Dutchman, three Englishmen and an Irishman (myself).

And then presently loomed up before me a composite man—a person so quaint and strange that he must have a line to himself—an Icelandic-American; an Icelander with an American accent and American progressive ideas, yet all the time an Icelander. He is the only man I have ever met who, having lived twenty years on American soil, has retained his original nationality.

BATTLE GROUND AND COUNSEL GROUND

TWO days later I started for the wilds on a pony, with a guide on another pony, and followed by half a dozen pack ponies carrying provisions, tents, cooking gear and fishing rods. And those wilds gave me a view of the mould in which the indestructible Icelandic character is cast. We did not bring any lamps or candles; we rode into endless daylight across the bridge that spans the Elethaar River.

The road we took leads to Thingvalla. It is the only road of any account in Iceland, and it stretches across thirty miles of bleak plateau, where the melancholy cry of the wimbrel pursues you all the way, and where the great Icelandic ravens keep watch. It led us to a jumping-off place, where the plateau broke away and fell to a vast plain; the silent mountains that surrounded the plain looked down upon a lake, strewn with islands and still as

the lake of memory. It was the plain of the lake of Thingvalla—the centre and stage of all Icelandic history and legend.

Down there Njal was burned, Njal could leap his own height with all his gear and as far backwards as forward. Those mountains saw Snorri and Hrore the skald, and they seem to see still. That is the secret of the tremendous influence that the place has on the mind of the observer. The battle ground and counsel ground, where men took counsel or fought with axes in the time of Norman William lies there untouched. The stage is still for the players; they have not departed, they hide everywhere to the fancy, their shouting fills the silence.

Down below, following the broken path that leads to the plain, we crossed a bridge under which flows the Oxara River.

"Look here," said the guide, and pointed to a dark pool that, although it drew its water from the rushing river, showed scarcely a ripple on its dark face, "this is the drowning place where women were drowned in years gone by. Many women were drowned. It is deep."

It was deep. And as I gazed down into the obscurity it seemed as deep and dark as the mysterious history of the land that holds it.

"And here," said the guide, pausing on the bridge, "was once fixed the Blood Stone, which criminals' backs were broken in years gone by. Many convicts were killed here, but the stone is gone, no man knows where."

Striking across the plain we came to a summer hotel—a tiny building with a veranda. On the way to it we left the little church and

THINGVALLA. WHERE THE OLD ICELANDIC OPEN-AIR COUNCILS WERE HELD

parsonage on our left. The parson, in shirt sleeves, was making hay in the paddock of the parsonage.

Magnússon, the Icelandic scholar of Cambridge in England, once told me that the plain of Thingvalla is the top of a vast lava bubble that rose slowly in the days when the world was made and that, failing to burst, sank and formed that vast level. If that is so, the creation of the plain of Thingvalla was a prophecy of the Icelandic nation—that strange bubble of humanity which in prehistoric days rose toward heaven with sound and fury, and which, cooling and solidifying to a level desolation, strewn with the evidence of past power, wild flowers of thought and with the poetry that clings to the remnants of all great deeds.

THE EVIL GEYSER

THE plain of Thingvalla is strewn with wild flowers. So is all Iceland. You find them on the most barren hillsides, the plains and at the feet of the unclimbed ice jökulls.

There is one thing in Iceland that tries soul more than lame ponies, endless deserts, food that is only an apology for English food—that eternal daylight of summer which pursues you even when you sleep. A friend told me that, while he was prospecting along the glittering Lang Jökull, the daylight rode him like a nightmare and became at last unendurable. I can quite believe him. I had a full experience of it in the little hotel at Thingvalla, where my dreams were haunted by the patient daylight that stared in at through the curtained window.

The Great Geyser is the king of all Icelandic sights, when he is to be seen. Even when he refuses to show himself you can feel his presence just as you can feel the presence of a tiger in the jungle. The Great Geyser has an evil personality; he sulks and hides, and the only indication of his furious temper is the working of water in the pool where he makes his home. The pool is banked by low, dark, dead leaves; it lies in a desolate as the landscape.

We determined to make the most of the opportunity. The Geyser is the king of all Icelandic sights, when he is to be seen. Even when he refuses to show himself you can feel his presence just as you can feel the presence of a tiger in the jungle. The Great Geyser has an evil personality; he sulks and hides, and the only indication of his furious temper is the working of water in the pool where he makes his home. The pool is banked by low, dark, dead leaves; it lies in a desolate as the landscape.

the water of the pool domed up; the dome burst, and with a roar that resounded from the hills the Great Geyser sprang to life. The earth shook with his coming, and he leaped a hundred feet high almost in a bound. There in clouds of steam he stood for one terrible moment, struggling like a maniac tangled in a sheet, sank, rose, sank again, and vanished. The steam clouds rolled away on the wind, and the plain and the sky and the hills resumed their sinister calm. The geyser frightens you. Such an outburst of fury and strength in that desolate region disturbs the mind of the on-looker. To the imagination there is something evil in the whole business.

This touch of the weird and the vaguely wicked is not confined to the geyser basin. As we pushed onward under the hot summer sun of the following days, the basalt valleys showed us things that were untempestuous, yet disquieting and not good to live among. For one thing, the basalt has this peculiarity: the longitudinal and vertical splits in it are so evenly placed that the valley walls seem built by the hands of giants. You come across fortifications, towers and battlements among which the heat-shaken air produces strange effects. At times hounds in full cry seem to be running along the sky ridges and the far mountains appear to undulate and swell and sink, like a troop of giant horsemen cloaked and riding rapidly. I have been told that to live long out there among those things disturbs the mind, and produces a depression and nervous dread that makes it absolutely necessary to leave.

And what a relief it is to break from that perpetual domination of the mountains and valleys and to see the blessed sea again, as we saw it when we struck the Breidi Fjord,—the Broad Bay, to give it its English name,—blue

and island-studded and stretching from Sandur Point to far-off Breidavik! If you take a map of Iceland you will see the Breidi Fjord, lying just north of the Faxa Fjord, but you will not see its wonders. The Icelanders declare that the islands of this bay cannot be numbered; and I almost believe them.

The Breidi Fjord is the paradise of the northern birds. If you go out on it in a sailing boat you will find the days too short to exhaust the marvels of the bird life. In the nesting season you will see on the rocks the puffins, the razorbills, the kittiwakes, the auks, and the long battalions of the guillemots in their white and black plumage. The kittiwakes always build highest; in the rock holes below them the puffins hide, and below the puffins the guillemots nest. At Grimsey you will see the swarming kittiwakes darkening the sun, and the great bird city north of Sylt is one of the wonders of the world. But neither at Grimsey nor at Sylt will you see such various bird life as in the island-strewn Breidi Fjord.

There you will find the great burgomaster gulls and the skuas—true overlords and pirates of the air. You will see the gannets flying in long strings and hear their monotonous “Clak-clak-clak!” mingled with the “Get away—get away!” of the kittiwakes and the melancholy calls of the oyster catcher. Those are the only sounds that rise above the tune of the wind and the sea; and then out there you will meet, perhaps, the Icelandic fog—of all fogs the most treacherous and of all dangers the worst.

We came back by a coasting steamer to Reykjavik, and two days later we were steaming for Leith, and Vatna Jökull was again a gray pavilion in the sky, a vast temple built by the ice spirit above the strangest land I have ever seen.

hired a horse and carriage and drove to Bethel. It was long after dark when he reached the house. His mother met him at the door. Behind her smile of welcome he could see the shadow of anxiety and fear.

“I’ve had the doctor here,” she said, “and he left some powders to quiet him. I’ve given him two of them, and he’s asleep now. He hasn’t slept for two days and nights, and he hasn’t eaten. Yesterday he walked the floor till he was tired out, and then he seemed to collapse, and ever since that he’s been in his chair there in the sitting room. When he talks at all it’s about—you know—the trouble. I’m so glad you’ve come!”

Weak from weariness and anxiety, she sat down by the table and, burying her face in her arms, wept. It was the first time in years that Ralph had seen his mother cry. Her heart had always been the stoutest among them. He went and sat down beside her and tried to comfort her, and in a few moments she lifted her face, wiped the tears from her eyes, and was once more her old, resolute self.

When they heard Orchard stirring in his chair, they went into the sitting room.

“Here’s Ralph, father,” said Mrs. Orchard. “I wrote him that you were not very well, and he has come up to see you.”

There was a puzzled look in the man’s eyes, and for a moment he did not seem to understand. Then his face lighted with recognition and he held out his hand.

“I’m glad you’re here, Ralph,” he said. “They gave me some powders, and I couldn’t see very well at first. You’re in time for the wreck. It’s coming pretty soon now.”

“Oh, there’ll be no wreck, father!” replied Ralph reassuringly. “I’ll look out for that.”

“You don’t know how bad it is, my boy. Here I am, helpless. Your mother and Ada doing all the work on the place. No one to do any chores. It’s terrible!”

“You forget, father,” interrupted Mrs. Orchard. “We have Old Tompkins to feed the stock and do the chores.”

“Old Tompkins! What does he amount to? A babe in arms could do as much as he can.”

“Well,” Ralph said encouragingly, “I’ve

Why he should have become so deeply interested in the fortunes of this family, living with scanty means on the little farm up among the Bethel hills, he could not say himself. He was a bachelor, and his affections had not hitherto been centred. Somehow Ralph, with his boyish enthusiasm, frankness and sincerity, had from the first taken hold of his deeper nature. And it was perhaps natural that, having become interested in Ralph, he should become equally interested in the other members of the family at Bethel that the boy loved.

When two days had gone by without further word from Ralph, Oakford grew anxious. On the third day he could stand the suspense no longer, and late in the afternoon he ordered his mare saddled and brought to the door. Leaping on her back, he went pounding along the road that led toward Bethel. It was sunset when he reached the Orchard home. Ralph was standing on the porch, and when he saw who it was that was tying his horse to the hitching post he went down to welcome him.

“I wanted to learn about your father at first hand,” said Oakford. “How is he?”

Ralph described, as well as he was able, the nature and extent of his father’s illness.

“One thing,” Ralph added, “seems to be on his mind night and day. It’s kind of taken possession of him.”

“What thing is that?”

“Why, his inability to send me to college on account of Mr. Brill’s claim to the property.”

“I see. What does the doctor say?”

“Not much. Only that we must keep him quiet and free from excitement, and let the thing wear itself out. I think the doctor’s coming now.”

Shading his eyes with his hand he looked up the road.

“I’ll sit on the bench under the trees here,” said Oakford, “and when the doctor comes out I want to have a talk with him.”

Dr. Burnside tied his horse to a fence rail, since the one hitching post was in use; then, taking his medicine case from under the seat of his buggy and casting a glance at the stranger seated under the trees, he went into the house. When he came out, fifteen minutes

later, Ralph accompanied him; after introducing him to Oakford, the boy left the two men together; but there was not much that the doctor could add to the account Ralph had already given of the case.

“His inability to send his son to college is preying terribly on his mind,” said Dr. Burnside. “As a rule the mental obsession in these cases is symptomatic only. In Orchard’s case I am inclined to think it is causative. If we could relieve his mind from this particular pressure, I believe he would get well.”

“In other words, if the fact that his son has been prevented from going to college brought on his illness, then the fact that his son can and will go to college will cure him?”

“Exactly. That would do more for him than all the medicine I could dose him with.”

“Ralph informs me that you have directed that the patient be kept quiet and wholly free from excitement?”

“Yes, I think that is advisable.”

“Suppose the excitement were owing to favorable news?”

“That would be different; it might be the best thing that could happen to him.”

“Will you wait here a few minutes till I can have a little talk with Ralph and his mother?”

“Yes. I’ve been driving pretty much all day, and I want to take a little rest before I go back to Little Bethel.”

Oakford beckoned to Ralph, who was waiting on the porch, and the boy came quickly to where the two men were.

“Ralph,” said the surveyor, “how much have you saved in the last two years?”

The question was so abrupt and unexpected that for a moment Ralph hesitated; then he replied frankly:

“Between four and five hundred dollars.”

“I want you to take that money and go to college next fall.”

“But,” Ralph answered hesitatingly, “I was going to use part of that, the greater part, in repairing the house here, if father succeeds in holding the title.”

“He may not succeed. If he does, the money will do him more good put into your education than put into his house.”

“But, Mr. Oakford, I—”

“No buts or ifs. I’ve thought it all over and I’ve made up my mind. You’re to enter

NORTH FORTY EAST

By Homer Greene

In Ten Chapters Chapter Five

ON the second day after the unsuccessful survey of the division line, Stanley Orchard went to Mooresville to consult a lawyer. Oakford took him to Allen Jackson, a prominent lawyer, who had had much experience in litigation over disputed land lines.

“I don’t see how any surveyor with nothing except the deed before him,” Jackson said, after he had asked them many questions about the case, “could do anything else than run that division line at right angles to the warranty line. The only thing that will sustain Orchard’s title is evidence outside of and contradictory to his deed. Who were present when this line was established?”

“No one,” replied Orchard, “except Brill and me and Owens and Old Tompkins.”

“What does Old Tompkins know?”

“Nothing. If he did he couldn’t tell it, and if he could tell it he wouldn’t.”

The lawyer laughed. “That bars him out. I don’t see what you have left except your own evidence and the cross in the rock. It’s a bad case.”

“But I built my house on this property and I’ve lived there for nearly eighteen years.”

“That isn’t long enough to give you title under the statute. You see the trouble is that Brill can stand on his deed, and on a survey made in accordance with it. You’ve got to prove your title, if you prove it at all, in derogation of your deed. That isn’t an easy thing to do, especially when you yourself are the only available witness.”

“I suppose that’s right,” Orchard said wearily. “Well, what’s the best thing to do?”

“Why, I’d wait and let Brill bring his action in ejectment. He’ll have to do it within two years to avoid the running of the statute. Of course we could bring an action under our Act of Assembly, which provides that the party in possession may begin proceedings to settle a disputed title. Or we could go into a court of equity and ask for the reformation of the deed. But my advice is to wait and let Brill bring his action in ejectment.”

“All right. Meanwhile I suppose I can’t mortgage the property?”

“No. The bank wouldn’t lend you money at that kind of security.”

Orchard rose slowly to his feet. His face was pale, and he had a tired look in them, and his hands trembled.

“For that old notebook,” he said in parting, “I’ll give you your own.”

Orchard nodded and dashed. When they were alone, the lawyer guessed the outcome of the visit.

There’s a certain mood about the man

ever lost his hopeful spirit. The boy was worried.

“Don’t give up, father,” he said. “The thing isn’t settled yet, and there’s always a chance.”

Orchard paid little attention to any words of encouragement.

“Do you remember,” he asked, “when Adam pointed toward the poor-house over the hill that day and hinted that it was waiting for me? Well, I’m headed for it, straight.”

Ralph laughed a little in an effort to reassure his father, but Stanley Orchard continued:

“I wouldn’t so much mind bein’ robbed myself, if it weren’t robbin’ you at the same time. If we could have got you through college the same as his boy, I wouldn’t have cared. He might have smashed me after that. It would have been all the same.”

“Now, father, don’t you worry about that. Don’t! I’m well off here. I’m earning money. Some day, perhaps, I’ll go to college in spite of Adam Brill.”

But Orchard did worry—not openly or aggressively, but silently and despondently. He returned to Bethel and went about his accustomed tasks; but he had lost his buoyancy of body and mind. His disappointment sank deeper and deeper into his heart and dominated his thought. There was nothing that he could do. Brill was silent. And his silence and inactivity made the situation still more harassing. He was too shrewd to take immediate action, for action had its risks; he was playing a waiting game.

Orchard’s farm had never served him better than it did that season. The hay crop, which he had harvested before the drought became severe, was rich and abundant. The field and garden products had never been equalled. The fruit trees were laden. Winter found the family provided with means to satisfy every want so far as food, shelter and clothing were concerned. But Stanley Orchard became more and more despondent. He seldom went abroad; instead he hugged his hearth or paced his floor and waited for the catastrophe. When he talked at all it was about his trouble.

One evening late in the spring, when Ralph returned to the office from a day in the field, he found a letter from his mother asking him to come home. His father was ill.

Ralph scribbled a hasty note to Mr. Oakford, and, without waiting to eat his supper,

DRAWN BY S. J. ROSENMEYER

“I WANT YOU TO TAKE THAT MONEY AND GO TO COLLEGE NEXT FALL.”

come to stay a few days with you and look after things till you get round.”

“Just so! Just so! While Adam Brill’s son is at college, getting the benefit of an education, my son’s doing the chores on a thirty-acre farm! It’s an outrage, Ralph. It’s an outrage! I can’t stand it!”

He had started forward in his chair; his eyes were strained, his face had become tense, and his breast heaved with emotion.

Mrs. Orchard went up to him and began to smooth the damp hair back from his forehead. “There, father!” she said soothingly. “Never mind! Things are never quite so bad as they appear to us when we’re sick.”

He was soon calmed, and by and by, under the influence of the opiate, he again fell asleep. Ralph’s presence in the house obviously comforted him. There was no marked improvement in his condition as the night wore on, but even in the midst of his distress he seemed to find satisfaction in having his boy near him.

Oakford was worried by the news of Stanley Orchard’s illness in Ralph’s hasty note. He had not failed to notice the change in the man when he had seen him from time to time.

the engineering school at the university this coming fall. You'll have money enough to carry you through the first year. I'll see that you get enough more to complete the course."

Again the boy thought quickly before replying. The proposal, coming so suddenly, so unexpectedly, confused him.

"I couldn't let you do that. You've done too much for us already. I shouldn't feel —"

Here the doctor interrupted: "Don't turn down that offer, Ralph. I see what Mr. Oakford has in mind. He intends not only to benefit you but to save your father to his family. Don't hesitate. Don't!"

But Ralph did hesitate. He could not grasp the meaning of it as readily as the doctor did. He looked slowly from one man to the other. What he saw in their eyes decided him.

"I will do as you say," he replied.

"Good!" exclaimed Oakford. "Now tell your mother that I want to see her for a minute."

Ralph went to call his mother, and when she appeared on the porch the surveyor went to meet her.

"You're so kind to come to see us in our trouble," she said as she descended the steps. "Ralph says you wish to speak to me."

"Yes. Dr. Burnside and I have decided that your son must go to college this fall."

"Quite right, Mrs. Orchard," said the doctor, who had come up. "It is Mr. Oakford's prescription, and I have heartily indorsed it."

She looked wonderingly at the two men, and Oakford hastened to explain. He told her of the effect the news would probably have upon her husband.

"It's no new plan on my part," he declared. "I've been contemplating the thing for a long time. I am simply putting it into effect sooner than I would otherwise have done."

What could she do except yield to their persuasions? It was all so reasonable, so generous, so heaven sent.

"So far, so good," said Oakford. "Now let's go in and see Stanley."

Orchard was in the sitting room. He was still bolstered up in his easy-chair. He refused to lie down lest he should never again be able to rise. Ada had brought in the lighted lamp and put it on the table in the middle of the room. Shadows fell across the sick man's face and lay heavily on his closed eyes. When Mrs. Orchard and the surveyor entered, he looked up wearily.

"Father," said Mrs. Orchard, trying to control her voice, "Mr. Oakford has come to see you."

He recognized his visitor in a moment, and held out a limp hand in greeting.

"I'm sorry you're feeling so miserable," said Oakford. "What seems to be the matter? Tell me exactly, can't you, just what the trouble is?"

"Trouble!" echoed Orchard. "It ain't trouble, Mr. Oakford, it's agony. I can stand trouble. I've stood lots of it. But when it comes to robbin' my boy of his education, the way Adam Brill's done it, that's killing me, Mr. Oakford, that's killing me."

His voice trembled and broke, and ready tears filled his eyes.

"That's nonsense, Orchard. Adam Brill has no power to prevent your son from going to college."

"But he's done it. He's done it."

"Then he shall do it no longer. Ralph is going to college this fall."

"What? What's that?"

The sick man straightened up in his chair and shot a frightened look at Oakford.

"I say Ralph is going to college this fall; it's all settled. He knows it. His mother knows it. Dr. Burnside knows it. And now you know it."

"Where does the money come from?"

"He has enough to carry him through the first year, and some friends of his and yours are going to back him for the rest of the course. It's all settled. You couldn't change that plan if you fought it from now till Christmas!"

"Ralph has friends, I have friends, that'll put my boy on an even footing with Adam Brill's? John Oakford, you're not lying to me?"

"I was never more in earnest in my life."

Orchard was sitting bolt upright now; his hands clenched the arms of the chair on either side. He turned his eager gaze upon his wife.

"Mother!" he cried.

She went to him and knelt on the floor at his side and hid her face in his lap.

A minute later Ralph and Dr. Burnside came into the room and confirmed Oakford's declaration.

"You'd better take another one of those powders to-night, Orchard," the doctor said, looking at his patient's beaming countenance. "To-morrow night you won't need any. You'll sleep without it."

"Mother," said Orchard, after a little, "can I have that piece of chicken I wouldn't eat at dinner time? I'm hungry."

Twelve miles down the river road, in moonlight and shadow, through the marvelous May night, John Oakford rode back to Mooresville. And only once before in his life had his heart been as light and his thought as gay as now, and that, too, was when he had done a good deed to help a fellow man in misfortune.

TO BE CONTINUED.

AFTER THE FLASH

By Albert W. Tolman

"COME on with that spud wrench, Jimmy!"

It was after eleven o'clock on a hot morning in June. The four steel workers—Frank Boutwell, the foreman, Alex Farris, the subforeman, or "pusher," and Con Heath and Jimmy McKay, the "connectors"—stood on a platform of loose planks almost two hundred feet in the air, putting the last bolt into a splice plate. They were framing in the "cage" of tower 84.

Eighty-four, the highest transmission tower of the Eastern Hydroelectric Power Company, stood on a little sandy island in the Androscoggin below Borden's Ferry. The line had been built toward it from each end; when 84 was finished, the system would be complete.

The planks rested on the horizontal cross braces that formed the sides of a six-foot square and that connected the tops of four steel legs one hundred and ninety feet high. At each corner a perpendicular strip of angle iron, twenty feet long, was bolted to the top of the leg by means of a splice plate. To the summit of each strip was fastened a hoisting block, from which two ropes dangled to the ground. From one strip of angle iron fluttered an American flag.

The men worked as unconcerned as if they were on the ground. Their sleeveless jerseys gave free play to their muscular, sun-browned arms. They wore "sneakers"—for leather soles are likely to slip on iron, and a single slip might cost a life. All were strong and active, but Farris, the pusher, stood out among them as a man of unusual strength. He was more than six feet tall and had very long arms; he had once been a sailor.

At last the bolt was in and the nut screwed up tight. The men stopped a minute to rest and cool off. Farris wiped the perspiration from his forehead.

"Whew, but it's hot!" he remarked to Boutwell. "Reminds me of the skysail yard of the old Aryan, when we crossed the line."

Far below, the six members of the ground crew, or "bull gang," were preparing to send up the cross braces that would hold together the four columns just erected. The cage would then be ready to support its three thirty-six-foot horizontal cross arms, each end of which would bear two high-tension wires.

Hitherto the morning had been breathless and the sun bright and hot; but now a mass of black clouds came rolling down the valley, preceded by a strong, cool wind. The foreman looked apprehensively toward them.

"Means trouble for us, I'm afraid; but rain, shine, or blow great guns, we've got to finish this cage before night."

The work was being done under a forfeiture contract that imposed a penalty of twenty-five dollars for every day lost and that carried a bonus of the same amount for every day gained. They were now two days ahead, and wished to hold that advantage, since it meant an extra dollar a day to each man. Besides, a gale might work havoc with the unbraced columns of the cage.

There was some delay below. Meanwhile the thunderclouds, rolling on rapidly, blotted out the sun. Impatiently Boutwell leaned over to look down.

"Lively with that steel!" he cried.

One of the tenders waved his arm and shouted, but his words were drowned in the roar of the wind. The foreman turned to Farris.

"Looks pretty black, doesn't it, Alex? Guess we're in for a drenching; but we'll weather it all right."

"This tower'd make a good lightning rod," remarked the pusher.

"Too good for us, if the lightning strikes it," was Boutwell's reply. "Here it comes!"

With a crash of thunder the storm burst, and almost in a moment the rain was falling in torrents and the wind was blowing furiously.

"Look out for yourselves, boys!" shouted the foreman. "Grab the columns and hang on hard!"

Each man sprang for a corner, clutched an upright, and, planting his feet firmly on the cross braces, held on for his life. The rope ladder, fastened midway of one of the braces and hanging loosely down over the partly completed permanent ladder a few yards below, whipped out in the gale like the tail of a kite.

Everything loose began to go. First a plank that weighed at least fifty pounds flew out from the braces and scaled downward, then a second plank whirled away, and a moment later a block and rope went, with two or three loose bolts and wrenches. Before long the entire platform had gone.

The first thought of the men aloft had been for their fellows on the ground. Farris shouted the familiar warning of the steel worker, "Heads up!" and saw the men below spring to windward, away from the death and destruction raining from above.

Farris glanced round at his mates. The two

HE SLIPPED HIS RIGHT ARM ROUND THE FOREMAN'S BODY . . . AND PULLED IT UPWARD

connectors, Heath and McKay, had stuck the sharp-ended handles of their spud wrenches through the bolt holes in the angle irons above their heads, and had locked their fingers firmly over them.

Boutwell, the foreman, had no wrench. Hugging the column against his body, he was fumbling at his belt. The belt happened to be unusually long, and he evidently intended to buckle it round himself and the iron for additional safety.

The pusher ran his hand along his own belt, but his wrench was gone from its ring. So he pulled out his driftpin, shaped like the stick with which boys play "three-old-cat," and tried to push it through the bolt holes above his head; but the bulging middle of the pin prevented it from going through. Dropping it into his pocket, he hooked his fingers through the bolt holes.

By this time a hurricane was howling round them and the whole tower trembled as if it were about to topple over. Hail began to sting the men's faces and hands. They had no means of protecting themselves, but they bore their punishment doggedly.

Blacker and blacker grew the clouds; nearer and louder rumbled the thunder. Farris caught a momentary glimpse of the bull gang scattering for shelter. Then the ground disappeared in the smother.

Suddenly out of an inky mass close overhead shot a single blinding flash. For a moment the pusher was stunned, paralyzed. His skin prickled with fiery needles. The slippery iron under his hands seemed to burn red-hot. He swayed backward, almost lost his hold, recovered himself, and locked his fingers tighter about the column.

Looking round, Farris saw Heath, opposite him, clinging numbly to his upright. McKay, six feet to the left, was also holding on, apparently unharmed. At that moment Farris saw McKay's eyes fasten on Boutwell's corner. The connector's jaw dropped and a look of horror overspread his face.

"Frank! Frank!" he cried.

As Farris swung about quickly, a sudden chill ran over him. The foreman was insensible. His head drooped on his right shoulder, his face was pale and his eyes were closed. His feet still rested on the cross braces; but his knees bowed out and his body slumped

loosely backward over his belt, like a sack of meal. But it was something else that almost stopped the pusher's breath.

Boutwell's belt, drawn tight against the angle iron, was unbuckled! The lightning had caught him as he was drawing the leather strap through the clasp. Midway in the act he had been struck senseless.

The buckle point pressed hard against the leather. Even as Farris looked it moved slowly. For a second it caught and hung, then slipped again. A little more, and the foreman would topple backward and plunge one hundred and ninety feet straight down to certain death.

Farris heard a rushing; the wind was coming again. A second might seal the foreman's fate.

With a sureness born of experience on slippery spars high above reeling decks, Farris hurled himself straight toward the column from which Boutwell hung. His left foot, in its rubber "sneaker," caught the brace firmly and his left hand closed round the angle iron. He slipped his right arm round the foreman's body under the armpits and pulled it upward.

For a moment his left hand, clinging to the slippery column, was the sole support of two lives. Then with a mighty effort he heaved Boutwell's inert form upright, caught the iron with his other hand, crushed the insensible foreman against it, and held on.

Again the gale was on them with the shriek of a typhoon. From directly overhead came a blaze of lightning, a rattling fusillade of thunder. Gust after gust set the slim columns straining at their splice plates until it did not seem that the thin angle irons could stand the test. They swayed sickeningly, and Farris held his breath. At the top of the column over his head the flag snapped and fluttered.

Half regaining his consciousness, Boutwell began to struggle. He was strong, and Farris had all he could do to hold him. The foreman seemed to be partly crazed by the shock, for as he tried to throw off Farris's arm he muttered:

"Let go—let go—let me alone!"

"Keep quiet, Frank, won't you?" the pusher implored. "You'll have us both off."

But the dazed Boutwell kept on struggling. He surged suddenly against Farris, and the latter's left hand slipped off the column. Fortunately, he regained his grip.

"Hold fast, Alex!"

It was McKay that spoke. Farris knew that the connectors were watching him, but he realized that they could give him no help; he had to stand with one foot on each cross brace, and so there was no room for anyone else at the upright.

Desperately Farris squeezed the foreman's body against the iron in a bear's hug. The sharp edges cut his hands until they bled, but he clung only the harder. Below him he could see the steel framework streaming with water, and dimly through the vapors could make out the ground.

Another flash! Another stunning report! The tower had been struck again.

Farris's hands tingled and forked pains stabbed his body. Dazed and benumbed, he felt his strength ebbing; he could not restrain the struggling foreman much longer. Another flash might bring death to both.

Down swooped a furious blast. The pusher summoned the last remnants of his strength to meet it; after that effort he should have to let go, for he knew he would be able to hold on no longer.

But it was the last effort of the storm. The gale ceased as suddenly as it had come; the rain stopped, the clouds cleared away. On the ground stood the bull gang, with their faces turned anxiously upward. A cheer burst from them as they saw their mates clinging in safety two hundred feet above them.

Gradually Boutwell's senses came back; but he was still weak and shaken from the lightning stroke.

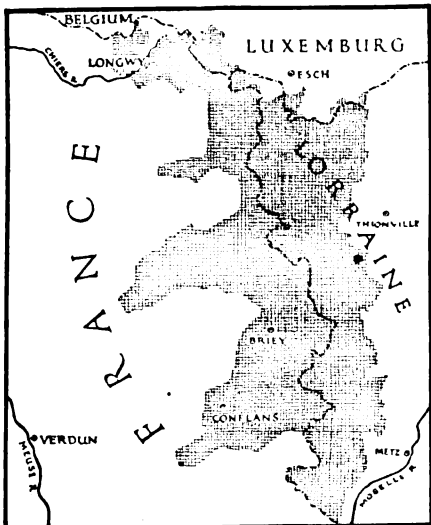

The ropes from the block hung close by. "Here, Jimmy!" said Farris. "Tie a bowline in the end of this rope, will you?"

McKay tied the knot, and they dropped the loop over Boutwell's head and tightened it under his arms.

"Lower away!" shouted the pusher to the tenders below.

Soon Boutwell stood safe on the ground. He was in no condition to do any more work that day, and so another man took his place.

Led by Farris, the gang collected the scattered gear and rebuilt the platform. The next morning they began work bright and early, and by night had completed the tower.

The shaded portion of this map indicates a district rich in iron ore.

FACT AND COMMENT

HE who is made by an opportunity is usually the one who made the opportunity.

Mercy to the Tiger is a sham;
Call it "Being Cruel to the Lamb."

AMAN is ashamed of good actions only when he is where he should be ashamed to be.

THE Lorquin Natural History Club of Los Angeles has placed signs at many points in the mountains of southern California urging that harmless snakes be protected. The signs read, "Do not kill harmless snakes. They destroy disease-bearing rodent pests. The only harmful snakes in California are rattlesnakes." In time we may learn that, like birds, harmless snakes are among the best animal friends the farmer has.

ANOTHER suggestion as to naming the vessels of our growing navy, besides the suggestion that the names of our earliest fighting vessels be revived, is that ships of a certain class be named for famous Indians. There are numerous vessels with Indian names now, but they are named after states and cities; but Powhatan, Pontiac, Tecumseh and Black Hawk are names that would well befit the American navy.

HOW easily people are misled! Because the price of butter is high, the manufacturers of oleomargarine are clamoring to have the tax removed from their product. What they fail to disclose is that the tax on oleomargarine that is not colored to imitate butter is very low. It is only on the product that is made to look as much as possible like real butter that the tax is high, and it was made high for the sole purpose of protecting the consumer from fraud. It is just as well to know both sides.

THE assertion that the \$6150 recently paid for Langwater Dairymaid in North Easton, Massachusetts, was the highest price ever paid for a cow has not been allowed to go unchallenged. Two readers of The Companion have written to tell us of sales at higher prices, and it is not unlikely that there have been other cases. An Iowa friend mentions the two-year-old heifer sold at West Liberty in that state in 1878 or 1879 for \$7200; and another friend in Mississippi reminds us that the Jersey Lady Viola was sold not long ago for \$7000.

IT is suggested by M. Eugene Brieux of the French Academy that the government establish an official marriage agency, to supply eligible young women with husbands after the war. Before the war there were about 200,000 more single men above the age of twenty-five than single women. Now, of course, the women outnumber the men. M. Brieux believes that there would be many more marriages if some wholly trustworthy agency existed to bring young people together. He also makes the interesting suggestion that the dowry be abolished as a national custom. The lack of a marriage portion has always been the great barrier to the matrimonial fopes of Frenchwomen of the middle and lower classes.

LAST month occurred the centenary of the two oldest savings banks in the United States—the Philadelphia Savings Fund Society and the Provident Institutions for Savings in the Town of Boston. From the small beginning of 1816 have grown the 2139 savings banks in the country, with their 10,686,000 depositors and \$4,700,000,000 in deposits. But those figures do not completely represent American thrift, for there are 4,793,670 savings depositors in the national banks, with \$919,731,000 to their credit; 3,400,000 such depositors, with \$300,000,000 to their credit in state banks, and 2,500,000 savings depositors, with \$1,053,000,000 to their credit in the trust companies. Moreover, there are 612,000 depositors in the postal savings system, with \$90,000,000 to their

credit; and the cooperative building associations have 3,000,000 shareholders and assets of \$1,500,000,000.

THE PEACE PROPOSAL

THE Kaiser opened a world of possibilities when he launched his proposal that the belligerents meet and discuss peace. History may never be able to reveal what was uppermost in his mind. Was it a sincere conviction that Germany had reached such a position of supremacy in the field that its enemies must be correspondingly conscious of defeat, and therefore ready to accept what Germany regarded as moderate terms? Or was it that Germany had begun to perceive such a lessening of its own strength as pointed to a rapidly approaching exhaustion, and that he hoped to delude his adversaries by brave words? Between those two extremes there is room for a score of theories, among which one man's guess is as good as another's.

But even if we knew what prompted the notes, we should still be ignorant of what the Kaiser hoped to accomplish by the step. Those who not only suspect but condemn everything that the Kaiser does are convinced that he did not expect his offer to be received anywhere with favor, but that he put it forth solely with the intention of persuading the world that his enemies, by rejecting it, made themselves responsible for prolonging the war. The more common belief is that, although the Kaiser could hardly have hoped for immediate success, he did expect that the idea, even if temporarily rejected, might germinate and fructify hereafter.

Following closely upon the German suggestion came the note of President Wilson asking the belligerent governments to disclose, each for itself, what they would regard as acceptable or debatable terms of peace. The note was received in some quarters with suspicion and even with anger and dismay; in others with varying degrees of sympathy. At the time of writing there is little hope that it will have an immediate effect, or even a remote effect, in bringing the warring nations into conference, and so making nearer the prospect of peace.

Of course the real question is, Can the war end before there is a decisive victory for one or the other side? It seems unlikely. No one of the Entente powers can be pacified by any concession that Germany may offer to other members of the group. Would the Kaiser make any offer concerning Belgium that England would accept, unless his African colonies were returned to him? And what would the British colonies in South Africa say to that? Furthermore, if that matter were arranged, what advantage would it be to Russia? Then, as to Russian Poland—will Germany withdraw its plan, scarcely a month old, to set up a kingdom dependent upon its will in Russian territory; or will Russia consent to a peace as long as that plan stands? There is Serbia, too. Is Austria to be permitted to extinguish the nationality of the Serbs, or must Austria accept defeat on the one point on which it entered the war?

How is the question of Constantinople and the Dardanelles, more difficult now than ever before, to be decided; or is it not to be decided, but left for future wars to decide? What of the claim of Italy to Trent and to Trieste? What of Alsace-Lorraine? What of Montenegro? There is scarcely room for compromise on any one of these questions, and accordingly no "reasonable" basis of peace by agreement.

THE IRON OF LORRAINE

IT is unfortunate for the future peace of Europe that by far the best iron fields that are accessible either to France or to Germany lie exactly on the present frontier of the two countries. A good many Frenchmen believe that the Germans' hope of seizing permanently the part of these fields that lies in French Lorraine was one of the real causes of the present war, and the reason that last winter determined them to attack at Verdun, instead of at some point nearer Paris. Certainly, thoughtful writers, both French and German, discuss the subject very frankly, and point out to their respective countries how fatal the final surrender of any part of this disputed territory would be to the prosperity of their nation.

In this age of machinery a plentiful supply of both coal and iron is essential to any country that hopes to maintain itself as an industrial power; and the last ten years have proved that such a supply is even more necessary in war than in peace. The Germans admit that without the iron of the Metz and

Thionville regions (which they thriftily took from France after the war of 1870) they would have been unable to supply their armies with the incredible quantity of guns and ammunition that modern fighting requires. France has kept up only because the British navy has kept the seas open for the import of iron; its own mines in the basins of Briey and Longwy have been in the hands of the Germans ever since the war began.

Now, neither France nor Germany is rich in iron outside the Lorraine fields. The year before the war France produced nearly 22,000,000 metric tons of iron, and Germany dug more than 28,500,000 tons from its mines. If Lorraine were all French, the figures would have been 43,000,000 tons for France and 7,500,000 tons for Germany. If Lorraine were all German, that country would have had 48,500,000 tons to 2,000,000 tons for France. The figures explain why the two nations will fight to exhaustion rather than surrender any territory that they now hold in Lorraine.

The question of coal is less critical, for the coal fields of the Saar—part of which was French until the fall of Napoleon—are farther from the border, and are not essential to Germany, although they would be very useful to France, which has very little coal of its own, and which has, largely for that reason, seen itself outstripped in the industrial race by Germany.

It begins to appear, however, that neither power is likely to gain any territorial advantage in Lorraine as a result of this war. Peace is likely to leave the frontier still cutting the precious fields of iron very nearly in half. But unless Europe is wise enough to find a way out of its national envies and jealousies, the time may come in the not far distant future when the prize will seem rich enough to one country or the other to justify another war of aggression and conquest.

TWO ARE COMPANY

ALL of us feel the truth of the old proverb, and this in reference not only to that ever-intrusive and superfluous third but to the difference that always exists between the quiet society of you and me and any larger gathering whatsoever.

Really intimate conversation is seldom, if ever, possible with more than two persons. In a general social assemblage we may have brilliant wit and vigorous argument, and intelligence may be stimulated to a higher and a more showy activity than is possible in quiet corners; but the simple, direct interchange of intimate thought, the communication of soul for soul, of one real personal experience for another, hardly takes place when more than two are present.

Women, with their delicate social sense, understand all these things best. Mme. d'Arblay, a woman of world-wide observation, remarks of an acquaintance, "I determined, however, to avoid all tête-à-têtes with him whatsoever, as much as was in my power. How very few people are fit for them, no one living in trios and quartets can imagine."

Mme. d'Arblay is perfectly right. There are people who are created to live with many, people who seem to be warmed and kindled by the presence of a crowd, who glitter and sparkle, overflow with witty retort and pleasant anecdote and song and mirth and laughter. You get those same people by themselves and think what a gold mine of amusement awaits you, and they flat out to nothing, like a burst balloon. Again, there are others, as we all know, who in general society sit quiet and listen, who seem dull and unpromising and socially quite hopeless. If we are left alone with them, we feel at first that a heavy burden has fallen upon our shoulders. Then we find suddenly that they have seen many things and felt many things and can make us see and feel them. They may even give us that greatest of all delights of conversation, the sense that some one else sees and feels and thinks as we do.

Never set a person down as dull until you have tried him alone; and even if the dialogue fails, do not be too sure which is the dull one.

THE NURSERY OF GENIUS

THE late Sir Hiram Maxim and his almost equally well-known brother, Mr. Hudson Maxim, were born each in a little town in Maine so small and inconspicuous that but for its famous son it might never have been heard of. In their young days poverty and privation were frequent visitors and familiar friends. Schooling was scant and inefficient;

toys, if there were any, were homemade, and recreations were personal and individual rather than organized. Yet out of that seemingly hostile environment rose two men who will be classed with the great inventive geniuses.

How did it happen? The newspapers have had more or less to say about it. Some of them are asking whether our little back-country towns are still raising mechanical geniuses. Most of them think not. A professor in Clark University, in Worcester, Massachusetts,—a city rich in great industries and diversified products of inventive brains,—believes that we are losing our mechanical supremacy to Swedes, Germans, Frenchmen, Danes, Italians and Greeks, because we let our sons fritter away too much time in school and college athletics, and allow them to grow up with the idea that selling bonds is a better job than "bossing" a machine shop.

Probably some of the criticism is pertinent, but the most of it fails to go to the root of the matter. The great advantage of boys from "up Sangerville way," where the Maxims were born, is that they have no "advantages." They must do things for themselves, and by doing them they learn. The curse of incipient genius is the mechanical toy. How can you expect a boy to be permanently interested in engines if you give him a toy engine, complete and ready to run, and continue to surfeit his mechanical appetite with motor boats and hook-and-ladder trucks and miniature automobiles? They appeal only to the curiosity, not to the imagination. Give the same boy a brook, and a little lumber, and tools enough to build a dam and a water wheel, and see how he will "go to it"! That gives him a chance to do something with his own hands and his own brain,—a chance to make experiments, exercise his imagination and learn by his mistakes,—and that, say what you please, is the only way in which we ever really learn anything in this world.

There is another phase of the matter that none of the newspapers seem to have noticed: the passing of the mechanical period into what may be called the electrical and chemical period. It would, of course, be absurd to say that all the great inventions have been made, but it is quite just to say that the field is much better covered now than it was when the Maxims were boys. The young men of to-day who go to technical training schools are getting more work in electricity and chemistry and mineralogy than in mechanics, and all three are inexhaustible fields. Perhaps our great inventors of the next generation will find their occupation there rather than at the lathe. Nevertheless, one of the best presents that you can give a real boy is still a good sharp pocketknife.

TO SPREAD FRENCH THOUGHT

OF the various plans announced by the belligerent groups for prolonging the war after the war, the least pernicious is that which the French intellectuals propose, the object of which is to promote in foreign lands a knowledge of French thought and French literature. Before the war Germany industriously carried on an educational propaganda in the United States and elsewhere; France never did. Now the French intellectuals are convinced that it is desirable to undertake such a movement, in order both to combat the further spread of Teutonic influences at the end of the war and to arouse in foreign countries sympathy with the ideals of the Latin races.

An organization called the *Comité du Livre* is to carry out a definitely formulated plan. Branch committees are to be started in foreign countries and to form collectively "an intellectual federation destined to oppose everywhere German predominance." The *Comité* will issue bibliographies of French works and will publish annually three special catalogues: one devoted to children's books, one to works for scholars and students, and one to works for "the man of taste."

For circulation in the United States there is to be prepared a catalogue of more than three thousand titles, and in addition special catalogues are to be published, "in order to combat efficaciously the immense advertisement made of the intellectual production of Germany by the thirty thousand catalogues distributed free each year among the booksellers of the two hemispheres by the aid of the grand commission houses of Leipzig."

Americans will surely welcome the increased facilities for acquiring further knowledge of a people for whom, in consequence of the events of the last three years, they have the deepest sympathy and the highest admiration. They will hope, however, that the end of the war

will mean the birth of a new internationalism, such as M. Romain Rolland, most distinguished of living French authors, is now preaching from his exile in Switzerland, and that the propaganda of one nation as opposed to that of another will then prove superfluous and obsolete.

CURRENT EVENTS

RAILWAY MATTERS.—On December 23 the Federal Board of Arbitration filed a report on the demand of the railway switchmen for improved conditions of labor and of pay. The board awarded an eight-hour day instead of a ten-hour day, gave the men an increase of five cents an hour, and decided that overtime should be paid for *pro rata*.

SHIPPING BOARD.—On December 22 President Wilson appointed the board that is to organize the government shipping corporation authorized by Congress. The five members are William Denman of San Francisco, an admiralty lawyer, Bernard N. Baker of Baltimore, long president of the Atlantic Transport Line, John A. Donald of New York, also an experienced shipping man, John B. White of Kansas City, lumberman and exporter, and Theodore Brent of New Orleans, who has been a railway official.

BERNARD N. BAKER

LAND BANKS.—The farm land banks authorized by the rural credits act are to be established at Springfield, Massachusetts; Baltimore; Columbia, South Carolina; Louisville; New Orleans; St. Louis; Houston, Texas; St. Paul; Omaha; Wichita, Kansas; Spokane, Washington; and Berkeley, California.

THE PEACE NOTES.—President Wilson's note to the warring nations caused widespread discussion all over the world. It was more favorably received in Germany than in France or Great Britain; the public men and the newspapers of the Entente nations generally expressed the opinion that the note was ill-timed, and suspected the President of trying to force the Entente into agreeing to consider the peace proposals of Germany. The neutral nations were on the whole sympathetic with the President's purpose, and both Sweden and the Federal Council of Switzerland dispatched notes to the belligerents seconding President Wilson's appeal for a public statement of the terms on which both parties would consider making peace. —Shortly after the President's note was made public, Secretary Lansing gave out a statement in which he said that our rights as a neutral nation had been persistently violated by both belligerent alliances, and that the President feared that unless peace was made the United States could not help being drawn into the struggle in the protection of those rights. That explanation having led to something very much like a panic in the financial market, he made another statement later in the day, in which he said that the country was not considering any change in its policy of neutrality. —On December 26 the reply of Germany to the President's note was received; it merely repeated that Germany was ready to participate in a peace conference, and evaded Mr. Wilson's request for definite information concerning the basis on which it desired to negotiate.

DANISH WEST INDIES.—On December 21 the Landsting of Denmark agreed to the sale of the three Danish West Indian islands to the United States, and the King signed the bill that authorized the sale on the next day.

MEXICO.—On December 24 Washington learned that Gen. Villa had captured the important city and railway junction of Torreón, and on December 26 he was said to have taken San Luis Potosí. Details of the fighting were lacking. —The Constitutional Congress at Querétaro remained in session. Articles were passed that guarantee the freedom of the press and forbid members of the clergy to teach

in primary schools. —It was announced that Gen. Carranza was unwilling to sign the protocol agreed on by the joint commission without some changes in its form.

IRELAND.—The ministry of Great Britain determined on December 21 to release the five hundred and seventy-six men still held in confinement for participation in the Irish uprising of last summer.

AUSTRIA.—The new premier, Count Clam-Martinitz, declared that he would call the Austrian Parliament, which has not been in session since the war began, and urge closer economic relations between the German Empire and Austria. —Count Czernin von Chudenitz has succeeded Baron Burián as foreign minister of Austria-Hungary.

THE EUROPEAN WAR

(From December 21 to December 27.)

The subject of peace was still the absorbing one in all the European capitals, although it was not so much the German proposals as the letter of President Wilson that was under discussion. None of the Entente nations had sent their replies to Germany when this record closed, but it was understood that all would refuse to enter any secret conference, and would demand that the German government declare publicly what it was willing to offer by way of peace terms.

The weather was unfavorable for active warfare on almost every front, and it was only in the Dobruja that important fighting occurred. There we learned that Mackensen was steadily pushing the Russians backward toward the Danube, and on December 22 Petrograd admitted that the Russian army was being withdrawn across the river. On Christmas Day Berlin announced that the Germans had taken Isakcha, and were attacking the "bridgehead" at Matchin—presumably a pontoon bridgehead, since there is no permanent bridge anywhere along the lower Danube except at Cernavoda.

The importance of this news lies in the fact that if Mackensen can force a passage of the Danube at or near Isakcha, he will then be in the rear of the Russian lines of defense along the Pruth River. If he can cross in sufficient numbers he will have turned the left flank of the twelve-hundred-mile Russian line, and Odessa and the Black Sea provinces of Russia will be threatened. The Germans also broke the Russian defense at Rimmik-Sarat, and threatened the Russian lines along the Sereth River and the important city of Braila.

On the western front and in the Trentino there were only local engagements.

London announced that the British forces in Egypt had surprised and taken El Arish, the base from which Turkish movements against the Suez Canal have been made. A strong Turkish position at Maghdalah, south of El Arish, was also captured. Over a thousand prisoners were taken. That ends all immediate danger to the Suez Canal.

Several British and Norwegian vessels were reported destroyed by German submarines, but there was no word that the crews were lost. Paris reported that the U-45 had been sunk by French destroyers. Berlin declared that the missing French battleship Suffren was sunk by a German submarine.

Gen. Lyautey, the new French minister of war, arrived in Paris from Morocco, where he

has been resident general. The powers that he is to have amount almost to a dictatorship; for the war council has voted that "all questions concerning the preparation and carrying on of the war will be under the direction of the war minister, and that he will notify the interested ministers and generals of the decisions taken."

GEN. LYAUTEY

The British government has forbidden the publication of all shipping reports except casualties; this is to prevent any information concerning the sailing of vessels from reaching the enemy. It was reported that under the plan for nationalizing British shipping the Cunard and White Star boats would sail from Halifax instead of from New York, and be armed with six-inch guns. The sailing lanes are also to be guarded by fast cruisers.

THE HARBOR OF CHARLOTTE AMALIE IN THE DANISH WEST INDIES

ONE YEAR OF THE HUDSON SUPER-SIX

A year ago a stranger—an enigma. A new invention with astounding claims. Now conceded ruler of motordom. It perfected the Six and turned interest back from added cylinders. It showed the way to real efficiency. Holder of all worth while records. Applauded by 25,000 enthusiastic owners. The Largest Selling Front Rank Car.

A Story Unparalleled in Automobile History

Two years ago, with us and with others, the trend was toward motors of the V-type.

We were then the foremost builders of the light weight Six. Its advantages and limitations were fully understood by us.

Its smoothness of operation quickly made the Six the accepted type over Fours. But as the motors were developed limitations were encountered which prevented the realization of engineering ideals.

The problem was approached principally from the standpoint that if added cylinders were adopted, all such limitations would be banished.

For a time it seemed the Six would cease to command the leadership it had maintained.

Just before the New York Automobile Show one year ago, all interest centered in motors of the multi-cylinder type.

But at the Show, the Hudson Super-Six made its debut. Then instantly interest swung to it.

We claimed a new type. The factor which had limited the efficiency of all types—Fours, Sixes, Eights and Twelves—had been discovered and overcome.

A new principle in design had been revealed.

What had been sought by leading engineers for years had been found by Hudson.

The simplicity of the Six could be retained. Motor limitations had been removed. Added cylinders were not needed.

So leadership, because of that, was accorded the Super-Six. The trend to the multi-cylinder was arrested.

Numerous makers gave up their Eight and Twelve cylinder plans.

Let us review the year's developments.

The Super-Six Showed the Way

Hudson engineers approached the problem from a new angle. They solved it with a mathematical principle upon which a basic patent was granted.

By that single invention the most sought for solution to motor car problems, regardless of the number of cylinders, was found.

Greater power was obtained. More flexibility was shown and when the car was tried for endurance it successfully met tests never imposed on motor cars before. These things we think essential to efficiency. They are efficiency. You will see by what the Super-Six has done in winning all worth while stock car records that our claim to 80% increased efficiency is a modest boast.

Greater Proof of Endurance

Until the coming of the Super-Six practically all records for speed, acceleration, hill climbing and endurance were held by Fours. The Sixes had not done much.

A few records had been won by cars of the multi-cylinder type.

But the Super-Six instantly changed that condition.

We first proved the endurance of the Super-Six motor by running a stock chassis 1819 miles in 24 hours. That beat the best previous endurance record by 52%. It is perhaps the world's most coveted record.

We showed greater power by winning the Pike's Peak Hill Climb the greatest "non-stock" event of its kind. And we defeated twenty famous contenders in the world's most trying power test.

We proved road service by driving a 7-passenger Super-Six Touring Car from San Francisco to New York in 5 days, 3 hours and 31 minutes.

Then we turned around and went back, completing the round trip in 10 days and 21 hours. Thus twice in one round trip with a single car we established America's greatest proof of endurance. It was the first car to ever attempt the round trip against time.

Our invention gives more power without added cylinders or weight. It gives quicker acceleration and adds a yet unknown degree to the endurance of the motor.

All this came from the solution of that one problem which engineers had been unable to solve. The power that had been wasted in the motor itself was delivered where it was useful and available.

This Turned Interest Back to the Six

But many did not distinguish between a Six and the Super-Six.

As a result all makers of Sixes profited. Many buyers thought by what the Super-Six had shown that any good Six could do as well. So when they found it difficult to get prompt delivery of a Super-Six they accepted a Six.

Now they know there is no similarity between Sixes and the Super-Six save in the number of cylinders used.

They know that without the Super-Six invention all motors are limited as to efficiency. They know that with the Super-Six invention any motor of one, two, four, six, eight or twelve cylinders delivers more power—is more flexible and will give longer service, many times over.

And they know that being patented such efficiency is exclusive to the Hudson Super-Six. It is the only known principle by which such efficiency may be obtained.

The Gasoline Saver

The Super-Six possesses many other exclusive advantages.

One is the gasoline saver, a device which adds gasoline mileage. By it the low grade gasoline now on the market is made more efficient. At a nominal charge it can be quickly installed on any Hudson Super-Six not so equipped.

Note the variety of models in which the Hudson Super-Six is produced. Every taste is met. Every comfort provided for.

It is a fine car in every sense of the word. Men who want the finest will not be content with less.

One year of the Hudson Super-Six convinces us it is the only permanent type thus far produced.

LAST YEAR'S CALENDAR

By Ellen Hamlin Butler

MY need of thee has passed away,
O little guide of yesterday;
But such a magic light is cast
Upon this record of the past,
That, for an hour, I lay aside
The fair new chart of time and tide,
And read with spirit-sight made clear
The picture-story of my year.

Ah! Never did old parchment shine
As this illumined book of mine,
For down the line of dates and days
An ever-changing glory strays.
In each glad festival I trace
The smile of some dear, loving face,
And angel wings gleam softly where
The page is shadowed with despair.

All that I deemed most commonplace
Is hallowed with transcendent grace:
Rose lights from many a hearth-fire's glow
Lie warm on January's snow.
Through the March tempest I desery
Rainbows afloat in April sky,
And on the fields that suffered blight
The sunshine of God's harvest light.

Slowly I turn each precious leaf.
How beautiful the year! How brief!
And knowing well whose hand has laid
These scenes in memory's shine and shade,
I cry, "Forgive the faithless hour
That shamed Thy love or foiled Thy power,
For, Lord, on every page I see
Goodness and mercy followed me."

DO IT NOW

"JOHN," said Dr. Brown to his son, "that grass has needed cutting for some days."

"Yes, sir," replied John. "I am going to cut it to-morrow."

"It isn't very important whether or not the grass is cut," answered his father, "but it's extremely important that you have the right state of mind about getting at what needs to be done. There is a legend that Satan once offered a prize to the demon who should suggest the surest method of damning men's souls. One brought forward a most brilliant argument to demonstrate the futility of goodness. Another most luridly pictured the attractions of evil. Another proposed that the satanic legions should admit the wisdom and the glory of righteousness, but should concentrate their powers on persuading men to put off the day when they should begin to practice righteousness. Satan is said to have awarded his prize to that suggestion.

"There is no question," continued the doctor, "that the greatest enemy to goodness in the world is procrastination. Every man that lives means some day to lead a good life. You have seen that little placard on office walls, 'Do It Now!' It ought to be before our eyes wherever we go. It ought to be written in our minds. Just as soon as we discern the right thing to be done, we ought to set about doing it without delay. If we delay to-day, it's twice as easy to delay again to-morrow. Get the habit, John, in small things. If the grass ought to be cut now, then require of yourself that you cut it now. If your Latin ought to be prepared now, then don't risk the chance of getting the procrastinating habit by putting it off to another time. I don't urge you to plunge into things without thinking. Take all the time you need to come to your conclusions. But when your judgment tells you a thing surely ought to be done, get at it at the first possible moment. Do it now!"

John started for the door. "That grass ought to be cut, that's sure," he said, "and I'm going to do it now!"

GOODNESS AND CHARM

"IT'S too bad," said Mrs. Carter, who had recently taken rooms in the house of an invalid, "that Mrs. Hall seems so fond of that flibbertigibbet of a Rose, and almost blind to the excellence of Jane, who does so much for her."

"Rose is very charming," I suggested, "very bright, and —"

"But she lets Jane sweep and scrub and cook," asserted Mrs. Carter. "Every morning it is Jane who lights the fire and prepares breakfast for her mother. She does at least twice as much before she goes to school as Rose does."

"Just observe a little longer," I said.

A week later we met again.

"I must admit," my friend said, "that Rose is a very attractive little thing! Jane is, of course, a most excellent, capable and devoted daughter, but Rose is a sunbeam."

"Sunbeams," I agreed, "are desirable things."

"The other night," went on Mrs. Carter, "I went in with some flowers. The two girls had been to a concert. Jane hurried home to get her mother's half-past-nine 'nourishment' ready. Rose stayed behind to chat with the girls. I thought her selfish until Jane, having served the lunch, sat down.

"Tell me about the concert, Jane. Was it good?" asked her mother.

"Oh, soso," answered Jane.

"Were there many vocal numbers?"

"I didn't count."

"Did Mrs. Ross sing?"

"No."

"Mrs. Jones?"

"Yes."

"Oh, she did! Then her voice is better. Did she sing well?"

"Yes, I guess so."

"Did she sing more than once?"

"Yes."

"Was she encored?"

"Yes."

"Well, poor Mrs. Hall was worn out with her questions. Jane gave every answer as if it had been a beloved tooth and her mother a dentist. Then in came Rose, bright as a daisy.

"O mother!" she cried. "How I wish you had been there! It was such a charming concert! There were two piano duets and a solo by that boy Mrs. Graham was telling us about. He really plays quite well. And it wasn't a bit true about Mrs. Jones's voice having given way. She was down for two numbers, and was encored twice each time. And she sang Annie Laurie for the last. I wish you'd heard her. And Miss Pratt was accompanying in that black silk she always wears with a pink bow! I believe she'll go in for sashes next! The organist from Kamloops was there, and

he made a little speech so funny and bright. All the Browns turned out in force, and Kitty has a new suit. They asked after you, and Kitty is going to bring you some flowers soon, she said. Notice the suit, if she wears it. It's a brown pin stripe with a cutaway coat. And notice —"

"Then Jane interrupted.

"Rose, you'll tire mother all out chattering like that," she said.

"No! I like it," pleaded poor Mrs. Hall. "I seem to get the good of everything Rose goes to."

"Then Rose kissed her mother and danced off to bed. I admit, of course, that Jane helped her mother upstairs and remembered her hot-water bottle. Oh, she's capable, to be sure; but how dull Mrs. Hall would be without Rose!"

"And what a fine thing it would be," I added, "if Rose could have some of Jane's sterling parts, and Jane a little of Rose's sunny temperament!"

THE RESOURCEFUL SKIPPER OF THE KEA

RESCUED from the very jaws of death by starvation on a barren rock in the Pacific Ocean, Capt. Theodore Curtis, a veteran sea captain of Long Beach, California, recently returned to his home, safe and sound after his thrilling experiences. With the captain were three sailors of his crew who were cast away with him.

Capt. Curtis, with an engineer, cook and deck hand, left Long Beach under orders from the International Fishing Company to inspect one of its boats at Turtle Bay. Leaving San Quentin in a seventy-five-ton power schooner, the Kea, the captain accomplished his mission before the trouble began. On the second night out of Turtle Bay on the return voyage, the cook, by carelessness when he was making coffee, set the boat on fire. This happened late at night, and the captain and crew were roused to immediate action by the realization that a leaky distillate tank stood on the after deck, with the boards surrounding it soaked with the distillate that had already seeped out.

"By the time we saw what had happened," said the captain to the reporter of the Los Angeles Times, "the flames were shooting masthead high. There was a heavy sea running, and we had only two life preservers and a small lifeboat. We would not have had a chance if that fire had got to the tanks. I grabbed my mattress, wound it round the leaky tank, and held it there while the men fought the flames. Finally, with our extinguishers, they got them under control."

The fire, however, was only the beginning of trouble, for soon after the flames were put out the engines stopped. The men ran up sails, but the winds were unfavorable. The engineer tinkered and coaxed the engines into pulling the ship a hundred and fifty miles, but then they gave out entirely. The Kea washed about helplessly for a day, while the men tried vainly to make headway with the sails. Then a fishing boat turned up and towed the Kea to San Geronimo Island, where its skipper left the schooner and crew, with the promise that he would return in a day or two. The island is only a mile and a half long and half a mile wide, a mere rock in the sea inhabited only by birds. There was no water on the island.

The captain and his crew of three men watched hopefully for the return of the fishing boat, but it never came. The small supply of water on the boat gave out. Then the skipper conceived the idea of rigging up a condenser from the ship's whistle and a few barrels, and he got in that way about four gallons of drinkable water a day. Had it not been for that water, all four men must have perished.

Capt. Curtis and his three companions were on the island for fifteen days. For food, they fished and ate abalones. There were few fish; so the fare consisted mainly of the abalone meat. To add to the personal discomfort of the captain, he suffered from the loss of several teeth, which had been extracted before his departure on the voyage. Since that caused him to be ill most of the time, he lived for most of the two weeks on nothing but water condensed by the improvised still.

On the fifteenth day the sailors sighted a boat on the horizon. In desperation they launched their skiff and began to row with all their strength toward the ship. The ship did not see them for a long time, but at last it came about, and Capt. Curtis and his men knew that they were saved. The ship was the Freda from San Pedro.

A TEMPORARY HOTEL

UNCLE HENRY and Aunt Jane had not visited their nephews and nieces for several years, writes a Companion reader, and Uncle James and his family had not yet paid the visit they had contemplated for some time.

When, therefore, both uncles wrote saying they would pay us a visit on a certain week if it were convenient for us, we did not inform either that the other had written, for we were afraid that one of them would give up the trip, lest both families with our own should make too large a household.

So about the first of August we had a household of fifteen to be cared for in a bungalow that had only three bedrooms. But it was a happy party. Everyone took hold and made light work; we overlooked inconveniences altogether or turned them into jokes, and by making use of parlor and living room, hall and dining room, we found a place for everyone to sleep.

We had a set of rules that father drew up and posted for our "Hotel de Bungalow." They were as follows:

General Information and Rules.

This hotel is conducted on the sardine plan; a prize is offered to anyone who can find any unoccupied space.

All meals guaranteed under the Poor Food and Drugging Act.

All our eggs strictly fresh—when they were laid. Onions served weekly—the weaker the better.

Regular rates do not include snoring privileges. The capacity of the hotel is ten gals.

Baseball fans will find a pitcher in every room. Leave all valuables with the proprietor; he needs them.

Regular meals at 7 A. M., 12 M. and 6 P. M.; irregular meals whenever the cook isn't looking.

If you like the food, do not kiss the cook; her stomach isn't very strong.

This hotel has no rats except in ladies' hair. A good comb will be found on every rooster.

The toothbrush hangs in the bathroom. Moving pictures in every room; look in the mirror.

Nightmares to rent at reasonable rates.

If the stillness of the neighborhood disturbs you in the night, lift the sheet and hear the bed tick.

If you find your room getting too hot, open the window and see the fire escape.

No rebate allowed on account of loss of sleep.

We serve certified milk. Our water bill certifies its quality.

Women without escorts welcomed. Making safety matches is our specialty. Clergyman on the premises.

Vegetables fresh from California. We ship ours to the New York market.

Infant Postum made on request of women or children.

No dogs wanted. We buy our sausages.

Inevitancy on the part of employees should be reported to the manager in writing. Drop your complaint in the wastebasket. It will do no harm there.

MOUNTAINS THAT WEAR UNIVERSITY LETTERS

HIGH up on the bare slope of the Wasatch Mountains, immediately behind Salt Lake City, is an enormous white capital letter "U" that is visible from every point in the great Salt Lake Valley. It is the letter of the University of Utah. It is one hundred feet long by fifty feet wide, and is as everlasting as the mountain it rests upon, for it is made of solid concrete.

Years ago it was the custom for each of the two lower classes at the university to try to put its numerals on the hills behind the college, and to prevent its rival from doing the same thing. The resulting fights became so violent that the student body took steps to put an end to them. The class numerals were replaced by a great letter "U," made by the entire student body. It was of earth

WHITEWASHING THE "U"

and was whitewashed; but the rains soon washed it away. The letter had to be made every year.

In 1907 the boys decided to make a permanent letter of concrete. They raised a sum of money to buy materials, drew plans, dug the trench, made the concrete and fashioned the great letter.

Ever since, April 16 has been set aside as "U" day. On this day all the students and many townsfolk besides climb the steep slope of the mountain and assemble at the "U." The workers are organized beforehand, and most of the hard tasks fall to the freshmen! Quantities of lime and water are carried up the hill, the letter is swept clean and a coat of whitewash applied. By noon the work is completed, and the letter stands out sharply in its new white spring suit. Then the students descend to the campus, where the "coeds" serve luncheon on the lawns. The afternoon is given up to sports and dancing. It is a Western variation of the historic ceremony that Thomas Hughes describes in *The Scouring of the White Horse*.

Farther west, on the hills overlooking Berkeley and San Francisco Bay, the traveler beholds another great letter—the golden "C" of the University of California. In size it is sixty by thirty feet. It, too, is made of concrete. It stands eight hundred feet above tide level, and is colored a golden yellow—the university colors are gold and blue.

This great letter has been strung with wires, and on the occasion of an athletic victory it blazes out against the dark background of the night, flashing its message to all the country round.

Near Ogden, Utah, a great "Y" adorns a steep slope in honor of the Brigham Young College, and Livingston, Montana, gazes out on a huge white letter "L."

HITCHIN' UP FOR THE WIDDER MASON

AS he settled himself upon the long seat near Caleb Peaslee's back door, Mr. Obed Gunney groaned wearily.

"What's aillin' you now?" Caleb asked him. Obed stretched his arms painfully once or twice and grinned feebly.

"I ben hitchin' up a hoss for the Widder Mason," he confessed, "and I feel kind of wore out."

Mr. Peaslee's surprise was patent in every feature. "Hitchin' up a hoss!" he repeated. "That ought not to tucker a man out same's you be."

Obed crossed his legs with a visible effort and began his explanation. "Mebbe four hours ago—right after dinner 'twas—I sot out to go down to the village and get two-three things I was needin' at the store—some harness soap and some lamp wicks, and such. When I got to the Widder Mason's place, she was out by the fence, peering up and down the road. When she ketched sight of me her face lit up wonderful.

"O Mr. Gunney, she squeals, 'I'm so thankful you come along jest when you did. I was jest wantin' some man to hitch the hoss up for me; 'twon't take you a minute, hardly.'"

"Well," Obed submitted, "what could a man do but say he'd be glad to do anything he could? 'T any rate, that was what I told her."

"Oh," she says, 'will you? Ain't you the help-inest man! Well, seein' you're so good, mebbe I'll ask you to shift over that pile of lumber. I had it hauled from the mill, and they piled it right where I don't want it,' she says.

"Some of them timbers," Obed commented grimly, "was six-by-eight-inch stuff, and green spruce at that. 'Twa'n't no one-man job shiffin' 'em round, but I'd gin my word, and it took me the better part of an hour to get it done."

"The widder'd ben watchin' me all the time, and jest b'fore I took holt of the last sticks she disappeared into the shed, and when she come out she had a spade and pickax in her hands."

"Of course," s'she, 'what I really wanted you to do was harness the hoss for me, but long's we're standin' here talkin' you might jest as well be busy. And I've ben wantin' a couple of post holes dug there for I d'know how long,' she says, and with that she shoved them tools into my hands and sot me to diggin'—and in that ledgy back yard of hern, too!"

"The long and short of it is, Kellup," Obed said

gloomily, "that woman kep' me there four mortal hours pilin' over lumber and diggin' post holes and settin' in the posts and tacklin' on a few shingles on the shed and pokin' down a hornet's nest out of the gable of the house,—I got stung twice doin' that,—and it was all done under the color that we was jest standin' there talkin'!"

"Fin'ly, when I'd done more than a reg'lar day's work and my back was achin' and my left eye'd swelled up so'st I could scarcely see out of it, she let on that she'd have the hoss harnessed and go down to the store."

"I threw the harness onto the hoss with both hands, and I made a quick job of that, if I do say so myself. I didn't cal'late to give her time to think up any more work, and when I give her the reins and helped her in, she fairly beamed on me."

"There," she says, 'I've had a real nice, long talk with you, and 's far as delayin' you goes, I don't b'lieve that harnessin' took you over a minute. I'm glad it didn't, for I'll feel free to call on you again sometime, when I need some one to hitch up for me,' and with that she drove off, leavin' me there with my mouth gaped open and without so much as a 'thank you kindly' for the four hours' work I'd put in for her!"

"But," concluded Mr. Gunney firmly, "the next time Eudora Mason gets a man to hitch up a hoss for her that man won't be Obed Gunney. There's too much to it."

IN A WILDERNESS OF GOLD

THE New York assay office is now the most important institution of the kind in the world. There is more gold stacked up in boxes and kegs, in bricks and bars, in bins and bags, than ever before in the history of the country. The assay office, says the New York World, is the purchasing agent for the government. Foreign gold, consigned to banks and trust companies, is "cashed in" through the assay office.

British sovereigns, packed in boxes, are piled as high as the ceiling. Dodging that golden bulwark, the visitor is likely to bump into the cases full of French twenty francs that are piled on the other side. Turning to reach the elevator, he skirts a row of gold bars, packed five ten-thousand-dollar bars to the keg, in sawdust, and stretching along the wall twice the height of a man.

All gold, of whatever nature, is melted and refined to a fineness of 999.5, or finer, and cast into bars of standard sizes. The value of each bar is expressed in United States dollars and cents. Every bar and coin has to stand the acid test.

There are fifteen big melting pots at work on gold exclusively. It seems almost brutal to see the workmen scoop shovelfuls of gold pieces from metal boxes and dump them, one after another, into a pot until it is full, and then clap on the lid and wait for them to stew!

BOYS AND GIRLS

THE difference is apparent early: A boy has as much fun in stoning a cat as a girl has in hunting for violets. A boy's curiosity is directed to the ice box; a girl would like to see what is in the top bureau drawer.

A girl can give the impression when away from home that her parents are wealthy; a boy cannot. Every boy is old enough to be welcome to sit in the neighbor girl's parlor many years before his sister thinks he is old enough to sit in the parlor at home.

A girl is never so young that she will reveal to guests at a party that the spoons are borrowed; a boy child never grows so old that he fails to.

Give the boy a dollar and he will eat it; give his sister one and she will wear it.

A brother and sister may have hair of the same shade, but the boy's is called red and the girl's, auburn.

When brothers fight, it is over the larger share of pie; when sisters quarrel, one has worn something belonging to the other without asking permission.

A GIANT OVEN

BAKING railway cars is not a process recognized and described in household cookbooks, yet the process is in practical operation in the car shops of the Pennsylvania Railroad, according to the Popular Science Monthly. One problem that had engaged the attention of the railway officials was that of reducing the time required for drying a car after painting.

Their experience with quick-drying paints caused them to construct a mammoth baking oven at Altoona. It is large enough to accommodate cars of almost any length. With the car well inside, the doors are closed and the temperature is raised above the boiling point of water. The paint is completely dry and hard and ready for service in about three hours.

The saving of time by this process is very marked. It has reduced by ninety-five per cent the time required for drying cars by the old method, and has cut in half the time a car is out of service during repainting.

NO INCUMBRANCE

A CONSIDERABLE commingling of social classes, writes a correspondent of the Manchester Guardian, occurs in our village, owing to the townfolks' practice of renting summer cottages among us, and living therein in neighborly fashion with the working people for whom the places were built. In one such case the resident from town was an unmarried lady; the genuine cottager next door had a husband who, to put it mildly, was no blessing to her.

Making a friendly call one day, the wife was greatly impressed by the pleasant air of comfort and well-being achieved in a cottage otherwise the duplicate of her own. She looked round with a mildly envious air and, with a little sigh, earnestly remarked, "O Miss X—, you ought to be 'appy—no 'usband nor nothin'."

AN EDIBLE CURRENCY

AT Cobham, a rural station in central Virginia, Mr. Bell is the storekeeper. One day a small negro came into his store with a single egg. He went up to Mr. Bell and displayed the new-laid egg.

"Mr. Bell, mummer say please, sir, give her a needle for dis egg."

"You can get two needles for an egg," answered Mr. Bell.

"Nor, sir, mummer don' want two needles; she say please, sir, give me de change in cheese."

THE CHILDREN'S PAGE

LITTLE BEAR'S SURPRISE PARTY

BY FRANCES MARGARET FOX

LITTLE BEAR did not like to hear any talk about Sleepy Cave, which was the name of the Three Bears' winter home the year that Jack Frost came so late. There were three beds in Sleepy Cave, ready and waiting for the Three Bears—a big, big bed of fir boughs and moss for the huge Father Bear, a middle-sized bed of fir boughs and moss for the middle-sized Mother Bear, and a deep, deep bed of feathery moss for tiny Little Bear. There were also feathery moss blankets taken from fallen logs in the forest: one for huge Father Bear, one for Mother Bear, and the softest, warmest blanket of all for Little Bear. Sleepy Cave was big and warm and dry. There was no chance for snow to drift in at the doorway, because it was sheltered by a broad, overhanging rock, and the back of it was toward the wind. There was blackberry jam put away in that cave, and honeycombs and many other good things to eat, in case the family should wake up and feel hungry before spring.

But Little Bear did not like to hear a word about Sleepy Cave. With him it was the same old story, beginning, "I don't want to sleep all winter! Mrs. Maria Wildcat, she said, 'Young cub, you won't be anything but a little baby bear, eating porridge out of a little bowl, and sitting in a wee, wee chair, and sleeping in a wee, wee bed for another hundred years, if you lie round and sleep all winter! You'll never grow up!' She always says that! And Mr. Bob Wildcat, he said —"

"There! There!" Mother Bear interrupted. "Don't let me hear another word about Maria Wildcat or any of the Wildcat family! I think I said that to you once before!"

"But I don't want to sleep all winter!" wailed Little Bear. "I want to stay in our own little house in the woods and see the snow on the evergreens! I'd love to play in the snow and go sliding on the ice! I want to stay here and eat porridge out of my little bowl, and sit in my little chair and sleep in my little bed! Father Deer's children do not sleep all winter. They make tracks in the snow, and they lie down to rest in the evergreens and watch for their enemies in the middle of the day. Father Deer told me about it all over again. I want to stay here and play all winter like other folks. Sally Beaver's mother, she said —"

"Hush!" said Mother Bear. "You have talked enough."

She spoke severely; but a moment later, when the little fellow went out and sat on the doorstep to think, she said to Father Bear, "Suppose we have a surprise party for Little Bear, so he will have something pleasant to think about when he goes to Sleepy Cave?"

"A good idea!" agreed Father Bear. "But

there is snow in the air, and if there is to be a party it had better be this afternoon. Whom do you wish to invite?"

Mother Bear smiled as she answered, "Let us invite the children of all our friends who sleep through the winter. I think that will be pleasanter for Little Bear. We'll invite Auntie Cinnamon's children, and Uncle Brown Bear's family, and the Porcupine twins, and the Field Mouse children, and the young Woodchucks. If you will go and ask them, I will make blackberry-jam sandwiches and honey cakes, and get the house in order."

Little Bear did not ask a question as Father Bear, looking rather proud of his new fur overcoat, went forth to visit the neighbors.

That afternoon, as Father Bear and Mother Bear were happily waiting for Little Bear's company to arrive, there came a knock at the door, and in came Auntie Cinnamon. "I came to say," said she, "that my children cannot come to the party because they have gone to

"But where is the party, mother? Am I invited?" suddenly asked Little Bear.

Just then came another knock at the door, and Mother Porcupine walked in to say that the twins were tucked away in bed for the winter, she hoped, so they could not come to Little Bear's surprise party.

Little Bear was so delighted when he learned that he was to have a surprise party that he was not disappointed when the laughing Blue Jay came with a message from Mrs. Field Mouse, saying that none of her children could keep their eyes open, they were so sleepy, and so of course they could not come to the party.

"I'll sit by the window and see who does come," said Little Bear, happy as he could be.

Now it happened that no one else could come to the party; so Mother Bear took Little Bear to the cupboard to show him the blackberry sandwiches and the honey cakes, and let him taste them to see how good they were, while Father Bear stepped outdoors to ask the Blue

MOTHER BEAR LET HIM HAVE A BLACKBERRY SANDWICH

sleep for the winter. No, I cannot stay, I thank you, but I am glad to stop in a minute to say that I wish Little Bear pleasant dreams, and the same to you!"

"Sleepyheads!" said Little Bear, when Auntie Cinnamon had gone on her way.

Next came Uncle Brown Bear. He was so fat that he was out of breath from walking fast and had to rest a minute before he could say, "Our children are asleep and cannot come to the party, but Auntie Brown would have me come over to thank you and to wish you all pleasant dreams." And away he went.

"The sleepyheads!" cried Little Bear again, and how he laughed and laughed!

Jay to please fly quickly away and invite the Wildcat children, and the young Squirrels and Chipmunks and Foxes to come immediately to the party.

The Blue Jay flew away to do the errand, and soon many chattering, noisy wildwood children were hastening to the party. But when they reached the house, they found Little Bear sound asleep in his wee chair with a contented smile on his face; he was dreaming of that party. The merry children wished to share with him the jam sandwiches and the honey cakes, but they could not waken him, although they tried their best.

Late that afternoon, when the party was over and the frolicsome children had gone, Father Bear took Little Bear in his arms and Mother Bear closed the house. Then away went all three to Sleepy Cave.

When Little Bear was snugly tucked up in his feathery moss bed, Mother Bear kissed him and whispered to Father Bear, "I am so glad that he was happy when he fell asleep!"

That very night it snowed, and snowed and snowed.

WHEN BILLY WAS TARDY

BY BLANCHE STUART

THIS is the story of the way a nail in the fence of Billy Allen's garden kept the fourth-grade room in the Lincoln School from winning the beautiful flag that the teacher and pupils had set their hearts on. It really was not the fault of the nail, as you shall see, for the nail had its own work to do, and would rather have been doing it than making trouble for the fourth-grade room.

The story of that nail goes back to last summer, when Billy was helping his father fasten some boards that had worked loose in the garden fence.

"I can drive nails, father; let me hammer some of them," he begged.

His father handed him the hammer, and Billy did very well indeed—for a time; but after he had driven three or four nails he suddenly tired of his task and dropped the hammer to chase a butterfly that was hovering near. It

THE SANDMAN'S WIFE

BY MIRIAM CLARK POTTER

The little brown sandman lives, you know, On the top of the hill where the cherries grow; The roof of his house is a great toadstool With a wee bell tower, like the village school; And tumbling and heaping about the door Are piles of sand from the white seashore.

The little brown sandman, bent and thin, Has a deep-blue cloak that he wraps up in; His peaked hat has a star on top And he fastens his cloak with a green gumdrop; He's always sleepy; a slow man he; And he stretches and yawns at half past three.

Now, the greatest joy in the sandman's life Is Polly M. Pumpkin, the sandman's wife; She's a round little soul, with a rosy face, And she bustles and bounces about the place; The children the sandman goes to see She loves a great deal more than he.

At seven o'clock, on every night, She lights his lamp with a fagot bright; Then Polly M. Pumpkin wakes him up As he sits asleep by his blue teacup. "The children are nodding now!" she cries. "Go sprinkle the sea sand upon their eyes."

And she hands him a sack, when he blinks and starts, "For my sleepest children— Ah, bless their hearts!"

And quite unknown to the brown sandman She has mixed it up, as only she can, With magical sugar, as sweet as a rose, That brings good dreams wherever it goes.

"Now hurry away!" she cries, and stands On the flat doorstep and waves her hands. The little brown sandman slips away Till he's lost in the stars of the Milky Way. "He'd never get started in all his life, If it weren't for me!" says the sandman's wife.

Then she climbs the bell tower, up on the house, And she peers about, like a bright-eyed mouse; And she says to herself, as she always does, "I'll let him sleep some night, because I'm going to go in my husband's place." And a mischievous smile lights up her face.

did not seem important to Billy that he had left one nail driven only halfway in, and his father did not notice the half-driven nail when he picked up the hammer and went on with the work.

That was last summer, as I said before. Since school began there have been weekly contests between the rooms of the Lincoln School, which Billy attends, for a beautiful silk American flag. The room that does not have a single tardy mark for the week holds the flag for the following week. Some weeks no room earns the flag, and then it remains locked up in a closet. Billy's room, the fourth-grade room, has not yet had the flag once; but there was one week when it looked as if that room were surely going to win. When Friday came it was the only room in the big building that had no tardy marks.

Billy lives very near the schoolhouse, and he had not been late all the term. It was no fault of his that the room had not won the flag long before. Of course he would not be the one to fail it now!

But on that Friday morning he slept a little later than usual. When he dressed, the buttons would not stay buttoned and there seemed to be more of them than usual. Then he wanted an extra slice of toast, and had to wait while his mother prepared it. By the time he was ready to start it lacked only four minutes of nine.

"Lots of time!" he cried, when he kissed his mother and put on his cap. "I'll go through the garden. It's a short cut."

Billy ran down the garden walk and clambered to the top of the fence. The school yard lay just beyond. The pupils were watching, and they clapped their hands when they saw Billy coming. But Billy did not jump off the fence. He sat there and acted as if he were trying to take something out of the pocket of his trousers. His mother ran to the door.

"Billy, do hurry!" she urged. "It's almost nine!"

Then the teacher of Billy's room came to the window and called sharply:

"William Allen, do not sit on that fence an instant longer! The last bell will ring in a minute and you will be tardy!"

Still Billy sat on the fence, although it was plain now that he was trying to climb down. His mother saw that something was wrong, and ran down the garden path. Billy began to struggle harder. There was a sound of tearing, and Billy fell to the ground with a big hole in his trousers. Just then the bell rang. Billy's room had lost the flag.

"It was an old nail!" complained Billy, crying bitterly, as he climbed back over the fence and walked to the house to have his trousers mended before he went to school. "It had no business there, anyway!"

But later when he and his father talked it over, he remembered about the nail that he had left half driven; and the lesson that Billy has learned is one that he is not likely to forget.

GAMES OF OTHER DAYS AND LANDS

BY HARRIET O'BRIEN

I. EGYPTIAN HANDBALL

HOW old is the game of throwing and catching a ball? No one can say. It is probable that it has been played in one form or another through all the thousands and thousands of years since first there were children in the world. Of course in the earliest times the game was very simple. The ball may have been a shell picked up on the shore, or a large nut, or some kind of wild fruit. Or it may have been made of such rude materials as a bit of skin rolled up and tied.

We know that tossing and catching a ball was a favorite sport of both the Greeks and the Romans, for the old writings that have come down to us from their time tell us about it. Further back in history than that, the Egyptians not only played with a ball but made up a simple game in which the ball figured. The two pictures that appear here are copied from an ancient Egyptian carving of four thousand years or more ago. Each of the children has a ball, and each throws to the other at the same time. Then, having thrown his own ball, each crosses his arms and catches the other ball with the arms in that position. That is, if the ball comes on the right side, it is caught with the left hand; if it comes on the left side, it is caught with the right hand. If you think that is easy to do, try it.

No doubt the boys and girls who lived along the Nile enjoyed this game many centuries before Columbus discovered America, or Julius Caesar led his armies, or the Greeks besieged Troy. It is as easy to get fun out of it now as it was then, for the game of ball never grows old, no matter what form it takes or where it is played.

Ask any questions you wish about the contents of this page. They will be gladly answered.

FAMILY PAGE for JANUARY

Address your letters to THE EDITOR OF THE FAMILY PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

CLIMBING VINES FEW PEOPLE KNOW

AMATEUR gardeners have strangely neglected some of the best of the climbing vines. One that you seldom see, in spite of the fact that it was introduced into this country nearly fifty years ago, is the climbing hydrangea, which originally came from Japan. Perhaps the formidable-looking name—*Schizophragma*—under which it is commonly catalogued may account in part for the fact that it has remained in the background so long. It bears splendid tresses of white flowers in July and August, and, as it clings readily to any rough surface, is especially suited for growing on tree trunks and rustic arbors. It is hardy, but does not climb so rapidly as some other vines.

Polygonum arbutifolium is a very fast-growing vine that late in summer bears a great cloud of fleecy white flowers. It serves excellently for covering fences and trellises.

Although *Aetnindia* is somewhat better known, it is rarely seen except in the hands of professional gardeners who have learned its value in forming dense screens. It is especially well suited for covering lattice-work in order to produce a screen, and for growing on porches where seclusion is desired. The fact that insect pests almost never infest the vine offsets the scantiness of its white flowers and edible fruit.

Akebia quinata needs more sun than the *Aetnindia* vine, but, like it, is exceptionally free from insect pests and plant diseases, and is excellent where you do not desire a dense screen. It grows gracefully on arbors and trellises.

There has been a strong desire for a climbing vine that is evergreen in the Middle and Northern States. *Eucynips regalis*, or evergreen bitter-sweet, answers that description. However cold the weather may be, the leaves are as pretty and green in February and March as they are in June. It produces great numbers of yellowish-red berries that last half the winter. The *Eucynips* does not grow very fast during the first year, but after that it makes moderately rapid growth. It is especially attractive when grown on walls; it also looks well on arbors, and can be used to advantage in covering the foundations of buildings. Sometimes it is used for edging and, where box is not available, for making miniature hedges in place of it. Altogether it is one of the best vines that have been introduced in recent years, and has the further advantage of being inexpensive. Plants already started cost only twenty-five cents apiece.

Another rather new vine is *Ampelopsis brevifolia*, called the Japanese ivy, which is like the common Boston ivy except that the leaf is smaller and more finely divided. It is the equal of the Boston ivy in its ability to cling to the smoothest surface and in its rapid growth. Its light-green foliage turns bright red in the fall.

Newer than any of the vines just mentioned is a wonderful clematis recently brought from China by Mr. E. H. Wilson, the plant hunter. *Clematis montana rubens*, as it is called, has rosy-red flowers that resemble those of the Japanese anemone. Flowering begins in June and continues to some extent throughout the season.

Many varieties of the clematis grow well in this country, although only two or three are known to the average amateur. *Henryi*, which has white flowers eight inches across, *Madame Andre*, which has deep crimson blossoms, and *Sieboldi*, which bears wonderful, large lavender blossoms, should be as well known as the common *paniculata*, although they are not quite so hardy and need some protection when fall comes.

One new vine among the annuals that deserves to be mentioned is the cardinal climber, which has bright scarlet flowers that resemble small morning-glories. It grows rapidly and is very attractive even when not in flower, for the leaves are dark green and finely cut. Like most plants that have flowers of the morning-glory type, the cardinal climber likes an open, sunny position. It is best to start the seeds in the house by planting them one to a pot late in March.

FOOD VALUES

IN these days of high and still-mounting food prices, housekeepers have to know something of food values. When a family includes a hard-working father, one or two voracious boys and, let us say, a delicate little girl, all of whom must be fed on a small outlay, the problem is not an easy one. Many families live in a state of semi-starvation, although they do not know it, and, at the same time, spend enough money on their table to provide them with plenty of good food.

The first thing to learn is that a large family cannot be fed on a small outlay if the members demand table luxuries, or if the whole week is stunted in favor of the one big meal on Sunday. When the money allowance is very small, not only are expensive cuts of meat out of the question, but there can be very little meat of any kind. While the children are young they must have milk, and the first thing to be sure of is that it is clean and fresh. Then the mother should learn how to vary her marketing in order to keep up the right ratio of proteins, fats and sugars.

People who can afford to buy without thought of cost get most of their proteins from steaks and chops, turkeys and chickens; but peas, beans, lentils and oatmeal do just as well, and cost much less. Cheese is a most valuable food, and can be made palatable in many ways.

Many children dislike fat, especially those who need it most,—yet it is a very necessary element in their diet. When it cannot take the form of cream or good butter, it should be supplied in the form of "dripping," suet or oleomargarine. Children who refuse to take fat when they see it in bulk, will usually take it in the form of milk puddings, or when cooked with their vegetables, or

hidden in sandwiches and disguised under a relish. Children usually welcome sugar in any form. Jams and fruit butters are wholesome, and molasses is an economical form in which to supply sugar.

AN ANNUAL MEETING THAT WAS NOT DULL

"HOW odd to have a programme at an annual meeting!" exclaimed a woman who had just come into the Sheldon Women's Club. "A blessing, though, to have anything novel! If there's any gathering more deadly dull—" She stopped eloquently.

"Yes!" agreed her neighbor. "Why, look there! They seem to have some sort of stage behind those curtains. That's funny! What do you suppose it's for? The first number on the programme is the 'Report of the House Committee.'"

As if in response to the question, the curtain parted, and a ripple of merriment ran over the audience as they recognized a facsimile of the shabbiest corner of the Sheldon Women's Club owned and conducted for girls who were employed in the city.

"Do you suppose that's the report?" whispered the woman who had first spoken. "It certainly speaks for itself."

Just then a young girl appeared on the stage and began to rearrange the furniture. She placed two chairs in the corner, tried the effect of a small taboret over a large ink spot in the rug, and was arranging the magazines on the table when another girl entered.

"Are you going to have a caller?" she inquired.

The first girl nodded. "Do you think there's a chance of our having the place halfway to ourselves?" she asked anxiously. "He's a boy from home, and rather bashful, you know."

"I hope so," said the second girl sympathetically; "but I'm afraid—you see the glee club's planning to practice, and then there's Amy Nutting and her crowd. Here they come now."

Six or eight girls entered noisily and spread in every direction. One of them ran her hand hastily over the magazines, and pushed one or two to the floor before she found the one that she wanted; another helped herself to the taboret, and a third looked longingly at the two chairs in which the other girls had hastily seated themselves.

Suddenly some one noticed that another girl was standing on the threshold, from her timid air, her outside wraps and the suit case in her hand, evidently a stranger. "Is this the Sheldon House?" she asked.

The group of girls came forward cordially. In a few moments they had answered her questions about the cost of rooms, the laundry, the dining room and the bedrooms.

"Upstairs is really lovely," they explained, "because some one gave the house committee money enough last year to renovate it. But look at this! They know there ought to be three or four rooms, so everyone wouldn't be jumbled together, but they just haven't the money. Still, you'd better stay! Some one's sure to help out soon!"

They swept her away to the registrar's office just as the glee club and a group of listeners crowded into the room.

Behind them came the "bashful boy from home" with his hostess, but the two chairs had already been taken. Finally the girl found one small chair, and the boy perched uneasily on a narrow window sill.

They tried to talk, but between the confusion of the rehearsal and the battery of eyes the boy seemed stricken dumb. Groups of girls came and went. One or two tried to read some of the magazines but gave it up in despair.

"Oh," said the boy at last, "let's go out and take a walk."

"It's nearly zero outside," said the girl. "But I'll tell you, Tom. We'll go down to the station. There aren't many trains for an hour now, and it'll be light and warm—and rather quiet."

The curtains closed and the report of the house committee was over.

"That's the best report I ever heard," said one woman. "I shall look into that parlor business right away."

The next number on the programme was the "Report on the Cooking Classes." The curtains parted again to reveal the stage set for a cooking lesson, and a group of young cooks gave a "demonstration," although the lack of one or two things in the equipment was very clearly brought to the attention of the spectators.

Next, in front of the curtain, came the finance report. At a table in the centre sat the treasurer.

To her came first the different receipts: a fairy bringing "the gifts of friends," smiling girls with the income from classes and rooms, a bank messenger with the returns from investments; then a funny tax collector appeared for his taxes, a carpenter and a plumber for payment for repairs, a grocery boy for money for supplies—the line of disbursements that filed across the stage seemed almost endless. When the last one had gone, the treasurer rose and carefully counted out some bills and change.

"Cash on hand for another year, five dollars and two cents," she announced ruefully, and left the stage.

Other committees followed, each setting forth its needs or its work in similar novel and picturesque fashion. When the meeting was over there were many women in the audience whose interest in the club had been keenly reawakened. They

"REPORT OF THE HOUSE COMMITTEE"

had come expecting to be bored, but had found themselves interested from beginning to end.

A SENSE CONTEST

THE game consists of a number of tests in which the winners are those who make the best use of their five senses.

In different rooms or at different tables arrange a group of tests for each of the five senses. An older person should act as judge; if a great number of children take part, have a judge for each group of events. The number of players is limited only by the trouble you are willing to take in planning the contest. Give each player a card with the various events written on it and a space opposite each event for the judge to write the score made by the player. It is convenient to mark the grades on a standard of one hundred per cent.

Vary the tests as much as you please, but keep them simple and of a nature that will interest young persons. There is no need to use anything in the contest that you do not have at hand in the house. Here is the way one mother planned the various events, all of which proved successful.

There were five tests for the sense of sight. First the players were asked to look for two minutes at a large picture full of detail; then they had to turn away and write as complete a description of the picture as they could. They were then allowed to see a tray on which were displayed ten or twelve small, familiar articles, such as a match, a thimble, a fork, a pencil, a stone, and so on; the contestants had to say at a glance how many articles there were on the tray.

After a somewhat closer study, the players had to turn away and tell what the articles were. Then, while their backs were still turned, one of the articles on the tray was removed; they were allowed another glance at the tray, and had to tell what article had been taken away. That event was repeated with the change of adding an article to the tray instead of taking one away.

As each player finished the tests for observation, he passed into the room where the events for the sense of hearing were held. For those events the player was blindfolded. Each player took the tests by himself, apart from the others. First a silver and a gold thimble were dropped on the floor, and the player had to distinguish them by their sound. Then a note was struck on the piano, followed by a number of others; the player was asked to say when a note an octave higher than the first note had been struck. After that a number of notes were struck on the piano, or on glass tumblers filled with various amounts of water. After each series of notes the player had

to say which note had been the highest, or the lowest, or the loudest, or the softest.

During the tests of the sense of touch the players remained blindfolded. Each player in turn was allowed to take various objects in his hand, and was asked to name them by his sense of touch. White potatoes and sweet potatoes, fruits of all kinds, an onion, a shoehorn, a ten-cent piece afforded tests that kept the players alert and that yet were not beyond their powers. Oddly enough, few of the children could tell what the shoehorn was, and all of them mistook the ten-cent piece for a one-cent piece. After the players had finished those events they passed to the last test for touch, which consisted in feeling an older person's finger and telling which finger of the hand it was.

For the sense of smell, various things, such as vinegar, oil, essence of peppermint and essence of vanilla were put into small bottles. The players, still blindfolded, had to determine by the sense of smell what the various bottles contained. They also had to name certain fruits by the smell of them.

The tests for the sense of taste were performed in a similar manner; the players had to name by the taste various harmless articles of food.

The children who took part in the contest were as much amused when they made mistakes as they were delighted when they made good scores.

WHEN TO STOP WORK

AS there is an appropriate time for everything, there is an appropriate time to stop work. When hours for work are definitely fixed, the stopping moment comes at a regular time. But suppose our time is our own, but that we must devote a share of it to work: when shall we stop? Shall we cease when the work is done, and not until then?

Usually that would be best; whenever it is possible, we ought to complete a task before we lay it aside. But sometimes we cannot finish the work at one sitting. Then we ought to be sure not to stop until we have done the hardest part—until we feel assured that the end is in sight, and that we can leave the work in such a stage that taking up the task again will be more of a pleasure than a burden. All of us delight in doing a thing that we know we can do, especially if the thing is difficult; we should make our return to a task attractive by the feeling that we can solve the problem that confronts us.

A piece of work uncompleted remains on the mind; but if it has been well started, remembering it is a pleasure. To put it in terms of wrestling, we should get a strange hold on a task before we pause for breath. If we do that, going back to the matter, whatever it may be, will be pleasant, and completing it will be swift and gratifying.

FOR THE HOME DRESSMAKER

IN joining the seams of garments, either when basting or when doing final stitching by hand or by machine, always hold the bias edge of the material on top of the straight edge—that is, nearest you. In that way you will avoid stretching the bias edge unduly. While dressmaking, have a board and an iron ready for pressing seams, hems and turned-down edges. Do not wait until the garment is finished so that you may do the whole at one time. Better results follow when you press each small part of the work as you go on. Press open every seam, and overcast or bind it. The finish will be more accurate and more "professional."

If you are not sure how to make any part of a garment, you will save time, not by experimenting, but by looking at a similar old garment. This applies particularly to plaquettes, cuffs, collars, and similar accessories.

Save and use left-over odd colors of sewing silk for basting silken fabrics, satin, chiffon, crepe, velvet, and materials of that sort. Sewing silk will not mark the material, as will cotton thread.

Cut the basting threads in garments at rather short intervals before you attempt to remove them. To pull the length of a long basting thread from a garment is to risk tearing the fabric or at least separating the warp and woof fibres. The difference of time between the two methods is negligible.

When you hem, use a very fine needle and thread appropriately fine for the material. The right-side stitches will be much smaller than when the hemming is done with a medium-coarse needle, and the nervous effort to keep the stitches small on the right side will be greatly reduced.

When you baste, use a long milliner's needle. It is a habit hard to acquire, but one that will be very helpful when once established.

When you are dressmaking, have plenty of pins at hand. Dressmakers' slender steel pins are excellent for the purpose. At any rate, buy pins so fine that they will be virtually useless for other purposes. By using slender, extra sharp pins you mark the fabric less.

When you work on black or dark fabrics, wear a white apron. The reflected light will be of material help.

Save all selvages of Georgette crepe, chiffon or fancy fine weaves. You can make a novel and attractive finish by applying them as a tiny ruffle or by leaving them on the material in the original cutting.

To Remove Clinkers. When there is a good fire in the kitchen range and the clinkers on the lining of the fire box are red, clean the ashes from the upper edge with a poker, and pour as much salt as possible on this edge where it joins the fire

\$10 Extra

For new subscriptions sent us during the month of January, 1917, you will not only receive a *Premium* for every new subscription and a *Winner's Gift* for every multiple of five new subscriptions, but you will also receive a *Monthly Cash Bonus* as follows:

CLASS A BONUS
For an average of *Five* new subscriptions per week, totaling twenty in January, we will give a *Cash Bonus* of **\$10.00**

CLASS B BONUS
For an average of *Four* new subscriptions per week, totaling sixteen in January, we will give a *Cash Bonus* of **\$7.00**

CLASS C BONUS
For an average of *Three* new subscriptions per week, totaling twelve in January, we will give a *Cash Bonus* of **\$4.50**

CLASS D BONUS
For an average of *Two* new subscriptions per week, totaling eight in January, we will give a *Cash Bonus* of **\$2.50**

CLASS E BONUS
For an average of *One* new subscription per week, totaling four in January, we will give a *Cash Bonus* of **\$1.00**

The above Offer is to be repeated each month, January to June inclusive.

Double Bonus

If a subscriber wins *Three* or more *Monthly Bonuses* between January 1 and July 1, 1917 (in any one class or in several different classes), we will *double* his Bonus by sending him on July 15 an amount equal to all the *Monthly Bonus Money* he has earned between January 1 and July 1. Our Offer of a *Double Bonus* will thus enable any Companion subscriber to win as much as \$120.00 in Bonus Money, besides receiving a *Premium* for every new subscription and a *Winner's Gift* on every *fifth* subscription.

Note. (1) Bonus Offers are open to Companion subscribers only (not agents), and are subject to Conditions in October Premium List. (2) The mailing date of your new subscription orders determines the month in which they will be counted.

THE YOUTH'S COMPANION
Boston, Mass.

CONTINUING THE FAMILY PAGE FOR JANUARY

brick. The salt eats away the clinkers. The first application may not be successful, but when it is repeated on three or four successive days the clinkers will disappear; or if they have not fallen away of themselves, they can easily be pried off with a poker when they are red hot.

AN EGG RACK

PEOPLE who keep from ten to thirty hens almost invariably have one basket or box in which they put their eggs day after day. Thus the freshest eggs, being always on top, are the first used, and, unless the basket is entirely emptied occasionally, some of the eggs at the bottom are likely to become stale.

Each day's eggs should be kept separate from those laid on other days, but a basket for each day in the week requires too much shelf room. The egg rack described here solves the problem admirably. It should hang on the wall, entirely out of the way, in a cool cellar.

Let us suppose you have a box about twenty-three inches long and twenty-one inches wide made of boards about one half inch thick. That is a good size. From it make a shallow box four inches deep, twenty-two inches long and twenty inches wide. Next make seven shelves of half-inch boards four inches wide, and just long enough to fit the box inside. Nail them in place, three inches apart, and sloping downward one inch from front to back.

By using one shelf for each day in the week you will know exactly how old each egg is. The rack will accommodate eighteen eggs a day.

THE COMPANION RECEIPTS

These receipts are gathered from original sources in America and Europe and are fully tested

WINTER SOUPS

SOME one has said that there are as many soups as there are days in the year. Probably there are more, but only a very small number of them appear on the dining table of the average family. Among the following receipts are some that are little known, but they are especially appetizing on cold winter evenings, when a hot, rich soup seems the most appropriate beginning for a meal.

French Onion Soup.—Chop two medium-sized onions, and fry them to a rich brown in two ounces of butter over a moderate fire, for onions burn quickly. To them add a quart of boiling soup stock of any kind, or simply water or milk, and cubes of lightly toasted bread. When the soup is ready to serve, add a little grated cheese, and season it with salt and white pepper.

A Flemish Soup.—To two pounds of washed and picked Brussels sprouts add ten potatoes, two onions, two leeks, salt and pepper. Cook all gently until the vegetables are tender; then pass them through a sieve. Force as much of the vegetable pulp through as possible. Add one quart of beef stock and serve the soup very hot.

Cream of Potato and Chestnut Soup.—Boil one cupful of diced potatoes and one half cupful of chestnuts in salted water until they are tender. Drain them and add one quart of scalded milk; season the mixture with a dash of nutmeg, salt and Cayenne pepper; thicken it slightly with a tablespoonful of cornstarch moistened with a little cold milk, and add one tablespoonful of minced parsley when it is ready to serve.

Tapioca Soup.—One quarter cupful of tapioca, one cupful of cold water, one pint of boiling water, one quart of chicken or veal stock, one cupful of hot milk, the yolks of two eggs, salt and pepper. Soak the tapioca in the cold water for two hours, drain it, add the boiling water, and cook the whole in a double boiler until it is transparent; add gradually the hot stock and cook both for ten minutes; then add the seasoning and the hot milk. Beat the yolks of the eggs and add them after diluting them with a little of the hot mixture. Stir the soup for a few seconds, pour it into the tureen and serve it.

Pot-au-Feu.—Choose a good-sized beef bone that has plenty of meat on it, cover it with water and boil it for three hours. Remove the bone and cut the meat into bits. Let the stock cool, then remove the fat, add the meat to the stock, return it to the fire, add one large onion that has had ten whole cloves imbedded in it and has been browned until it is brown, add one pint of cooked tomatoes, one half cupful of rice, and one quarter cupful each of chopped potatoes, carrots and cabbage. Cook the whole until the vegetables are tender, and add salt and pepper. Just before you serve the soup, add one teaspoonful of white sugar burned to a good brown color. That adds to the flavor of the soup and gives a rich color.

Clam Chowder.—One and one half dozen clams chopped fine, one cupful of water, three large potatoes peeled and cut into dice, two slices of pork or bacon cut into dice, one sliced onion, one quart of milk, two tablespoonfuls of butter, two tablespoonfuls of flour, one teaspoonful of chopped parsley, one teaspoonful of salt, one quarter teaspoonful of pepper and a dozen large crackers. Try out the pork or bacon and fry the onion in the fat; add the clam liquor, the water and the potatoes. Cook the chowder until the solids are tender; season it, then add the clams and the milk. Cook it ten minutes longer, then thicken it with the flour and the butter creamed together. Pour the chowder over the crackers, sprinkle the top with the chopped parsley, and serve it immediately.

Creole Soup.—Wash and cut into slices one half dozen good-sized turnips; add half a can of tomatoes, two tablespoonfuls of sweet red peppers, canned or fresh, half a teaspoonful of allspice, ground, one sliced Bermuda onion, a scant teaspoonful of salt, four whole cloves and a large tablespoonful of butter. Cover the ingredients with water, place them over the fire, bring them to the boiling point and cook them rapidly until the vegetables are tender; then strain the soup and keep it hot, without letting it boil. Heat a pint of rich milk in a double boiler and thicken it with a small teaspoonful of flour moistened in a little milk. Be sure that the sauce boils, then turn the vegetable purée into a hot tureen, stir into it a pinch of baking soda to keep it from curdling, and very gradually add the sauce, stirring the soup constantly as you do so. Serve it at once.

"All My Elements Are There"

The Oat Is a Complete Food

Students of food values know that the oat contains all the elements we need. And in the right proportions. All save fat—which the cream supplies—and water.

It is rich in elements which most foods lack.

It is famous for its energizing powers.

For ages the effects have proved that. But science now tells us why.

It is this great food—the most delicious, most important grain food—that Quaker Oats presents in extra-luscious form.

It is for lovers of vivacity, capacity and power.

In this rich, flavory form folks eat it plentifully and often—as they should.

Quaker Oats

The Royal Grade of Vim-Food

Its extra goodness is due to selected grains. Quaker Oats is flaked from only the big, plump, luscious oats. We get but ten pounds from a bushel. The little grains have no such flavor as you find in Quaker Oats.

All the world over, millions of oat

lovers have discovered this Quaker Oats quality. So everywhere this premier brand outsells any other.

Every grocer sells it, and without extra price. Asking will bring it to you. Remember this, for your own delight, when you next order oats.

10c and 25c per package
Except in Far West and South

An Aluminum Cooker

For \$1.00—Retail Value \$2.50

This aluminum double cooker is made to our order to cook Quaker Oats in an ideal way. No flavor is lost, no aroma. The oat flakes are perfectly cooked.

It is large and heavy, made to last a lifetime. Cereal capacity, 2¼ quarts.

Over 700,000 homes are now cooking Quaker Oats in this way. Now we want every home to have one. We supply only one cooker to a family.

Send us our trademarks—the picture of the Quaker—cut from the fronts of five Quaker Oats packages, or an affidavit showing the purchase of five packages of Quaker Oats. Send \$1.00 with the trademarks or affidavit, and this ideal cooker will be sent to you by parcel post, prepaid. We require the trademarks or affidavit as assurance that you are a user of Quaker Oats. The trademarks have no redemption value. This offer applies to the United States and Canada. Address

BOYS' PAGE for JANUARY

Address your letters to THE EDITOR OF THE BOYS' PAGE, THE YOUTHS COMPANION, BOSTON, MASS.

A BOY'S MICROSCOPE

SOONER or later every boy who becomes interested in nature study feels the need of a microscope, for he soon learns that by the use of an instrument that magnifies 20 to 75 diameters, or, according to the popular way of figuring by areas, 400 to 5600 times, a new world is opened to him.

He seldom has means to get a standard instrument, which costs \$18.00 or more; nor would he be likely to appreciate a fine instrument if he had it, or, in his lack of experience, to give it the care that such a piece of mechanism needs. It is therefore usually best to start with a \$2.00 or \$3.00 instrument. Any boy who deserves a standard microscope will accomplish a great deal with the smaller one. Fig. 1 shows one of the cheaper instruments in use.

In buying a low-priced instrument, unless you get it from a company that has a high reputation, be cautious, for some cheap microscopes on the market are absolutely worthless, and among those at the same price there is often much difference. Hence it is well to have something mounted on a

FIG. 1

glass slip, and to test several instruments with it, choosing the one that shows the brightest, clearest image. If possible, get the microscope that has a concave mirror, and avoid all that are alleged to magnify more than 80 or 90 diameters, or that produce a cloudy image.

The cheaper microscopes sell at prices that range from \$1.00 to \$12.00, but it does not pay to get one that costs more than from \$2.00 to \$4.00, for the more expensive among them have virtually the same lenses as the cheaper ones, or are of too high power for their quality, and so are of no use at all. Those that range in price from \$5.00 to \$12.00 are more convenient to use; but if a prospective purchaser can spend that amount of money, he will do better to add a little to it and get a standard instrument. When the need of greater magnification is felt, as it will be after long use of low-power instruments, it will be necessary to buy a standard instrument; there is no satisfactory way to apply fine lenses to a cheap stand.

One of the first ideas for a beginner to get rid of is that magnifying power determines the value of a microscope. To see detail, the first necessity is resolving power; and if the objective—the most important part of the microscope—is well constructed otherwise, the resolving power depends upon what is called aperture.

Roughly speaking, aperture is the proportion, according to certain laws, between the diameter of the back lens in the objective and the length of focus of the objective. That means simply that for every magnification there must be a corresponding proportional aperture: if the enlargement is too great for the aperture, all the extra diameters are useless. The writer has two objectives that magnify to the same degree but have very different apertures. One will reveal marks on an object that are only $\frac{1}{1000}$ of an inch apart; that is, it resolves those marks. The other will not show any marks that are nearer together than $\frac{1}{1000}$ of an inch; all marks nearer together than that become so blurred that they blend together and so are invisible. The first objective cost \$50.00, the other one \$4.00; but their magnification is the same.

Other things as important as magnification, and without which even aperture is useless, are good corrections for spherical aberration and chromatic aberration. The rays of light that pass through the centre of a simple lens are affected differently from those that pass through near the edge, and so cause blur and confusion unless the difference is compensated by a special method of construction. The same is true of color. The different-colored rays that together make white light are affected differently, one from another; so the lens must not only have curves that are exactly right but must be made of the right kinds of glass, known as flint and crown, and the two kinds must be used each in its proper place.

None of the small, cheap instruments have much, if any, correction for chromatic or spherical aberration, or sufficient aperture for any enlargement above 90 or 100 diameters. Above 80 diameters less detail rather than more appears, although, of course, the main outlines are larger. As magnification is increased, the care of materials used in making and mounting the lenses must be increased much more than in proportion. Therefore a small microscope made by a responsible concern and costing \$2.00 or \$3.00 will afford better satisfaction than some that are more pretentious, because it will give clear enough vision not to strain the user's eyes.

Any of the compound microscopes made by reputable companies have objectives of good aperture, and spherical and chromatic corrections good enough for the ordinary requirements of a lifetime, yet their price is within the reach of an ambitious and industrious boy.

FIG. 2

There are several well-known makers who for \$17.50 sell really good stands, with an objective that gives from 120 to 130 diameters, and about 35 when one lens is unscrewed. The instruments have coarse adjustment by rack and pinion, plane and concave mirrors, and iris diaphragm under the stage, and are well made and finished. They give a bright, sharp, flat field of view. The careful construction and the concave mirror permit objectives that give magnifications up to 300 diameters to be added and used later. Such objectives cannot be obtained in a cheaper instrument.

For about \$19.50 a very much better stand can be bought, if the 4-mm. or high-power objective is left out, although some dealers add ten per cent if that lens is omitted. For the young person who has shown by his continued use of his \$3.00 instrument that he will stick to microscopic work, the \$19.50 instrument is the cheapest one it will pay to buy. It has the minimum of attachments for good work, and yet all the other attachments can be added. With a 10-power eyepiece it will give 100 diameters with the 16-mm. objective that comes with it; or the divisible sort described above can be substituted.

A stand of the kind that allows high powers and their accessories to be added as they are needed should have a plane and a concave mirror so mounted as to swing out for oblique lighting; a substage screw for attaching the condenser necessary for very high powers; an iris diaphragm just under the stage for controlling the light; a coarse adjustment by rack and pinion; a fine adjustment by another milled head, to allow the highest powers to be used; an eyepiece held in a drawtube so that the distance from eyepiece to objective can be altered, and an inclination joint that will allow the microscope to be used comfortably in other positions and even horizontally for photography.

Such an instrument is a good investment, for eventually it may grow into a complete high-class microscope.

Sometimes good bargains can be found in second-hand microscopes, but unless the buyer knows what he is about he may find that he has bought nothing but a lot of junk.

As should have been gathered from what has been written above, the objective is the important thing. The modern tube length is short, about 160 mm.; the older instruments had a tube length of 200 mm. or even 250 mm. The older objectives, such as came with the microscope, are suited to the greater length, but a modern objective, made to work with a short tube, would be useless on the old-style microscope, as would most other modern equipment. Hence it is not wise to buy an old instrument with the expectation of adding accessories in the future; but if the lenses that come with it are good, there will be no need of new ones, and so a useful instrument can be got for very little money. But in case there is no substage condenser,—and many of the older instruments lack it,—there should be a concave mirror; otherwise the microscope is likely to be poor.

The Companion will soon print in the Boys' Page an article on The Care of the Microscope.

THE GAME OF SHOGI

SHOGI, or Japanese chess, is an extremely interesting game, little known in America. It differs widely from Occidental chess, but it provides the same unlimited opportunity for skill, and offers an infinite variety of situations and interesting complications. A set of *shogi-no-koma*, or Japanese chessmen, can easily be made by any boy; and the game can be played with the help of a few simple rules.

To make a board, get a smooth piece of wood about sixteen inches square. On it mark off a square with sides 13 $\frac{1}{2}$ inches long. Divide the square so drawn into eighty-one 1 $\frac{1}{2}$ -inch squares. After inking or painting the lines, shellac the board; but instead of making the squares alternately light and dark, as in checkers, leave all of them in the natural color of the wood.

The men are all exactly alike in shape (Fig. 1) but differ in size. For the two kings, which are the largest, cut blocks of wood 1 $\frac{1}{2}$ inches long. For the soldiers, which are the smallest pieces, cut eighteen blocks 1 inch long. Then there are two elephants and two chariots, each 1 $\frac{1}{2}$ inches long; four golden generals, each 1 $\frac{1}{2}$ inches long; four silver generals, each 1 $\frac{1}{2}$ inches long; four knights, each 1 $\frac{1}{2}$ inches long; four spears, each 1 $\frac{1}{2}$ inches long. You will thus have forty blocks of various sizes ready to be labeled. On the upper side of each piece print its name, and on the other—except in the case of the kings and the golden generals—put its initial, or initials, and the letters, GG. In the case of the spear, put on its back SP-GG to distinguish it from the back of the soldier, S-GG. When all the pieces have been labeled, you will have two kings, two elephants, two chariots, four golden generals, four silver generals, four knights, four spears and eighteen soldiers. The board and the men will then be ready for play.

THE RULES

I. The object of the game is to checkmate or "kill" the opponent's king. That is accomplished when the king is under attack by a hostile piece and cannot escape the attack by moving out of danger, or by interposing one of his own men, or by capturing the attacking piece.

(a) A player attacking his opponent's king shall say *check*, or *o-te*, thus warning his opponent that he must remove the king from danger.

(b) A king under attack shall be called "in check."

(c) Neither player shall make a move that will place his own king in check.

II. The pieces shall be arranged on the board as in Fig. 2.

(a) In the first row on the centre square place the king; on the two adjacent squares to right and left place the golden generals; on the next two squares the silver generals; on the next two squares the knights; and on the two corner squares the spears. In the second row place the elephant on the square in front of the left-hand knight, and the chariot on the square in front of

the right-hand knight; all other squares in this row are to be left vacant. On the nine squares of the third row place the nine soldiers.

(b) Each player shall place his pieces with the pointed end toward his opponent, in order that it may be possible thus to distinguish the ownership of the men. (Because the pieces often change hands during the course of the game they are not distinguished by color, as in checkers or Occidental chess.)

III. The board shall be theoretically divided into three sections: the three rows occupied by the player's men are to be known as "home territory"; the three central rows, on which no men are placed

Spear	Knight	Silver Gen.	Golden Gen.	King	Golden Gen.	Silver Gen.	Knight	Spear
	Chariot						Elephant	
Soldier	S.	S.	S.	S.	S.	S.	S.	S.
Soldier	S.	S.	S.	S.	S.	S.	S.	S.
	Elephant						Chariot	
Spear	Knight	Silver Gen.	Golden Gen.	King	Golden Gen.	Silver Gen.	Knight	Spear

FIG. 2

at the beginning of the game, as "battlefield"; and the three rows on which are placed the opponent's men, as "enemy's territory." It will be seen that one player's home territory is his opponent's enemy's territory.

IV. The different pieces may move as follows (see Fig. 3):

(a) The king may move one square at a time in any direction.

(b) The chariot may move straight to the front, straight to the rear, or straight to the right or left, as many squares as may be desired, but it must not pass over any other piece.

(c) The elephant may move diagonally forward or backward as many squares as may be desired, but, like the chariot, he must not pass over any other piece. (In their powers, elephant and chariot are like the bishop and castle in Occidental chess.)

(d) The golden general may move one square at a time in the following directions: straight to the front, rear, right and left; diagonally forward.

(e) The silver general may move one square at a time in any of the following directions: straight to the front; diagonally forward and backward.

(f) Whenever the knight makes a move he advances two squares to the front, then turns one square either to right or left. The knight alone may jump over a piece that stands in his path. Unlike the knight in Occidental chess, the knight in shogi must not move backward or to any squares except the two indicated.

(g) The spear may move any number of squares to the front in a straight line, but must not move backward.

(h) The soldier may move only forward and one square at a time.

V. On entering enemy's territory, any piece may be turned over, thus signifying that it has been promoted to the powers of a golden general, or it may remain as before, at the will of the player. When such a piece is turned over, it becomes to all intents and purposes a golden general; but if captured and returned to the board as a "captured piece" (Rule VI), it reverts to its original status.

(a) The king and the golden generals cannot gain promotion.

(b) The chariots and the elephants, on entering enemy's territory, not only retain their former powers, but may move one square in any direction. In any one move, however, they must not deviate from a straight line.

Note 1. The inscription on the under side of a piece that is turned over indicates that the change in power has taken place. For example, suppose a silver general has entered enemy's territory; on

FIG. 3

its back it bears the initials SG-GG, which signify that a silver general has acquired the powers of a golden general. When once this change of power has been made it may not be withdrawn.

Note 2. There is one exception to that rule: In the case of a captured piece (Rule VI) put into play in enemy's territory, it must make one move before it can be promoted.

VI. A piece taken by either player shall be known as a captured piece. The captor may put such a piece into the game anywhere on the board as one of his own men.

(a) There are two exceptions to this rule:

1. A captured soldier shall not be put into play on a column that is already occupied by a soldier belonging to the captor; that is, no player shall have one soldier in front of another.

2. A captured soldier shall not be put into play in such a manner as to checkmate a king. But a captured soldier that already has been put into play and

has become a golden general may move and checkmate a king. A captured soldier may be put into play in such a manner as to check a king, when the king is able to escape from the check.

VII. A piece is captured or "killed" when an opposing piece lands on the square it occupies.

(a) All pieces, including soldiers, "take" in the same direction in which they normally move.

(b) The knight alone may jump over a piece; a piece so jumped is not captured.

(c) No soldier that has not become a golden general may checkmate a king.

In its tactics shogi differs radically from chess. Under ordinary circumstances the knights should not be moved out, for they are a strong force in the defense, and their inability to retreat renders them liable to capture in the centre of the board. Caution should be exercised in moving the chariot and the elephant off the line of attack on which they are placed at the beginning of the game. The silver generals are commonly advanced to feel for weak places in the hostile line. When it is possible to take the offensive early in the game, an attack concentrated on a definite point should be maintained as vigorously and consistently as possible. Captured pieces should be utilized whenever it is practicable.

The game can be played carelessly for an hour's amusement, or it can be studied and made a genuine science, at the will of the player. In any case, it offers a fascinating entertainment that will well repay the slight trouble of making a set of the men and mastering the moves of the pieces and the simple rules of play.

A TOY SUBMARINE BOAT

THIS is a submarine boat that really goes. You can make it if you can find a bit of tin, some lead, a few brads and, most important of all, an old window-shade roller that has a good spring in it.

The spring is the submarine engine. Saw off the roller about three inches beyond the spring, and shape it like the blunt nose of a submarine boat.

Flatten a piece of the lead, and with two slender brads fasten it to the bottom of the boat for a

keel. You will have to experiment a number of times until you get the keel of the right weight and in the right place to permit the boat to swim evenly a few inches below the surface of the water. Of course the keel must not be heavy enough to sink the boat.

Next comes the propeller. First cut a piece of tin into a disk two inches in diameter, then cut it as shown in the illustration, and bend the flanges to shape it like a real propeller. In the centre make a hole that will just admit the end of the spring, to which it must be soldered. Wind up the engine by turning the propeller or the bit of iron knob that protrudes beyond it.

The shade-roller spring can be used as an engine for any sort of craft, from a toy motor boat to a toy battleship. It works effectively, and does not easily get out of order.

ROGER—AND RULES

"WHAT'S the matter with Roger? He doesn't seem to be able to hold a job more than a few months. I notice he's constantly changing from one place to another. He has a good education, he's bright and capable. I'm surprised that he hasn't gone ahead faster. What's the matter with him?" The speaker looked questioning at his friend.

"Well, it's only one thing," said the other. "I've known him ever since he was six years old, and he's been the same fellow always. He won't obey rules. He hasn't any use for regulations."

"I remember that when we used to play marbles he wouldn't stick by the rules. He was determined to 'fudge'—not to be more sure of winning, but merely because he wanted to override the law of the game."

"We went to boarding school together, you know, and the first thing he did was to laugh at the rules."

"What makes you laugh?" one of the older boys asked. "You'll find those rules are rules. That card on the wall isn't merely ornamental."

"We'll see," said Roger. "I think I can manage to jump some of them."

"He did. Consequently, although he was a bright student, he was usually in hot water with the board. The very fact that the students were expected to be in their rooms at ten o'clock awoke in Roger a desire to stay out until ten-thirty—he wanted to show the rest of us that no one could compel him to submit to rules. Some of the other fellows followed his lead, and the whole school was stirred up. The authorities struggled along with him to the end, but his standing was not good, and they were glad to get rid of him."

"In work a fellow has to stick to the rules, of course, but Roger doesn't see it that way. His employer may have rules to be observed by his help; but if Roger doesn't like them, he smiles and does as he pleases—for a few days or weeks; then he is looking for another job."

"It isn't that he lacks ability. His last employer told me that he was one of the most capable young men he ever had, but that he wouldn't live up to the rules of the house. He spread the contagion among the other employees; there was trouble

Quality
First!

THE NEW COMPANION is known as "the Quality Machine." This standard has been steadily maintained by us for over a quarter of a century, and it has placed the New Companion among the leading sewing machines of the world. In construction, durability, equipment and operation no better sewing machine can be obtained at any price.

New and Exclusive Improvements

All the latest improvements, including the Plate Tension Thread Release, are incorporated in the New Companion. No other machine can furnish a Plate Tension Release.

FACTORY-TO-HOME PRICE

As originators of this popular plan we have been able to provide our subscribers with a high-grade sewing machine at a large saving to each purchaser. We pay all freight charges on the machine to any railway station in the United States, and allow three months' free trial.

How this is done is told in our Illustrated Descriptive Booklet. A postal inquiry will secure it by return mail. Send for it NOW.

all round, and so Roger had to go. If he could overcome that fault, you'd see him start to climb the ladder mighty fast."

AN ATHLETIC MATCH EVERY DAY

MANY curious facts have come to light since men of science began to measure the amount of effort required for different things that people do. Among other things it is now known that young people have to do more work in proportion to their size, merely to live at all, than their elders do. Their hearts beat more rapidly, their lungs pump faster, and in general they make harder work of all their bodily processes.

The units by which bodily work is gauged, and by which, also, the energy of the food that we eat is measured, are called calories. Bodily work includes not only productive labor, such as hoeing corn or sawing wood, but also eating, breathing, keeping warm, and the like, which even in the case of a laboring man use up at least half of the energy he expends.

While an average grown man at light, indoor labor does about seventeen calories of work a day for each pound of body weight, a boy or a girl does twenty or twenty-five, a young child thirty, and a very young baby forty-five.

A comparison of growing boys and girls with their fathers and mothers shows at once that they are very like the members of a college athletic team compared with other students. That is to say, they are working their bodies much harder; and as a matter of fact the college athlete actually does the twenty or twenty-five calories of work to the pound that his younger brother in the grammar school does.

But no first-rate college in these days expects its athletes to live, while they are in training, just as the other students live. The trainer takes special pains to get them to bed early and to see that they avoid all bad habits. Usually, of course, they eat at "training tables," where the food is especially nutritious.

Every boy, then, ought to remember that as long as he does his twenty calories and upward of work every day, largely by the mere act of living, he is an athlete in training, and is playing a match every day in the year. Therefore, like the older athlete, he should make sure of his sleep and guard his general health. Most especially, since all of his work has to come out of his food, he should put himself at "training table," and not eat what he knows is not good for those who are in training. People who are doing only seventeen calories of work for each pound of their weight can afford to do many things that people in the twenty-calorie class had better avoid.

A SHORT CUT

BOB'S face assumed a puzzled expression as he looked at the board before him. It was ten inches and a fraction in width, and for almost ten minutes he had been trying to divide it into three equal parts.

"That's harder than I thought it was!" he exclaimed finally, as he realized that he was getting larger and larger fractions, although he was still far from the accurate division that he sought. "I guess I should never make a carpenter."

Bob's uncle glanced toward him with an amused twinkle in his eye. He had noticed his nephew's puzzled silence and had guessed the reason. Getting up from his position in front of the workshop that both were building, he went over to where Bob stood.

"This is the way to do it," he said. Taking a rule, he laid it across the ten-inch board obliquely, so that the oblique measurement

was exactly twelve inches. Then he marked off with his pencil three equal divisions—one at the four-inch line and the other at the eight-inch line. "Now you will find your board accurately divided," he said. "That is the easiest way to make divisions. It works on any width or for any number of divisions. To divide a 9½-inch board into four parts, for example, you make your ruler measure obliquely just 10 inches across the board, and then you would mark off your division at 2½, 5 and 7½. It is a very handy thing to remember, for it will save you many a quarter hour of ciphering."

A HOMEMADE FLASH LIGHT

A SUBSCRIBER writes that, if the necessary materials are at hand, it does not take long to make a serviceable flash light of no small illuminating power. The supplies that are called for are a three-volt incandescent lamp and a socket to hold it, a small reflector, two dry-cell batteries, three feet of double-braided insulated wire and a switch.

First, with a short piece of the wire, connect the zinc binding post of one battery with the carbon

binding post of the other. Cut the remaining wire into two pieces and attach them to the other binding posts, as shown in the illustration. Bore a hole in the reflector the size of the screw on the lamp, and put the lamp through it. Screw on the socket and attach the two loose ends of the battery wires. Break one of the wires, connect it with the switch, and the flash light will be ready to use.

It can be packed in a small box for convenience in carrying. If that is done, care should be taken to keep the batteries from touching each other and thus "running out." By adding more batteries and using a larger lamp, you can, of course, get a more brilliant light.

The Greatest Sport Of Them All

It has coasting with your bob-sled or double ripper beaten in a dozen different ways. And you can coast all year around. No waiting for a lot of snow, a good freeze or a steep hillside. Every day is a coasting day if you have a MIAMI-MADE Bicycle.

There is nothing like a bicycle for real health-building fun. It takes you to school in a jiffy; it makes running errands for Mother easy and a pleasure. And don't forget those rides with the other boys after school and on Saturdays. Bicycle riding is the greatest sport of them all!

But you won't be really satisfied with anything but a MIAMI-MADE Bicycle. It has all the features of other makes and a lot they haven't got.

Here Are Just a Few of the
Special Exclusive Features of

MIAMI-MADE Bicycles

Musselman Coaster Brake

No matter how fast you are going, you can stop in an instant. No springs to break. No parts to wear smooth and slip.

Four-Ply Hercules Construction Frame

Built of the finest seamless tubing. The reinforcement is carried back eight inches into the tube with four plies of steel at the joint. Can't break or buckle.

The Crank Hanger

Made of special steel, each part carefully tested and oil-tempered. Every part machined with unerring accuracy. Stronger and heavier than other crank hangers.

Front Fork

Made of heavy gauge seamless tubing, beautifully and thoroughly nicked and enameled. Crown extends well into the fork side and up into the stem. Exceptionally strong.

There isn't any color, any model, any type of bicycle, any feature that you may want that you won't find in the MIAMI-MADE line of bicycles. There are four lines, the "RACYCLE," the "HUDSON," the "MIAMI," the "FLYING MERKEL."

Go to the dealers in your city that handle these lines. Try them all before you decide. Pick out the one you like best. Tell Dad you want that bicycle and why.

There are lots of bicycles, but there is only one kind that you really want and that is a MIAMI-MADE Bicycle. You'll agree with us after you have seen them. If there isn't anyone in your city who sells MIAMI-MADE Bicycles write us and we will send you our catalog. Don't let anyone sell you anything but a MIAMI-MADE Bicycle.

GIRLS' PAGE for JANUARY

Address your letters to THE EDITOR OF THE GIRLS' PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

A WINTER PICNIC

THE girl who belongs to a family in which the income is inadequate to social needs and demands is compelled to face difficulties that are not imaginary. To wear an old hat serenely when everyone else has a new one is a test of character. To be content with a last year's gown when your friends appear in smart, new garments requires a brave spirit.

The inability to entertain is often the most serious hardship that people of small means are obliged to meet. It is there that ingenuity and a willingness to be original may prove of more value than money, as in the case of two girls who, in spite of a very slender income, have an abundance of pleasure and are as popular in a set of wealthier girls and boys as they would be if they had a fortune.

One of their most interesting achievements was a winter picnic. They had been invited to teas and luncheons until the time had come for them to return some of the hospitality that had been extended to them; and being happy, courageous girls who wear their simple gowns with an air, they determined to steer clear of formal and conventional things, and to make originality take the place of money.

They live in a suburb of a big city, so that fields and wooded hills are near at hand. On a cold December Saturday, when a light fall of snow had made all things lovely, the young people met at eleven o'clock. There were eight boys and eight girls, all in sweaters, and wearing stout shoes.

The hostesses had prepared small bunches of holly tied with red ribbon. These were pinned to jackets and sweaters, and the party set out for the woods. The chaperon was a married sister, so full of the love of a good time herself that, although her presence held in check all tendency to roughness, she was in no sense a kill-joy.

A long tramp through the woods carried the party to a rocky hill overlooking a frozen river. There, in a small clearing, the young people found that some one had been before them.

A hole had been dug and was full of hot coals; a small, growing cedar tree had been hung with amusing favors; and as the party arrived, the big brother of the girls waved his cap and said, "Good-by!" Having played fairy godfather in the arrangement of the camp, he was no longer needed.

The live Christmas tree proved most successful, for the fun began with the distribution of the favors, each of which was accompanied by an appropriate verse. Then the party gathered round the glowing coals; and while the girls opened the boxes, the boys spread the steamer rugs in a sheltered corner.

From the boxes came glass cans of oysters, crackers, pickles and a bottle of milk. The result was an oyster stew, steaming hot; and after it came bread and cheese toasted over the coals, and a pot of fragrant coffee.

The two girls who were the hostesses have a country-bred mother who is teaching them that the open fireplace and "God's out of doors" are great adjuncts in dispensing hospitality. She is teaching them, too, that their lives need not be barren of social joys because they are not rich.

The Making and Application of Design

It is in the Girls' Page for February

THE VALUE OF A MUSIC TRAINING

THE power to make ordinary, everyday living an artistic thing, to transform and beautify life, is not a natural gift, but comes through training and growth. As a rule a course in college is the means by which a girl can best obtain such training; but it is natural, also, that the fine art of living should receive special nurture from the fine art of music.

Music educates taste and gives quickness and fineness of perception. Moreover, it makes a special appeal to the emotions; a cultivated woman is one whose feelings are fine and true.

At first sight, to study music seems to be only a matter of practicing until you can play or sing. But the modern music school, with its courses in harmony, the mathematics of music, in theory, in music history, and generally in modern languages, offers much to give the intellectual balance that a well-rounded cultivation requires.

Many girls who for various reasons cannot go to college have an ability in music that might be trained in such a way as to give them some of the things that a college course would give, and also a certain amount of experience that a college course does not always afford.

In a music school a girl can begin work at the point which she happens to have reached in the study of music. She is at no great disadvantage if she has little real knowledge of music, for she does not, then, have to go through the discouraging process of breaking up bad habits in playing or singing. Her work is so arranged that all her study contributes to definite progress, and she advances at the rate of her natural ability. The education of the eye should be an important part of a girl's training. That is something that the music student has an opportunity to gain, for the music school is generally situated in a large city. The city itself will offer much in the way of beauty. In its museums the girl will see the art of the world and in its libraries will find the stores of knowledge.

If the school has a home for its students, the

girl will have certain social privileges. By mere association with other girls, she will learn more about the characteristics of different parts of her own country than she would be likely to learn in any other way. She will find that her happiness depends on her being tolerant of the opinions of others, for girls have their own way of training one another.

As she becomes proficient in music, the value of her education becomes apparent in her ability to entertain. Music is a sort of universal language; and the feelings of people the world over are very

will not stick to the fingers. Do not put any butter on the fingers, but work fast.

THE HOTEL-REGISTER GAME

THE brief description of the amusing pastime of inventing hotel-register puns that we printed on the Editorial Page for January 20, 1916, led many cheerful punsters to send us lists of such names as Mr. Perry Scope, Mrs.

EARNING MONEY AT HOME

THE COMPANION is eighty-nine years old. A part of the pleasant fortune of its long life has been receiving the confidences of four generations of American girls. Through countless letters it has known their personalities, their problems and their ambitions.

Among these problems, great and small, one that is neither the greatest nor the smallest is the most common. That is the economic question of *Earning Money at Home*. The household service that the girl renders keeps her from feeling altogether dependent upon her male relatives; but that is not enough. An allowance may provide spending money, but it may be too small to cover all the girl's needs, and it can never provide her with the feeling of independence that she craves.

Many girls who would prefer to stay at home are preparing to leave it for factory, store or office because they cannot get any money of their own at home. Others remain, but do so in a spirit of willing or unwilling sacrifice. A great number of girls and women cannot and do not consider any other economic field than the home; yet at the same time they wish to earn, either for pocket money or to increase the family income. All these groups The Companion will try to help.

The Companion has found that ways, means and materials for earning often lie close at hand unrecognized, and that many girls need only to have their attention directed toward them. The best way to do this is to avoid vague and glowing general suggestions, and give her the clear, detailed facts of actual experience.

Many resourceful young women have lately set their wits to work and discovered the solution of their own special problems. From such commonplace occupations as cooking, preserving, sewing and poultry raising several girls have thought out paying schemes. Others have thought out more novel, but no less simple, plans. For the most part these plans demand only a small amount of capital. Some of them can be developed into more ambitious projects, according to the ability and the ingenuity of the experimenter.

Ideas that The Companion has collected from all parts of the country will be published from month to month, as space is found. The Companion cannot, of course, guarantee success for any one venture; but since all the plans are based upon actual experiences, they may reasonably be expected to "work" again.

much the same. The musical girl is at home wherever she has an opportunity to play or sing. People of differing views or even of different tongues may alike enjoy her music.

The ability to entertain others passes easily into the power to influence others. When the girl goes back to her home, she will be sought for in school, in church and in society. She will come naturally into vital contact with the whole community. She has it in her power to become a civilizing centre.

The more complete her music education, the greater, of course, will be her power; but even a comparatively short course in a music school should yield returns that will be well worth while. It should give her a new outlook—power to see beauty in life and to make life beautiful. But in order to gain those things she must go to the school with a determination to put her whole heart and her whole mind into her work.

And she will not truly have gained those things unless, when she goes back to her home, she goes with a feeling of obligation to pass on to others the benefits that her music education has conferred upon her.

A HANDKERCHIEF DANCING DOLL

WHEN or where the first handkerchief dancing doll delighted children with its performance and made the "grown-ups" laugh is unknown; but although the doll is not a recent invention, it is still a novelty.

In the border of a handkerchief between two corners make a solid knot to serve as the doll's head. The corners at the sides of the knot are the arms. Next lay the handkerchief straight and flat with the knot at the top; then grasp between the thumbs and fingers of both hands the bottom corners of the handkerchief. Holding the handkerchief in that manner, lift it and twirl it round and round until you have two tightly twisted legs.

The two corners that you hold are the feet.

Taking care not to let the handkerchief untwist, grasp both feet in one hand, and, with the other holding the bit of border that sticks up from above the knot, help the doll to dance. At the end of the dance, as you hold the feet firmly and pull up on the head, suddenly let go one foot, and the doll will give a kick that is sure to cause a laugh.

Grandmother's Best Molasses Candy. — Use two cupfuls of

New Orleans molasses, one cupful of white sugar, one tablespoonful of vinegar, one tablespoonful of butter and one small teaspoonful of soda. Put the ingredients together and boil them hard for twenty minutes. Stir the mixture all the time, for molasses and sugar at the boiling point will burn in an instant. If the quantity is doubled, boil the candy five minutes longer. Cool the candy in shallow pans. If it gets quite cool before it is touched, and is pulled in small quantities, it

Addie Pose and Mr. Tim O'Rous. Those The Companion printed in the issues for March 30 and August 17. One ingenious subscriber went so far as to devise a hotel-register game of cards, which is an excellent source of entertainment on a winter evening.

Make a pack of one hundred blank cards, and on them write the names of the "guests," so that two cards make a set. For example, write "Allie" on one card, "Gator" on another; "Jennie" on one, "Rossity" on another. Give ten of the sets distinguishing marks, so that they will be known as prize sets. You will then have fifty sets of cards, certain ones of which are more valuable than the others. The game is at its best when from two to six players join in the fun.

Shuffle the cards well and deal five cards to each player, leaving the rest face down in a pack on the table. The player at the left of the dealer begins by matching any sets he may have in his hand. He may then call upon any player in the group for the other name of any "guest" he holds in his hand, be it first or last name. Should he fail to receive the card that he calls for, he draws one from the pack in the centre. If it is the card for which he asked, he matches the two and places them at one side and calls again. He may call as long as he receives or draws the one he calls for; should he draw one that matches another card in his hand, he reserves it until his next turn, when he may put the pair on the table and call as before. If any player's hand runs out, he draws a card from the pack and proceeds as before. The game continues until all the cards are matched.

The score is counted in this way: the player who holds the most sets at the end of the game gets ten points; each prize set counts five. The one who has the highest score wins, or several hands may be played and the game set at a number agreed upon at the beginning.

SUCCESS WITH FERN BALLS

INNUMERABLE failures in trying to grow fern balls result from not giving the balls sufficient water. Mere spraying is useless. Nothing short of a good soaking every other day until growth has started will bring success. Two or three hours is none too long to leave the balls in the water, and regular watering is required even after the ferns have begun to appear.

By soaking the balls in weak manure water after growth has begun to show, you can develop extra fine specimens. Pulverized sheep manure from the seed store is a very convenient fertilizer for use in town houses. Put it in a cheesecloth bag and immerse the bag in a pail or tub of water until the water has assumed the color of weak tea, when it will be sufficiently strong. Feeding the ferns in that way even once a week will result in amazing growth.

The best time to start fern balls is early in the year; in from two to four weeks they will be covered with feathery green foliage. They may be dried off at any time, and will then remain dormant until water is applied again.

If you cut a fern ball through the middle and place one half flat side down in a fern dish, and apply water as already described, you will have

in a short time a charming centrepiece for the dining table. The divided fern ball will demand much less care than the ferns commonly used on the dining table. If it takes on a burned appearance, it is likely to be because of exposure to the sun. It is better to keep it out of direct sunlight at all times.

Fern balls are made by packing the roots of a special variety of Japanese fern in moss, forming the whole into the shape of a ball and binding it with tough string. Sometimes the strings rot away or break, but then it is necessary only to fasten a few fine wires round the ball to make it as firm as ever. Properly grown, fern balls are interesting and attractive, but the half-naked specimens that are often seen have little to recommend them.

THE CLUE

ISABEL came flying out of the music room, humming the solo that she was to sing at the concert that evening. Aunt Nell looked up brightly from her taffing.

"You have your solo almost perfect, haven't you, dear? A half hour more of practicing —"

"Almost! Aunt Nell!" Isabel stopped in her whirlwind rush to the front door. "Why, I know it from beginning to end, every note of it."

"Every note?" echoed Aunt Nell quietly but with peculiar emphasis.

Isabel hesitated for a second. "Well, every note except one—that difficult one where I drop from F to A flat; but Jean always gives me a note for a clue, so I'm all right," she declared confidently.

Aunt Nell's face was serious. "But suppose Jean forgot to give you the clue? Suppose she should be unable to play your accompaniment to-night?"

"Oh, but she will be able, of course," said Isabel, with a laugh. "Bye-bye, auntie!" and off she ran.

Aunt Nell, anxious for her niece's success at the concert, watched her hurry down the walk with flying feet, and then, even as she watched, those twinkling feet faltered, hesitated, turned and came back toward home. In a moment Isabel solemnly entered the sunny living room.

"O Aunt Nell," she cried dolefully, although her eyes twinkled, "you've spoiled my afternoon! I've simply got to conquer that note and depend upon myself." And with a prodigious sigh she again entered the music room and closed the door.

After twenty minutes Isabel appeared with a look of elation on her face. "There," she said, grasping her aunt by the shoulders and giving her a loving little shake, "are you satisfied? Is your blessed old mind quite at ease?"

Aunt Nell gazed fondly into the glowing face so near her own.

"Quite," she answered, smiling, "but it wasn't solely a question of my mind."

A WASH RUG FOR THE BATHROOM

THE wash rugs that are sold at the stores are as a rule expensive, but a handsome wash rug can be easily made according to the following directions:

Take two balls of carpet warp and a medium-sized steel crochet hook. Make a chain of one hundred and seventy-five stitches, turn into the third stitch back, make a double crochet stitch;

continue the double crochet across; chain three, turn, and go across with the double crochet; chain three, turn, and double crochet six stitches; then chain two and double crochet into the third stitch on the last row; chain two, double crochet into the third stitch, and so on. Continue to within six stitches of the end of the row; into those stitches put a double crochet; chain three, turn, and go across like the last row. That makes two rows of openwork stitches. For the fifth row, double crochet six, then make two openwork spaces, then solid double crochet until within two openwork spaces of the end.

Continue back and forth, making two rows of openwork until the mat is one yard long. Finish with two rows of solid double crochet. That makes a plain border outside the openwork.

Into each end of the rug make a fringe by knotting in three strands of warp five inches long.

THE GAME OF INITIALS

AN amusing way of entertaining a group of friends is to teach them the game of initials. Provide each player with paper and pencil, and read aloud the following questions: What is your favorite occupation? What is your chief characteristic? What do you most admire? What is your pet aversion? What is your favorite book? What is your principal article of diet?

The only condition of the game is that each player shall answer every question with words that begin with her own initials. Thus a girl named Mary Anne Smith might give as the answer to the first question, "Making artistic stories," and she might further state that her chief characteristic is "Most amazing severity," and so on. The answers, of course, will vary, but reading them aloud is sure to create merriment. Other questions to add to those given here will suggest themselves.

HEADACHE IN CHILDREN

THE healthy child has no headaches, and ought not to know the meaning of the word until it is well into its teens. Nevertheless, headache is not very uncommon in children, and it does not always receive the attention from parents or physicians that it deserves. In children under three years of age it is difficult to recognize headache, for they cannot describe their symptoms, and can only cry violently or else lie very still and resent any attempt to move them.

Habitual or frequent headache in a child is generally an indication of some constitutional fault; he may have a gouty or nervous inheritance, or he may be run down or anemic. The latter condition often affects older children as they approach the period of adolescence.

Another common cause of habitual headache in children of school age is eyestrain; that comes on toward evening, and is absent during vacations and on Saturdays and Sundays. Chronic nasal catarrh is also a cause of headache. That form differs from the eye headache in being constant or else in coming on irregularly—in the morning as often as in the evening.

Another cause of headache, less frequent in children than in adults, is auto-intoxication, due to intestinal torpor, an inactive liver, or worms. In searching for the possible cause of obscure headaches, the teeth also, which sometimes begin to decay very early, must not be forgotten.

The onset of acute disease, such as one of the contagious fevers of childhood, is almost always announced by severe headache in the forehead.

The place of the headache is sometimes, although not as a rule, an indication of its cause. In general, pain in the forehead or over the eyes is due either to anæmia, auto-intoxication, affections of the nose or eyestrain; pain in the temples or the sides of the head is caused by ear troubles or decayed teeth; eyestrain and ear inflammation sometimes cause pain in the back of the head; and the pain of anæmia and auto-intoxication is likely to be in the top of the head as well as in the forehead.

THE ROOT OF BITTERNESS

YOU heard Bob and me fighting, Sunday night," said Nan.

"Did I?" pondered Aunt Hester. "That was the time when you wanted eggs for your chafing dish, wasn't it, and Bob was reading his paper and didn't go at once to the kitchen to get them for you? Was that what you call fighting?"

"I said some sharp things, and Bob got grumpy. I've been used to having men jump to do things for me, and it makes me frantic when Bob doesn't notice."

Aunt Hester chuckled softly. "You're planting a root of bitterness, Nan Brewster, and you'd better get right down on your knees and dig it out. There was a wise man who wrote a letter to the Hebrews. 'Watch diligently,' he said, 'lest any root of bitterness, springing up, trouble you.'"

"Why don't you say that to Bob?" protested Nan. "It isn't up to me."

"Yes, it is up to you," contradicted Aunt Hester, briskly. "You're head gardener of this home, and you're cultivating a root of bitterness where you might have sweet blooms."

"But I'm not going to spoil Bob all the rest of his life just because his mother spoiled him."

Aunt Hester laughed again her big, comfortable laugh. "That's all right; train him up in the way he should go. But suppose each one of Bob's inadvertencies had been a single instance. Is any one of them worth a quarrel or even a tear?"

"But that's just it. Every time he acts like that it makes me remember the time before and the time before that, and then I get hot."

"But that's just it," mimicked Aunt Hester. "Instead of treating each little quarrel as a trifle to be disposed of and forgotten, you establish it as a shoot of your root of bitterness, and you can never get rid of the shoots while the root is there. The only way is to dig up the root whole. Think how many wonderful, wonderful flowers you could grow in the spot that root has usurped. Think of your love and Bob's; was there ever a more beautiful flower than that?"

"No," breathed Nan. "Your common interests; your work and play together; your deep thoughts shared and your jokes exchanged; aren't they worth cherishing?"

Nan nodded. "Then plant your garden thick with them, my dear, and let the little quarrels go by. There's never any poison in one little quarrel, but it comes when one quarrel after another springs from that old root of bitterness."

"But wouldn't you ever tell Bob when he's wrong?"

"I'd tell Nan first where she's wrong. And sometime, when you're loving Bob the hardest, you can take your most effective smile and cut down the weed in his character that distresses you. It will come easy if you treat it as a separate weed, instead of a sprout from the old root of bitterness. Don't you see?"

"I guess so," answered Nan in a meek voice.

Have Fun and Make Money with a Dayton Bicycle

BICYCLING is more than mere fun—especially if it's a fine, glistening Dayton that's scooting you from here to there—smoothly, quickly, comfortably! A good, dependable

Dayton Bicycle

can actually mean money in your pocket and this interesting booklet, written especially for boys, will show you how. Get it, quick!

FREE TO BOYS

Here, boys, is a fascinating book that actually tells you 50 different ways in which you can make money with a Dayton Bicycle. You are ambitious. You want to be a good business man—and you're ready for good, live, money-making suggestions. Here they are. Write us today, asking for Booklet No. 12. It is free.

Dayton Bicycles have been made by this company for 22 years and are backed by a straightforward five-year guarantee. A Gold Medal at the Panama Pacific Exposition is just one evidence of the Dayton's unusual merit. Made in 7 models. Ride a Dayton this year—and you'll ride one every year. And remember! The booklet above is free to you. Write for Booklet No. 12 today.

This New Sport Model Combines Smartness With Economy

The youth and beauty of the land are adopting this new Overland as their very own.

Here at last is a car which for all its smartness of design is reasonably priced and inexpensively operated.

The two comfortable front seats are both adjustable forward or back to suit the reach of father or son, mother or daughter.

There is also a roomy, comfortable rear seat—so, four large people may ride sociably and in real comfort.

The Country Club is notable for its easy riding qualities.

It has long 42-inch cantilever rear springs which ease it over rough roads so smoothly that you might well imagine you were in a much heavier, bigger car.

The body is rich grey in color and the trim is black enamel relieved by an occasional flash of bright nickel.

Red wire wheels with one extra are regular equipment and give just the right dash of brilliant color.

It is an easy car to drive and handle, and good, big brakes make it safe.

The Country Club is in great demand so it is advisable to see the Overland dealer at once if you want an early delivery.

PASADENA PUBLIC LIBRARY

WHEN in middle age Prof. Franklin Rudolph found that his health was failing under the strain of college work, he decided to live outdoors as much as possible for a few years. After considering various parts of the country he bought an abandoned farm far up on Spring Creek in the wildest part of the Missouri Ozarks. In the spring he and his wife and two boys, Wayne, eleven years old, and Ted, three years younger, moved out to the farm. Down the creek they had neighbors within half a mile of them and thence at regular intervals all the way to town, eight miles away; but up the creek no one lived except Big Mose.

Mose was a big, fat, sleek-looking negro who made his living by hunting and fishing, and whose reputation for honesty was none too good. He planted only an acre or two of corn, and his one horse grew very thin and hide-bound in the winter; but his two large hunting dogs of mongrel breed always looked as well-fed as himself. A perpetual enmity existed between the state game warden and Big Mose, for the negro was known as a persistent violator of the game laws. Proof against him was hard to get, however, because his white neighbors seemed willing to tolerate his depredations so long as he clearly recognized the difference between wild animals and domestic stock. That he had been always politic enough to do.

Soon after the Rudolphs arrived in their new home, Wayne and Ted heard that Mose had a bear cub that he had taken from a den early in the spring. With the help of a neighbor Mose had killed the mother bear, but he had kept the cub "to train his dogs on," as he said.

Early one afternoon the boys went up to the negro's cabin to look at the cub. It was fortunate for the little bear that they went when they did. Even before they came in sight of Big Mose's shack they heard a great outcry—the growls and snarls of dogs fighting, mingled with the whimpering and crying of a voice that was strange to them. Running forward, they found that the dogs had the bear down on the ground in front of the cabin and were rapidly shaking the life out of the little fellow. The big negro, with his face aglow with malicious pleasure, stood over his dogs and encouraged them. The boys were shocked. From their earliest years their mother and father had taught them kindness to animals. Besides, the little bear was not much larger than a full-grown cat.

"Stop 'em!" Wayne pleaded. "Don't let 'em kill it!"

"Who-oo-e! Wool him, Towsuh, wool him!" shouted Mose. "I'm jes' a-trainin' dese dogs," he explained. "'Sides, dat li'l black scoun'el done bit me. Gwine let 'em finish him right now."

On the way up the creek Ted had cut a stout club for a cane, and now without stopping to speak he ran up close to the dogs and began to beat them. Wayne picked up a stick and helped him so lustily that the two mongrels, with shrill yelps of pain, leaped away from the cub. The little bear lay still, breathing in painful gasps, too far gone even to raise his head.

Mose stood dumfounded at first, and then he grew indignant.

"Whut make you-all do dat? Hain't dis my balah? Why cain't I kill my own balah ef I wants tuh?"

"You mustn't worry him to death; it's against the law!" cried Wayne, trembling with excitement and anger.

"Sho' now! Den I'll knock him in de haid wid an axe."

Little Ted had knelt down and raised the cub's head, for the poor beast was showing signs of reviving.

"I'll tell you what I'll do, Mr. Mose," said Wayne. "I've got two dollars of my own money that I'll give you for him."

"Got dat money right now?"

"It's at home. You can go with us and get it."

That was how the Rudolph boys got their pet bear. He grew amazingly and was far more playful than a kitten or a puppy. He quickly seemed to forget all the hardships of his early existence, and grew very fond of his young masters. At night, when they put him to bed and left him, he cried, and at daylight in the morning he whimpered until they came.

Having no boys to play with, Wayne and Ted made a boon companion of the little bear. Every trick that they had ever heard of a circus bear's performing they taught to Black Billy, and the cub proved himself an apt and willing pupil. Little Ted made a "goat" of him by teaching him to pull a cart, which the boys made themselves, and before the summer was over, Ted was driving him all through the woods and fields. Meanwhile an enmity still existed between Black Billy and Mose and his dogs. If the dogs or their owner came

in sight the cub always stopped still, whatever he might be doing, and stared at them with a red gleam in his eyes. One day Mose came into the yard and passed near the cub. No one knows whether the negro kicked the little beast, but suddenly the family heard a sharp growl from the bear and a shout from Mose. Rushing to the window, they saw that Billy had seized the negro by the leg, had ripped his trousers to shreds and was trying to fasten on him with his teeth. Mose broke away, climbed the paling fence and escaped. Later Mr. Rudolph offered to make good all damages that Mose had suffered.

When blackberries ripened, Black Billy took to making excursions to the patch alone, for he was very fond of the berries. It seemed, however, that Billy could go berry hunting only at the risk of his life, for Mose's two dogs never missed a chance to attack him. Several times they treed the cub and kept him treed until one of the boys rescued him by driving off his assailants. Once the dogs caught him on the ground and badly worried him before Ted and Wayne came. Again the boys found Big Mose trying to club the little beast out of a tree while his dogs howled beneath, waiting for their prey to fall. The negro dodged quickly into the brush when he saw the two young owners.

Time passed and Black Billy became as large as either of the dogs. He weighed over fifty pounds; his legs grew strong and his teeth keen and long. Then one day he gave the dogs a lesson in bear fighting that they never forgot. It was August, and Ted had driven the bear some distance from the house to a thicket of black haw trees. Billy had reached up and pulled down a limb of one of the bushes,

and both he and his master were eating their fill. Suddenly the two dogs rushed up with sharp barks. Either the presence of his little master or a growing realization of his own strength heartened Black Billy. He sprang to a large tree, placed his back against it, and met the first of his antagonists with a blow that sent the dog rolling over and over. The other dog had seized the bear, but Billy calmly reached down and picked him up clear of the ground. He must have given the mongrel a real bear's hug, for the dog yelped frantically as he struggled to get loose.

From a thicket of brush a few yards distant Big Mose now came rushing up with a club in hand. He aimed a blow at the cub's head, but the bear dodged with the cleverness of a trained boxer, and the club, glancing from his shoulder, expended its force on the dog. Black Billy released the dog and, making a long jump straight at his old enemy, gave him a swinging side swipe as he landed.

With a howl of surprise, the big negro turned and made very clever use of his legs in getting away; the dogs had already fled. The victorious Billy merely sat still and grinned broadly. Finding himself unpursued, Mose stopped

and shouted back to Ted, "Now I gwine shoot dat balah—you heah me!"

Of course Ted reported the whole occurrence to the family, and Prof. Rudolph thought it best to interfere before the negro carried out his threat.

"Mose," he said, when he met the negro on the road one day, "I don't want the cub killed, because he amuses my boys when they have no other play-fellow, and he's harmless. I take it you would rather the game warden didn't know about the green deer hide I saw at your cabin the other day—you understand me, Mose; you let the bear alone."

"Yassir. I ain't never tetch him. But dat beast is sho' dangerous, you mind me! He gwine kill somebody er kill some stock right erway! Dat's de way tame balahs allus does when dey gits big. He gits you-all inter trouble sho' as you is bawn."

It was well along in the fall, in hickory-nut time, before Mose's prediction threatened to prove true. Mose and his dogs had taken particular pains to avoid Black Billy. The bear was now apparently two thirds grown and weighed more than a hundred pounds. The boys thought that no dog could have been more obedient or half so useful as their pet, and from merely tolerating him for the sake of the lads Mr. and Mrs. Rudolph had now become much attached to the faithful, willing, good-tempered black fellow.

In fine weather Ted and Wayne hitched him to his cart and drove him into the woods on expeditions after hickory nuts, pecans and walnuts. Once among the timber they would unhitch him. He would immediately shin up the trees and shake off the nuts. Down on the ground, he helped the boys to gather and to shell out their harvest; he was as handy as a squirrel with his forepaws.

Wayne was permitted to use a little rifle that fall. Squirrels had done a good deal of damage to the Rudolph

BLACK BILLY

By Charles Askins

"NANCY, could you take me to the Dolls' Show at the Smith & McNeil's toy department this afternoon? Mother can't, because she has to stay with grandma." It was Nancy's little seven-year-old sister, Charlotte, who spoke. "Could you?" she repeated. Then, as Nancy still did not reply, she added entreatingly, "I'm just *wild* to go! Jeannette Barlow has been; and she says there are *hundreds* of dolls."

"I'm so sorry, dear, but I can't possibly take you," Nancy replied at last. "This is my afternoon for telling stories to my club at the settlement, and I *must* do it. Think how few pleasures those girls have and how many you have! You have so much to make you happy this afternoon without the Dolls' Show, and they have nothing except my story-telling. I must go," she said again; "they need me."

Charlotte said not a word. With tears of disappointment in her eyes, she walked away. Nancy, glancing up at the house as she sped off to the settlement, saw the child, curled up on the library window seat, gazing wistfully out at the gray winter sky. She frowned impatiently.

"It's enough to try the patience of a saint," she exclaimed to herself, "the narrowness and selfishness of the family point of view! It's so out of date, to say the least, to expect a person, just because she is born in a family, to sacrifice everything and everyone to that family! Charlotte expects me to give up my settlement-club meeting of two *dozen* little girls to take her, *one* little girl, to a Dolls' Show!"

"As for the rest of the family, they all, except mother, are the same! Henry doesn't see any reason why I can't neglect any and every one of my clubs if he wants me for something at the same time! Marion is just as bad! Even father can't understand that I'm needed at the settlement. Grandma thinks making calls with mother on that tiresome Miss Jones, who doesn't need me at all, more important than all my dozens of friendly visits in the settlement neighborhood—where they *do* need me! Mother is the only one who understands that interest in humanity ought to be socialized—that the people who need your time, not the people who only *want* it, should have it."

Such reflections as those had been frequent with Nancy during the three months she had been taking a "course" at the Social Science School. Her family had indeed tried her patience. Nancy was the eldest daughter; they were an ordinary, everyday, well-to-do family, and were like other ordinary, everyday, well-to-do families in asking of her those things that such families have asked of their eldest daughters for a great many generations. "Except mother!" Nancy's irritable musings invariably included those words.

After the Story Club had dispersed, Nancy lingered at the settlement talking with the head resident about social service. "You ought to give yourself to the persons who really need you, hadn't you?" she said finally.

"Most certainly!" the head resident agreed. She looked keenly at the young girl, and then added, "Of course you should make no mistake about who they are."

Neither then nor immediately afterward did Nancy bestow more than a cursory mental glance upon the suggestion contained in the last remark.

Why should she? She was quite sure who the persons were that needed her. Were they not the children who came to the settlement and their families? Had she not, indeed, returned at the Social Science School, after only three months' attendance, that you should love and serve, not only your family, not only your personal friends, not only even your immediate neighborhood, but the whole human race—or such part of it as might especially need your love and service?

As she hurried home from the settlement Nancy's thoughts turned to Charlotte. "I

NEEDING NANCY

By Elizabeth McCracken

hope," she said to herself rather petulantly, "that by this time Charlotte has got over being blue because I could not take her to the Dolls' Show! A dissatisfied child is so very trying!"

She found the family at supper. Far from being "blue," Charlotte was radiant with excitement and delight. "O Nancy," she cried, as her eldest sister slipped into her chair and unfolded her napkin, "I did go to the Dolls' Show! And it was *lovely*! Henry took me."

"And very good of Henry it was, too, when skating is so fine," said the father of the family, with a pleased look at his son.

"I'm glad we have *one* brother or sister to

said with quiet conviction, "It is the best thing in the world to be needed."

Many times during the rest of her course at the Social Science School Nancy remembered her mother's words. But perhaps she recollected them most vividly in the weeks after the course was finished, when she was trying to obtain a position as a settlement worker, or, finally, as a social worker of any kind.

It seemed that no such position "needed" her! Her work in the settlement during the period of her course had been arranged by the school. Now she had completed the course,

DRAWN BY E. F. WARD

IT SEEMED THAT NO SUCH POSITION "NEEDED" HER!

do something for us once in a while," said thirteen-year-old Marion—a remark somewhat ambiguously worded, but quite clear in meaning.

"Marion, my dear!" said the mother reprovingly; but she smiled at her son very happily.

Although gratified at heart that his act was so generally appreciated, Henry showed a fifteen-year-old boy's dislike of being publicly praised. "Oh, let's talk about something else!" he said gruffly.

Nothing loath, Nancy began to relate anecdotes about her settlement boys and girls and grown-ups. "They are *so* interesting," she concluded, "you can do so much for them—they *do* need you so!"

The other members of her family made various and characteristic rejoinders to that assertion, none of which Nancy found very sympathetic—except her mother's. Her mother

and the work she had been doing was assigned to another student of the school.

At last Nancy, in dismay, consulted the head resident of the settlement in which she had had charge of the Little Girls' Story Club. "I thought I was needed here," she faltered.

"What you *did* was needed," the head resident reassured her. "It is still going on—only now some one else is doing it."

"But I thought I was needed," Nancy's voice was not quite steady.

"My dear," said the head resident gently, "few young girls are needed individually except by their own families—and in these days, alas! not all are needed even by them."

"What do you mean—'not all are needed by them'?" Nancy questioned.

"I hope you may not have to know!" was the head resident's only answer.

But poor Nancy did have to know. Unable

to find a position as a social worker that needed a person so young and inexperienced, she said to herself, "I believe I *will* try to give myself to the family. They need me!" She now remembered the head resident's earlier words about making no mistake as to who the persons who needed you were. "They are the family," she declared to herself. "I already love them; I shall serve them!"

By way of beginning she said to Charlotte, whom she met in the hall as she entered the house, "There is a Children's Fair at the church house to-morrow afternoon. I'll take you if you'd like to go."

Charlotte stared at her sister in an amazement that made Nancy blush. "Marion is going to take me," she said. "Thank you very much," she added with tardy politeness.

"You never can take me anywhere; so mother decided that, to *some* things, near home, Marion was old enough to take me, if I would do just what she said, same as if she were my eldest sister."

Late in the afternoon Nancy came upon Henry, busily engaged in some wood carving. He had met with a difficulty, owing to the grain of the wood. Nancy had taught wood carving to a class of boys at the settlement, and after watching her brother for a few moments she said, "Let me help you with that."

Henry gazed at her with an astonishment equal to Charlotte's. "Father always helps me over the hard places," he replied. "Guess I'll wait for him."

For that day Nancy tried no more. Several times during the evening, when plans for the rest of the week were being discussed, she almost offered her services in carrying them out, but something—a nameless but terrible fear—prevented her.

The next morning, however, after a night of refreshing sleep, things seemed less desperate. At the breakfast table, her father said to no one in particular, "My desk is in such confusion I can't find a postage stamp on it."

"Let me tidy it for you, father," Nancy said at once.

He peered at her over the edge of his paper. "You, my dear!" he exclaimed. "Thank you very much, but Marion has done it lately—she knows about the things on it."

To her grandmother next, then to Marion, she tried to be of service, and could not. They no longer needed her! She said it to herself with a bursting heart. None of them needed her! Unless—her mother. "Mother does, of course," Nancy assured herself.

But for three whole days she deferred offering herself in any capacity to her mother, until she thought she could not endure the lurking doubt another hour. When her mother one day after dinner mentioned her intention of calling that afternoon upon Miss Jones, she said hesitatingly, "Would you like me to go with you, mother?"

Her mother looked at her, but, blessed relief! not in surprise. "Yes, dear," she said in her sweet voice, "very much. And Miss Jones will like to see you. She needs visits from young people."

Needs! At the word Nancy's eyes filled with tears. In another moment she was in her mother's arms, sobbing out the whole story on her shoulder, and being comforted. "No one needs me, not even the family, any more!" Nancy cried. "But I need you, mother!"

Her mother held her closer, kissing her softly. "We every one need you," she said tenderly, "and it won't be many days before you know it! We grew accustomed to not *having* you, when you were so busy with your settlement work, but not to not *needing* you; we've needed you every minute of the time! And you will find that the more you give yourself to your own family, the more you will be able to give yourself to the rest of the world—the more you will be needed by everyone."

"I don't just see how," said Nancy, puzzled. "You *will* see how!" her mother answered.

cornfield, and the boy made a very acceptable addition to the family larder with those he managed to shoot. Of course Billy went along on those shooting trips, and Wayne often sent him up into the tall trees to scare out hidden squirrels or to investigate nests.

He was better than an ordinary watchdog, more alert, and quicker to detect visiting "varmints." He killed a raccoon that visited the henroost one night, and on a subsequent night Prof. Rudolph sent him up a very large elm in which he suspected that a wildcat had taken refuge. The cat was there, and jumped wildly for its life. Mrs. Rudolph declared that without Billy she never could have raised poultry in that wild country.

The one sorrow of the young bear was that his little masters had to attend school. Since Billy would surely have accompanied them if he had been left free, Prof. Rudolph had to chain him in the daytime. That was not such a great hardship for the cub, however, for at night—when bears are naturally most active—he had full liberty.

But a storm was about to break over the apparently innocent head of Black Billy. The

boys brought the first word of it from school, and, with indignant disbelief, related what they had heard. Certain of their schoolmates had openly declared that Billy had become a mean and thieving bear, that he was almost nightly visiting the surrounding farms, bent on mischief, and that eventually he would have to be shot.

Prof. Rudolph listened to the boys with more gravity than they had expected. He had been told that as a pet bear reached his maturity his wild nature would be sure to assert itself, and that, in fact, he would be likely to do exactly what Billy was accused of doing. Nevertheless, the professor meant to give the little bear the benefit of every doubt. So far as he knew, Billy did not roam away from the place at night; late in the evening he was always in his bed, and in the morning he was sure to be somewhere round the yard.

But after visiting several of his neighbors down the creek the next day, Prof. Rudolph became convinced that Billy had really turned marauder. A bear had certainly been making raids in the vicinity—a

bear that was evidently well trained and accustomed to human beings.

Squire Robbins had seen the bear deliberately unlatch his lot gate, walk on his hind legs to the corner and unfasten the door. At his shout the creature plunged behind the crib and was gone. One moonlight night Mr. Winton had seen the bear pulling up turnips with his paws. Jake Sims could have shot the bear while he was trying to break into his smokehouse, but refrained, knowing how much his young owners were attached to him. Sam McCracken had actually seen the bear walking off exactly like a man, with a fifty-pound porker in his arms. And Al Jones had missed a calf, although he did not know whether or not the bear had killed it. All told, the calf, several hogs and some poultry had disappeared. Corn pens, apple bins and potato piles had been raided. No bear other than Black Billy could have planned and carried out the thefts so cleverly.

Squire Robbins declared that the patience of the neighborhood had been exhausted and that if the depredations of Black Billy did not cease some one would shoot him. Prof. Rudolph

reluctantly agreed to give the bear away and at once wrote to the zoological park in St. Louis. Receiving a reply that the park would be glad to accept the bear as a gift, he had a cage built in which to ship Billy. He was hauling it home, when he met Big Mose driving his old roan horse.

"Whut dat box for, 'fessor?" asked the negro.

"I'm going to ship Billy to St. Louis."

"Er hah! Whut 'id I done tole ye 'bout baiahs! He been cuttin' up scan'lous."

The big negro laughed maliciously as he drove on.

Two small boys romped with Black Billy as long as they could that evening, putting him through all the circus tricks that they had taught him. Tired at last, they curled down with the bear in his bed and rested their heads on his shaggy side. When the time came for them to go to their own quarters, they asked that Billy might be turned into the root cellar for the night, in order that he might eat his fill of the fine winesap apples lately stored for the winter.

"We'll take some apples out of one of the

bins, dump them on the floor and let him eat and eat," said Wayne. "He can't get at the others in the bins, and he won't want them, anyway, with all we'll give him."

As it was the last thing the boys could do for their pet, Prof. Rudolph gave them permission. Boylike, neither of them in the least believed that their pet was guilty of any of the crimes ascribed to him.

"I'll never drive him any more," said Ted forlornly as he and Wayne lay in bed. "And he'll be put in a little iron cage and never have a chance to climb a tree for hickory nuts again. Billy wouldn't hurt anything at all 'cept old Mose and his dogs."

"I don't believe he would, either, Ted," said Wayne, "but maybe it's for the best. Father says he would carry Billy back into the mountains and let him go, but Billy would be sure to come back home or some one would shoot him."

It was the greatest sorrow that the boys had ever known.

Prof. Rudolph planned to get the bear off to the express office before his young masters awakened in the morning, and had sent for Squire Robbins's son to come over to spend the night and to help load the heavy animal

and cage into the wagon in the morning. Shut into his root cellar Black Billy made no sound, and it must have been after midnight when Prof. Rudolph was suddenly roused.

From the cellar came whines, growls, heavy blows and shouts. Followed by Tom Robbins, Mr. Rudolph rushed out. As he dashed round the smokehouse in sight of the cellar door, he saw what seemed to be a bear emerge on all fours, stagger about for an instant and rise to his feet, with a club in his paws. After the first bear came another smaller bear; but what the second animal lacked in size he made up in rage, for his eyes were gleaming and the moonlight showed his bared teeth. His hair was raised, and he roared with anger as he

dashed fiercely forward. The first bear swung his club heavily as the pursuer came on; but, dodging the blow, the smaller bear sent his adversary, club and all, spinning a dozen feet out into the yard. Mr. Rudolph at once recognized the second, smaller bear as Billy, and undoubtedly Billy was winning the fight.

With a frenzied shout for help the other bear tried to get to his feet and run. Billy was upon him too quickly, and, grasping him with teeth and claws, he pulled his entire hide off. Freed from his skin, the bear proved to be Big Mose. He ran wildly for the smokehouse, plunged in and slammed the door.

By that time the boys and their mother had reached the place and were staring in

amazement at the scene. Billy was busily mauling the empty hide, and he was still so much enraged that they feared to approach him—all except little Ted, who walked up to his pet fearlessly.

"Behave yourself, Billy! Don't be a bad bear."

Billy desisted, sat up, waved his paws and grinned amiably. So far as he was concerned, the fight was over.

They found Big Mose in the smokehouse, so much frightened that they could hardly induce him to come out.

The whole scheme of the rascally negro was now clear. Disguised in a bearskin, he had for the past month been committing all kinds of petty thefts, many of which were malicious, knowing that the pet bear would be blamed for it all. At last he had decided to lay in his winter supply of apples from the Rudolph bin, but fate in the shape of Black Billy himself had overtaken him.

The negro was not badly hurt, although he would retain some marks of his fight in the cellar for many a day. Hearing his confession, Squire Robbins gave him twenty-four hours in which to leave the country and never return. He left. At last account the boys still had their bear, older now, but still their goat, clown and playfellow.

COAL-TAR PRODUCTS

By Ira Remsen, President Emeritus, Johns Hopkins University

EVERYONE knows that there are two kinds of coal—soft and hard, or bituminous and anthracite. When either of them is heated to a high enough temperature, where air can get at it, it takes fire and burns. During the burning, gases are given off, and when the burning ends, an ash remains. That ash is something that was contained in the coal—something that will not burn.

When soft, or bituminous, coal is heated in a vessel that has only a small outlet and no inlet for air, it does not burn, but it does undergo great changes. Gases and liquids form and, passing out through the small outlet, leave behind a solid that is familiar to the world as coke.

COAL TAR A PANDORA'S BOX

IN the making of coke, as well as in the manufacture of illuminating gas, there is always formed a thick, black liquid, more or less viscous, called coal tar. For many years it was regarded as a nuisance to be got rid of as soon as possible. To some extent it was used for making tar paper and for preserving lumber, but the quantity used for those purposes was very small compared with the quantity formed. Coal tar would never have become so famous as it is now if chemists had not become interested in it.

In 1845, A. W. von Hofmann, then a young man of twenty-seven years, who afterwards became one of the leading chemists of the world, discovered that, when coal tar is heated in a closed vessel with an outlet so arranged that the escaping vapors pass through a long tube surrounded by cold water, the vapors are condensed and form a liquid, just as water vapor, when cooled, forms a liquid—water. He also found that the liquid first condensed consists largely of a substance that had previously been obtained from benzoic acid. It is called benzol, and is now known to chemists as benzene. That was the beginning of the scientific study of coal tar.

The wildest dreams of the pioneer workers in this field must have fallen far short of the results that followed. Coal tar, the despised nuisance of the middle of the nineteenth century, has become a veritable Pandora's box from which almost anything may be expected.

At the suggestion of Hofmann one of his pupils, Mansfield, undertook a more thorough study of the products formed when coal tar is distilled. The results were published in 1849. Neither Hofmann nor Mansfield foresaw then that the work they did would be likely to have any commercial value. They were merely trying to find out all they could about this tar. When they found that some of the products they obtained from coal tar were commercially useful, Mansfield undertook to distill the tar on a large scale and, sad to relate, lost his life in consequence of an accident in his factory.

The next step in discovering the wonders of coal tar, and a most important one, was also taken in Hofmann's laboratory. While Hofmann was away on a vacation a young Englishman, W. H. Perkin, who was serving as an assistant, tried some experiments of his own with the ambitious purpose of preparing artificial quinine. The experiments did not turn out as he hoped, but he noticed that

in some cases a colored product was formed. That led him to undertake further experiments in the hope of obtaining colored products that might prove of value as dyes. In one of those experiments he used aniline, and discovered a black substance that did not promise much. He found, however, that when he treated it with alcohol a lilac-colored solution resulted. From that solution he obtained the first aniline dye. It came to be known and is still known as mauve. It has also been called Perkin's violet.

Although mauve was the first aniline dye, it was not the first coal-tar dye to be made. That honor belongs to picric acid, a yellow dye, which Woulfe discovered in 1771; he made it, however, not from anything then obtained from coal tar, but from indigo. Picric acid has become a much-prized substance and is now obtained from coal tar.

The discovery of mauve led at once to active work with the object of finding out what that colored substance was and whether other colored substances could be formed from aniline. The most astonishing results followed. The chemists discovered that an almost infinite variety of colored substances could be made by comparatively simple methods.

Some of the substances were valuable as dyes and some were not. The dyes first made were in many cases rather harsh to the eye, and, although they were extensively used, they gradually came into disrepute. Then, too, some of them came to be used illegitimately—to color preserved fruit, for example. At one time arsenic was used in making one of the best-known aniline dyes, which was used in dyeing stockings; it was popularly believed that the dye caused poisoning.

Notwithstanding the prejudice thus created the aniline-dye industry grew rapidly, and new and better dyes were soon discovered. Among the dyes that were found practically useful only a few need be mentioned here: Hofmann's violet, Paris violet, crystal violet, opal blue, night blue, Victoria blue, glacier blue, dragon green, acid magenta, navy blue, night green. It may be said that almost any color or shade can be made, although not all the colors are fast. One of the most valuable aniline dyes is aniline black. It shows great resistance to the action of soap, light and air.

Now, let us go back for a moment and inquire what aniline is and what connection there is between it and coal tar. Aniline was first made from indigo, which is obtained from the plant known as *Indigofera anil*. Chemists later found that they could make it from benzol. Thousands of tons of aniline now come annually from that source. The connection thus established is this: Coal gives coal tar; coal tar gives benzol; benzol gives aniline; aniline gives aniline dyes.

ARTIFICIAL INDIGO

BUT benzol is only one of hundreds of substances obtained from coal tar. Another is toluol—called toluene by chemists. It yields a substance that is similar to aniline and that in turn yields many colored substances useful as dyes. Those are also called aniline dyes.

Another substance obtained from coal tar is

naphthalene, familiar to the world at large in the form of "moth balls." Naphthalene has come into prominence because it serves as the starting point in the manufacture of a large number of beautiful dyes, such as various oranges, fast red, Congo red and benzo-purpurin.

Indigo is one of the most highly prized and most extensively used dyes. Until a few years ago it was prepared entirely from the indigo plant, but at present it is manufactured. In making it naphthalene plays a leading part, and so indigo must now be classed with the coal-tar dyes. It is well to observe in passing that when artificially prepared indigo was first put on the market there was great prejudice against it. It was said that it was not the same thing as the indigo made from the plant and that it therefore could not be used for the same purposes. In spite of the objections, artificial indigo has made its way and has virtually displaced the natural dye. There is not the slightest question of its being the same thing. But, furthermore, it is better than the natural indigo, for that always contains impurities, whereas the artificial product can be made pure.

COAL-TAR MEDICINES

AMONG the products obtained from coal tar is anthracene. It "began life" as an obscure substance with apparently no hope of acquiring fame, but it has risen to great prominence because two chemists found that they could make from it the well-known dye Turkey red, or alizarin. Alizarin had formerly been obtained from madder root, and madder was cultivated extensively for the purpose. But in 1868 two young German chemists undertook to find out what alizarin is; they treated the substance in many ways and in one experiment obtained anthracene from it. That gave them the clue. They reasoned that if they could get anthracene from alizarin they might be able to get alizarin from anthracene. That proved to be not very difficult, and Turkey red is now a coal-tar color—one of the wonders of coal tar. In this case, as in that of indigo, the manufacturing chemist has taken the place of the cultivator of the soil.

The dyestuff industry of to-day is based almost wholly upon coal tar. The dyes in the market are not all aniline dyes. Many are not at all related to aniline. The expression "coal-tar colors" is, of course, broader, and includes most dyes in use.

But other valuable substances that are not dyes are obtained from coal tar. There is a long list of coal-tar substances used in medicine, many of which are undoubtedly beneficial—some of which perhaps are not. Among the more familiar ones may be mentioned atophan, antipyrine, antifebrine, aspirin, salicylic acid, salvarsan. The effects of many such substances upon human beings have been studied with great care, and their value as remedies is thoroughly established; in other cases there is not a sufficient basis of knowledge to justify our using them. It seems not improbable that, as investigation proceeds, many specific remedies will be added to the short list now at our command. It is, however, only through long-continued scientific study that the desired result

can be reached. A great field is open, which has been cultivated only to a slight extent.

Some of the most valuable perfumes have their origin in coal tar or are related to coal tar—and some of them are in the nature of frauds. When benzol is treated with nitric acid a compound known as nitrobenzol is formed. It has an odor that suggests the oil of bitter almonds—a fact that has led to its being used under the name of "artificial oil of bitter almonds," although the two substances are not at all closely related. Its chief use is in the manufacture of soap. No harm is likely to be done to the person using it; yet the name is a fraud. "Essence of mirbane" is another name given to it. That is also objectionable, for the substance is not an "essence" and "mirbane" is merely a trade name.

Essence of wintergreen, or oil of wintergreen, which is related to salicylic acid, is made artificially and is widely used on account of its pleasant odor. As a remedy the artificially prepared substance is identical with that obtained from the plant, and there is no objection to using it if precautions be taken to prepare it in pure condition.

Vanillin, the odoriferous constituent of the vanilla bean, is now made artificially, although not from coal tar. Nevertheless, we may confidently expect that the time will soon come when it will be obtained from one of the constituents of coal tar, for it is closely related to some of them. The same may be said of heliotropin, an artificial perfume, which is extensively used.

By far the most important of the substances obtained from coal tar that are used because of their taste is saccharin. It is about five hundred times sweeter than sugar; when you take it into your mouth it tastes like sugar, but that first taste is followed by a slight sensation of bitterness. Nevertheless, saccharin is used for various purposes, although in several countries its use is prohibited by law.

THE VALUE OF SACCHARIN

IN view of that prohibition, the first and most important question that suggests itself is this: Is the use of saccharin objectionable on the score of health? Those who have investigated the subject most thoroughly say that it is not. I can safely say that small quantities of saccharin—such quantities as would be likely to be used—are not injurious.

Another question that has been raised, and very properly, is whether saccharin is used, or can be used, in any way that can be regarded as objectionable. To discuss that question properly we must take many things into consideration and must present many facts; there is not space to do it here. Suffice it to say that the saccharin problem, which has acquired national significance, will no doubt in time be solved satisfactorily.

Finally, another class of substances obtained from coal tar calls for mention. The substances in this class are used on account of the ease with which they explode. Many explosives are known, but the two that are related to coal tar are picric acid and trinitrotoluol. Picric acid has already been mentioned as the first coal-tar dye; it was made by the action of nitric acid on indigo. It is now made in enormous quantities by treating carbolic acid with

nitric acid; and most of the carboic acid used is made by starting with benzol. Carboic acid is known to chemists as phenol, and picric acid, as trinitrophenol.

Some of you will perhaps remember that during the South African war it was at times noticed that the skin of those engaged in a battle became yellow. That was a result of the contestants' using the explosive lyddite, the chief constituent of which is picric acid. The latest explosive is, however, trinitrotoluol, which is being used extensively in the present war; the chemists make it by treating toluol with nitric acid.

It is interesting to observe that the three most widely used explosives have names that resemble one another: they are trinitroglycerin, trinitrophenol and trinitrotoluol. Indeed, if we go back to gunpowder we find that nitre, or saltpetre, is, so to speak, the milk in the cocoanut. Now, nitric acid is obtained from nitre, and the three explosives

named are formed by treating glycerin, phenol and toluol respectively with nitric acid.

Probably enough has been said to give at least a slight impression of the "wonders of coal tar." Starting with the black, offensive substance that is always formed in manufacturing illuminating gas and in preparing coke, it is possible to obtain:

1. An almost infinite variety of dyes of any desired color.
2. Substances that are extensively used in medicine.
3. Perfumes, delicate and otherwise.
4. Substances used because of their taste, chief among them, saccharin, five hundred times sweeter than sugar.
5. Explosives of the most violent type.

The end is not yet. Chemists are at work in many laboratories throughout the world, and the experience of the past justifies us in the confident belief that of the wonders of coal tar there is not likely to be an end.

NORTH FORTY EAST

By Homer Greene

In Ten Chapters. Chapter Six

D R. BURNSIDE was right in his prediction. Stanley Orchard did not need an opiate the following night in order to induce sleep. New hope, new life, entered into his blood and flushed his arteries and veins. The realization that after all Ralph was going to college, drove all unhappy and distressing thoughts from his mind. He was a changed man. He did not of course become immediately well and strong. It was many weeks before he could work in his garden or field as he had done before. But with the help of a good hired man, who replaced Old Tompkins as chore man and who did the heavy work of the farm besides, he was able to plant his garden, sow his grain and care for his stock, and later on to harvest his crops, which were again rich and abundant.

However severe had been the result of his disappointment, the fulfillment of his ambition made him completely happy. No prouder day ever dawned for Stanley Orchard than the day in September when his son went forth to the engineering school. He saw Ralph off at the train. It might do for the boy's mother to kiss him good-by at the farmhouse gate, but it was for his father to witness his real departure at the station. Nathan Brill went back to his studies at the school by the same train, and Adam Brill was also at the station to bid his son good-by. Equality at last! In spite of poverty, in spite of oppression, Stanley Orchard was doing for his son all that Adam Brill with his wealth and power could do for his. That, indeed, was glory enough for one day.

There were no tears in Orchard's eyes as he watched the train disappear round a curve. When it was gone he turned and walked, with firm step and head held high, down the platform and out into the street. He passed close to Adam Brill, but he did not care to speak to him or to boast in his presence. His triumph was sufficiently complete. He stood justified that day in the eyes of the world.

Brill did not fail to notice the evident pride and exhilaration of his adversary. The crease between his bushy eyebrows had grown deeper and his gray face had hardened into immobility as he had glanced now and again at Orchard and his son and had seen the triumphant stride with which the proud father swept down the crowded platform and out into the street. It was apparent that if he would curb and crush Orchard's spirit he must use harsher measures than any he had yet taken, and he was ready and determined to do so.

Brill went from the railway station to the office of his attorney in Mooresville and instructed the lawyer to begin at once an action in ejectment against his neighbor. Stanley Orchard should feel his power and resentment as he had never felt them before.

Meanwhile Ralph and Nathan, on the same train and in the same car, were speeding toward a common destination. They had seen little of each other since that eventful day on the hill when Ralph had ordered his friend to leave him lest quick and passionate words should bring their friendship to a sudden end. They had met occasionally on the street, and had talked now and then of the school that Nathan attended, but there was no longer any comradeship between them as of old. Neither boy had dared try to bridge the gulf between them lest the result of the effort should be to widen it.

Ralph certainly could not ignore or excuse in any way what he considered the unjustifiable and barbarous treatment of his father by Adam Brill. Nathan, on the other hand, although he realized that his father was taking

an unfair advantage of his neighbor, could not, as his son, admit that he was wrong. Yet from the day when he had heard his father openly declare that he would deprive Orchard of his home the thing had oppressed him and appalled him. It was so utterly unjust; so unnatural and inhumane. It was on his mind by day, he often dreamed of it at night; yet he was bound by filial loyalty to utter no word of condemnation or complaint.

Like a trailing ghost the memory of it followed him to the school, and try as he would he could not drive it from his thought. And in its train came other thoughts, still more terrible. How many were there among the hundreds with whom his father dealt, as landlord or mortgagee or creditor, whose woes were similar to those of Stanley Orchard, whose hardships and sufferings had contributed to the wealth of which he, Nathan Brill, was now the beneficiary? Unpleasant thoughts indeed! They left him unsettled, unhappy, unstrung, unfit to accomplish fully the work for which he had gone to school.

During the first term of his freshman year he had indeed started bravely out and made excellent progress, in spite of the disturbed condition of his mind. His brightness and frankness and social ease, as well as his intellectual ability, soon made him popular with his fellows. He was taken into one of the leading fraternities. He became active in athletics. He was always welcome at any social gathering. He enjoyed those things, for they diverted his thoughts. When he was engaged in them, unpleasant memories did not dare to intrude into his mind; but when he took up a book to study, he found a shadow striking across every page. What wonder, then, that his ambition to be an intellectual leader soon waned, and that the harder and more persistent workers passed him in the race? Yet, by making a heroic spurt at the close, he finished his freshman year without falling seriously behind, and would enter his first term as a sophomore without conditions. He was going back, however, with no buoyancy of spirits, no taste for the coming tasks, no determination to lay ghosts or to conquer obstacles or to attain success.

When the train was well under way he came over and sat down in the seat beside Ralph. "It's mighty fine," he said, "that you're going down to the school. I understand that you're to enter sophomore and will be in the class with me."

"Yes," replied Ralph, "Dean Robinson thought I could do it easily enough, and that even if I had one or two conditions I could work them off without much trouble."

"Of course you can. The dean will take care of that. If he finds that a fellow is plugging away at his best, he'll go a thousand miles out of his way to help him."

After that there was silence between them for a few minutes. Nathan sat drumming listlessly with his fingers on the arm of the seat and looking out through the window across the aisle. Then he said:

"Of course you understand—I don't want to intrude on you—but if there's any assistance I can render you in any way—it won't be very much, I'm afraid—I'm heartily at your service."

Ralph thanked him, and again there was silence. The train stopped at Millbury. Passengers left the car and others entered. The engine puffed out from the station and once more the travelers were moving swiftly toward their destinations. Suddenly Nathan turned and faced his companion.

"I say, Ralph," he exclaimed, "what's the

THE THING THAT HE HAD EXPECTED AND DREADED HAD COME. IN WHAT MANNER SHOULD HE MEET IT?

use of all this? I mean all this coolness and restraint. We can't help what's happened back there. Why not forget it while we're away, and get back on the old footing?"

"I can't forget it, Nate," replied Ralph; "but I've nothing against you. I'm willing to meet you halfway, and more than halfway."

"Good! You don't know how this thing has hurt me. Of course you weren't home, but I haven't dared to go and see your mother more than twice this summer. I don't know what she thinks of me. Now, if I had to see you every day down at the university and get no more than a nod or a smile, the same as I do from any other fellow in the class, I'd simply go crazy. The thing has played hob with my nerves as it is."

His eyes, his face, his passionate utterance, showed how intense was his feeling. The old fondness for the companion of his boyhood flamed up in Ralph's heart. He held out his hand.

"I'm with you," he said. "I shall need you down there as much as you'll need me. I'm glad you broke the ice. We can't travel much together, maybe, but I reckon we can keep a grip on each other."

So they shook hands and it was settled. And the friendship renewed that day was never again broken as long as they both lived.

When they reached the town where the university was, Nathan was as good as his word. He took charge of Ralph, helped him with his baggage, piloted him to the campus, introduced him at the registrar's office and saw him settled in his room.

After that, although they saw little of each other in the social life of the university, for their associations were entirely different, they nevertheless kept up their cordial personal relations. They occasionally took long walks together into the country. Ralph seldom visited his friend's quarters, which were in another hall from his, across the campus, but Nathan came often to sit in Ralph's bare room.

The fact that Ralph was outstripping him in all studies that they had in common aroused no feeling of jealousy in Nathan's breast. There was no legitimate excuse for Nathan's failure to keep up in his work, for he learned easily; but in his character, gentle and manly though it was, there was an innate weakness that yielded readily to suggestion. He needed outside influences or a moral shock to hold him fast to his better self. Ralph understood his friend's lack of moral stamina and tried to supply it, but not always with success. In answer to his repeated protests, Nathan would good-naturedly admit his faults and offer some plausible excuse. Athletics, the glee club, social affairs in the city, student affairs on the campus—they all took so much time and required so much attention. A fellow could not be forever plugging away at calculus and conic sections. The charm of college life would be lost.

Once in a while, it is true, Nathan did brace

up and by weeks of splendid work encourage his friend. Then for some unaccountable reason, he would suddenly drop back into the old rut.

When the Christmas vacation came the two boys went home together. On the train, after an interval of silence, Nathan turned to his companion.

"Did I tell you that the dean called me up yesterday?" he said.

"No," Ralph answered apprehensively. "What was it?"

"Oh, just another admonition to mend my ways! Things have been going bad lately, I guess."

"I'm sorry. It's a shame; when you could make a record to be proud of if you'd only try."

"That's what the dean says," Nathan admitted. "I suppose you're right."

"Then why don't you try? Why don't you start in at the beginning of next term and put up a genuine fight for it—a real, persistent, practical fight?"

"I think I will. I told the dean I would, anyway. I had to tell him something like that, or rustication would have been the next thing in order; and rustication's not pleasant in the winter time. Besides, he said he was going to write to my father, and I wanted to influence him to give an optimistic tone to the letter."

"Please don't make light of it, Nate," said Ralph in much concern. "It's too mighty serious a matter."

"I know it's serious." He had grown suddenly sober. "I know it's serious. You can't tell me. Nor can I tell you what's behind it all. I wish I could. I wish I knew, myself. I'd like to smash the whole slate and begin all over again, and have only myself to depend upon."

Another proud day had come for Stanley Orchard. His son was home from school—home with a report of which any father might boast. The joy he felt had had few parallels in his narrow and unfortunate life. He could not refrain from gazing proudly on this splendid young fellow, tall, well-built, fine-looking, neatly dressed, with the bearing of a soldier, with the learning, so Stanley Orchard thought, of a sage. Adam Brill might begin a thousand suits in ejectment, might issue a hundred writs of possession, might put him out, bag and baggage, on the winter roadside, and still he should be happier than Adam Brill; for it was neighborhood gossip that although Ralph Orchard was doing excellent work at the scientific school Adam Brill's son was falling seriously behind.

"I said I'd show Adam Brill that if he had money in his family we had brains in ours," declared Orchard to his wife that night, "and I've done it."

"Don't be too hard on Nate, father," Mrs. Orchard replied. "I can't believe all the things we hear about him. Ralph is still fond of him and says nothing unpleasant about him. Don't

let's judge other men's sons, lest some unhappy thing should come upon our own boy."

"That's right, mother," assented Orchard readily. "I've got nothing against Nate. He's always treated me like a gentleman. If he's gone wrong, it isn't his fault; and he isn't responsible for his parents."

Perhaps it was some such thought that crossed the mind of Adam Brill as he sat alone before his fire on Christmas night and thought about his son. He had known for some time that Nathan was not making good progress in his studies. It was not a pleasant thing to contemplate. And now, with the Christmas holidays, had come a letter from the dean, saying plainly that unless Nathan applied himself more diligently to his studies it would be a waste of time and money for him to keep on at the school, even though he should be permitted to remain. It would be hard to conceive of any disappointment that could fall on Adam Brill more bitter than that, except possibly the absolute expulsion of his son from the school. He was not angry or resentful. His affection for the boy was too deep to permit him to feel anger or even resentment; but he was unspeakably grieved.

Sitting alone before the blazing fire of wood, he wondered whether the blame should rest entirely on his son; whether, for some reason that had not hitherto occurred to him, the fault might not be partly his own. But he could not think of anything that he had done that might have led to such an unhappy result, or of anything that he had left undone.

Toward midnight Nathan himself came in. He had been attending some Christmas festivity at Little Bethel. Now he stood with his back to the fire, facing his father.

"You're up late to-night, father," he commented.

"Yes, I've been waiting for you."

"That wasn't necessary, was it?"

"I think it was. I've a letter here that I've been holding for a few days, waiting for a chance to discuss it with you."

He drew the dean's letter from his pocket and handed it to Nathan to read.

"Well," he asked, when the boy had finished reading it, "what have you to say about it?"

The young man turned partly round and gazed into the fire without answering. The thing that he had expected and dreaded for so long had come. In what manner should he meet it?

"What have you to say about it?" repeated Brill a little more insistently.

"There's not much to say," replied Nathan, finally. "I suppose the dean is right."

"What's the matter? Can't you do the work?"

"The work is very hard."

"Can't you do the work if you try? I understand Ralph Orchard does it, and does it successfully."

"Ralph is a plugger. He's at it early and late."

"Can't you be a plugger, too? Can't you be at it early and late?"

"I'm afraid you've expected too much of me."

"I've expected you to take advantage of the opportunities I've given you, that's all. It's humiliating to see you left behind by the son of a pauper."

Nathan turned and faced the man squarely. "Father, Ralph is my best friend. And it seems hardly fair to call his father a pauper."

"He will be a pauper before I'm through with him, or he'll face about in his conduct toward me."

Brill rose and began to pace the floor.

Nathan did not remember when he had ever before seen his father so agitated.

"I'm sorry you feel that way toward him," he replied. "That's one of the things that hurts me and discourages me: to be on friendly terms with Ralph and to know all the time that you're taking every advantage you can of his father."

"I haven't requested you to be on friendly terms with the boy. I'm doing nothing to his father that the law doesn't permit."

"I know. I suppose that's true. But ever since that day on the hill, when you laid claim to his property because of the description in the deed, the thing has worried me. I haven't been free from it. I don't offer it as any excuse for what I've done at college. But if I could shake off the feeling that you've been unfair to Mr. Orchard, I believe I could brace up and be of some credit to you."

Brill stopped in his walk and looked curiously at his son.

"So the boot is on the other foot," he said. "It is my conduct now that comes in for criticism. Well, my boy, I'm fifty years old, you are twenty; I'm not willing as yet to place either my conscience or my business affairs in your keeping. And I do not see how my conduct can have any possible bearing on the question of your taking advantage of your chance to get an education."

"Perhaps it hasn't. I don't know. I only know that I feel that way about it, and it depresses me. I can't explain it to you; I don't believe you'd understand. But regardless

of all that, is it worth your while, is it worth the thought you give it, to follow up Stanley Orchard the way you're doing? He's boastful and irritating, I know. But he's poor and powerless, and simple-minded. And you're—you're the other thing. Is the game big enough to make it worth your while to hunt it? It would take very little to make him your friend. Just a few words, a kind act. Why can't you, father? Why can't you?"

He held out his hand appealingly, but his father was obdurate.

"Because I don't choose. Because there's time enough for that when I've beaten him into submission, as I shall. Besides, that's not the question under discussion. Here's the

dean's letter. You admit that at present you are making a failure of your college course. Now, you have reached a point where there are two ways open to you: You can go back and make of yourself the man that you are capable of being, and that it has been my life's ambition to have you be, or you can drop out and become the disappointment and failure that will make us both miserable from this time on. Take your choice."

For a full minute the two men, young and old, stood looking into each other's face. Then Nathan turned again toward the fire and gazed wearily on the glowing coals.

"I will go back," he said.

TO BE CONTINUED.

"SHORTEN HAWSERS!"

By George C. Lane

WITH a stiff westerly wind blowing across the river, the tug Dauntless and her tow of two light barges neared the drawbridge at Brownport on her way down to the Sound.

The tug signaled to the barges to shorten hawsers. Because of the wind it would be necessary to take the barges abreast through the draw.

The hawsers were stiff with ice. Joe Bozeman, on the head barge, found his very hard to handle. The job of barge captain was a new one for him, and he made awkward work of taking up the slack.

"Come, get a move on there, kid!" shouted old Jenkins from No. 28. "Your line'll foul the propeller if you don't show some signs of life."

In a few minutes the two barges were abreast and the space between them was closing. Their sterns were already together. Jenkins ran down along the side of his barge toward the stern.

"Hang on there a minute, kid, and I'll jump over and give you a lift!" he shouted. "It's jest as I said to you before we started down: you was never cut out for this kind of work."

Young Bozeman knew that old Jenkins was well-meaning enough; but it had galled the boy to be told over and over again that he was useless. He was doing his best, and everyone had to learn, he reflected rather bitterly, as with aching hands he pulled away on his hawser.

The next instant came a sharp cry from Jenkins, cut short by a great splash. The old bargeman had slipped on the icy deck and fallen overboard.

Even as Joe ran to the side of his barge, he realized the terrible peril that Jenkins was in. The space between the two barges was rapidly lessening; like the jaws of a huge pair of pliers the two were coming together. Jenkins was swimming frantically in an effort to reach the bows in time to avoid being squeezed to death; but it was evident that the old man was not much of a swimmer. His chance of getting out before the huge jaws closed tight was almost hopeless.

It was fifteen feet from the deck of the barge to the water. Joe had no means of reaching the man. He thought of going back for the ladder; but he realized at once that before he could unlash it and get back the old man would be crushed. For a second his brain seemed a blank, and then, while Jenkins still struggled desperately toward the bows, all sorts of useless ideas crowded into his mind.

All Joe's resentment at Jenkins' bullying gave way before his alarm at the terrible death that threatened the old man. Joe looked about him helplessly. Along the entire length of deck the only thing in sight was a short piece of iron rail used on the guy rope that served to steady the coal buckets as they were hoisted out of the hold. But of what possible use could that be to him?

Again Joe glanced over the side. The space had become appreciably narrower. Jenkins, splashing furiously in his attempt to reach the bows, had still more than half the length of the barges to go.

At last Joe had an idea that seemed practicable. "Dive!" he shouted. "Dive! It's your only chance! You'll have to go under them."

Jenkins paid no attention; perhaps he did not hear. Joe shouted again with all the strength of his lungs:

"Dive, man! You can never swim out that way!"

Hampered by the cold and by his heavy clothes, Jenkins was making harder work of it all the time. Presently he stopped stroking and tried to push himself along with his hands on the nearer barge; he made no

HOLDING THE PIECE OF RAIL CLOSE TO HIS BODY WITH ONE ARM, HE JUMPED, STRAIGHT AS A DART, BETWEEN THE TWO VESSELS

better progress by that method, and presently his head went under and he came up choking.

It was hard for Joe to stand there and witness the old man's frantic but feeble struggles. He must do something. He knew that Jenkins' only chance of escape was to dive under one of the barges. Since the old man would not attempt it, Joe decided that he himself must jump over and pull the man down with him. For an instant he shunned the idea. Was it possible, he wondered, after all? Could he pull the struggling man down quick enough to avoid being crushed along with him?

He looked about him again. His eyes fell on the piece of rail, and with quickly beating heart he ran cautiously down the icy deck, seized the iron, which weighed at least thirty pounds, and hurried forward again.

As he reached the spot directly over the struggling barge captain, he shouted again, but Jenkins paid no attention. Joe took a long, full breath and, holding the piece of rail close to his body with one arm, jumped, straight as a dart, between the two vessels.

He struck the water near the struggling man and with his free hand gripped him about the neck and shoulders. Down, down they sank in the icy water, dragged toward the bottom faster and faster by the iron rail.

Jenkins struggled furiously to free himself,

but Joe clung with a desperate hold. The old man clutched and clawed and wrenched at Joe's arm and wrist to free himself. Ordinarily, strength for strength, Joe in his youthful vigor would have been more than a match for him; but now Jenkins fought with the strength of the drowning. It was all that Joe could do to keep his hold on him.

Down, down they went, headfirst now; in another instant they touched the thick mud of the river bottom.

So precipitous had been their descent that Joe had forgotten to let go of the piece of rail. Now he dropped it and, still clinging to Jenkins, began to stroke with his free hand toward the surface.

In spite of the awful throbbing in his ears his brain was still clear; he remembered that if he was to avoid the bottom of the barge he must swim to one side and not straight upward.

Jenkins' struggles to break away were growing feebler, but suddenly he threw both arms round Joe's neck and clung with a deathlike grip. In alarm Joe fought to free himself; with the old man's arms round him, he could not. His own strength was fast failing him; his lungs ached and the blood in his head throbbed painfully.

He managed at last to seize Jenkins' fingers and to pry loose their strangling grip. Then, still clinging to the old man's shoulder, he again fought his way toward the surface.

It seemed to Joe that his lungs would burst with the breath that was in them; but he dared not expel it. Summoning his failing strength, he redoubled his efforts. Jenkins, who had ceased struggling, was like a dead weight in his grasp; Joe did not know whether the old man was still alive or not.

Would he never reach the surface, the boy wondered? He was tempted to let go his hold on Jenkins, so that, unhampered by the dead weight, he could reach the air sooner. Had he not done his best? There was no need of their both drowning. Black specks danced before his eyes. His right arm felt as heavy as lead. His furious struggle and the icy cold of the water had robbed him of all except the last ounce of strength, it seemed, and yet he fought on stubbornly, if feebly, although he hardly realized what he was doing.

It did not make any difference now, he told himself. He might as well keep his hold on poor Jenkins until the end. Only a moment longer and then— Well, when they found him still clinging to the old barge captain, they would know that he had done all that a man could.

If only his lungs did not ache so! If only— Although hardly realizing at first what he was doing, he was gulping a fresh breath of air. He had reached the surface!

Close beside him loomed the high, black side of one of the barges. His brain cleared at once, and he supported Jenkins' head so that his face was clear of the water.

"Gone, course they are, both of 'em, just squeezed to death, that's all," he heard some one say on the barge, which now loomed almost above him. "The two boxes came smack together a few seconds after the youngster jumped. I seen it all plain as day."

Joe tried to shout, but he had no breath for the effort.

"I s'pose the kid had some notion of trying to save the old man," another voice said. "Pretty tough, though. Wal, ain't nothing much to do, 'cept wait round a few minutes, and then I'll have to run in to Brownport and report the drownin'."

The tug had stopped. Joe, who was in the lee of the barges, turned over on his back and, still supporting Jenkins' apparently lifeless body, kicked himself along toward the end of the barge.

Ahead of him, only a few feet away, was the tug. A moment later the greatly astonished crew of the tug were helping the two barge-men over the rail.

In the engine room they rolled Jenkins on a keg and after a while succeeded in getting the water out of his lungs.

"Well, kid, I sized you up wrong, and I'm willin' to admit it," old Jenkins said an hour later, as he gratefully wrung Joe's hand. "You can make a barge captain of yourself if you want to, all right; but I reckon you're cut out for somethin' better than that."

FACT AND COMMENT

AT the banquet of life, there are tables for the notables, but there are no tables for the not-ables.

A House begins to be a Ruin when
A Fallen Tile is not put back again.

WHENEVER you can look at yourself and be satisfied, you should begin to suspect yourself of moral blindness.

DO not be disappointed if the Bureau of Ethnology cannot answer your request for "the Indian word" for this or that. In a recent report it says that there are, or have been, fully five hundred distinct Indian languages on this continent north of the Rio Grande, and almost twice that number in the whole of the New World.

THE wheat belt is already looking forward to a bumper crop in 1917. The fall months were exceptionally favorable for farm work, and the acreage of winter wheat is far greater than usual. All the wheat that America can raise this year will be needed, for it is certain that none will be left over from the short crop of 1916, and probable that the European harvests will again be short.

CANADA is rapidly gaining possession of the greater part of Niagara Falls. The American Falls now carry less than a twentieth of the entire flow. For two hundred years or more the centre of Horseshoe Falls has been receding by erosion at the rate of about five feet a year. The edge of the American Falls recedes much more slowly—only a few inches a year. As the Canadian Falls drop back toward Lake Erie, they receive a larger and larger volume of water.

TO a father who admitted in court that he did not know how his son, then under arrest, had been spending his evenings or what he had been doing the judge put some questions that other fathers might well ask themselves: "Do you keep a horse?" "Yes, Your Honor." "Where is it now?" "In the barn." "You know where it is every night, don't you? You lock the barn door to keep the horse safe, and you feed it and care for it, don't you?" "Yes, sir." "Which do you think the most of, the horse or the boy?" "The boy, of course." "Then see that you treat him as well as you treat the horse."

THE world little notes what happens on the ancient throne of Abyssinia, where tradition has it that the Queen of Sheba once ruled, yet an interesting change has just taken place there. Before Menelik, the reputed descendant of King Solomon, died, a few years ago, he selected his grandson, Lij Yasu, as his successor. It was an unpopular choice, and the young man has been forced to step aside in favor of Zeoditu, a daughter of Menelik. The Empress Zeoditu, who is forty years of age, hates all foreigners, and is likely to attempt absolutely to close Abyssinia to them.

THE revival of plans for a tunnel under the English Channel brings out the interesting and little-known fact that a substantial beginning on the tunnel was made a generation ago. In 1874 a French company sank a shaft at Sangatte and drove a gallery a mile and a half under the Channel toward England. In 1881 an English railway company sank a 160-foot shaft near Dover and drove a 7-foot tunnel more than a mile under the Channel toward France. Then the cautious statesmen interfered and stopped work. Both tunnels remain virtually intact. Engineers have found that at a depth under the Channel ranging from 80 to 200 feet is a stratum of gray chalk that is the easiest possible material to cut through.

IT took seven weeks to compile the official returns of the popular vote cast in the recent presidential election. Mr. Wilson received 9,116,296 votes, almost three millions more than he got in 1912, and a million and a half more than any previous candidate received. Mr. Hughes, too, had more than any previous candidate, and nearly a million more than Taft and Roosevelt together polled four years ago. His total was 8,547,474. Mr. Hanly, the Prohibition candidate, got 225,101, which is

17,000 more than his party received in 1912; but Mr. Benson, the Socialist, who polled 750,000 votes, got 150,000 less than Mr. Debs received at the last election. The total vote was three and a half millions greater than it was in 1912; not far from half the increase came from women voters, enfranchised since the last election.

OUR WEST INDIES

ALL the essential preliminaries to transferring the ownership of the Danish West Indies to the United States were completed in December. The treaty, which had already been ratified by the United States Senate, was approved in Denmark by both branches of the Rigsdag and signed by the King. When Congress appropriates the twenty-five millions that is the price agreed upon, the cession will be formally made.

The Companion lately told the story of the several efforts of the United States to purchase the islands; there is no need of repeating it. Heretofore Danish sentiment has blocked the sale, and there has been little disposition in this country to press the matter, except in those official circles that emphasize the importance of national defense.

When the United States took over the Philippine Islands, and virtually paid Spain a large sum for them, the late Thomas B. Reed made an ironical remark about the price per capita that we were paying for some millions of savages. We are now paying almost three hundred dollars an acre for one hundred and thirty-eight square miles of territory. And yet, although for purposes of production the land is not worth three hundred cents an acre, the bargain is a good one for us as well as for Denmark, because it gives us one of the best harbors in the West Indies for a naval station to protect the Panama Canal.

Although Columbus discovered one of the islands, St. Croix, or Santa Cruz, on his second voyage, and although the islands, since they were settled by the Dutch about 1630, have been at different times in the possession of England, Spain, France and Denmark, they have little that is picturesque or noteworthy in their history. Nor is their trade of much value. Their entire commerce with Denmark in 1914 was worth less than \$200,000. They have long had closer trade relations with this country than with Denmark. In 1914 we imported from the islands produce to the value of about \$30,000, and sold them goods worth nearly \$900,000.

The purchase will add a little less than thirty thousand people, mostly free negroes, to the number of those who acknowledge allegiance to the United States.

The transaction is purely a business matter, based on the fact that the islands are useless to the seller but valuable to the buyer.

OIL WELLS, EAST AND WEST

THE four things that make modern warfare unlike the warfare of the past are the aeroplane, the submarine, the automatic gun and the motor transport. Three of them are dependent on the gasoline engine; and therefore no country can wage modern warfare successfully unless it has access to a large and constant supply of gasoline. For the first time in history the oil well has become as important to the plans of a general staff as the iron mine, the grain field, or the munitions factory.

During the opening year of the war the Central powers had some reason to worry about their gasoline. Germany itself produces little of the precious stuff, and the great Galician oil fields, which lie under the slopes of the Carpathians, were constantly threatened by the Russians, and part of the time occupied by them. But since the battle of the Donajec in May, 1915, the greater part of that region has been in the hands of the Germans. Only the wells of the Kolomea district are still held by the Russians.

To the Galician oil fields the Germans have now added those of Roumania, and while they hold them they will not need to economize in the use of gasoline. The Roumanian wells, like those of Galicia, are found among the foothills of the Carpathians, and belong to the same geological formation. The United States, Russia and Mexico produce more petroleum than Roumania, but, except for the Dutch East Indies, Galicia comes next. Roumania and Galicia together can furnish about twenty million barrels of oil a year.

Of course England and France are worse off for native supplies of petroleum than the Central powers are, but so long as the British navy holds the seas they have the unlimited supplies of North America and Russia to draw

upon—to say nothing of the less productive wells of India, Persia and the East Indies. The British expedition into Mesopotamia, our readers will remember, was not undertaken originally to seize Bagdad, but to gain control of the promising oil field near the mouth of the Tigris River. That object it has attained in spite of the reverses that followed the ill-advised attempt on Bagdad.

COAL

WHEN beef and mutton grow dear, prudent housewives buy less meat. When eggs soar upward to fantastic figures, valiant housewives have been known to buy no eggs at all. With every advance in price there is a corresponding decrease in consumption—except in the case of coal; but so strong is custom, and so submissive are we to its decrees, that, if coal were four, or fourteen, or forty dollars a ton, it would make no difference in the stifling heat of American houses and hotels, shops, banks and railway stations.

Parlor cars are beyond redemption. They are heated without extra cost, and kept at the temperature in which the African porter loves to bask. Post offices are beyond redemption. The taxpayer settles their coal bills, and their clerks simmer in an indescribable atmosphere, compounded of steam, dust, stale smells, old clothes, old boots and the breath of the passing populace. But why should a big hotel, a cheap boarding house and an ordinary restaurant vie with one another in suffocating their patrons? In one of Mrs. Wharton's novels an ingenious gentleman attains great wealth by patenting a device for the exclusion of fresh air from hotels. To judge by the dining room of any hotel in the country, that patent must still be minting money for its owner. It is characteristic of our imperfect civilization that, so long as the food is rich and abundant, we do not ask to eat it in comfort. A crowded room, a blare of music, a curious medley of costumes, a shrill crescendo of voices striving to talk the music down, closed windows, heavy upholstery and a temperature of 80° F.—that is the combination familiar to all Americans who are rich enough to afford such indulgence.

Poor people get less food and no music, but the same hot and tainted air in which to eat their Hamburg steak and pie. The boarding-house keeper sighs her soul out over her coal bills. The merchant resourcefully adds the increased cost of fuel to the price of his commodities, and makes the public pay for the pain it suffers. Uneasy citizens declare that the government should take control of the coal mines and sell their product cheap; but everyone wants to go on living in a crematory, because that is what we are accustomed to. No one wants to lower the blast-furnace temperature, which stands responsible for half the ailments in the country.

The coal that Americans burn every winter to produce an excess of heat—let us say a temperature over 68°—is worse than wasted. It assures us, at a heavy cost, discomfort and disease.

BELGIUM

WHO are the Belgians, whose sufferings have aroused the sympathy, and whose courage has aroused the admiration, of the world? Belgium, as Belgium, is one of the youngest countries in Europe; it dates only from 1830, when it separated from Holland, with which it had been united since 1815. But its people have a long and honorable history; it goes back to the time of Julius Caesar, who regarded the Celtic tribe of the Belgae, living between the rivers Scheldt and Seine, as the bravest of all the Gauls. Like all the rest of Gaul it became a part of the Roman Empire. Then, in the fifth century, it was overrun by the Franks and for four hundred years it was Frankish. When Charlemagne's empire dissolved, a part of Belgium, Flanders, fell into the hands of French rulers and the rest of it was included in Lorraine, then ruled by German kings.

Later still, both parts of Belgium, together with Holland, became part of the dukedom of Burgundy, which was independent both of France and of Germany. Then, by marriage, the House of Hapsburg became possessed of Burgundy; and the Netherlands, Dutch and Belgic, became under Charles V a fief of the Spanish crown. When Spain lost its power and Holland gained its freedom, France got back a part of Flanders, and the rest of Belgium passed to the house of Austria, in the hands of which, with some vicissitudes, it remained until the French conquered it in 1794, only to give it up at the fall of Napoleon.

Belgium, therefore, like many another frontier region, has known many masters, and its people have become one of the most mixed in Europe. It is not unfair to say, however, that they are very much like the people of northern France—with less of the Roman infusion and a stronger strain of Germanic blood. To their northern neighbors, the Dutch, the Belgians are less nearly allied, although the two countries have often been politically united.

Unlike the Dutch the Belgians are prevalently Catholic; and although in Antwerp they have one of the great seaports of Europe, they are more industrially and less commercially minded than the Dutch. They are industrious, thrifty and home-loving. Their little country was until the other day the most thickly settled and one of the most prosperous in Europe. It is one of the most highly civilized, too. As far back as the Middle Ages Flanders and Brabant were the workshops of Europe and, next to Italy, its art centres.

The geographical situation of Belgium and its age-long position on the border between the powerful countries of France and Germany have made it perhaps the greatest battlefield of Europe. The Belgians have seen too much of war and suffered too much from it to be a quarrelsome or a warlike people, but they are high-spirited and do not submit tamely to aggression. What the future of the nation is to be is not perfectly clear. To-day Germany is administering the country as a conquered province; and it is strategically and commercially so valuable that the Germans would like extremely well to add it permanently to their empire. That they would no doubt do if they were able to dictate the terms of peace; as it is, the general opinion is that the Germans are ready to withdraw from Belgium, if the Allies will let them control the Balkans and the Near East. Whenever and however peace comes, the Belgians may be depended upon to set to work again, with the sturdy, patient courage they have shown more than once before, to build a new prosperity out of the ruins of their towns and the shell-ploughed stubble of their fields.

THE PUBLIC-BUILDINGS SCANDAL

AFTER long efforts by reformers, public opinion found a way to put an end to the worst abuses of the "spoils system" in the distribution of petty offices. It has not yet been fully aroused to the scandal of the raids on the national Treasury for which new public buildings serve as a pretext.

Let us go back to the beginning and see how the evil started. In certain of the largest cities it was impossible to hire privately owned buildings that in size, arrangement and situation were suitable for customhouses, courthouses, or post offices. It was therefore both economical and efficient to buy sites and erect buildings for government occupation. In time, conditions in some of the smaller cities made it seem wise to extend the policy. Those cities were either ports of entry or places where the national courts held sessions; in some cases one building served as customhouse, courthouse and post office. Even at that it was in many instances false economy to build rather than to hire quarters.

Then ambitious towns, here and there, doing an unusually large postal business in proportion to their populations, sought and received ornate buildings to be used solely as post offices. In a few of the cases the government possibly saved small sums by building in preference to renting; but most of the public buildings of that class cost much more, counting interest on the capital, upkeep and maintenance, than equally useful if less picturesque hired accommodations would have cost.

Then the door flew wide open to a scramble by cities, ambitious towns and even small villages. Congressmen, importuned to procure public buildings for them, courted favor and popularity by yielding to the demand. Those who had indefensible projects combined to stand by one another. The result was the shameful raids on the Treasury that have come to be known as "pork" bills.

It would be easy to fill this page with examples of excesses that no reasonable person would justify. The last public-buildings appropriation act authorized the expenditure of \$487,000 for post-office buildings in nine towns in one state. According to the last census the aggregate population of the nine was 25,729. The buildings will take the place of rented quarters that cost \$5860 a year. Thus, merely the interest at four per cent on the cost of the new buildings will be more than three times the rental now paid, to say nothing of the expense of maintaining them, which, it is

estimated, will be on the average more than \$3,000 a year for each one.

Another example—the worst, no doubt, that can be cited—is that of a town of 537 inhabitants, for which the government is asked in a bill now pending to build a post office that will cost \$40,000.

Although that is the worst project in the bill, the Treasury Department estimates that four fifths of the items in the measure represent waste. That waste will go on until public opinion convinces Congressmen that the surest road to unpopularity at home is to sanction absurd demands even from constituents; and that nothing will discredit them so promptly as “log-rolling.”

CURRENT EVENTS

RAILWAY AFFAIRS.—The railway representatives and the heads of the four brotherhoods of employees failed to agree upon a *modus vivendi* while the constitutionality of the Adamson eight-hour law was before the Supreme Court. The employees asked for increase of pay from January 1 until the court's decision was announced. The railways declined to agree to that, although they promised to make the increase of pay retroactive in case the court upheld the law. On January 1 the brotherhood officials issued a statement to the members of their organizations explaining the situation and asking to be instructed whether or not to renew the threat of a general strike.

THE PEACE NOTES.—On December 30 the joint reply of the ten Allied governments to the peace suggestions from Berlin was given out at Paris. The note solemnly protested against the German assertion that the Allied governments were responsible for the outbreak of the war and against the assumption that the Central powers were in any sense victorious. It added that the mere suggestion of peace based on those fundamentally untrue propositions and containing no hint of the terms proposed was a sham offer of peace and in reality a war manoeuvre. The note went on to present the Allies' case against Germany, especially illustrated by its aggression against Belgium, and declared that the Allies could not consider peace until they had secured reparation for violated rights, the recognition of the right of small states to existence and freedom from molestation, and a settlement that could be regarded as a guarantee against such disturbances of the world's peace as the present war. — The three Scandinavian nations dispatched notes strongly supporting President Wilson's peace note. The Spanish government sent to Washington a reply declining at present to take action in support of Mr. Wilson's suggestions. — A resolution that committed the Senate to the support of the President's note was introduced by Mr. Hitchcock of Nebraska, but action on it was prevented by Republican Senators who were unwilling to indorse the President without more information concerning the actual diplomatic situation.

MEXICO.—The American members of the joint commission decided to consider Gen. Carranza's appeal for a modification of the protocol recently drawn up by the commission to provide for the immediate withdrawal of Gen. Pershing's force from Mexico. — The government at Washington learned that Villa and his partisans were recruiting and finding equipment for very considerable armies, and that it grew daily more doubtful whether the Carranza government would ever be able to regain the control of the northern states of Mexico.

HUNGARY.—On December 30 the new Emperor of Austria was crowned at Budapest as King Charles IV of Hungary. Count Stephen Tisza, the premier of Hungary, placed the crown on his head and the ceremony is described as brilliant. There are reports of political dissensions between the kingdoms of the dual monarchy; according to one, Count Tisza himself is likely to retire. It is not clear whether the new ruler is personally responsible for the changes that are occurring or expected

to occur in the cabinets both of Austria and of Hungary, but his policy will probably look toward a closer connection of Austria with the German Empire as a makeweight against the constantly increasing influence of Hungary in the affairs of the monarchy.

TURKEY.—The government of Turkey has announced that it is no longer bound by the treaties of Paris and Berlin, according to which the great powers of Europe exercised a kind of supervision over the relations of

Turkey with the citizens or the governments of foreign states. The note points out that Turkey is now an ally on equal terms with two of the powers in question, and must insist on being recognized as a perfectly independent and sovereign state.

THE EUROPEAN WAR

(From December 28 to January 3)

The probabilities and the possibilities of peace were the chief topic of discussion during the week, for the winter weather made military activity difficult on almost all fronts. The feeling was general that the German suggestion of a peace conference was certain to fail, especially since the German government had shown by its reply to President Wilson that it was not ready to declare publicly the terms that it thinks the military situation justifies. It was understood, however, that the government at Washington was secretly informed of the precise basis on which the Central powers are willing to negotiate, and many public men thought it possible that, if that were sufficiently liberal, a way might still be found to bring about a conference.

The German and Bulgar forces in Roumania continued their offensive and, according to Berlin, gained ground steadily, although much more slowly than in preceding weeks. The impression that the dispatches give is that the drive is slowing down and that the conditions of immobility that are present on the other war fronts are already in sight in Roumania. At the end of the week the Russian line ran from Braila to the Carpathians near the Oitoz Pass; it seemed unlikely that the Russians would be driven any farther back than the line of the Sereth River, unless their flank should be turned from the Dobruja. That district has not yet been entirely cleared of Russian troops, and the crossing of the Danube at that point would be a difficult matter. The retreating Roumanians, according to official report, destroyed nearly all the oil wells and refineries in the districts now occupied by the Germans. The stores of grain that were at Braila and Galatz are also said to have been destroyed or removed.

On the French and Italian fronts there were constant artillery duels, and in the region of Verdun there were occasional spirited local attacks, but no operations of importance. The British army has taken over another section of the front in France.

The ministers of France, Great Britain and Russia at Athens have demanded that Greece limit the number and the armament of all Greek troops and reservists north of the Isthmus of Corinth, release all Venizelist sympathizers now under arrest, and make suitable

OUR LADY OF THE TRENCHES
A CHURCH IN THE BATTLE AREA WITH ONLY ITS ROOF AND ITS SEPARATE BELFRY ABOVEGROUND

apologies to the Allied flags for the attack made by Greek soldiers on Allied soldiers in the streets of Athens. The royal council took the demands under consideration.

Berlin reports the sinking of a steamer carrying a regiment of Russian coast artillery near the Gulf of Finland. The ship is said to have struck a mine. The French armored cruiser Gaulois was torpedoed in the Mediterranean, but almost all of the crew were saved. Berlin declared that during November German submarines sank 138 enemy merchant ships and 53 neutral ships carrying contraband.

Aerial fighting was lively along the French front. The French aviator Guynemer brought down his twenty-fifth enemy airplane. British and French aviators dropped bombs on several factories and furnaces behind the German lines in Lorraine.

Gen. Joffre has been made a marshal of France, but apparently he is relieved from any further military responsibility.

Herr Batocki, the regulator of food supply for Germany, reported that the attempt to enforce an absolute maximum price for the necessities of life and to obtain an equitable distribution of produce throughout the country had broken down, owing to the unwillingness of producers and consumers alike to submit to the regulations.

Unsubstantiated dispatches from Russia told of the assassination of Gregory Rasputin, the monk whose influence on the royal family of Russia has long been the subject of international gossip. Rasputin was said to favor a separate peace with Germany.

There is an interesting movement on foot in Great Britain to take the liquor business out of the hands of private persons, with a view to restricting radically, if not actually prohibiting, the sale of liquor. Mr. Lloyd-George is believed to be considering the control of the liquor trade by the state through purchase.

Flour Facts

It is not generally known by the public that many different grades of flour are made in the same mill, at the same time, and from the same wheat.

The quality of each manufacturer's best-finished flour depends very largely upon how skillfully and carefully he separates it from the undesirable lower grades. The greater the proportion of the lower grades he puts in, the less it costs him to manufacture.

The making of the best quality flour can be likened to the skimming of milk; some skimmers are careful to take off only pure cream; others carelessly or purposely include a percentage of milk.

Therefore, grinding the best wheat does not alone insure the highest quality flour because the quality and richness of the flour are determined largely by the care, pride and equipment of the man who makes the separation.

The purity of both flour and cream depends upon how closely they are skimmed, and this is entirely up to the skimmer (the miller).

Pillsbury's Best is absolutely pure. It contains none of the cheaper grades; so we say,

THE LANTHORN OR THE GLEAM

By Morris Gilbert

CHOOSE! ye must choose, the lanthorn or the gleam—
Which shall ye take, oh, which shall ye resign?
Scale the star-clad uplands to the crest that lights a dream?
Trudge the shifting circle of the lanthorn's shine?
Unto each the choice—to none the sure command.
Lo! The timid bluebells in the sweet, wet crevices!
Silver pipes a-shrilling where the waifs of whimsey baid;
Clarions a-blarney where the way of service lies.
Down the powdered road shows the lanthorn on the way;
Yonder—yonder calls the glory of the gleam—
Shimmering, whispering, leaning to the day—
Leaning to the dawning of the day within the dream!

WHEN TRIBULATION AROSE

"I'M sorry, Harley," the minister said; he spoke in a low tone, as if speaking to himself. Memory was reconstructing the scene of seven years before, when, in that same room, he had knelt and prayed with the hopeful young convert and had looked into the earnest face, all aglow with enthusiasm. "I'm sorry, Harley. Tell me just how it was."

"I thought that I'd made a fine start toward being a Christian," the young man replied, with a little of his old-time boyish frankness, "but I see my mistake now. I was sincere enough, but I didn't count the cost. I'm a carpenter, you know, and I've often heard men say that building a new house, or repairing an old one, almost always figures up more in the end than you estimate it will. I didn't allow for the extra cost, Mr. Kingsley, and—there wasn't any reserve laid by."

"It was easy to live right, here. It was what everybody expected of me, after I'd taken the stand I did. When I was married, and went away, it was different. Ada—my wife—didn't care for that sort of thing, and the men I worked with were mostly rough and careless. At first Ada went to church with me, and I kept up family prayers. We had a good deal of company, though, especially on Sundays,—that was what Ada had always been used to, and I didn't want to dictate to her,—and that made it harder to keep on the way we'd begun."

"One evening Ada made some light remark about my family prayers, and the others laughed. She was only thoughtless, but it took all the heart out of me. I tried it a few times more, but it seemed useless, and I gave it up. I said to myself that I might just as well pray alone."

"Then harder things came, and the good seed got uprooted. I hadn't allowed for the stress and strain of what the Bible calls 'tribulations.' I thought I was down on bed rock, but there was sand somewhere, and—and the house went over. I know you'll say that I ought to begin all over again, but I can't. I couldn't feel any interest in it now."

"Have you noticed John Wheldon's new house—on Park Avenue?" The young man looked curiously at the minister as he nodded assent.

"For years John saved for that," went on Mr. Kingsley, "and four years ago he began building. When the frame was up and partly covered, a big wind laid it flat. It was a heavy loss for a poor man, for a good many of the boards and timbers were splintered and broken. To use your own expression, it 'took all the heart' out of John. He stored what was left of the wreckage under a shed, and never touched the work until a year from the next spring."

"Even when he began again the old enthusiasm was gone. I never saw a man more indifferent about anything. He said he'd never have touched it if he hadn't had the cut lumber on his hands. But the building went up, and stayed up. The debt is paid, I understand, and it's a snug little home, and John and his family are enjoying it. The contractor tells me it's a better house than the other one would have been, because John put his hard experience into it."

The young man was silent a long time. "Yes, I've got the cut lumber on my hands," he said musingly. "I suppose God will expect me to make some use of it."

ROSIE'S MOTHER

CLEARING her desk for the night, Miss Harlow heard footsteps out in the hall—shy, hesitating steps that did not sound like those of a child or a teacher, or of an angry parent. Her hands full of papers, she waited, curiously, until the stranger came into view. She was right: It was neither child nor teacher, nor parent with a grievance. Yet it was a mother—there was no question about that. She was speaking timidly.

"I—I am looking for Miss Harlow."

"I am Miss Harlow. Won't you come in?"

Her visitor entered and sat down. She was very nervous. Her soft, troubled eyes pleaded for sympathy.

"It's my little girl, Rosie—Rosie Doran. She's real pretty."

"Rosie is bright as well as pretty," Miss Harlow answered.

A flash of pride illumined the face of Rosie's mother and made it for a moment incredibly younger.

"Yes'm, she is. I—I want Rosie to have things nice. I do everything I can, but her father's been sick so much. And Rosie thinks somehow that I don't want to get her things. She don't understand—a girl like her couldn't. I thought maybe—Rosie said you were so nice to talk to—maybe you could help me some way. She thinks a lot of you."

Miss Harlow read the whole story clearly in the soft, timid eyes. When Rosie's mother went, at last, with a gleam of comfort on her tired face, Miss Harlow sat thinking until the janitor came to close the building. But then she had her idea.

She announced it to her class the next day. The class merely thought it a funny subject for a "composition." The subject was, "What my mother does."

There were schools where the experiment might

have been dangerous, but Miss Harlow knew her little world. These mothers worked in ways that children could comprehend. They needed only to see. In a day or two she began to hear discussions—heated ones. "My mother does more than yours." She smiled; it was a wholesome rivalry on the whole—far better than blindness. But she could hardly wait for Rosie's paper.

The time came at last. The class had gone. She ran rapidly through the pile and opened Rosie's paper.

The "composition" was blithe and boastful. It listed lightly a fabulous number of achievements. Miss Harlow read it through with a sinking heart until she came to the last sentence.

"I guess I didn't know how many things my mother did till I counted up," Rosie wrote. "I guess there isn't any mother does as much as mine."

The teacher's eyes lighted happily. Whether anything lasting came of it or not, here was reward for Rosie's mother.

THE EFFICIENT BOOT TOE

IT is very probable that Costello Robinson, who lives in the backwoods township of Albany, New Hampshire, is the only man who hunts bears by kicking them. He was recently on his way to work on the road that leads to Gumm's quarry and happened to have a rifle with him. Suddenly he came on two half-grown black bear cubs. Up went his rifle, and one cub fell dead; the other took speedily to a tree. It came over Costello that the other cub would be worth more to him alive than dead, and he began to shout lustily for assistance.

His cries reached the ears of Orrin Tyler, on whose land the bears were trespassing, and he hurried to the spot.

"What'll ye take for 'em, Orrin, jest as they be?" asked Costello.

"Oh, they're wuth ten dollars, I guess," replied the farmer.

Meantime the bear thought it was time to make his escape, and he began to back down the tree.

"Look out, Costello, or ye'll lose him!" cried Orrin.

"Not much, I won't!" cried Robinson, and as the bear neared the ground, growling menacingly, Costello drew back and with a powerful swing landed a kick where a kick would naturally terminate in such case. With a scream of outraged dignity and pain, the bear shot back up the tree. Orrin started up after him, but the bear managed to keep on the opposite side of the big pine trunk, and when Orrin was well up among the branches the bear scrambled rapidly down the trunk again.

Costello was right on the spot, however, and ready with his powerful boot toe. That treatment he administered on seven different occasions, and each time the bear went whimpering back into the tree. Finally the men understood that they must have a rope in order to make any progress.

"You go git one, Orrin," said Costello. "I'll see that he doesn't get away."

"H'm, yes; but I guess I'd better have my money first," said Orrin.

Costello agreed, and redoubled his guard lest both bear and cash should be lost. The bear tried again and again to escape; he circled, he slid, he dropped from limb to limb, but he always found Costello ready with his relentless boot, until, too sore to relish any more of that game, he perched on a branch and awaited his fate. The mother bear, if there was one in the neighborhood, did not appear, and when Orrin, accompanied by Elijah Mason, came back with a rope, the three men lassoed the bear and lowered it to the ground, a biting, snarling tangle of fury, disgust and entire loss of self-respect.

Costello collected the five dollars state bounty on the dead bear and sold the live one for fifteen.

THE UNGENEROUS BIRDS

LAST fall, writes a friend of The Companion, we built a home in a little patch of woods just outside the city. After we had moved in we began to feed the birds that flocked round. We found that tying pieces of suet to the trees, as the writers recommend, was not a success; for the birds worked at them so industriously that the pieces always fell to the ground in a day or so. So we put the suet up in latticed tin boxes that are made for the purpose. We nailed bacon and ham rinds to the trees, and put out a table that we kept covered with seeds and crumbs.

Almost every day there were five or six kinds of birds at our table. The table was a fairly democratic place, but usually only one bird at a time ate at a suet box or pecked at a bacon rind. If a newcomer flew down, the one already there flew away, although there was plenty of room. The only exception was made by the tufted titmice; two of them sometimes perched on the same bacon rind. The chickadees always gave way to the tufted titmouse, and then perched on a near-by twig and scolded about it. The tufted titmouse and junco flew from the nuthatch, the nuthatch from the downy woodpecker, the downy from the hairy woodpecker, and any of them from the blue jay. The blue jay seemed to swoop down on the birds who worked at the bacon and ham rinds for pure joy in seeing them scatter.

The blue jays, however, were so polite among themselves that they even fed one another. It was funny to see one blue jay ramming crumbs down another's throat.

The shy cardinal did not discover the crumb table until the twenty-eighth of February. When he did, though, he stayed right there nearly all day, leaving it for the night at half past five o'clock. The second day the cardinal came at longer intervals, and hung round once more until half past five o'clock. The next afternoon it snowed, and the cardinal did not reappear until mid-afternoon, and by that time the juncos were swarming all over the place. When he did arrive he began to clear the table of juncos. There were so many of them that they kept him wheeling and charging until he had no time to eat. There was plenty of food, but he plainly considered the juncos insufferable interlopers.

The next day he was less belligerent, and sometimes permitted a junco to stay. For some reason he affected not to see the nuthatches when they came, but on three occasions we saw him drive off a blue jay. Once the cardinal and a blue jay alighted on the table at the same moment, and the cardinal flew at the blue jay with an impact that drove them both a yard into the air.

Gradually the other birds came to be interested elsewhere when the cardinal arrived; so he really became lord of the table. Later he brought his lady; she almost never perched on the table, but

she expected him to come and feed her, and he did, too. At frequent intervals he would fly to the ground and put a seed into her outstretched bill, and then fly back to the table and continue ministering to himself.

We have never seen any cordiality among different bird species during our woods observations. Each bird seemed to consider himself first, always; his lady second, sometimes; and all other birds intruders, to be brushed aside whenever it was possible.

SCALDING TEARS

"But, Lena, dear, don't weep such hot tears—I'll be back in a month!"—Fliegende Blätter.

THE LAMKIN'S CAR

SWINGING round, with his back against the counter, for a few minutes' refreshing interchange of ideas and information with the social circle round the glowing stove in Lem Stanford's grocery, Simeon Gaines observed, "Lonny Lamkin must ha' been doin' pretty well lately. I'd a notion he must be prosperin', buildin' him new henhouses and all, but all the same I'll admit it comes as a surprise, him buyin' him a car. There ain't no reason he *shouldn't*, fur's I can see, only somehow it never entered my head he *would*. Lonny's bein' so deliberate, to say the least, and automobiles so extry totherwise."

"Well," agreed Uncle Eli Bonney, "Lonny's doin' well, all right, but henhouses are one thing and an automobile's another. When a henhouse is built, it's *built*. It don't keep bustlin' pieces off itself, nor feed on gasoline at a quarter a gallon; but an automobile—well, mebbe Lonny can afford it, but I should scarcely think he was justified."

"Unp!" snorted Uncle Eli Emmons. "Ye're puttin' it too mild, St. Gasoline and tires and tinkerin' are bad enough, but there's worse. Lonny couldn't drive a car to save his immortal soul—he's a Lamkin, and there never was a Lamkin yet with more mechanical knack than a baby; there'll be the shuffer to pay, and if ye was profane by natur' ye might put it there'd be somebody else to pay it ain't polite to name. I don't see no reason for mincin' language; I call Lonny Lamkin an extravagant idjit!"

"Oh, well," put in Lem Stanford pacifically, "mebbe he ain't contemplatin' a shuffer, Eli. Lonny ain't so to say handy, but he might learn."

Uncle Eli snorted again. "You mark my words, he'll never drive that machine. He's *some* kinds of an idjit, but he ain't that kind. Feller that can't drive a nail 'thout poundin' his thumb, and managed to blow himself up with his wife's gas stove, and bewitched his windmill first day, so's he had to send to Boston for a man to put it right agin—He durstn't!"

"He ain't goin' to hire a shuffer, though. I heerd him say so," remarked Simeon Gaines. "I was down to the depot when they was unloadin' the car, jest now. I must say she's a good looker."

"Did Lonny drive her home?" inquired Uncle Eli skeptically.

"Nobody drive her; she's there yet," said Simeon. "She'd better be," rejoined Uncle Eli darkly, "ef Amanda Lamkin ain't pinin' to be a widder. I see ye smilin', but I know what I'm talkin' about. There's a family genius and family fallin' that can't be got away from; and a Lamkin is a Lamkin. I've known 'em from their gret-grandfather down, and they're capable enough at farmin', but helpless infants with machinery. I tell ye, there'll be a shuffer or a smash-up out to the Lamkin place, or that car'll be sold secondhand within a fortnit."

There was a loud, approaching purr and a cheerful honk. Every head turned toward the door, and a glistening new motor car swept proudly by with a woman at the steering wheel.

"Amanda Lamkin!" cried Simeon, with a big laugh. "Fooled ye there, Uncle Eli. I bet there won't be any shuffer if Amanda's on the job!"

"Didn't fool me, neither," declared Uncle Eli loftily. "Wasn't I jest tellin' ye 'bout family inheritances? Amanda's mother was a Totten, and Gran'ther Totten run a tugboat forty year. It's jest what might be expected."

"THEIR LITTLE EVENING SHOOT"

I RODE into Festubert, which was full of noise, says Capt. W. H. L. Watson in his *Adventures of a Dispatch Rider*, and, hastily dismounting, put my motor cycle under the cover of an arch and reported to the general. He was sitting at a table in the stuffy room of a particularly dirty tavern. At the far end a fat and frightened woman was crooning to her child. Beside her sat a wrinkled, leathery old man with bandaged head. He had wandered into the street, and he had been hit by shrapnel. The few wits he had ever possessed were gone, and he gave, every few seconds, little croaks of hate. Three telephone operators were working with strained faces at their highest speed. The windows had been smashed by shrapnel, and bits of glass and things crunched under foot. The room was full of noises: the crackle of the telephones, the crooning of the woman, the croak of the wounded old man, the clear and incisive tones

of the general and his brigade major, the rattle of not-too-distant rifles, the booming of guns, and occasionally the terrific, overwhelming crash of a shell bursting in the village.

There was the sharp cry of shrapnel in the street and a sudden rattle against the whole house. The woman and child fled somewhere through a door, followed feebly by the old man. The brigade major persuaded the general to work in some less unhealthful place. The telephone operators moved. A moment's delay as the general endeavored to persuade the brigade major to go first, and we found ourselves under a stalwart arch that led into the courtyard of the tavern. We lit cigarettes. The crashes of bursting shells grew more frequent, and the general remarked in a dry and injured tone:

"Their usual little evening shoot before putting up the shutters, I suppose."

But first the Germans "searched" the village. Now, to search a village means to start at one end of the village and place shells at discreet intervals until the other end of the village is reached. It is an unpleasant process for those in the middle of the village, even if they be standing, as it were, in comparatively good shelter.

We heard the Germans start at the other end of the village street. The crashes came nearer and nearer, until a shell burst with a scream and a thunderous roar just on our right. We puffed away at our cigarettes for a second, and a certain dispatch rider wished he were anywhere but in the cursed village of Festubert by Béthune. There was another scream and overwhelming relief. The next shell burst three houses away, at our left.

The Germans finished "their little evening shoot." We marched back very slowly in the darkness to 1910 Farm.

TRULY DELIBERATE

IN a certain Southern city there lives a bachelor, whom we will call Mr. Jack C—, who has the reputation of being the slowest man in town. Indeed, his friends doubt whether any other town can produce a man who could compete with him in deliberation.

One night in the autumn, just at the time when country dwellers are bothered by the wasps that come into the house to seek protection from the cold, Mr. Jack C— and his cousin, Mr. Jack M—, who is of a very different temper, stopped overnight at a farmhouse where they had to share a double bed. Upon retiring, Mr. Jack M— promptly fell into a doze, from which he was shortly roused by the restless movements of his bed mate. He growled out:

"What's the matter, Jack?"

To which he received the drawling reply:

"I belle-e-ve, Jack, there's a wa-a-asp in this bed."

"You just imagine there's a wasp in the bed,"

was the sharp rejoinder. "Keep still and go to sleep."

His companion subsided, and Mr. Jack M— fell into another refreshing doze. About five minutes later his cousin's drawling voice penetrated his consciousness:

"Jack, there *is* a wa-a-asp in this bed."

"No such thing! Shut up and let me sleep!"

was the reply, in a wrathful voice.

There was quiet for a short time. Then Mr. Jack C— spoke again, and his voice had a rising inflection.

"Ja-a-ack, I tell you, there's a wa-a-asp in this bed."

"For heaven's sake, Jack, shut up! There isn't any wasp in the bed. Keep still and let me sleep!" snapped the now thoroughly irritated Mr. Jack M—.

About ten minutes later the wasp got over on the other side of the bed. There was a sudden snort, a violent exclamation, a mighty upheaval of the bedclothes. Mr. Jack M— was dancing round the floor on one foot while he held the other in his hand, and gave vent to a steady flow of picturesque interjections.

From the bed Mr. Jack C— calmly regarded his cousin's gymnastic performance, and when the verbal fireworks had sufficiently subsided for him to be heard, remarked:

"I to-o-old you there was a wa-a-asp in the bed. He stu-u-ung me three times!"

A BOOK OF "NEW LEAVES"

EVEN the great men of the earth evidently find that keeping New-Year's resolutions is not so easy after all. Those of us who know the difficulties of early rising—particularly on the dark and shivery winter mornings that follow immediately on the heels of the first of January—will look with the "wondrous kindness" of a "fellow feeling" upon these self-incriminating entries that are taken from the diary of the famous Dr. Samuel Johnson:

"1760—Resolved, to rise as early as I can."

"1761—My purpose is to regulate my sleep."

"1764—My purpose is from this time to rise early."

"1764—(September)—I resolve to rise early: not later than six, if I can; I hope sooner, but as soon as I can."

"1765—My resolution. I purpose to rise at eight, because, though I shall not yet rise early, it will be much earlier than I now rise."

"1769—I purpose and hope to rise early in the morning, at eight, and by degrees at six."

"1772—I hope to rise by degrees more early in the morning."

"1774—I hope to rise at eight."

THE FIRST POISON-GAS FIGHTER

A RECENT dispatch from the London correspondent of the New York Sun shows that the discovery of poison gas was anticipated in nature's laboratory. A little British beetle has been employing it in self-defense for untold ages. One of the strongholds of this bombardier beetle (*Brachinus crepitans*) is along the shores of the Thames in the Gravesend district. Here it finds a home under the flat stones that are scattered along the river's bank.

The beetle is very likely to be attacked by some of the fierce ground beetles, or Carabidae. As soon as the pursuer draws near, the little beetle ejects a peculiar liquid, which, when it comes into contact with the atmosphere, bursts into an acrid, evil-smelling smoke.

This has an astonishing effect on the pursuing beetle. Indeed, it seems to be overcome and stupefied by the suddenness of the attack. The smoke has a blinding and suffocating effect that lasts for a minute or so, and during that time the little beetle makes good its escape.

BUSTER'S VISIT TO DREAMLAND

BY JOHN CLAIR MINOT

To Dreamland! To Dreamland!
It's there I'll go to-night.
To Dreamland! To Dreamland!
The land of dear delight.
I'll ride upon a bunny,
Along a way that's sunny,
And hold on very tight, tight, tight.

In Dreamland, in Dreamland,
Oh, wondrous things I'll see!
To Dreamland, to Dreamland,
Oh, won't you go with me?
The night is soft and June-y,
The Milky Way is moon-y,
And all the stars are free, free, free!

Some one was singing very soft and low when Buster started off on the road to Dreamland. The song had something in it about riding on a bunny, and Buster laughed out loud at the idea of going to Dreamland in that fashion. There was no bunny to be seen, anyway. And why should the road to Dreamland be sunny? Of course it would be a moonlight road. Anyone ought to know that. But how can a night be "soft and June-y" in the middle of the winter?

Buster was now so far along on the road to Dreamland that he could hear the voice of the singer only faintly, far behind him. There was a turn of the road, and he heard the song no more. Buster's feet were bare, but he did not mind, for the road had a carpet of flowers. He hurried on until he came to a steep hill. The road became narrow here, and ran close to the edge of a precipice.

"I must be almost there," he thought; and then the path curved round a great rock and he saw Dreamland just ahead.

He could see high mountains, with castles on the tops and sides, wonderful trees and flowers all round, and a great waterfall that tumbled over a cliff into a deep valley where there was a curious little house reached by long bridges. Close beside the road ahead of him grew great clusters of giant poppies. As he looked he heard a voice singing:

Have a care! Have a care!
Into Dreamland would you fare?
Then take heed! Then take heed!
Here it is, the key you need!

The voice was heavy and harsh. The song stopped as suddenly as it had begun. Buster looked round eagerly, but he could see no person; but all at once he knew that the words came from the bill of an immense black bird that was perched on the wall beside the path, a bird that wore a shawl and a bonnet and held a great key in one claw.

"If you please, Mr. Bird," said Buster boldly, "may I go into Dreamland?"

"Yes, indeed," answered the bird. "That is what Dreamland is for—a place for good boys and girls to visit when the day is ended. Take this key. It will unlock the great door in the archway between the tall towers yonder."

"Do you give the key to everyone who comes along?" asked Buster.

"Oh, no!" answered the bird, with a chuckle. "I have sharp eyes. I can tell that you have been a good boy to-day."

"Ye-es," faltered Buster, "except that mother had to scold me for tracking in that mud, and I forgot twice to shut the door."

"That was not so very bad," said the bird, "and I know you mean to do better to-morrow."

"Oh, yes!" agreed Buster readily. Then he looked ahead to the tall towers and asked, "What if I should get lost in Dreamland?"

"Nonsense!" croaked the big bird. "Don't worry about that. Here are three of my very best guides that I am going to send along with you—Chipper, Trip and Dozy."

Buster looked down and saw in the pathway beside him three oddly dressed little fellows, not half so tall as he was. They smiled in a most friendly way, and bowed low, to show that they were ready to serve him.

"Thank you very much, Mr. Bird," said Buster, taking the big key that the bird was holding toward him. "I'll hurry along now."

When he started toward the arched gateway, Chipper, Trip and Dozy ran spryly before him, and he heard the black bird on the wall chanting in a hoarse voice:

Hurry slow, hurry slow,
If to Dreamland you would go!
Ponder well, ponder well
What you do and what you tell!

Buster had barely put the key into the lock of the door between the tall towers when the door swung open before him, and he stepped through the archway with his guides.

"This," said Chipper, spreading out his hands, "this is the Candy Garden."

"The what?" gasped Buster.

"The Candy Garden," repeated Chipper. "Every kind of candy grows here. All the

trees, bushes and vines are loaded with candy. See! That tall tree bears pink lollypops, and the lemonade lake is just beyond, with the maple-sugar hedge round it. Those shrubs have a fine crop of bonbons and fudge."

"My!" exclaimed Buster. "I should have brought a basket! Can't we stay right here?"

"Oh, no!" said Chipper. "There is much else to see. Perhaps we'll come back later."

Buster did not believe there could be any part of Dreamland better than the Candy Garden, and he kept looking back over his shoulder as the three little guides led him on. They passed through an orchard where the trees were bending low with golden fruit and a beautiful park where deer were feeding beside a sparkling lake. Then they followed

"It is a visitor to Dreamland," answered Chipper, "and he wants to look down on the world from your mountain top."

"Your visit honors us," said the king grandly, as he stooped over the side of the chariot and lifted Buster in with him. "What is your name?"

"Rodney Dwight Woodford," answered Buster, "but they call me Buster for short."

"I see," said the king. "Well, Buster, I hope you will like our mountain top well enough to come often. Let me show you some of the things worth seeing."

Then they rode slowly round the edge of the great plain on the loftiest mountain in Dreamland, while Chipper, Trip and Dozy ran along beside the chariot, and the knights

Beyond that plain, where the two rivers come together, you see a beautiful castle. That is the Castle of Song. All the birds come there to get their supply of music every spring. And in the valley beyond those green hills all the animals that came in the ark are still living happily together. Perhaps you would like to go down that way; the road is easier there."

"Thank you, I think that will be fine," said Buster.

So when they had ridden the rest of the way round the plain and looked out over the Hills of the Holidays and the Christmas Tree Forest, King Gingerjug said good-by to Buster and drove into the courtyard of his castle. Then Buster and his three guides took the road that led down the mountain side.

While they were resting a moment in the shade of a mince-pie tree, Buster heard a voice singing near by:

Ta-de-dum, dum, dum!
Ta-de-dum, dum, dum!
Ta-de-dum,
Ta-de-dum,
Ta-de-dum, dum, dum!

"That is Little Bear! I know it is Little Bear!" cried Buster, springing up. "That is the same song he sang when the elephant that got away from the circus helped him make a path through the forest for the otter babies!"

Sure enough! Round a bend in the road came Little Bear, dancing from one side of the road to the other while he sang.

"Hello, Little Bear!" called Buster. "How did you ever get here?"

"Oh, I had no trouble!" said Little Bear who was too polite to show surprise that a strange boy had spoken to him. "They think I am curled up in Sleepy Cave for the winter, but I slipped away one moonlight night. But how did you know me?"

"Oh, I've seen your picture in The Companion!" answered Buster, "and my mother has read me the stories about you."

"I thought you might be the boy who was so frightened when I looked into the schoolhouse window last summer," said Little Bear. "His name was Simon."

"Mine is Buster, and I should not have been frightened," said Buster.

Then they sat on a rock side by side, and talked of the time when Little Bear fell over backward into a basket of eggs, as he was fishing on a raft, and of the important errand that he did for the Wildcat family when Yowler Wildcat was teething, and how he bragged too much before he had the race with Grandpa Tortoise, and how he learned to swim by falling off a log while crossing the stream. It was great fun.

Finally they said good-by. Buster told Little Bear how eagerly he should watch for the stories of his adventures in The Companion, and Little Bear sent his love to all the boys and girls who enjoy reading about him. Little Bear went on his way, singing as usual. Buster kept on down the mountain road, and soon came out of the forest into a sunshiny place where there were many strange little folk flitting round. When he had watched them a moment, he knew that he had seen them before. They were the Giggglequicks!

"What is your name?" he ventured to ask one of them.

"I'm Chucklechin," came the smiling answer. "This place is Happy Highlands; and the Giggglequicks live here. Of course, we may be sent for at any moment, you know, to help out some boy or girl who is in trouble."

"Yes, I know," said Buster. "I've seen you in The Companion—Besnig, the fattest Giggglequick, and all the others. I think you are just wonderful!"

"Thank you!" said Chucklechin. "I hope that you will not need our help, but if you do we will try to be there in time."

Then it was Buster's turn to say "Thank you." He was just going to tell his guides that he was getting tired, and that he should come back some other time to see the rest of Dreamland, and especially to visit the Candy Garden, when he found himself going on through the arched gateway between the tall towers. He looked back an instant as he passed the giant poppy plants, and saw Chipper, Trip and Dozy, with their arms round one another's shoulders, singing a farewell song to him:

Bid the Land o' Dreams good-by;
Rosy morning gleams
Bring a warning you must hie
From the Land o' Dreams.

Bid the Land o' Dreams good-by;
Down the Milky Way
You'll go sliding through the sky
To the sunny day.

Bid the Land o' Dreams good-by;
You must journey far,
But some other time you'll fly
Back to where we are.

THE BIRD HELD A GREAT KEY IN ONE CLAW

a path that led up into a great mountain. Up, up, up, it went, but Buster did not get a bit tired, although the path became very steep.

"We are almost there," said Chipper at last.

"Almost where?" asked Buster.

"Almost to the castle of King Gingerjug."

"A real king?" asked Buster.

"No, a Dreamland king," answered Chipper, "and of course that is far better. King Gingerjug is a fine old fellow. His kingdom is on the highest mountain."

While Chipper was speaking they came out on a vast, level plain on the top of the mountain. A body of knights on black horses and ladies on white horses came slowly riding to meet them. The prancing horses had golden trappings, and the riders bore little purple flags at the ends of long lances. Behind the knights and ladies the king himself rode in a golden chariot that flashed with a million jewels.

"What, ho!" called the king in jovial tones. "Who comes here? Who comes here?"

on the black horses and the ladies on the white horses rode behind, two by two.

"First look at some of the other mountains," began the king. "That mountain just beyond the sunset is solid gold from base to summit, and the smaller peaks beside it are made of diamonds, pearls, opals and amethysts. They are very hard to climb, but most of our visitors go there, nevertheless. The vast forest that you see in that direction is the Forest of Lost Things. Many of our visitors enjoy rambling there. The lake that seems to stretch away as far as the world itself is the Lake of Love. See how its waters sparkle in the sun!"

"And what mountains are those?" asked Buster, pointing in another direction.

"The one on the left," answered the king, "is the Mountain of Broken Toys. It seems to be growing larger all the time. The other is the Mountain of Schoolbooks. That has some dark caves where cruel giants dwell.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

GRIPPE IN CHILDREN

DURING an epidemic of grippé a great number of children are sure to be among the sufferers; for they are constantly exposed to infection in schools, places of amusement and street cars. It would be a good thing if cases of grippé were quarantined like those of scarlet fever; the habit of regarding it as a comparatively trifling malady from which there is no escape, once an epidemic has started, is unfortunate.

Children of all ages—not even excepting nursing infants—suffer from grippé, and the symptoms are often as severe as they are in adults. It is certainly worth while to take all pains to keep the sick away from the well, and to see that young children are not taken into overheated or overcrowded places or exposed to prolonged cold.

Grippé is probably taken by breathing in infected air, and therefore very cold outdoor air is more healthful than the stagnant, contaminated air of our houses. At the same time, many people carry the theories about "hardening" their children too far. They keep them outdoors, often insufficiently clothed, until they are thoroughly chilled, and their vitality is so much lowered that they fall victims to the first germ that comes their way. Brisk play in frosty weather is a tonic for all children, but there are days in the winter climate of our Northern States when children are better off in a well-ventilated play room than outdoors.

An interesting experiment was made in one hospital during a grippé epidemic. Generally every child will take the grippé, once it has got a foothold in a hospital ward; but in this case a double wall of gauze was put up between the different beds, and no drafts strong enough to carry the germs from one bed to another were permitted.

Although the same nurses took charge of all the children, most of the children escaped the disease.

Special care should be taken to protect very young babies from the grippé, for it usually goes hard with them. If a nursing mother is suffering from an attack, she should be careful not to breathe or cough over the baby, and should hold a handkerchief before her face whenever the baby nurses.

Many children suffer from a persistent cough and rise of temperature whenever they have grippé, and those symptoms last until warm weather comes. They should be strengthened by tonics and given a change of air, if that is practicable.

BULLETINS OF BEAUTY

CROP reports have held their place now for many years in the daily news. But it is becoming more and more common to find reports of crops, grown either by art or nature, that are of value only for the pleasure they give. Perhaps it is a line in a country paper: "Mayflowers are now in bloom in Follymill Woods"; perhaps a metropolitan journal announces that the lilacs or rhododendrons or roses are now in the height of their glory, either in some public park or in some suburban estate, generously opened by the owner that the public may share his pleasure in its beauty. More and more the public responds to these bulletins.

In England, the London newspapers for years have announced the blooming of the magnificent horse-chestnuts that line, four deep, the avenue in Bushey Park; and Londoners in thousands hasten to see the sight. In beauty-loving Japan, cherry-blossom time not only calls forth notice of the blooming of each historic grove or tree, but it turns the pilgrim crowd into poets, who tie their charming verses to flutter praise among the flowers.

Perhaps the most famous tree of all—"the cherry tree of all Japan"—is the enormous old weeping cherry of the Gion Temple, which for a hundred and thirty years has been the official harbinger of the Japanese spring, the first cherry tree to burst into bloom. It is a noble tree with massive trunk and huge branches, supported by a little forest of posts and props. Age has not lessened its vitality, and it blooms from the lowest, sweeping bough tip to its airy crown. The minute the word goes forth that the buds have opened—processions begin. "Banners on high proclaim it by day, and lanterns, picturesque pine torches in iron baskets, electric lights and colored fires exalt it when daylight fades. By lantern and firelight the clouds of blossoms are more enchanting than by day."

Our way is not the Japanese way; the Orient and the Occident, even when they feel alike, express themselves differently. Some day, far in the future, our heterogeneous crowds may learn to delight in beauty, enhanced by history and tradition, as keenly as do the Japanese. But even then it is doubtful whether we hang odes in our ancient elms, or illuminate on the Fourth of July that avenue of blossoming catalpas along which the signer, Richard Stockton, rode home bearing the news of the immortal Declaration.

Perhaps we may evolve ways of our own to honor our most beautiful forests and trees and fields of glowing bloom; perhaps we shall always remain in such things an unexpressive people. But the chief thing is to seek, to behold and to appreciate; and we are learning fast.

"I See Where My Puffed Wheat Goes" But the More That Goes the Better

The last thing to restrict is a child's love of Puffed Grains. And these are the reasons:

Puffed Wheat and Puffed Rice are whole grains. They contain what every child must have. Much they contain—phosphorus, minerals, gluten and vitamins—are discarded in flour-making.

And Puffed Grains completely and easily digest. Every food cell is exploded. So at any hour and in any form Puffed Grains are ideal foods.

They Don't Last—That Is True

People eat Puffed Grains for breakfast—with sugar and cream or mixed with fruit.

In the forenoon, perhaps, the girl of the house uses them in candy making. In the afternoon, the boy, perhaps, eats them like peanuts, buttered or salted. For supper they are floated in bowls of milk.

Thus Puffed Grains are always the most popular foods in the house. But they are all-food, remember. Every food cell is blasted. Every granule digests.

They don't tax the stomach. And they supply what most foods lack, and what every person needs.

Don't limit the use of Puffed Grains. Keep all three on hand to supply a variety, and tempt a still larger consumption. For these are the perfect foods.

Puffed Wheat Puffed Rice
and Corn Puffs
Each 15c Except in Far West

Puffed Grains in Milk or Cream

Puffed Grains Mixed with Fruit

These are Prof. Anderson's scientific foods. They are steam-exploded—puffed to eight times normal size. Every food element is fitted to feed.

They seem like confections—thin, airy bubbles, with a taste like toasted nuts. That's why folks so enjoy them. But their purpose is to supply whole grains in a form which the body can utilize. In no other way known can that be accomplished.

Eat Puffed Grains in some way daily.

BLUE STREAKS

These Tires Must Be the Best We Can Make

Guaranteed

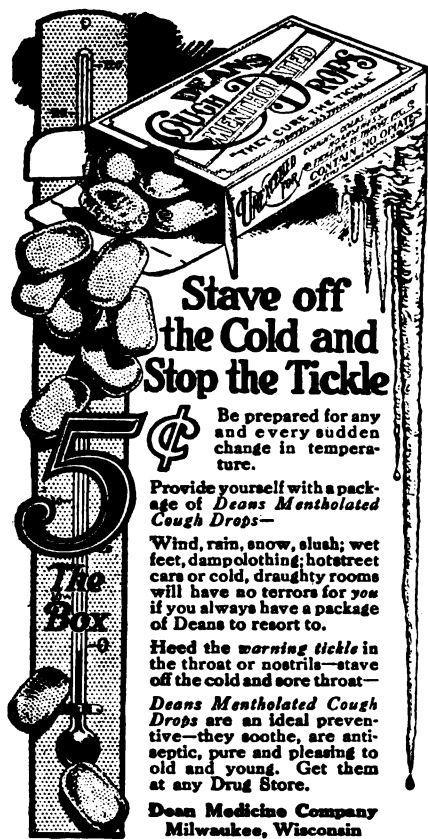

Every Goodyear Blue Streak Bicycle Tire is our card of introduction to some boy. Through this tire he gets his first impression of The Goodyear Tire & Rubber Company. And first impressions are lasting.

Some day that boy will own an automobile and we will want to sell him tires for it. Or he will own a power plant and will be a prospect for belts and packing.

Can't you see that we *must* give him in Blue Streak Bicycle Tires a product that will reflect credit upon the name of Goodyear?

NATURE & SCIENCE

GAME LAWS FOR WHALES.—Prof. Zonia Baber, author of *The Oceans: Our Future Pastures*, in the *Scientific Monthly* protests against the wholesale slaughter of whales that is taking place at present without the slightest attempt at preventive legislation. In the early fifties from 30,000 to 40,000 California or gray whales passed along the coast of California between November and May every year. To-day you can travel thousands of miles in the Pacific Ocean without seeing one whale. Prof. Baber believes that the time will come when men will have to depend upon the larger Cetacea for their meat supply, since it will be impossible to raise cattle because the density of population will be such as to leave no available land for grazing. The writer therefore proposes that the great nations agree upon an international closed season for all marine mammals except the killer whale—the only one that destroys warm-blooded animals—until the valuable sea creatures can multiply sufficiently to take the place, in part at least, that sheep and cattle now hold in the food supply. Unless some such measure is taken soon, the Greenland, the humpbacked and the gray whale will, like Steller's sea cow, the passenger pigeon and the great auk, pass to extinction, victims of commercial greed.

OUR PIPE INDUSTRY.—Very few people realize the varied applications of the prosaic steel or iron pipe. It has been used for many years as a conduit for water, sewage, steam or gas, but at the present time pipe enters into the construction of such varied products as agricultural implements, automobiles, architectural ironwork and grill work, building columns, refrigerating machinery, dry-kiln apparatus, elevator cars, wheelbarrows, workbenches, ornamental gates, elevator

grain spouts, safety ladders, warship masts, lighting and high-tension poles, electric wiring, railway signal apparatus, sprinkler systems and signal towers. As the variety of uses for tubular products increased and the cost of making steel diminished, there has been a change also in material. Fifty years ago nearly all the screw-joint pipe was made of wrought iron. The accompanying diagram furnished by the National Pipe Company shows the effect on the pipe industry of the Bessemer and open-hearth processes of making steel.

SALVING THE WASTAGE.—Heaton Park Hospital at Manchester, England, is now devoted to treating disabled and convalescent soldiers. One of the novel methods of treating cases of rheumatism, debility following dysentery or typhoid, heart disease, shell shock, painful and contracted scars and similar ailments is a whirlpool bath. It consists of a tank that contains four feet of water and that is large enough to hold twelve men. Halfway down are seats that allow the bathers to be immersed up to their necks. The temperature of the water is kept about ninety-three degrees—just below that of the body. The men stay in the bath for an hour at a time. The room is dimly lighted, and there is a general atmosphere of quiet. From the bath the men pass to rest rooms, where they remain in bed for an hour or more. They are excused from physical training for a time, and their lives are made as cheerful as possible. Disordered action of the heart, caused usually by shell shock, is the fundamental trouble in nearly all the cases. The results of the treatment have been most favorable. Ninety per cent of the men become fit for physical training, and a large number return to their units, fit for active service.

A SOLAR WATER HEATER.—The sun itself heats the hot water used by many residents of Monrovia and other places in southern California. According to the *Scientific American*, the sunshine water heater consists of a coil of pipe arranged in a box about four inches deep with a copper bottom and a glass top. The apparatus is usually placed on the roof or in a similar exposed location. The rays of the sun heat the water in the pipe and thus set up a circulation that carries the water to a storage tank, from which it is drawn for household uses. The storage tank is so thoroughly insulated that the loss of temperature during the night is usually not more than four or five degrees. Southern California is unusually favored with sunshine, but there seems to be no reason why this economical method of heating water should not be used in other parts of the country during hot, sunny weather.

THE MOSQUITO PERIL.—One of the greatest discoveries in the history of medicine was that of Dr. Ronald Ross, who, at Calcutta, in July, 1898, found that the spores of malarial parasites are concentrated in the salivary gland of the mosquito. As Dr. Ross himself wrote, "The exact route of infection of this great disease, which annually slays its millions of human beings and keeps whole continents in darkness, was revealed. These minute spores enter the salivary gland of the mosquito and pass with its poisonous saliva directly into the blood of men. Never in our dreams had we imagined so wonderful a tale as this." Until lately it was not known whether a disease-spreading mosquito could infect more than one person. Recent experiments of the Public Health Service have proved that an infected malarial mosquito can infect several persons without again obtaining blood from an original source of infection, and that an infected mosquito retains her ability to infect with malaria for at least twenty-five days. Even if a mosquito empties her available supply of malarial parasites into one man, she may infect a second man a few hours or a few days later through a new generation of parasites. This is a most important discovery, for it shows that the individual disease-laden insect is a veritable machine gun in point of danger, and it emphasizes the necessity for stamping out the breeding places of the malarial mosquito.

Mitchell

\$1460

For 7-passenger Six—48 h. p. 127-inch Wheelbase.

\$1150

For Mitchell Junior—40 h. p. 120-inch Wheelbase Six.

Both Prices f.o.b. Racine

A Thousand Extra Values Due to John W. Bate

That is not an exaggeration. You will find in the Mitchell a thousand extra values, as compared with most rival cars. They are all paid for by factory savings, due to John W. Bate. He built and equipped this mammoth plant to build this one car economically. His efficiency methods have cut our factory cost in two.

This year our new body plant brings a vast new saving. And that all goes into added luxury.

No other fine car in the world is built under like efficiency methods. So the Mitchell gives you, as compared with rivals, at least 20 per cent extra value. And gives it in things which everybody wants.

Where Mitchell is Unique

In the past three years, out of factory savings, we have doubled our margins of safety. Now every vital part is tested for 100 per cent over-strength. The result is a car of superlative endurance—probably a lifetime car.

Over 440 parts are made of toughened steel. Parts which get a major strain are all of Chrome-Vanadium, and all oversize.

Steering parts, axles, gears and driving parts are built twice as strong as need be. The Bate cantilever springs are so strong that never has one been broken.

Extra Features—Added Luxury

The Mitchell includes 31 extra features, all paid for by factory savings. That is, features—like a power tire pump—which practically all cars omit. These extras alone cost us \$4,000,000 this year.

leather costs 50 per cent more than the usual grades.

Every detail is exquisite. The car shows lavish luxury. No other car at near this price was ever so attractive.

All we save in our new body plant

goes this year into added luxury. We have added 24 per cent to the cost of our finish, upholstery and trimming.

Our finish coats, to get a deep, enduring lustre, are

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase. A high speed, economical 48-horse-power motor. Disappearing extra seats and 31 extra features included.

Price \$1460, f.o.b. Racine

Mitchell Junior—a 5-passenger Six on similar lines with 120-inch wheelbase. A 40-horse-power motor—1/4-inch smaller bore than larger Mitchell.

THE ITALIAN CABLE RAILWAYS

THE *teleferica*, or cable railway, that the Italians have contrived to supply their mountain troops quickly and easily with ammunition and provisions, is one of the most interesting inventions that the war has brought forth between high mountain and low mountain.

The steam railways, says a writer in the *Railway Age Gazette*, run in the valleys at the foot of the Alps. The freight, however, has to be picked up and distributed by wagon or automobile truck, and it must go up the higher mountains on mule and man back, and finally on man back alone, bit by bit. But here the *teleferica* steps in and says, "Let me do it. I'm quicker and surer. I can go in all weathers. Avalanches can't stop me."

Along the 400-mile front the *teleferica* daily does the work of an army of at least 240,000 men—or 120,000 mules. The last figure is interesting when it is considered that there are only 175,000 mules and horses used for transportation purposes in this entire army that the Italians have organized to fight the Austrians.

According to the official statistics there are 125 miles of *teleferica* scattered along the front, with a total daily carrying power of 3600 tons. Each *teleferica* built can carry roughly 30 tons. There are some 120 different stations, each with a line a mile or so in length. The one I saw reached a height of 11,000 feet on the side of Monte Adamello, in the central Alps; it did the work of 2000 men every day.

The operation of the *teleferica* is not much more difficult than that of an electric elevator in a "skyscraper." Once the heavy motors and machinery are got up the mountain sides and the three-quarter-inch steel cables strung across deep valleys and chasms and rivers, the mounting of the car upon the overhead cable and the attaching of the pulley cable are simple enough.

We had been coming up all morning by burro from the valley, the alpinist colonel and I, riding along narrow roads built on the side of a huge mountain.

We came at last to a small shack that blocked the road. The colonel dismounted, greeted the officer in charge of the station, and let me take a look round. I saw a couple of heavy motors with cables. My eye followed those cables, however, and they kept going across the valley and up the side of the opposite mountain until the eye, dazzled by the snow, could follow no longer. "Well," remarked the colonel, as he cheerily knocked the snow from his thick, hobnailed boots, "suppose we go up."

We climbed into the basket, four feet long by two wide, with side rails not more than six inches high. Wheels began to whirl, and our car ran smoothly out into space.

I held on for dear life to those low sides and fervently hoped the colonel would not rock the boat. "This thing wouldn't pay in peace times," I said.

The car ran up on a thirty-degree incline for a couple of minutes and stopped, for we had completed the first *teleferica* section of the three that would take us to our destination. In seven minutes we had traversed a distance that on foot required an hour.

A DOG ARISTOCRAT

ABOUT her fine collie, Max Gladstone O'Connor, Mrs. T. P. O'Connor tells many engaging anecdotes in her book, *Dog Stars*.

All the cabmen at the cabstand, writes Mrs. O'Connor, had a word for Max, and hopefully he frequently got into a waiting vehicle and sat there until the laughing "cabby" drove him up and down the embankment.

One lovely morning in June I was walking through Grosvenor Square when I observed an equipage, the like of which is to be seen only in London, waiting for some great lady. The large, sash-smooth horses, jet-black, were perfectly matched; the silver-plated harness glittered magnificently; the long, melon-shaped barouche was lined in wine-colored satin; the coachman and footman, both big, fine-looking men, wore powdered hair, claret-colored broadcloth liveries, richly adorned with silver buttons, and high hats with silver bands and cockades. Conscious of their importance, they looked neither to the right nor to the left, but with proud eyes gazing into space remained immovable. Such magnificence could only be the product of an old, picturesque and self-respecting aristocracy, possibly the carriage of royalty.

Suddenly I missed Max. He seemed to have disappeared as if by magic, for he was not on either side of the street, and yet it had been only a moment since he was trotting by my side. I turned back and, as I passed the carriage, looked up, and there he was, smiling and at ease, sitting in the back of the wine-colored barouche on the tufted satin seat.

"Max," I called, "get down at once and come along!"

Those massive, self-important lackeys never winked an eyelash. They must have seen him get into the carriage, and certainly they saw him get out, but they made no sign. And I am confident that if a kangaroo had taken a flying leap into that opulent richness he would have been treated with the same silent, crushing pomposity.

AN EXPENSIVE FISHING TRIP

AN ardent fisherman was President Cleveland, and a writer in the *New York Sun* says of him that he enjoyed angling for the fish that would not bite quite as much as he did for those that would. While fishing one day, dressed in oilskins and a slouch hat, he was addressed by an angler garbed in the height of piscatorial fashion with:

"Hello, boatman! You've certainly got a good catch. What will you take for the fish?"

"I'm not selling them," replied the man in oilskins.

"Well," continued the persistent angler, "what do you want to take me out fishing to-morrow?"

Mr. Cleveland, who was plainly enjoying the joke, replied, "I can't make any engagement except by the season. Will you give me as much as I made last year?"

"You're a sharp fellow," replied the angler, "but a good fisherman, and I'll accept your terms. What did you make last year?"

"Oh," replied Mr. Cleveland, "about a thousand dollars a week! I was President of the United States."

The Victor Record catalog is the most complete catalog of music in all the world

It has required 19 years of constant research, of steady application, of tireless effort, and the expenditure of more than Eleven Million Dollars to place this catalog in your hands

This great book of 506 pages is the recognized authoritative index to the world's best music; to the greatest musical achievements of all time.

Its pages are living tributes to the years of unceasing vigil spent in gathering the best music from every portion of the globe. They reflect the hours upon hours which the greatest artists have devoted to recording their superb art for the delight of all generations. They attest to the enormous amount of time and millions of dollars spent in developing the art of recording to its present state of perfection. And through each and every page runs the story and proof of Victor Supremacy.

Every music-lover will want a copy of this great Victor catalog of music

Everybody should have this book, whether or not they have a Victrola. All will appreciate it because of the information about artists, operas and composers, and the numerous portraits and illustrations it contains.

Any Victor dealer will gladly give you a copy of this great catalog of music, or we will mail you a copy free, postage paid.

PASADENA PUBLIC LIBRARY

"DO leave that crazy book and come out skating with me!" said Nancy. She twisted her scarf round her neck. "It's too cold!" With an amiable smile, Sally waved the "crazy book" at her roommate.

"Isn't! The skating's perfectly great." "I skate so badly that it really isn't any fun for me."

"You wouldn't skate badly if you'd only practice. You've got the stroke and you're as strong as an elephant; all you need is to keep at it."

"Much virtue in that 'all,'" murmured the other, sinking deeper into her comfortable chair.

"You're the laziest girl in this school!" Nancy was so small and red and snappy-eyed that she reminded you of an enraged robin. "You won't work, you won't play, you won't do anything; you dawdle through your whole life, 'Sleepy Sally Payson'!"

Sally's smile was just as sweet as ever as she drawled, "You've got kick enough for us both, honey chile. This room would go up in smoke if two steam tugs lived in it."

"Well, I'm going to have some fun. You can toast over the fire—pussycat!" With a sound of clashing skates and banging doors Nancy darted off.

Sally smiled on tranquilly and gazed at the fire. "I am a poor creature—can't skate, can't swim, can't golf, can't play basket ball, can't do anything. This is a queer old school for me, with everyone else hot for sports. Nan's right, too. I am as strong as an elephant."

She stretched out her splendid, lithe body to the fire and flung her long arms above her head. She was so warm and vivid and alive that it was hard to believe that a languid spirit dwelt in her strong body.

"I must make it up by my vast intellectual efforts," she said to herself, and picked up her book with a laugh, for she was just over the line of failure in all her studies. "I suppose I could learn to skate—but I don't believe I'll begin this afternoon." With her feet on the fender and her head sunk into the cushions, she was the picture of lazy comfort.

Outside, Nancy was blowing off her wrath to her friend, Suzette Reeves, as they clumped down the corridor together.

"It's a shame!" she raged. "Sleepy Sally's got brains enough to head her class, and she's got a voice like a bird, and she's built for athletics; but she never studies, and she won't practice for the choir, and she can't even make second team in anything."

"She's a nice, sweet girl, though," said Suzette. "You always feel something in her."

"Something! She's a gold mine; but she'll never dig the gold out. Do you mean to tell me she amounts to anything in this school?"

"Why, no,—I don't suppose she does; everyone likes her, though. There goes Miss Vanaine; let's hurry and catch up with her."

Suzette was not especially interested in Sally; no one in school was.

"It's a wicked shame!" muttered Nancy, as she ran after her friend.

Sally read a little, dozed a little, and stirred herself languidly to brew a cup of tea. Suddenly she flashed into life. She had caught a glimpse of a black braid bobbing against a vivid green coat. Sally pressed against the window to watch the only girl that she had ever really cared for. She gazed down at the tall, strong figure, the keen, gentle face with the dark, soft, poetic eyes, until her own blue eyes grew wistful.

Happening to glance up, Elizabeth Janney nodded, laughed and beckoned to her.

"Come out to the lake!" she called.

Sally flung up the window.

"Gorgeous skating!" cried Elizabeth. "Out with you!"

"All right."

Elizabeth did not offer to wait. "We'll all be there!" she cried over her shoulder.

Sally routed out her long-neglected skates and swung off down the campus—a wonderful

SLEEPY SALLY

By Grace Margaret Gallaher

DRAWN BY WILSON DEXTER

BUT SHE CAUGHT HERSELF AND SWEEPED AHEAD ON A MIGHTY RIGHT STROKE

figure of youth with her rosy cheeks and her easy stride. "If it isn't Sal Payson!" "What have we here, Sally Pay?" "Howdy, Sally!" All the girls greeted her cordially, for everyone liked Sally; but they did not gather round her as they always did round Nancy.

"I don't really make any difference to them," Sally thought with a momentary feeling of bitterness. "Oh, well, Nan is so keen about everything she deserves to be popular; she takes the trouble."

Sally caught snatches of the girls' talk, which was all about the coming match with the rival school, The Firs.

"Hockey match first this year," explained one girl.

"Short race next," went on another.

"And three against three for the long-distance."

"What's the course for that?"

"Round the island," announced Nancy, who seemed to know.

"Josephus! I went halfway round last year without stopping, and that'll do me!" exclaimed Alicia Griffith, a tall, red-haired girl.

"The Firs have a winged wonder!" said Suzette.

"The winged wonder will skate a onesome, then. We haven't any girl who can do that!"

"Nonsense! Elizabeth Janney!"

"I'd try," said Elizabeth modestly, "but

I'm afraid my poor old ankle will double up on me. You'll have to get some one else."

"Helen Richards, then, and Phoebe Sears!" The names came in many voices.

"Plucky little Helen, she'll get it on cold, hard grit," said Elizabeth, smiling at a small, sturdy figure skating down the lake.

Sally yearned in a queer, new way to have Elizabeth smile so at her.

"But the third?" asked Betty Ely. "Who'll we have to stand up against that wonder?"

"No one," Phoebe Sears conceded gloomily, "and we'll be beaten, just as we were last year."

"And the year before."

"When I was a freshman in this school," Alicia declared, "no one ever dared dream that an upstart place like The Firs could beat our school, and now they've beaten us hands down at basket ball and at winter sports!"

"They shan't this year!"

"We'll have a wonder, too, if we have to make her out of snowballs!" Nancy cried.

"Come on, I'm freezing." Betty seized Nancy with one hand and Elizabeth with the other, and the three shot off up the lake, with the others following in a string.

No one seemed to notice Sally, left to struggle with a strap. She skated after them with a slow and awkward stroke, but her great strength held her against the wind, which

was blowing strong from the north. When the girls were far ahead of her, they suddenly turned and swept down on her in a laughing, racing crowd. Sally put her whole strength into her stroke; she would not waver before those girls!

"Awful grind against this wind!" they cried as they tore past. "Turn round with us!"

"Thanks! Going round the island!" she called back.

"What an idjit!" she said to herself, clenching her teeth and struggling against the wind. "I couldn't skate round that island to save my neck. I guess the girls must be laughing at me now. I don't believe that one of them could make it in this gale."

In her strange new energy she ploughed ahead stubbornly against the wind.

Click! She shot forward and thumped flat. The buckle had loosened. Scrambling to her knees, she cast a guilty look over her shoulder. No one had noticed her, for all the girls had crowded up on the wharf, where a newcomer was brandishing two bottles.

"That's Mary Howland with something hot to drink! Glory, wouldn't it taste cheerful!" The lonely skater felt chill and forlorn. "I can't go any longer against this howler, but I won't face those girls again on their upskate. No, siree!"

An idea came to her and she laughed aloud. "Why not?"

In a moment she had jerked off her skates, had climbed up the bank and was walking through the trees across the island. At that point it was scarcely a hundred yards wide, and she came to the other side within half a minute.

"They'll think I skated round it." She looked up to the distant head of the island and laughed again; it was such an outrageous "fake" that not even a freshman would be taken in by it.

The girls were long in starting up the lake again. They had not gone far before they saw Sally come skating round the foot of the island.

"It's Sally!" they shouted. "She's skated round the island!"

"In this wind!"

"In this time!"

A moment later Sally joined the group.

"Sally Payson, what a bag of tricks to hide from us! I never dreamed you could skate like this!" It was Elizabeth's deep, sweet voice.

Afterwards Sally thought of the man in the Bible who had "a dumb devil." It was so easy to say, "Oh, I walked across!" Yet not one word came from her.

"I thought you were going some when we passed you!" cried Alicia.

"If that's how you can skate," said Phoebe, president of the athletic association, "you've got to skate in the race."

"One of the three!" they all cried.

This astounding feat of Sally's astonished them less than it would have done if any other girl in the school had performed it; they knew her magnificent strength, and to what good purpose she could exert it at the last moment, if she only would.

Still Sally stood dumb before them. Then she swung herself round and made for the wharf, which was easy for her to reach now, with the wind pushing her from behind. Did she imagine that Elizabeth's soft eyes questioned her?

She gave her back a look as hard as the ice itself.

The girls flocked up to school with her, and pulled her into the gymnasium.

"Miss Hare, we've found some one to beat that Firs wonder—Sally Payson!" Nancy announced.

"But Sally doesn't skate, although she ought to," said the little gymnasium teacher.

"Listen! Listen!" they all cried at once.

Sally heard it all and made no protest; at Miss Hare's "I knew you had it in you, if you'd only bring it out!" she stood as if she were in a dream, smiling, in what the girls thought the silence of modesty.

Although she ached with weariness, Sally

42 THE CODE OF THE TRAPPER

By Ernest Russell

DUSK was gathering over the muskegs on the Cariboo River; the lengthening shadows reached rapidly toward the farther shore. In midstream a rippling trail broke behind the canoe of Colin Fraser, who was paddling to his trapper's camp with the silence and the easy grace characteristic of the wilderness hunter.

From the half gloom of the ridge behind him suddenly shot a thin pencil of flame, the report of a rifle shattered the silence, and a tiny jet spurted from the water just in front of the canoe. A second shot followed, and a splinter whirled from the blade of Fraser's paddle. Then silence again fell on the river.

With a hasty backward glance, Fraser drove his canoe into the protecting gloom of the nearer

along the shore, a bear shuffling along the denuded slope opposite, all served to enliven his weary hours of watching; but he never took his eyes for long from the distant bends of the river.

Five days he passed thus in ceaseless watching. The sixth dawned, gray and dismal, with a thin, cold drizzle. A little after midday Fraser, cowed like a monk in his wet and sodden blanket, saw through the pall of mist that overcast the farther reaches of the river the faint outline of a moving object. As the dim object entered the quick water and approached the conflux of the streams, it quickly took shape.

Fraser did not need to scrutinize the oncoming craft closely. The posture of the man, the manner of his paddling, the very canoe itself, proclaimed the half-breed. When the canoe had swept round a bend and disappeared, the trapper stood up, fumbled in his pocket for his short black pipe and, with numbed fingers, slowly filled it.

A week later Fraser was at home, busily engaged in preparing for the long season of exile and work amid the snows. At the general store of the little frontier settlement he bought such provisions as he could not get at the post; he examined carefully all the details of his equipment. At last he was ready to depart. When he had stowed his dunnage into his canoe, he pushed from the shore and, settling into the rhythmic swing that long habit gives, paddled silently into the shadows that embraced the stream.

The mantle of the snows had fallen upon the wilderness; from the snug little cabin on the Cariboo, Fraser looked forth on a world of white. He liked the solitary life amid the great silences. Its ceaseless toil and its harsh privations could not dispel the glamour that his calling had for him.

For a week the weather was fair. Then there came a dark day, with a hurried gathering of clouds that packed closer and closer together in dull gray masses, and with an ominous commotion in the tree tops. Early in the evening snow began to fall. All night the wind howled round the little cabin.

Early the next morning the trapper put on his snowshoes and struck off, light-hearted, to open up his line.

On the fourth day out there came an event that stirred his blood. Stooping to dig from the snow a hidden trap, he found it sprung but empty. Almost at the same instant his quick eye saw a waving thread of coarse red yarn caught on a twig near by. He instantly remembered the brilliantly hued mittens that Louis Gonyea habitually wore.

"The thievin' half-breed! Thought this storm would hide his work, did he? Well, I'll git him next time, sure as eels is snakes!"

The code of the trapper in the far north is inexorable in punishing poachers. The blood law of the old days still holds; death, swift and summary, is the fate of the poacher caught red-handed in his thieving. Fraser guessed that the half-breed would probably make another foray, and saw his way to settling all scores.

After days of waiting there came, almost unheralded, out of the still air one gray morning the great, fleecy flakes of a storm quite to the liking of the grim trapper. When the snowy tumult was at its height, he plunged into the thick of it, and, settling into a long, easy stride, headed straight to the east.

When he neared the place where he thought the half-breed would probably come to poach, he moved more cautiously. Winding his way among the trees, he strained his eyes to catch through the descending wall of snow some glimpse of the figure that he sought.

When, after a while, he came on an otter trap, he found the news he wanted. The trap had been rifled, and a telltale track of snowshoes led into the woods. The trail was already almost obliterated, and the trapper knew that he should have to hurry

if he wished to carry out his plan of vengeance.

For several miles he traveled at a pace that tried every muscle in his frame; now and then he stooped to assure himself that his victim had not escaped him. It had become very cold, and the snow, turning to sleet, stung wickedly. His breath came in short, rasping gasps, yet on and on he pressed with tense face and straining eyes.

As he was swinging down a slight incline to cross an ice-bound stream, he suddenly halted and, dropping to one knee, peered into the thicket.

Crouching over some object, with his back toward his pursuer, was his enemy—motionless, unsuspecting. In the first moment of exultant frenzy the trapper's fingers clutched at the trigger of his rifle.

Then, laying the gun down, he crept toward the kneeling half-breed. When he was within a few feet of the poacher, Fraser rose, and, hurling himself upon him, pinioned his arms in an iron grip.

Under the violent impact of Fraser's charge, the half-breed plunged face forward into the yielding snow. The trapper's muscles tightened to meet his violent struggles. For a second he waited grimly, but no sound or movement came from the man beneath him.

Suspicious of a ruse, Fraser felt with his right hand for the other's throat and clutched it. With a quick turn he forced the limp form upon its back and gazed upon the face of Louis Gonyea. The poacher's eyes were closed, his lips parted, and his face had a strange, grayish pallor. Then Fraser saw that through a rent in the homespun trousers, well above Louis' right knee, blood was slowly oozing.

Scattered in the snow were the furs that the half-breed had stolen. Flung to one side lay a half-trimmed carrying pole and his hand axe. A glance told Fraser what had happened. As if guided by the hand of retributive justice, the keen-edged weapon had glanced, sunk deep into the flesh of the luckless Louis and brought him defenseless before his enemy. He had probably just met with the accident when Fraser came upon him.

The trapper found that Louis' heart was still beating, and he quickly formed a plan for saving the life that he had been perilously near taking a few minutes before.

Hours later a pale, round moon looked down through scurrying clouds upon the bent figure of the trapper, who, carrying Louis on his broad shoulders, was laboring heavily across the snows toward his shanty on the Cariboo.

The next morning Louis' large black eyes opened weakly on the interior of the cabin, rested on the blanketed figure on the floor, wandered over the hanging litter on the walls and wearily closed again. Shortly afterwards

FRASER HURLED HIMSELF UPON HIM

Fraser awoke, revived the dying fire and, glancing now and then at the sleeping figure in the bunk, busied himself with his morning's work.

Ought he to protect and conceal the worthless criminal who threatened his own livelihood? Or ought he to show the half-breed before the people of the settlement in the colors that would brand him always with dishonor? Fraser pondered long over the problem. At last there came from out his better self the answer that he sought, and from that moment he labored with all the fervor of his strong nature to bring about the desired end.

One day Fraser returned to the shanty to find his charge seated on the edge of the bunk contentedly smoking a vile-smelling pipe.

"Well, Louis," he said, "if you're able to stand up to that there pipe, I reckon you'll be moggin' soon; and as we've got to have some kind of a parley before you go, I'll out with my part and then you can say yourn. You've had a close call, my lad; and you come near goin' with a back load of sins. By a mere matter of chance I've had a hand in bringin' you through. It wasn't of my seekin', I'll own to that. I know you was lifting my fur, and I know it was you that laid for me, below on the dead water last fall.

"But it's come to me to give you a chance. There's no call for doin' murder over a passel of fur; there's a-plenty for the both of us, I reckon. If you want to make a new start, I believe I'll see that you can. I've brought down your fur, and if it ain't enough I'll give you some of mine. You'll find some manner of work out to the front. I'll see you don't lose by it if you travel a straight trail. How does it strike you, lad?"

Louis sat for a long while with downcast eyes fixed on the old pipe in his hand. Unknown to him his heritage of French sensitiveness and emotion was warring in him with the hatred of the white man and the scorn of reconciliation of his Indian ancestors. Centuries of civilization battled with centuries of aboriginal instinct—and in the end it was civilization that triumphed.

At last he lifted his eyes and with simple words and in a low voice uttered his decision. The inscrutable features gave no hint of the feelings that stirred within him, but he gave his hand on the compact with a quiet earnestness that impressed the trapper.

Thus the two came to their understanding. During the final days of their sojourn together neither referred to the incidents that had moved the deepest feelings of his heart. When the time came for Louis to go, Fraser loaded his toboggan for him, and a generous burden it carried.

Dragging the load himself, Fraser accompanied his silent companion far upon the way. He parted from him with brief words of caution and good cheer, and swung briskly eastward to his long-neglected traps. Only once he turned to wave a last farewell to the figure standing in the snow.

ONLY ONCE HE TURNED TO WAVE A LAST FAREWELL

shore. Grasping a projecting branch, he held his craft close to the bank under the overhanging trees.

"Well," the trapper muttered, "that was pretty slick shootin' for this time of day, and me movin' right along lively. Glad it wa'n't any lighter. 'Twa'n't an Injun sighted that gun, at that distance—and there ain't any white man got a spite agin me. If it wa'n't an Injun and it wa'n't a white man fired them shots, it comes in between—and the 'breeds are up to it. Sneaks and cowards—that's what they are.

"Take that Louis Gonyea, now—if 'twas him, he came a long ways to do a dirty piece of work. Must want these trappin' grounds pretty bad to do murder for 'em—but let's see you get 'em, my boy!"

The trapper kept to his hiding place until the rising moon showed a brilliant course before him; then he silently paddled onward through the friendly shadows. The moon stood high in the heavens when he rolled his blanket about him and sought sleep in the shelter of a rough lean-to far down the stream.

The next morning Fraser was early on his journey. There followed two days of unremitting toil at the paddle, of hurried portages and scanty meals. The end of the second day found him camped where the whitened waters of Rocky River joined the dark and placid current of the Cariboo.

Whoever had made the attempt upon his life must sometime leave the wilderness by one of the two waterways that he guarded. He must know who that person was, so that no doubt should hamper his firm resolve to have vengeance. He had not yet planned the manner or the time of his retaliation; the future would solve its own problems.

Screened among the cedars that clothed the high bluff at the confluence of the rivers, the keen-eyed trapper kept his vigil. Trout flashing in the stream, a predatory mink wandering

lay awake that night for a long hour watching a great, cold moon sail across the sky and hide behind the pines.

"Am I a liar?" she asked herself with cold scorn. "I can't remember that I ever told a lie, but I must be a liar, for I acted this lie so easily."

She turned her back on the moon.

"What'll I do? Tell the girls that it was a joke?" She shivered in her warm nest. "Oh, why didn't I have the sense to say it straight out? I've got to tell them to-morrow morning."

She could not tell them. She had never made a moral effort in her life, and she could not force her lax spiritual muscles to it now.

"I suppose I could learn to skate before the race; it's three weeks off. Why, I've got to

learn! The girls will depend on me, and they shan't be disappointed!"

Her tense nerves relaxed; she slept.

"If there were such a thing as a will serum, I should say that a fairy doctor had inoculated Sally Payson with it," the gymnasium teacher said to her assistant; "she's determined to win the race with The Firs. She practices hours every day all by herself on the old rink; she won't go on the lake with the others for fear of playing."

"I always knew there was the best sort of stuff in that girl, if she were once roused," answered the assistant.

Sally certainly was roused. She skated with a grim earnestness that was absolutely different from her usual listless dallying. Not only her body struggled; her brain shook itself free

from cobwebs. The school required good work of its athletes, and Sally, who had been wont to dream away hours over a lexicon, now had to crowd a lesson into a few minutes in order to find time for the necessary practice in skating. With muscle, mind, spirit, she toiled at the highest tension.

She hated it. She longed for her chair by the fire and her sweet castle-building afternoons. This jumping on the hour and filling in every crack of time hurt her pleasant tranquillity; but she stuck to it like a bulldog.

The girls were amazed at the change and rather awed by it.

"It's a sort of Undine finding her soul," Alicia said to Elizabeth. "What did it, do you guess?"

"She's a splendid girl," Elizabeth murmured. Elizabeth was often with Sally now, and

Sally grew fonder and fonder of her. Elizabeth was her ideal—gay, strong and sweet. She was all on fire for school interests, yet never fussy or priggish.

At last the day of the ice sports came—clear, but with a stiff wind blowing from the north. The banks were thronged with spectators.

The school won the hockey match, The Firs won the dash race. The long-distance race was hailed with breathless excitement. The six girls ranged themselves in line—Phoebe, a little unsteady but capable of fiery spurts, Helen, slow but solid as a rock, and Sally, x in the problem.

"I'm scared of her," she heard a girl whisper behind her; "she's such a dark horse."

Sally centred her attention on the renowned skater of The Firs. There was nothing remarkable about the middle-sized, red-cheeked girl,

unless it was her very clear eyes and her very square jaw.

Crack! They were off. For the first time in her life Sally set herself against another in fierce competition. She got away easily on her long swing, and held herself just behind the Firs champion, for she had been advised to let her set the pace up to the home stretch. The wind seemed a hurricane to her. Still, she held her own until they rounded the head of the island. "Ah!" It was a long breath of comfort as the wind began to push her onward instead of hold her back.

She glanced over her shoulder. Phoebe was down! Whether it was a broken skate or a turned ankle she could not stop to see. Helen and one of the racers from The Firs were far behind. All the race was on her shoulders! She wavered, then steadied herself with a tremendous jerk and swung on.

Sally felt a shadow at her side, saw a figure glide ahead of her, and realized that she had two skaters to beat. Had she lost her speed or her strength? She heard the girls who had chosen vantage points on the island shouting her name. They were cheering her steadily, to keep up her courage. They trusted her. She had cheated them into that faith.

"They shan't lose by me!" she said to herself, grimly.

Then she sank her head between her shoulders, hunched her back and bent half double in her stride. Appearances were nothing to her; the wind that crowded her lungs to bursting was nothing; the pain in her side, nothing.

"I will not let the school be beaten by a lie!" she whispered through her closed teeth; and on she skated with body, mind and soul.

She passed the Firs skater who a moment before had passed her, and inch by inch she crept up to the Firs champion, then, shoulder to shoulder, held the pace. They passed the foot of the island together and together glided on, with the wind still behind them. Now Sally could make out different faces on the wharf. Only a few yards more and the race would be over. She felt the girl beside her gathering herself for a rush.

"You would, would you?" cried Sally in her throat, and gathered herself, too.

"Hurry, Sal, hurry!" She could even distinguish Nancy's voice from the others.

She swung tremendously on her left stroke. The skate slipped loose under her! Some fault in a strap or buckle had betrayed her.

But she caught herself and swept ahead on a mighty right stroke, slid for the wharf like a baseball player for the base, grappled for the rope in the air, caught it and dragged herself to her feet, two seconds ahead of the wonder from The Firs.

"You might have killed yourself, you reckless thing!" were Elizabeth's first words.

"I never thought of that," replied Sally, wiping a trickle of blood from her face, where the ice had grazed it. "I just was in honor bound to win."

In the twilight that night she and Elizabeth wandered about the campus, with arms intertwined. The wind had gone down and the air was soft. The two girls had grown very close to each other in the past few weeks.

"Do you know," Elizabeth said shyly to Sally, after a long silence, "the best of all this beautiful year is knowing you?"

"Thank you," said Sally, in the darkness.

"I'm so glad—so thankful—that we're going to college together. You're such a big girl, Sal, and so—so straight!"

Sally halted in the path. "Yes, I guess I am—usually."

"Always, you goose. I've—I've watched you, and I never knew so square a girl."

"You're square as a brick yourself."

"Mostly," Elizabeth laughed and pulled Sally's face round to hers. "You're an old darling!" Then she added, "I've got to write a letter for the last mail," and flitted away among the trees.

Sally turned to follow her, and then stopped; she never acted from impulse. Letting her friend go, she lingered in the silent night until the lights began to go out in the school.

"Elizabeth's friendship is the most beautiful thing I ever had in my life. I want to have it rest on a right foundation. Maybe, if I tell her, she won't like me any more, what I did was so—contemptible."

She looked straight up at the stars. "I won't that skating race on sheer, cold will. Have I got will enough to tell her?" Then, after a minute this strange girl said to herself, "Not now, but maybe I can work myself up to it before school closes."

All the rest of the week Sally "worked herself up" inch by inch, as she had won her race, making up her speech, picturing Elizabeth's amazement, facing her dislike. Then, in dull, prosaic noontime, she walked into her friend's room. It was empty, and she sat down to wait.

"On what a little hinge the gate of destiny swings!" she thought. "If I hadn't gone skating that day — If I hadn't worked like a dog all these weeks, I shouldn't be tough enough to do this."

"Elizabeth," she said as the door opened, "I never skated round the island that day. I walked across it. This afternoon I'm going to tell the other girls who were there."

Elizabeth sank to the arm of her chair. She looked strange and excited, but not especially startled.

"Afterwards I saw the red tassel of your cap on a bush, where it had caught, and—it jumped into my mind that —"

"Did you think I was—a-liar?"

"I—I—I couldn't judge. It seemed monstrous; so I tried to get better acquainted with you, and then I thought I was mistaken."

"And now?" Sally's voice was even.

"I believe more than ever you are the most honorable girl in the whole world. Oh, I'm

so glad you told me! You're free from all doubts now." She flung her arms round her. "No one except you, Sal, would ever have told after you had won the race."

"Elizabeth, you duck," said Sally. "I'm a reformed criminal, and you are both the stirrer-up and the prize obtained. School versus Firs Skating Race, prize—one beautiful Elizabeth."

"No, no!" cried Elizabeth, half shaking, half hugging her. "Prize—one beautiful Sleepy Sally."

"No, sir!" Sally returned the shaking. "One wide-awake-forever Sal."

NORTH FORTY EAST By Homer Greene In Ten Chapters Chapter Seven

NATHAN went back to college, but he went back heavy-hearted. He had none of the joyousness of his traveling companion, Ralph Orchard. Their vacations had been widely different. Although they lived within half a mile of each other, took part in many of the same holiday festivities in the neighborhood and had a hundred things in common, the atmosphere that surrounded the life of the one was entirely foreign to the life of the other.

So, whereas Ralph took up his books and studies with renewed interest and zeal, Nathan went to his tasks as if driven to them by a hard and heartless master. Yet he went to them bravely and with determination, and while he kept up in his current studies continued to make up much of the work in which he had fallen behind.

Dean Robinson was greatly pleased with Nathan's progress and did not hesitate to express his pleasure. He had grown fond of the young fellow whose attractive personality won him so many friends. He encouraged him in every way that he could, and resolved privately that, even though the boy should fall behind again, he would stretch the limit of his patience and power in order to keep him in college and to help him to graduate with honor.

Ralph watched Nathan closely, for he was always fearful lest the strain should prove too great for his friend, and that in some moment of weakness he should give way under it; but as the weeks went by and Nathan did not relax his toil, Ralph's hope grew stronger that his friend would conquer, after all. Then, in February, there came a change. It crept on so slowly that no one except a close friend could have noticed it at first. Nathan began to cut classes; evenings that he should have spent in working he spent in amusement; he failed in recitations more and more frequently. He was more jovial in manner than ever, but his joviality seemed forced.

"I'll brace up again soon," he said in reply to Ralph's protests. "I want to have my fling for a fortnight; then I'll get busy again." But the fortnight went by. The snows melted and ran away. The March winds howled across the campus. The warm sunshine of April came, and still Nathan had not forsaken the easier way.

One day a messenger from the dean's office came to Ralph's room. "Dean Robinson would like to see you in his study," he said. Putting on his hat, Ralph followed the messenger back across the campus and up the walk to the engineering building.

Dean Robinson motioned Ralph to a chair. "It's an unpleasant business," he said, "but I want to talk with you about Brill. You're a friend of his and know that he's been going wrong again. The thing is serious. I want to know what you can do to help save him."

"I don't know," replied Ralph. "It seems to me that I've already done all I can."

"Well, it's too bad. I don't like to see a fellow of ability go to pieces like this."

"Neither do I. I'd do almost anything to pull him out of it."

"I knew you would; that's why I sent for you. I've exhausted my own efforts. He promises readily enough, but he doesn't fulfill

his promises. I've written to his father, but if Mr. Brill has brought any pressure to bear on the boy it has apparently done no good. I'm sorry to say it, but if a change doesn't take place at once Nathan Brill will have to leave the university. You're the last resort. If you can do nothing, he'll have to say good-by to us."

"I can't have him go like that!" Ralph exclaimed. "It would break my heart. I don't

his friend's errand was. "Dean Robinson has been talking to you, hasn't he?" he asked.

"Yes, he has. And it's really his message that I want to give you."

"I can guess it, old man. I've been expecting it. Well, to-day's the last. To-morrow morning I brace up again and go to work. However, I'll come over after a while and we'll settle the details."

He turned away to rejoin his companions, but before he opened the door he said:

"If you should happen to see Robby on the campus, tell him I'll be round to-morrow morning as good as new."

"All right! I'll be waiting for you in my room."

Ralph went back to his own quarters and, taking up a book, tried to study. But across each printed page fell a picture of his friend as he had just seen him: the bright and wandering eyes, the forced smile, the flushed face and the hollow cheeks. After a while he laid down his book, lifted his hinged drawing board, braced it, got out his triangle and T square, and began to put a shading of parallel lines on a sketch that he was making.

Half an hour went by, and Nathan did not come. Another half hour, and still there was no sign of him. Perhaps it had not been so easy for him, after all, to get rid of the merry crowd in No. 83. Every time Ralph heard a footfall on the staircase his heart beat quicker in anticipation. Five o'clock came and went.

The light grew too dim for drawing, and Ralph stood at the window of his room and looked out across the athletic field to the college grove where the shadows were already deepening in the April twilight. Had Nathan forgotten his promise, or had he been afraid to hear the dean's message?

Long after his usual time for going to supper Ralph left his room and started toward his boarding house. As he was passing Allingham Hall it occurred to him to go up to Nathan's room and see whether he was still there. He ran up the stairs and knocked at the door. There was no response. He knocked again, but, except for the noise of his knocking, the silence was unbroken. He tried the door and found that it was locked. But of course there was nothing strange about that; most doors in the dormitories were locked at that hour, during which the occupants of the rooms were at their evening meal.

When Ralph came back to the campus from his supper he followed a path that passed the rear of Allingham Hall, in order that he might see whether there was a light in Nathan's window. There was none. He went on to his own room and started his evening tasks; but he had to exert all his strength of will to keep his mind on his studies. His anxiety was developing into genuine foreboding.

At ten o'clock he put on his hat and coat and again crossed the campus to Allingham Hall; but Nathan's window was still dark and his door was still locked. So he went back to his own room and to bed. He tried to argue with himself that his fear was without cause, that there was nothing especially strange in Nathan's absence from his room or in his failure to keep the agreement to call; but his forebodings would not down, and he was long in finding sleep.

The next morning he looked forward with hope, although not without anxiety, to seeing Nathan in the classroom at ten o'clock. That was the morning on which Nathan, in accordance with his promise, was to turn over a new leaf. But Nathan did not attend the class, nor yet the class at eleven o'clock; nor did he appear at the lecture at three.

As Ralph was crossing the campus after the lecture, Dean Robinson stopped him. "Have you seen anything of Brill? I understand he has been absent from all classes to-day."

"I don't know where he is," Ralph replied. "I've been looking for him."

"There are some unpleasant rumors about him. There may be slight foundation for them; but the thing looks bad."

"I hadn't heard them. What are they?"

"Oh, some goings on down at Guelph's. I hear. A little trouble in the street afterwards."

The dean passed on, but turned and called Ralph back to him. "I think you'd better keep up your search for him, Orchard. It's barely possible that he's in trouble." After a moment he added, "I doubt whether the faculty, after this incident, will permit him to

DRAWN BY B. J. ROSENMEYER

RALPH STEPPED FORWARD AND LAID HIS HAND AFFECTIONATELY ON THE SPEAKER'S SHOULDER. "I WANT YOU"

know but it would break my mother's, too. She's been very fond of him. You know his own mother died when he was four years old."

"Indeed! No, I didn't know." He sat for a moment in thought. "That may account for it to some extent. The power and influence of a good mother to keep a fellow straight is beyond reckoning. I like Brill. If there's any way on earth to save him I want to do it."

Rising from his chair as he spoke, he walked to the window and looked out. After a moment he turned again to Ralph. "Well," he said, "that's what I wanted to say to you. See what you can do. I give you three days."

Ralph left the dean's office and started across the campus toward his room. Then he turned back and went to the main entrance of Allingham Hall and up two flights of stairs. He stopped at the door of No. 83 and knocked. From inside the room came the sound of boisterous laughter and the clapping of many hands. Nathan himself opened the door, and when he saw who it was that had knocked he came out into the hall and closed the door behind him. His face was flushed, his hair was in disorder, his eyes were unnaturally bright.

"What is it, Ralph?" he asked anxiously.

"I wanted to see you," replied Ralph. "I have something to say to you. I can't say it here. Will you come over soon to my room?"

"Certainly! Just as soon as I can get rid of this crowd of fellows. No bad news, I hope?"

"Bad enough. But you can take the sting out of it if you want to."

Instinctively Nathan guessed at once what

remain under any circumstances. I wrote to his father this morning to come on. Doubtless he'll be here to-morrow. But that doesn't relieve you, as his friend, from the duty of looking him up."

The dean went his way; and Ralph, distressed beyond measure at the turn things had taken, started out on a definite tour of inquiry. The first man he met was one of his and Nathan's classmates, who was always well-informed on all college affairs.

"No," said the young man, in answer to Ralph's inquiry, "I haven't seen him. But I understand he was on something of a breeze last night; had a little mix-up with a cop. Resting up somewhere to-day, I imagine. If I hear anything I'll let you know."

The young fellow passed on, and Ralph went across to Allingham Hall. In the doorway he met Tracy Randall, who by common report was given to just such adventures as Nathan was said to have had the night before. Randall looked harassed and careworn.

"Do you know anything about Brill?" inquired Ralph.

Randall eyed his questioner keenly. "Why do you ask me?" he said.

"I thought you might have been with him last night and could help me to find him."

"Where I was last night," Randall replied shortly, "is no concern of yours. And where Brill is to-day is no concern of mine. I'm not his keeper. You might inquire at Guelph's." Turning, he went down the steps.

There was still one other person on the hill from whom Ralph might get information.

That person was Lomax, a senior, president of the fraternity to which Nathan belonged. When Lomax opened his door in response to Ralph's knock and saw who was there, he motioned to his visitor to come in.

"I was just thinking of you," he said. "I thought possibly you might be able to tell us something about Brill."

"I came to get information about him myself," Ralph answered.

"I'm sorry I can't give you any. He was in some trouble last night. We haven't been able to find him to-day. Some of the boys are out looking for him now. What do you know?"

"Hardly anything more than that he was at Guelph's and was mixed up in some fracas on the street afterwards."

"Yes. It's too bad. He's the best fellow in the world when he's himself. We want to get hold of him and bring him up with a round turn, and put him on his feet."

"Thank you!" exclaimed Ralph. "That's what I'd like to do, too. But I'm afraid we're too late to help him to stay in college any longer."

"Why?" asked Lomax.

"Does the dean know?"

"He knows a good deal," said Ralph. "I've seen him. I think he's made up his mind."

On his way from Lomax's room Ralph passed No. 83. He found that some one had forced the lock and entered Nathan's room, apparently in the hope of finding some clue to his whereabouts. Ralph went into the room, which was in great disorder; but he could find nothing there that would be of any help to him in his search.

So, stopping at his own boarding house long enough to eat a hurried meal, Ralph went on down the hill into the city. He made his way straight to Guelph's, a café on a side street, where scenes of hilarity were not uncommon, and where drunkenness was too often the mark of good-fellowship and good cheer. The manager of Guelph's could, or would, give no information that was of any value. Brill and some companions had been there the night before, he said; that was true. But it was not late when they left, and he was sure they were not unduly exhilarated. What took place in the street afterwards he did not know; at any rate, he was not responsible for it, whatever it was. And he had seen nothing of Brill since. So that settled the matter so far as he was concerned.

After that Ralph tramped through the darker streets, scrutinizing the face of each person he met. He stopped at restaurants, billiard parlors and hotels. He even looked into the coarsest and most disreputable resorts along the river front, in the lower part of the city. He inquired at the railway stations, but no one had seen the young man whom he described. At the police stations there was no record on any blotter about any student's having been in trouble. At the city hospitals no case of accident or illness had been reported that could by any possibility refer to Brill.

At midnight Ralph went back to his room.

But he did not go to bed; he knew he could not sleep. He tried to read, but soon threw down the book. Tired as he was he paced back and forth across the floor. There was no doubt in his mind now that Nathan, overcome by despair, had recklessly broken the last link that bound him to the university. Ralph blamed himself for not having held to his friend with a firmer grip, although what more he could have done he was unable to say.

So the hours of the night dragged on. At four o'clock he opened his window and looked out. The sky was overcast, and a low mist hung above the field and shrouded the trees in the grove. Cold, gray and impenetrable, the night confronted him. It might be that Nathan was out somewhere in the darkness, alone, unsheltered, helpless, hopeless. Ralph did not wait to consult his judgment; putting on his hat and coat, he extinguished his lamp and left the room.

The morning air was penetratingly damp and cold. Over in the east the sky was beginning to lighten a little; elsewhere the darkness was intense. Up out of the mist Allingham Hall loomed, huge and forbidding. There was no light in any window. Under the suffused glow of the street lamps Ralph made his way down the hill toward the centre of the city. There were few people abroad. A heavy wagon, laden with cans of milk, rumbled along

though he shrank back into the shadows, hide his identity from the one who sought him.

Nathan was the first to speak. "Well," he said gruffly, "what do you want?"

Ralph stepped forward and laid his hand affectionately on the speaker's shoulder.

"I want you," he replied.

TO BE CONTINUED.

AT THE "BLACK WIDOWS" MERCY

By Jack Bechdolt

MEN of science agree that there is one spider the bite of which is to be feared. The black widow (*Latrodectus mactans*), also known as the "hourglass," is a desert insect. It is common in the sandy districts of middle and lower California. In several authenticated cases its bite has caused death.

When Prof. Ralph Darrow of the University of Washington held up a black body almost an inch long impaled on a pin and told the students in his entomology class that it was the deadly black widow, there was naturally a craning of necks. The announcement that followed caused even greater interest.

"Imagine my surprise," said Prof. Darrow, "at receiving this specimen from our own state. It was found on a wild beach of Puget Sound not two hundred miles north of Seattle. Mr. Bowling, the father of your classmate, Tom Bowling, made the discovery, and sent this specimen to his son for identification. How these desert spiders got so far north I do not know, but before the summer is over I hope to be better acquainted with *Latrodectus mactans*."

Thus did Tom Bowling receive the answer to a proposal that he had made just before the class met that morning. With sparkling eyes he drew Prof. Darrow aside as soon as the class period ended.

"It's a go, then?" he asked eagerly.

Darrow, who was thirty years of age, smiled back at Bowling, who was twenty, with the same boyish enthusiasm.

"Of course it's a go!" he declared heartily. "I'll be ready to start the Monday after commencement. We'll find those spiders if it takes us all summer."

Six weeks later, on a pleasant morning in July, when the wide expanse of Puget Sound glistened like blue silk, a sturdy launch lay beached on the shore of Whidbey Island. The northern end of the island breaks off in sand cliffs that face the Sound. In some places the cliffs are almost perpendicular; in others they have a gentle slope.

For ten days Darrow and Bowling had been skirting

this shore in a leisurely search for the deadly black widow. The ashes of four camp fires lay behind them. They had searched ten miles past the spot where Tom Bowling's father had found a solitary specimen—the spider that he, unaware of any danger, had dropped into a paper bag, and that he had sent to his son because he regarded it as a curiosity. They had found no sign of another black widow.

Tom was discouraged, but Darrow laughed and reminded him that the spider might easily have traveled twenty miles from its colony. Young spiders, he said, often launched themselves from the tree tops, and drifted on the wind by a parachute of their own webbing.

"The spiders will surely be in the sand," Darrow declared. "We must look along those sandy cliffs."

The beaches beyond the cove where their camp lay were strewn with huge rocks and at high tide became impassable. This morning, accordingly, Tom and Darrow made their way to the top of the cliff. Darrow carried a plate camera swung by a strap from his shoulder. Under one arm he had a wide-mouthed collector's bottle. The big pockets of his heavy shirt bulged with notebook and spare plate holders. Tom was laden with a coil of light Manila rope, the canteen and the luncheon.

At the brink of the cliffs they began their search. Where the slope was too steep for them to climb down they used the rope; one stayed at the brink to bend the line round a tree trunk and to raise and lower his companion.

Toward noon Tom, clinging to the taut rope and digging his heels into the sun-baked sand, climbed wearily to the top of the cliff.

"Whew!" he exclaimed, as he threw himself on the ground. "I know now just how a fish feels when it hits the frying pan. That sand is just about as cool as the top of a red-hot stove."

Darrow mopped his moist face. "It's too

hot to work," he said. "Let's have a bite and then loaf for a couple of hours."

"The canteen's dry again," Tom said. "I'll hike back to that spring we passed and fill up before we eat."

Darrow grunted assent, and stretched himself wearily on a carpet of moss close to the brink. A moment later his extended foot touched the specimen bottle, which he had set down. The bottle turned over slowly and hesitated at the edge of the slope. The entomologist sat up and reached lazily for it, but, even as he reached, the bottle turned over again. In a little cloud of dust it slid down the cliff and brought up, ringing but unharmed, on a projecting rock forty feet below. Darrow groaned and eyed the errant bottle spitefully. As far as the rock where his bottle lay the slope was not steeper than forty-five degrees, but it was all soft sand. Beyond the rock it seemed to pitch off more sharply to the beach.

With his face to the earth, Darrow launched himself backward over the cliff; his feet ploughed great furrows in the sand as he lowered himself toward the rock. When a glance over his shoulder told him that he was close to the bottle and as near the brink of the steeper slope as was safe, he hunched himself to reach for his property. As he moved he felt the sand beneath his feet slowly yield. He dug his toes in to get a firmer hold, but was alarmed to find that he was slipping faster. He threw himself upon the slope, face down again. His progress slackened gradually, almost stopped, then began again. Gently but surely he was sliding toward the brink; the whisper of the sand that was cascading over the cliff told him that he was near the danger point.

The earth suddenly dropped out from beneath his feet, but as he plunged downward he clutched at a rock close beside him. His body came to rest, with his feet overhanging empty space. He peered up into the hollow under the projecting boulder, and there he saw the cave of the black widow.

Although at first Darrow did not see the spider, he knew that his search was ended, for across the mouth of the little natural cave was a web. Hanging from it by strands of spider silk were little bundles—the bodies of black beetles wrapped in webbing. *Latrodectus mactans* is one of the few spiders that attack armored insects like the beetle. It snares its victims and hangs their bodies before its home as a butcher hangs beebes before his shop.

In another second, however, the seriousness of his plight crowded aside Darrow's scientific interest in the spider's lair. He lay with both arms stretched above his head, grasping the projecting rock. Although only a part of his weight pulled against his aching muscles, his position was decidedly uncomfortable. No matter how he turned, he could not get a firm purchase on the flowing sand with his feet. He dared not let go the rock.

"Tom, O Tom!" he shouted.

A black, furry body darted out from the gloom of the cave under the rock. Alarmed by the shaking of her home, the black widow had come forth to give battle.

Darrow's rolling eyes saw the spider not two feet from his face. Comparatively small though the deadly insect was, she caused him to shiver with repugnance. Coal-black was her coat everywhere except for one scarlet splash on the abdomen—the "hourglass" marking that distinguishes the female. She was not far from an inch long. Fresh from feasting among a heap of beetle husks, the widow had darted forth angrily, and at the sight of this strange foe she had "frozen" to an attitude feigning death.

The entomologist accepted the challenge and struck first. Shifting all of his weight to his right hand, he aimed an awkward blow with his left at the ball of black.

The blow went wide; a second blow also missed the mark. As he struck, he gave his right arm an excruciating wrench, and had to grasp the rock again with his left hand. The spider darted back into her cave.

"Tom, Tom, hello—help!"

Darrow's husky voice cracked. He was hot and thirsty, and now grew suddenly faint. There was fine sand in his eyes and nostrils and between his teeth. The pulsing blood pounded like trip hammers at his brain.

"Tom Bowling, Tom, help!" he called, trying to catch a glimpse of the cliff top.

Something tickled his hand, and Darrow, turning his eyes, gasped. The black widow had swung herself up on a silken cord until she had reached Darrow's wrist. Now, on velvet feet, she moved across the strained tendons. There was a moment that seemed like eternity. Darrow's eyes were glued on the spider. His

DARROW'S ROLLING EYES SAW THE SPIDER NOT TWO FEET FROM HIS FACE

the pavement. An early riser, huddled in a greatcoat, hurried by. A destitute straggler with his hands in his pockets slouched miserably along, looking for some place of shelter. At a corner of the main street a policeman stood, lazily swinging his club. Day was beginning to break; people would soon be astir.

Four blocks down and three blocks to the right was the Union Station. Trains were arriving and departing every hour. Gathered on the station platform in the gray dawn were many people waiting for the Inter-State Express, which was late. They walked up and down or stood in shivering groups round the doorway. Ralph went among them and looked into all their faces. He entered the waiting rooms and scrutinized the occupants of the benches, many of whom had fallen asleep. But, waking or sleeping, the one whom he sought was not there.

Sick with anxiety, he pushed open the heavy door and started up the platform toward a different street from the one by which he had entered the station. There no one walked or loitered. The place was deserted except by one human figure, a man standing hidden in the shelter of a doorway. Ralph had almost passed him before he discovered him; but when he did see him, he stopped and looked him square in the face.

A casual acquaintance might very possibly not have recognized the man as Nathan Brill; but the heart of the friend who had searched for him leaped with the sudden triumph of discovery. The person who stood there shivering in the mist-cold morning, whose torn and soiled clothing and battered hat showed the hard usage that he who wore them had undergone, whose white and haggard face and swollen lips and bloodshot eyes told their own tale of riotous excess and wretched waking—this person could not for one moment, even

breath fluttered in his throat and his heart seemed to cease beating. He waited, tingling, for the pain of the spider's poisonous bite.

His strained muscles ached, but he dared not move lest he provoke an attack. An almost irresistible impulse to let go and end the suspense came over him. But that way lay certain death; if he could hang on until the spider left his hand, if he could only strike without being bitten, one sharp blow would crush the beast.

Darrow's tired eyes watched the widow crawl across his warm flesh, exploring curiously. The seconds dragged past, dusty, scorching hot, terrible.

"Tom, Tom, Tom, O Tom Bowling!"

The spider then stopped, alarmed; but as

Darrow's shouting ceased she stirred again. In a flash Darrow remembered something that gave him hope. The spider has an acute sense of touch and feels the slightest vibration, whether in air or earth. The breath of his shout had alarmed the widow. If he could keep the spider paralyzed with fear for a few brief seconds, he believed he could pull himself up to safety.

Twisting his face in the sand until he fronted the foe just overhead, he blew fiercely. A shower of sand particles flew from his lips and bombarded the poisonous widow. Instantly she curled into a lifeless ball.

In a flash Darrow put the accidental discovery to effective use. He sucked up a mouthful

of sand and blew it at the spider. The bombardment was effective. Half buried in sand, the widow continued to feign death.

"Now or never!" Darrow muttered. He summoned every ounce of his failing strength. The cords stood out on his hands and wrists, and his tired muscles quivered as he slowly crooked his elbows and forced his body upward. He groaned under the torture, but not for a second did he relax his effort. His knees floundered for a hold in the sand, slipped, and then caught for a brief instant.

It was a shifty kneehold, but enough. He had both arms round the rock now; with his knee he got a purchase on it, and in another second he lay upon the table-like projection.

In that moment of triumph he felt the spider stirring again, but now he could cope with her. With a quick flit of his left hand he sent the black widow spinning a yard away. Then he rolled over on the rock and for five drowsy minutes lay very still.

When Tom Bowling returned from the spring, he spied his friend floundering through the sand just below the top of the cliff.

"Call that resting," he began; but Darrow interrupted him.

"Look!" he croaked hoarsely, waving his specimen bottle. "I got the widow—but—she pretty nearly—got me!"

As he spoke he reached the top and there crumpled up, utterly exhausted.

JARS CONTAINING WHITEFISH EGGS

THE Bureau of Fisheries of the Department of Commerce is organized scientifically to help the fishing industry. The service it performs is most useful and practical; it pays its own way in the economic value of the work performed, commends itself to the business world, and in general appeals to the hard common sense of the American public.

Because the states have reserved for themselves the right to regulate their fisheries, the national government has no jurisdiction over any except the Alaskan fisheries. Soon after the bureau was created it was seen that the most effective direct aid that the national government could give the fishing industry was breeding food fishes and with them stocking waters free of charge. From the very outset the fish-culture work proved successful and popular; indeed, for years it has overshadowed all other branches of the service.

In 1915 the bureau ran fifty permanent hatcheries and half as many more auxiliaries and field stations. Their output exceeded four and three quarter billions of young and adolescent fishes and partly incubated eggs transferred to state hatcheries.

To distribute the enormous numbers of young fish produced each year is a huge task that requires a special staff of workers and unusual transportation facilities. Last year the bureau delivered fish to applicants in every state.

From an early period the bureau has used special fish-distributing cars. At present there are five such cars in use, and another car, of modern all-steel construction, has just been built. The cars, which have their permanent crews, are equipped for carrying large numbers of live fishes safely and comfortably; they are hauled everywhere, attached to passenger trains. Shipments off the main lines are entrusted to messengers, who carry their fish in baggage cars. Certain railways, which appreciate the advantages that accrue from stocking waters along their routes, do not charge the government for the transportation.

A natural outgrowth of the fish-culture work has been the transplanting of native fish into waters in which they are not indigenous. The bureau has thus increased the supply of food and game fishes in every part of the country, has greatly enhanced the pleasures of angling and has obtained very important economic results. Two of the most conspicuous cases, in which Atlantic coast fishes were established on the Pacific coast, are particularly interesting.

At a cost of not more than \$4000, young shad from eastern rivers were introduced into the Sacramento River between 1871 and 1880, and into the Columbia River in 1885 and 1886. From the outset the shad found their new home congenial; they multiplied at a rapid rate and distributed themselves along 4000 miles of coast, from southern California to southeastern Alaska.

Considered from a business point of view, that experiment in acclimatization has proved a remarkably good investment of public money; the fishermen of the Pacific coast states have caught and sold upward of 30,000,000 pounds of shad—they even ship to eastern markets—and have enriched themselves by the sum of \$600,000. Surely that is a good return on the original sum invested!

The striped bass has been acclimatized in much the same way as the shad, and the

MONEY-MAKING FROM WATER

GOVERNMENT MEN TAKING COD SPAWN ON A GLOUCESTER FISHING VESSEL

economic results have been equally striking. In 1879 and 1882 two colonies, comprising about 435 young fish, were liberated in San Francisco Bay. They increased so rapidly in numbers that to-day the striped bass is more abundant in California than in any Eastern state. Up to the present time the yield of striped bass on the Pacific coast has been more than 28,000,000 pounds, with a market value of about \$1,750,000. The total cost of introducing the species was less than \$1000!

The Bureau of Fisheries does not breed and distribute the oyster as it does the other food fishes. In every seaboard state it has, however, surveyed the oyster grounds and made practical recommendations for starting and carrying on oyster planting. What a great help that service has proved may be judged from the history of the oyster-planting industry in Louisiana.

Up to 1898 there were few planted beds of oysters in Louisiana waters. That year, however, the bureau investigated the oyster grounds. As a result of its reports certain favorable laws were passed that stimulated oyster culture in the state. Indeed, 20,000 acres of bottom lands were soon under cultivation. In 1906, to promote the local industry still further, the state asked the bureau to examine large sections of unutilized bottom land in order to determine their productive capacity. The conditions were found to be exceptionally favorable for oyster growing; within two years after the spawn was down, experimental plants produced to the acre from 1000 to 2000 bushels of oysters ranging from 3.5 inches to 4 inches in size. In Barataria Bay, where there had been no oysters whatever, the bureau established such promising beds that prospective planters immediately leased hundreds of acres of adjacent bottom land. In the first year after the bureau had finished its experiments, bottom lands hitherto unproductive yielded oysters that had a value far in excess of the

total appropriations for the research work of the bureau. Furthermore, large revenues have come every year to the state from leasing grounds for oyster planting.

After a number of years of patient research and experimentation the bureau has perfected a method of growing sponges from cuttings, and has thus opened up to sponge cultivation large sections of the bottom land off the Florida coast. That land formerly produced sponges, but had long ceased to bear them.

A concrete example of the ways in which the bureau gives practical assistance to the fishing industry is its recent highly successful campaign for introducing a new food fish into American markets. A result was that a new fishery sprang up on the Atlantic coast.

The tilefish, first discovered in 1879, was apparently exterminated in 1882, when dead fish of that species were found covering an area 170 miles long and 25 miles wide. Estimates made at the time indicated that 1,500,000 tilefish had perished from some vast submarine cataclysm. For ten years persistent search failed to reveal any tilefish in their old haunts, but in 1892 the bureau caught a few of them; the tilefish had re-established itself.

The situation confronting the bureau was this: The ultimate consumer was not acquainted with the tilefish and would not buy it. So long as any other fish were available, the dealer continued to be too busy to advertise it. The fisherman could not be expected to catch a fish of the existence of which he had no visible evidence and for which there was not a certain market. The problem of the bureau was to provide a demand and simultaneously to satisfy it—to excite the consumer's desire, the dealer's business sense and the fisherman's interest, and to make each react on the others.

Within less than a month from the day the demonstration vessel set sail for the fishing grounds the bureau turned the business over to the regular trade. More than twenty vessels

GOVERNMENT MESSENGERS PLANTING FISH IN A PUBLIC STREAM

have already entered the fishery and others are outfitting for it; the demand for tilefish is ten times the present catch, and the chief difficulty has been to keep the price from going too high.

Until a comparatively recent time all pearl buttons used in the United States came from abroad. When the Mississippi River and many of its tributaries, together with other inferior waters, were found to contain mussels the pearly shells of which could be used in making buttons, a new industry was launched. It grew rapidly, gave employment to many thousands of persons and supported a lucrative fishery.

The activity of the fishery, combined with the slow growth of the mussels, began after a time to affect the supply of the raw material, and in the end it became so much reduced that the welfare of the industry was imperiled.

While waiting for action by the states that would prevent the mussel beds from being further depleted, the bureau entered the field with the intention of bringing artificial propagation to the aid of the mussel fishery. The bureau set to work to make those biological studies and experiments on which successful attempts at cultivation would have to be based. It established on the Mississippi River in Iowa a very complete mussel laboratory, and soon devised a feasible method of mussel culture. The result was that the artificial propagation of mussels soon attained large proportions and is becoming more extensive and efficient every year.

In the Alaskan seals the United States government has the most valuable herd of wild animals ever owned by man. Of that herd the Bureau of Fisheries is the custodian. Indiscriminate slaughter at sea has sadly diminished the seals, and the herd may never again contain the millions of animals that it had in 1867, when Alaska became ours. Thanks, however, to an international convention concluded in 1911, to which Great Britain, Russia, Japan and the United States are parties, the herd has more than doubled in four years and now numbers more than 400,000 animals. Congress has thought it wise to forbid the taking of seals for commercial purposes, and at present the only seals that may be killed are those required for the food of the native inhabitants of the Pribilof Islands—tiny bits of land in Bering Sea to which the Alaskan seals resort.

Under the leasing system, which was done away with by Congress in 1910, 2,320,000 young male seals were taken by the lessees, who paid an annual rental and a royalty on each skin. The skins were then salted and shipped to London, and there sold at public auction. After being dressed and dyed by a secret process, seventy to eighty per cent of the skins were imported into the United States.

All that is now changed. When the business history of America is written, one of the most noteworthy chapters will be that which relates how in 1914 the Department of Commerce, acting through and in behalf of the Bureau of Fisheries, upset the unbroken practice of more than two generations, and decreed that government-owned fur-seal skins should no longer be sent abroad at increased expense and sold for the benefit of foreign merchants, but should be sold at home for the immediate benefit of the American trade.

FACT AND COMMENT

THERE are hundreds of overworked stomachs to every overworked brain.

What Happy Hearts are those that find a true Delight in Many Things, a Need of Few!

MOST of us believe that clouds have a silver lining, but few of us make any effort either to turn the clouds round or to get behind them.

WE little know how many men have gone from the United States to take part in the great war! Gen. Tozzi of the Italian army, who is over here on business connected with munitions, says that eighty thousand men have gone from this country to the Italian army alone.

JUDGED by the attention that the newspapers have given the 421 Ohio boys and girls who won prizes in this year's corn-growing contest, they are among the most important visitors that New York has had in a long time. The young Ohio corn growers who contested for the prizes raised on the average 80 bushels an acre, which is twice as much as the ordinary adult Ohio farmer raises. The winner of the first prize got 138 bushels from his acre, and the winner of the second prize, a girl, took 121 bushels from hers.

AT a recent meeting of teachers of English in New York, one of the professors in the Columbia School of Journalism deplored the fact that our colleges use classic examples in teaching English, and therefore, as he maintained, do not turn out students who can write a good newspaper style. He advocated the use of newspapers in teaching English. Nothing could be more unfortunate. The chief reason why newspapers are so much alike and so monotonous is the utter lack of distinction with which most reporters and not a few editors write.

ASHIPPING paper publishes a true story so remarkable that few writers of sea romances would dare to offer it as fiction. In January, 1904, a tidal wave left the British bark Avenger high and dry on a small island in the Gulf of Mexico. Last July another tidal wave swept the vessel back into deep water. Now, after a vacation of twelve years ashore, she is once more in the merchant service. The war has raised ocean freight charges to such a figure that the cost of repairing her was a small matter in comparison with what she can earn.

WHEN the native Australian or the long-time resident hears the cry, "Rabbo, wild rabbo! Rabbo!" he knows that he can get a cheap dinner that will also taste good, for the rabbit huckster is going by. But rabbits are now not nearly so cheap as they were before the war. The demand for meat of any kind has raised the price. The supply, however, is almost inexhaustible, and since refrigeration and canning have been undertaken on a large scale rabbit flesh has become an important item in the food supply of the world. One Australian firm last year canned 385,636 rabbits, and millions go to England and other countries in cold storage.

IN the list of families whose successive generations have rendered exceptional service in the Christian ministry the Cronenwett family deserves a high place. The Rev. George C. Cronenwett, a Lutheran minister, began preaching at Woodville, Ohio, in 1840, and remained at the head of his congregation until he died, in 1888. His son, the Rev. E. Cronenwett, was ordained in 1863, and is now in his fifty-fourth year of continuous service. Since 1877 he has been the pastor of a church in Butler, Pennsylvania. Thus father and son together have served one hundred and two years in the ministry.

GREAT BRITAIN is no longer the only nation that can say that the sun never sets on its territory. Since the United States acquired the Danish West Indies it can make the same boast. Hitherto the little island of Culebra, which is virtually a part of Porto Rico, has been our most easterly point of land,

and the island of Balabac in the Philippines our most westerly point. The distance between them is just a little less than 180 degrees, or half the circumference of the earth. St. Croix, in the Danish West Indies, is thirty-eight miles farther east than Culebra—enough to bridge the gap. Just as the sun is rising on St. Croix it is setting on Balabac.

UNIVERSAL SERVICE

FOR better or for worse the United States has become a member of the community of nations—a world power. The phrase should signify merely that we have become a more important member of that community. If, as we hope, the great war establishes and secures the rights of all nations, small as well as great, the rôle of every "world power" will be merely to protect those smaller nations that are not world powers.

The fact that, partly in consequence of its own acts, partly by events beyond its control, this country has been forced to abandon the attitude of "splendid isolation" that it held for the first century of its national existence imposes upon it both a duty to itself and a duty to other nations. We must assure ourselves of adequate security against the peril to which every nation is exposed—that of sudden and unprovoked attack—and we must be ready to take our part in protecting weaker nations.

To meet those duties an influential body of opinion favors universal compulsory service. That does not mean service after the German fashion, which requires all young men to spend two years or more in the ranks and to be subject to call during the greater part of their lives; it means only that since our present practice of leaving the defense of the country to a handful of regular troops and a larger but much scattered body of volunteers is too risky, all able-bodied men should receive such military training as will make it possible to turn them quickly into efficient soldiers.

What can be said in favor of the policy is so obvious that it need not be stated. The objections to it are all that need be discussed. Those who oppose the policy dread militarism. Whether requiring all young men to take brief courses in military training and introducing universal military drill into the public schools would lead the country to become militaristic is really the only issue between the advocates of complete preparation and their opponents. That is wholly a question of opinion.

But that more preparation is needed than any that has yet been made is also beyond argument. Take the present war as an example. Did Germany force it on Europe? Then how unfortunate it was for the Allies that England was found unready with an army hardly larger or more efficient than our own! Was it the pressure of the Entente that drove Germany into war? Then how fortunate for Germany it was that its preparation enabled it to carry the fighting into the enemy's territory and keep it there! So long as there are selfish and ambitious and aggressive nations, so long as there are nations that play the part of bullies, just so long will unoffending nations be liable to unprovoked attack, and so long must those unoffending nations make ready to defend themselves.

The only question then is, How far shall we go? By no means so far as to acquire a lust for war and to become swashbuckling in our attitude toward foreign powers, but certainly far enough to make an intending enemy pause and think again before attacking us.

BIG FIGURES

PROBABLY no commercial nation ever experienced so great and so sudden a change in its foreign trade as the United States has experienced in the last two years. Although it has become a commonplace with us to read every month that the "record" has been exceeded, there are nevertheless certain facts about the matter so startling that they still continue to astonish.

In 1914, in the ten months between the beginning of the year and the end of October, we exported about 6 million dollars' worth of explosives; in 1915, 111 million dollars' worth; in 1916, 583 million dollars' worth. Again, brass manufactures show values in the three years of 5 million, 38 million and 263 million. Of acids, cotton wearing apparel, firearms, barbed wire and sugar we exported in the first ten months of 1914 some 30 million dollars' worth; in 1915, 90 million dollars' worth; in 1916, 213 million dollars' worth.

Uniting all the items here mentioned, the aggregate for 1914 was 41 million dollars; for 1915, 239 million; and for 1916, 1059 million.

Since, in the case of all the items, the increase is owing almost entirely to the war, there will be a reduction when the war ends of more than a billion dollars a year in the trade in those articles alone. But the fact should not cause alarm or induce business men to anticipate the end of the war with dread. When the demand for war goods ceases, Europe will make a hurried and urgent call for goods that are in ordinary use, the supply of which has been cruelly depleted during the last two years and a half. Besides, it is easy to overestimate the importance of the foreign trade. At all times, even now while the European peoples are lavishing their orders upon us so freely, it is small compared with the home trade.

A CONTINUOUS PERFORMANCE

ROYALTY has always recognized the importance of being picturesque. It lives and acts before the eyes of its subjects a sort of continuous pageant, or serial romance, or moving picture. Good Americans abroad have sometimes been a little ashamed to find how readily they became interested in such colorful but futile affairs—a royal baby at its christening, yelling lustily in a cloud of lace; the betrothal of a princess and the exploitation of her trousseau; a king laying a corner stone very awkwardly and making a three-minute speech that the mayor of the little home town could easily surpass.

Royalty nowadays is busy with other affairs than those of court life and social pageantry. In these times of stress and agony most European sovereigns are anxious, hard-worked men, and their families must share their burdens; but with us in America the pageant of fashionable society is a continuous performance, which no cataclysm has yet interrupted. Many thousands of good Americans, to whom the press, the moving pictures, the magazines and the photographers make accessible the leaders of fashion, are given to following the doings and diversions of those persons with constant interest and no qualms of self-reproach. Sometimes they admire, sometimes they envy, often they criticize; but they seldom perceive that there is really less excuse for an American's interest in the society "movies" of America than for the interest of an Englishman or a German in the affairs of King George or Emperor William. After all, a king and a queen do represent something. They and their court may with a certain degree of right stand for the most elegant and interesting mode of life, as their nation conceives it. They are traditionally expected to exemplify high life at its highest; and even though they fail to do it—as they often do—it is a natural and not necessarily an ignoble curiosity that makes their people find them interesting.

On the other hand, what does the social pageant of fashion in America represent in its more than royal luxury? Not the ideal of the majority of Americans, certainly; not the "best" society, however worthy and high-minded some of the individuals may be; not authority, or fealty, or history, or tradition, or example. Better than the extravagant careers of some of our opulent citizens do the lives of some princes and princesses of modest income and manners represent that ideal of life and behavior which we like to think our nation still cherishes.

The consoling point is that, after all, a show is a show and "movies" are "movies." They may have some influence, perhaps an important one; still, not every boy who pays a nickel to revel in cowboy scenes is really filled with eagerness to don "chaps" and ride a bucking broncho. Because a girl gloats over Parisian ball gowns, Palm Beach bathing scenes and descriptions of the marvelous trousseaux of brides of multimillionaires, it does not necessarily follow that she is longing discontentedly for dollars and display. Often her interest is attracted not so much because the matter is alluring as because it is different.

After all, a show is a show and "movies" are only "movies."

THE NEXT STEP

THE recent passage of the national child-labor law has unified the regulations under which children may be employed in factories, mills, canneries, mines and quarries anywhere in the country. Nevertheless, since it applies only to industries the products of which are shipped in interstate commerce, it does not protect the children employed in local industries. The boys and girls whom we see at work every day—bootblacks, "newsies," messenger boys, bundle girls—belong to the latter class. So also do those engaged in the

different forms of agricultural labor. It is estimated that of the 1,350,000 children unaffected by the passage of the national law nearly three quarters are farm workers.

The protection afforded to those young laborers by the state authorities is frequently inadequate. For example, twenty-eight states have no regulations for street trading, and of the twenty that do have some regulations only one has a fourteen-year age limit for boys. Yet the occupations of newsboy, peddler and bootblack are not very well paid, and in many places are undesirable for youngsters. Night-messenger service is particularly objectionable. On the other hand, some states have passed laws that recognize the necessity of protecting the child, but have made no adequate provision for enforcing them. Again, public opinion is often insufficiently awake to demand the punishment of employers who break the law. In some cases the court remits or suspends fines; in other cases the jury always returns a verdict of "not guilty."

Because of those facts the National Child Labor Committee is urging all who are interested in its work to look about them, to find out what measures their respective communities seem to need, and then to work to get them. If they can properly organize public opinion they can appeal to the state legislature with some chance of success, and organized public opinion will insist that such laws as are passed shall be enforced.

But in all this work one point needs careful attention. Ill-considered legislation can do as much harm as good, and may even defeat the object for which it was enacted. It is futile to forbid children under fourteen to work if at the same time you do not oblige them to attend school. Children between the ages of fourteen and sixteen who are allowed to work should have a chance to get some form of supplementary education in industrial or continuation schools.

TURKEY AND THE TREATIES

THE "sick man of Europe," round whose bed the anxious powers have sat for nearly a century, has leaped to his feet, pitched his crutches out of the window and cried aloud to the world that he is restored to perfect health. In other words, Turkey has denounced the treaties of Paris and Berlin.

One of the two treaties was negotiated at the close of the Crimean War, and the other followed the Russo-Turkish War of 1877-78. Both represented the determination of Western Europe to keep Russia out of Constantinople and to bolster up the crumbling strength of Turkey. The Treaty of Berlin in particular marks one of the great crises of European politics. Turkey lay prostrate; if the great powers had kept their hands off, the Moslem would have been turned out of Europe for good and all, and Russia would have realized its age-long dream—Constantinople and the straits. But the powers dared not permit that; they turned Russia back, took the trembling Turk under their protection and in view of his helplessness put him under certain restrictions in his dealings, both public and private, with foreigners and Christians.

Those restrictions have no doubt been annoying to the patriotic Turk, but they were the price of his existence; the treaties that contained them were made to save him when he could not save himself. In denouncing them Turkey asserts its sovereignty against its former guardians and present enemies, France and Great Britain, and points out that it is not right that a nation that Germany and Austria have received as an equal ally should consent to be ordered about by the other nations of Europe.

The action of Turkey is not of substantial importance, for the war has already torn up the Treaty of Berlin and made a new composition of the Eastern question inevitable. It is an interesting matter of speculation, however, whether Turkey has taken the step of its own motion, that it may be in a position to claim territorial or other advantages in case the Central Powers are able to make a favorable peace, or whether it is only the first step in a concerted plan by which Germany and its allies will all denounce the treaties of Paris and Berlin, in order to erect on their ruins a province of "Mitteleuropa" in the Balkans. The second explanation is rather the more probable.

So far as actual independence, sovereignty and national power are concerned, Turkey was never worse off than it is to-day, in spite of the high-sounding phrases of its manifesto. The Italian and Balkan wars lopped from the empire Tripoli and almost all its remaining

territories in Europe. Since the war began Egypt, Cyprus, Armenia and lower Mesopotamia have been annexed by its enemies, and Arabia has revolted. The German organization has established a military and political receivership at Constantinople, and no sultan ever had so little authority as Mohammed V. However the war comes out the Ottoman power is certain to lose. The "sick man of Europe," who says he is cured, is sure to have a relapse, and possibly enough a fatal one.

CURRENT EVENTS

CONGRESS.—On January 5 the Senate, by a vote of 48 to 17, passed an amended Hitchcock resolution approving that part of the President's peace note which suggested that the belligerents name the terms on which they would discuss peace. —On January 9 the Senate passed the bill prohibiting the sale of liquor in the District of Columbia. Both houses passed the conference report on the immigration bill. —Secretary Daniels asked Congress to appropriate twelve million dollars additional to equip the navy yards to carry forward the new building programme, since the private yards had not offered bids for the entire programme at terms that were satisfactory to the Navy Department. —The rules committee of the House began an investigation into the charges that advance news of the President's peace note had been given by some one in Washington to certain stock operators in New York and Boston. Mr. Thomas W. Lawson of Boston was a witness before the committee, and so were Secretary Lansing and the President's secretary, Mr. Tumulty. Mr. Lawson declared that he believed highly placed officials have profited by the affair, but he declined to give the names of the men he suspected.

THE PEACE NOTES.—The reply of the Entente nations to President Wilson's note had not been received when this record closed, but it was expected daily. —On January 6

AN UNUSUAL PHOTOGRAPH SHOWING A FRENCH AÉROPLANE, GUIDED BY A SEARCHLIGHT, FINDING "HOME" AT NIGHT

Ambassador Gerard, at a meeting of the American Association of Commerce in Berlin, spoke of the President's note as an "olive branch." He also declared his confidence that the present administration in Germany was determined to cultivate the friendship of the United States. Several eminent Germans, including Vice Chancellor Helfferich, Foreign Minister Zimmermann and Arthur von Gwinner of the Deutsche Bank, expressed similar views. The State Department cabled to Mr. Gerard for a verbatim report of his speech, in order to see whether he had offended diplomatic proprieties.

TARIFF BOARD.—On January 6 it was announced from Washington that Prof. Frank W. Taussig of Harvard University had consented to serve on the Tariff Commission, probably as its chairman. The other members of the board have not been appointed.

SUPREME COURT.—On January 8 the Supreme Court affirmed the constitutionality of the Webb-Kenyon law that forbids liquor to be shipped from "wet" states into states that have prohibited the sale or importation of liquor. On the same day the court began to hear arguments on the Adamson eight-hour law.

MEXICO.—Villa was beaten at last by a Carranza general, Francisco Murguía. The battle took place at Jiménez, north of Torreon, on January 4. Villa's losses were put at eighteen hundred men, and he was reported to be fleeing with the remnants of his army toward Durango. Parral and Santa Rosalia were also occupied by Murguía. —It was said in Washington that the administration was considering the withdrawal of Gen. Pershing's force from Mexican territory, after which it was expected that the protocol recently drafted by the joint commission would be ratified and put into effect.

RUSSIA.—Gen. Trepoff, the Russian premier, has resigned and Prince Golitzine is premier in his place. The new premier is a Conservative, and is opposed to the growing

influence of the Duma; he declares himself determined to press the war to a victorious conclusion before discussing internal reforms.

RECENT DEATHS.—On January 5, Gen. Peter J. Osterhaus, last of the Union corps commanders in the Civil War, aged 94. —On January 11, Col. William F. Cody, "Buffalo Bill," aged 70.

THE EUROPEAN WAR

(From January 4 to January 10)

The Teuton drive in Roumania still continued. On January 5 the important city and grain port of Braila, on the lower Danube, fell into Mackensen's hands, and a few days later the Germans and Bulgarians broke through the Russian lines in front of the river Sereth and by a flanking movement obliged the Russians to give up the fortified city of Focsani and fall back behind the Sereth. In these operations Berlin reported that more than four thousand prisoners were taken. At the same time Russian counter-attacks in the Carpathians met with some success.

It is clear that the Russians, like the Roumanians two months ago, are suffering from an undersupply of ammunition. The situation is unlike that in Russia last year, for the Germans are shortening their line as they advance, and improving their means of communication by uncovering one after another of the passes across the Carpathians from Hungary; and they are able therefore to make full use of their superiority in gun power and ammunition. The Germans have reached the point best adapted for establishing permanent defensive lines, and we shall soon see whether they mean to stand along the Sereth or will try to push the Russians entirely out of Roumania.

The Roumanian Chamber of Deputies at Jassy issued a manifesto defying the invaders of the country and promising the nation final victory.

There was some sharp fighting along the Dvina River in Courland; the Germans were on the offensive and took an island near Friedrichstadt. Petrograd reported that other attacks were repulsed and that the Russians in turn had taken a vigorous offensive.

British assaults were reported from Beaumont-Hamel, on the Ancre, and from Arras. In the latter case London declared the British soldiers got clear through to the German third line. A German raid in the neighborhood of Loos penetrated the British trenches to the same distance, said Berlin. Skirmishes were reported from Verdun and the Argonne, and from Lake Garda on the Italian front.

The Entente Powers sent another ultimatum to King Constantine of Greece demanding that he comply with their wishes as to the disarmament of his troops. The blockade, which the powers declared when the King declined to meet their views, was said to be causing great inconvenience and not a little suffering in Greece.

Premier Briand, the minister of war, Gen. Lyautey, and the minister of munitions, M. Thomas, from France; Premier Lloyd-George and Lord Milner from Great Britain and Gen. Palitzin from Russia were in Rome in consultation with the Italian government. The subject of their discussions was kept a secret, but it was believed to relate to the policy to be pursued in the Balkans and to the reply to be made to President Wilson's peace note.

The Cunard steamship Ivernia, in use as a troopship, was sunk by a submarine in the Mediterranean. One hundred and fifty-three men were drowned.

About the usual number of merchant vessels were sunk, mostly in the Mediterranean. The list included one Spanish and one Greek ship. It was reported that the British merchant ship Arrino had rammed and sunk a German submarine.

The German government has asked that Mr. Vopicka, United States minister to Roumania and Bulgaria, be recalled from Bucharest, on the ground that he is unneutral in his attitude. Mr. Vopicka, who is a Bohemian by birth, will probably be withdrawn from Bucharest, but still remain accredited to Roumania.

A number of expatriated Belgians have been returned to their own country from Germany. Many of them are suffering from tuberculosis.

The London papers declare that the news that comes to them from the Central Powers points to a great scarcity of food in both Germany and Austria-Hungary. The Chronicle says that the Budapest Hirap quotes the food director of Hungary as saying that only one seventh of the grain supply needed to carry the people through the summer is in sight.

No Other Six Resembles Hudson Super-Six

Don't Be Misled—It is a Hudson Invention

Sixes have come into renewed popularity since the Super-Six won the top place. But the Super-Six invention—controlled by our patents—added 80 per cent to the six-type efficiency. And that 80 per cent is what gave it supremacy, when the V-types threatened to displace the Six.

Late in 1915, remember, the Six was a waning type. Even the Light Six, which Hudson gave first rank, had revealed some vital engineering limitations.

It had not solved the problem of motor vibration. It had not minimized friction and wear. Its endurance had proved disappointing.

Sixes at that time held hardly a single record. They were mostly held by Fours.

And leading engineers, including the Hudson, were seeking a remedy in Eights and Twelves. At that time the Six, for high-grade cars, seemed verging on displacement.

What Saved the Day

It was the Super-Six invention, remember, which then saved the day for the Six.

Hudson engineers discovered the shortcoming. By a basic invention they corrected the fault. They ended nearly all the vibration. They doubled the motor's endurance. Thus they created a motor which has since won all the worth-while records.

But that doesn't mean that the old-type Six is any better than it was.

'Twas the Super-Six That Won

The Super-Six, in a hundred tests, has out-performed all other motor types. It has not merely broken records. It has made new records which, a year ago, no man considered possible.

It broke the 24-hour endurance record by 52 per cent. It broke the transcontinental record twice in one round trip. A Super-Six touring car went from San Fran-

cisco to New York and back in 10 days and 21 hours.

It beat twenty famous rivals up Pike's Peak. It broke all stock-car speed records, and all for quick acceleration.

Then, after 7,000 record-breaking miles, it showed itself in new condition. Not a part or bearing showed evidence of wear.

No other motor ever built has shown anywhere near such endurance.

All By Saving Waste

The Super-Six develops no more power than other like-size motors. It simply delivers more. It almost eliminates motor friction and wear by ending nearly all the vibration.

That vibration, which wasted power, was the great fault of the Six. It is that which led to the Eight and Twelve as a possible solution. Any motor in which that fault remains can't compare with the Super-Six.

A New Gasoline Saver

The Hudson Super-Six, in endurance and performance, stands foremost in the world. The new-style bodies which we have created make the car look its supremacy. A new exclusive feature—a gasoline saver—gives it this year another advantage.

It now outsells any other front-rank car. It has 25,000 enthusiastic owners, who know that no rival can match them.

You can prove in one hour, at any Hudson showroom, that this car deserves its place. And that no other car, at any price, can be classed with it. Do that before the spring demand overwhelms us.

THE SOLDIER'S GOOD-BY

By Gregory Hay

MY little lad is sleeping now,
So straight and strong, with sunny brow;
I will not wake him lest he cry
To have to bid Old Dad good-by.
His valiant sword lies by his head,
With which he strikes his foemen dead—
The blade of tin that never yet
Felled him in the dread onset.
He's dreaming of the Days of Gold—
There little lads are Warriors Bold.
Perhaps he's fearing lest too late
He pushes on to Lucknow's gate;
Enacts again the part he bore
In the mad mêlée of Agincourt;
Or gayly bears his shining shield
Into the fray at Flodden Field;
Or with the Saracens he fights,
The boldest there of all the knights;
Or smites with David's sling and stone—
And Giants die with awesome groan.
My little dreaming soldier lad,
When you awake and miss your Dad,
Gird on your trusty sword and be
Through life a braver man than he:
A Fighter ever for the right
Amidst the shadows of our night.
I may not come again to see
The glory of your victory;
But I shall hope—O God, I hear
The bugles screaming, deadly clear,
And I must go, dear lad o' mine!
Good-by, dear boy, dear lad o' mine!

THROUGH THE NEEDLE'S EYE

SITTING at his big desk in the office of the Thornton Manufacturing Company, Mr. William Thornton was dictating letters when the name of the Rev. Dr. Colton, the minister of the church he attended, was brought in. Mr. Thornton dismissed the stenographer and told the boy to show the clergyman in.

When Dr. Colton came in, Mr. Thornton greeted him cordially, but he secretly wondered what had brought the good doctor there so early in the morning.

"I'm sorry to disturb you at this hour of the day, Mr. Thornton," he said, "but I have just come from the home of a woman whose husband has died, and there's nothing left to bury him with. I'm trying to raise enough to cover the expenses of the funeral. Can you give me fifteen dollars toward it?"

William Thornton knit his brows. "Wasn't it less than two weeks ago that I gave you twenty-five dollars to help pay a hospital bill for some one?" he asked.

"Yes, it was," said Dr. Colton.

"Well, when is this thing going to end, doctor?" he inquired. "One time it is twenty-five dollars for hospital fees, another time it's ten dollars for coal, another it's twenty for rent, and now it's fifteen for funeral expenses. When are you going to stop coming, doctor?"

Dr. Colton looked him squarely in the eye and answered, "I will stop coming whenever you wish it, William. Do you want me to stop coming when you are amply able to help in such cases?"

Mr. Thornton thought a minute, and then replied warmly, "No, doctor, I don't want you to stop coming. I'd grow as selfish as the devil if you did. Here's the money, and God bless you in the use of it. It's hard to keep money from petrifying your feelings, isn't it? Come again when you need more."

THAT HOME LETTER

NO letter from John to-night, mother?"

"No, father; but I wouldn't worry any more. John must be all right or we should hear." So father goes back to his work a little comforted; and mother goes on—worrying.

Just why the average young man will not write good home letters is a mystery that no parents have ever solved. He pleads that he has not time to write the long, loving messages that his conscience demands of him. But his father and mother, who have sent him through college and should now be thinking of laying up something for their old age, have time to earn a few extra dollars each summer to send to their boy on his birthday. "I wonder what he will do with his present this year," the mother muses as she cans several baskets of fruit for market. "Think of it, father, our John is almost twenty-six!"

The chances are that mother will never know how that ten dollars was spent. Parents know so little about their absent sons!

"I am well and getting along famously." That ought to satisfy anyone," argues John to himself as he writes his weekly or monthly home letter. But his parents, back there in the little village or on the farm, want to know how many men are working under him or with him, what salary he gets, where he goes to church and how he likes the minister, how his room or home is furnished, and what he has to eat. If he is married, his wife will probably supply the information, but it would mean so much more to the parents if it came in John's own handwriting.

"It seems ridiculous to keep telling folks that our boy is well," said a mother, "but that is really all we know about him."

"Except his views about the war," added her husband grimly. "I guess he's forgotten that we have a daily paper now. Didn't he say what he is getting in that new position of his? It would give me something definite to think about."

"Why, father, you don't spend all your time thinking about what John is doing and getting, do you?" asked mother.

"He's the only boy we have, you know," the man apologized. Mother knows. For a month she has thought of little except the Thanksgiving box she is planning for him.

As it happens, this particular John is doing very well, but he does not consider a salary of a thousand dollars anything to boast about. But to his parents out there on the farm a thousand dollars would seem a good deal of money, and so it would to the neighbors. Some day, of course, John will come home and show folks what a college education and a few years of hard work can do for a man. He may even give a library to the town. But until he has "made good" according to city standards, he cannot see that there is anything to write about.

Some men are incredibly careless. A salesman in a large department store was startled one day when a traveling man came to his counter and

inquired for his health; he had been asked, he said, to look the young man up the next time he came to the city.

"Wh-what?" stammered the young man. "I wrote home last week—or the week before—or —"

"Nine weeks ago, they told me," said the stranger with a smile, as he turned away.

"I can't understand why you worried about me," the son wrote home that night. "I've been very busy, and you know how I hate to write letters. I never can think of anything to say. I never wrote an interesting letter in my life."

But whatever the quantity or the quality of these letters from absent sons may be, mothers will keep on writing "just the same." Thousands of Johns are sure of at least fifty-two long, loving letters each year.

What would John do without his weekly letter from home?

ISAAC HADEN'S HOUNDS

THE dogs of war, as we know them to-day, are employed to succor, not to harm. They are noncombatants—gallant four-footed wearers of the Red Cross. But once at least in American history dogs played a different part on the fighting line.

The incident occurred during the Creek war in Alabama. There had been a number of Indian massacres, and the scattered farmers and their families had gathered for protection in strong little stockade forts scattered here and there. From one of these, Fort Siquefield, on September 2, 1813, no Indians being supposed to be at that time in the vicinity, the defenders and their families came forth to bury the bodies of a murdered family who had been slain at a distance, discovered and brought in for interment.

The funeral procession wound across the open ground to a little valley not very far away; the men, with an incredible lack of precaution, left their arms behind and the gate of the stockade open. Their every step was watched by ambushed Indians, who waited until all were gathered about the graves, then dashed out of hiding and made directly for the fort. If they could capture it, the unarmed whites would be at their mercy.

Their purpose was instantly clear, and the white men, running at a converging angle to the enemy, strove desperately to reach the gate first. They succeeded, but only to perceive with horror that the women and children were left outside. They had fallen behind, unable to maintain the pace. With a whoop, the savages, having missed their first object, bore down upon their helpless prey. The men, even if armed, were not enough to overcome them; and by the time they could get their rifles and rush to the rescue it would be too late.

At that moment Isaac Haden and his dogs came upon the scene. He was a notable hunter, who kept a pack of sixty fierce hounds, trained to pull down any living creature their master chose to pursue. He took in the situation at a glance, and spurring his horse forward, with a cry of encouragement to the pack, he led his sixty bellowing hounds in a wild charge upon the flank of the Indians. The dogs seized and bit right and left; confusion reigned; the women seized their chance and fled to safety. The men from the fort met them, hurried them forward, hustled them in, followed, and barricaded the gates. One woman only was killed. All the rest, and the children, were safe within.

But Isaac Haden yet remained outside; and between him and the fort were the Indians. In his mad charge he had ridden straight through them; now it seemed his only chance was to break through again. With a blast on his hunting horn he rallied the remainder of his pack, and with a pistol blazing in each hand and his dogs about him he charged once more. His horse fell dead, and his emptied weapons were useless by the time he had cleared their ranks, and there was still a race with death to the gate beyond, held open a crack to let him in. Five bullets went through his clothes, but he reached it and slipped through unhurt, although so closely pursued that it slammed shut in the very face of the foremost foe.

Whether any of his gallant dogs survived also history has forgotten to record.

AN ESCAPE FROM A CREVASSE

I WAS alone with a very green tourist one day, said a famous Norwegian mountain guide, Knut Vole, to Mr. N. Tjernagel, author of Paragaphs of a Pedestrian, when something happened that for a time I thought would end all my climbing forever. We were roped together safely enough, but I forgot to be watchful of the person I had in my charge.

To walk with a slack rope among those tricky crevices is to court danger. With my attention called elsewhere, I did not notice that my companion, contrary to instructions, was hanging hard on my heels and dragging the loop of the rope in the snow. Of a sudden the crust gave way beneath me and an awful, black abyss opened and swallowed me up. There was nothing to do except fall—which I did; but, luckily for me and the man above, my feet struck a ledge about twenty feet down. That stopped me and saved me from pulling the other fellow in after me.

Being still in the possession of my wits, I clung where I had landed, thankful for so much safety at least. But the ledge was so narrow that I could hardly keep my balance, and imagine my horror when the man above took to pulling and jerking on the rope! Had he succeeded in pulling me from my perch, we should both have plunged headlong into a bottomless pit. Falling in his well-meant but foolish effort to help me, he desisted. The rope grew slack, and I knew that he had departed in search of aid. I began to look about me. As scarcely any light penetrated from above, I was obliged to feel about with my hands to discover, if possible, some means of escape from my fearful situation. There was ice in plenty to support my weight, but there were no other accommodating ledges, and I soon saw that if I was to escape I must make my own way.

With my ice axe I began to chop steps in the ice, but I found it exceedingly slow work on account of my cramped position and frequent slips. Several times I almost lost my grip on the axe handle. After several hours of steady chopping, I got up nearly to the surface; but, as I was congratulating myself on my approaching escape, a huge cake of solid snow from above, becoming loosened, plunged down upon me. It enveloped me in a cold embrace, like that of death; by a miracle my head burst through the avalanche, but it drove my body so hard against the icy wall that it knocked the breath out of me and left me swaying about in a dizzy stupor. But I gradually recovered my senses and began to breathe. Slowly I took up my task again and cut my path upward to the light. I cannot describe my happiness when at last I

climbed out; words are not for such uses; let each one take thought to himself. Thanks to my good health, I quickly recovered from the shock and found my way home quite alone.

THE ARMY BOAT BUILDERS

WHAT would Uncle Sam's soldier boys do if they came to a river across which there was no bridge, or only the ruins of one destroyed by the enemy? Of course, they might set to work to build a pontoon bridge, but suppose they did not want to wait for that? How would they get across?

If you have ever visited a militia encampment where there is a company of engineers, you may have seen a huge sheet of what seems to be common canvas drying on the ground near the company street. That is the bottom, sides, prow and stern—if you please—of a company boat; whenever the boat is needed a squad of eight men,

PUTTING THE CROSSPIECES IN PLACE

detailed for the work, hurry off to the supply wagon and take from it the framework of the required craft. The great square of canvas is laid out on the ground; the timber sidepieces and crosspieces are laid out on that canvas according to system; each man knows exactly what to do. The sides are brought up; the ends drawn over; there is a knot made here, a buckle there; the commanding officer casts over the boat an approving eye—four minutes are gone, or perhaps five—and the boat is before you.

Nor is it a frail craft, to be used by a single scout. As it stands, it will support a weight of forty-five

READY TO LAUNCH THE BOAT

hundred pounds. As you listen amazed to that fact, the men hurry up with boards to make a bottom for the boat, and throw in oars and an anchor. Five minutes and twenty seconds after the first call the boat is ready to be launched.

If there is need, such boats can be built in great numbers. Meantime, having transported its first quota, each boat returns for more to the nearer side of the stream. In that way it would not take long to ferry a regiment across a very sizable stream.

A FASHIONABLE SCARECROW

"MY gracious!" ejaculated Mr. Gunney. He passed from the fervent warmth of the June sunshine into the welcome coolness of Caleb Peaslee's wagon shed and fanned himself vigorously with his straw hat. "My gracious!" he repeated. Mr. Peaslee looked up from the rake that he was mending.

"What's the matter of ye now, Obed?" he desired to know.

"My wife and daughter," replied Mr. Gunney, "have jest gin me a kind of goin' over, I guess you might call it—and me as innocent as a baby. It sort of took my breath away, and I've skun out a spell, to give 'em a chance to get over it."

"What you been up to now?" demanded Mr. Peaslee.

"I ain't been up to a single thing," asserted the culprit stoutly. "At any rate, I ain't done nothin' further'n to make a mistake that any man might have made. I desay you would have done jest the same as I did."

"Mebbe," admitted Caleb. "What you been doin'?"

"Well," hesitated Obed, "I'll tell you how 'twas. My wife and S'lome have been away visitin' for 'bout three weeks, and they left me to do as I was a mind to in most ways; but when any little thing'd come up that I was onsartin' 'bout, I'd write to 'em, or one of 'em. There wa'n't much—'bout whether I'd set another hen, or how much M's' Griggs owed us for butter, or some such thing as that."

"Bimeby, though, I wanted some advice 'bout what to use to make a scarecrow. I'd got my corn in, and them pesky crows was clawin' it out of the ground faster'n I could put it in. I didn't know where to find the things to make a scarecrow of; so I wrote to 'em and wanted they should tell me where I could find somethin'."

"Mebbe you remember," said Obed with a questioning glance, "that woman and her daughter that boarded at our house last summer?" Mr. Peaslee signified that he remembered them well.

"Well," Obed went on, "when they went away they left a raft of stuff that they didn't want—in the way of clothes, I mean. Some of the things were clothes that they'd worn fishin' and trampin' round in the woods, and they was c'n'sid'able tore to pieces. There they was, hangin' up in a clothes-press, and S'lome wrote to me to go and get somethin' to dress the scarecrow. She didn't tell me what to take," he added defensively, "so how in tunket they blame me is more'n I can figger out."

"Well, I went up there, and I pawed over that mess of stuff and picked out some things and took 'em out to the field and dressed the critter up in 'em. There was a fancy rig for a hat, and a long, jacket-like thing that they called a blazer, and a skirt with red and white stripes in it, and the stripes was an inch and a half wide. I don't believe," Mr. Gunney declared, in the pride of

creation, "that when I got through you could have found a tastier-dressed scarecrow anywheres."

"I took a lot of pride in it," Obed admitted, "and I guess it's just as well I took it before them womenfolks got home. Well, I ain't had a quiet minute since, and no knowing when I will have."

"Come to get at the rights of it," he explained, "there was some things there that both my wife and S'lome was callin' to wear themselves. My wife was goin' to fix over the hat for herself, and S'lome'd been picturin' herself rigged out in that striped skirt and that fancy jacket."

"Course they couldn't use 'em now—'twouldn't never do to have it said that they'd been robbin' a scarecrow to get things to wear. So the upshot is that I've had to give 'em more money than I could reely afford, to lay out in new clothes. There's jest one comfortin' thing 'bout the whole business."

"What is it?" asked Mr. Peaslee.

"Them crows," grinned Obed contentedly. "There ain't been a crow that's felt it safe to come within a quarter of a mile of the field since I rigged that scarecrow up. So mebbe I'll get my money's wuth out of it after all."

MR. WU'S VISIT TO MILLEDGEVILLE

IN June of 1902, when Wu Ting Fang was the Chinese minister to this country, he visited the little city of Milledgeville, Georgia, in response to an invitation to deliver the commencement address at a military college in that town.

The large audience that had gathered to hear the famous stranger had been instructed to rise from their seats as a mark of respect when he entered the auditorium. In their eagerness to do the proper thing, they did rise and remain standing when two Chinamen with queues down their backs entered the hall and were escorted to the stage; but they were rather disconcerted when it dawned upon them that their respectful greeting had been given to two Chinese laundrymen of the town who had been invited by the committee to take seats on the stage, where they might the better see and hear their famous countryman. Those two coolies also received the salute of the cadet battalion drawn up at the entrance of the building; but they were put in their proper place by Minister Wu, who, in receiving introductions after he had made his address, refused even to speak to his low-caste fellow countrymen.

Minister Wu appeared somewhat bored at the various entertainments that were arranged in his honor. A reception had been planned for him at the State Hospital for the Insane. Without much enthusiasm on his part, he was escorted to this institution; once there he began to show considerable interest, and asked to see some of the wards of the asylum. Disappointed at the mildness of the patients whom he saw, he demanded to be shown some violent cases. As the ushers led him into another ward where more violent patients were confined, a woman ran wildly out from her room and, with a loud shriek, seized the minister's queue, which had attracted her curious attention, and swung heavily upon it. Mr. Wu, concluding that he had seen enough, called loudly for his carriage and his attendants, and demanded to be driven away from the place at once.

It was with a feeling of relief that the entertainment committee saw their distinguished guest aboard his private car and bade him adieu.

A CAUTIOUS LOVER

MANY were the famous characters produced on the circuits of early days, says Mr. Arthur W. Spaulding in The Men of the Mountains—men fearless in danger, unwearied in labor, enduring in privation, powerful in exhortation, ready in wit, and often prepared to use physical as well as spiritual muscle in their combats with the Devil and his human agents.

Among the most interesting of them was Lorenzo Dow, a roving preacher whose work was not confined to the mountains or the frontier; for although he labored from the high peaks of North Carolina to the banks of the Mississippi and from Georgia to Canada, he was well known also along the Atlantic coast, and even in England and Ireland. Restless and eager, he continually traveled; nor would he marry until he had found a young woman who would promise that she would spare him from home twelve months out of thirteen.

His proposal of marriage, a letter that is, I think, unique in the deliberation and caution with which it approaches the subject, ran as follows:

"If I am preserved, about a year and a half from now I am in hopes of seeing this northern country again; and if during this time you live and remain single, and find no one that you like better than you do me, and would be willing to give me up twelve months out of thirteen, or three years out of four, to travel, and that in foreign lands, and never say, Do not go to your appointment, etc.—for if you should stand in the way, I should pray to God to remove you, which I believe he would answer—and if I find no one that I like better than I do you, perhaps something further may be said upon the subject."

WHY THE LION ROARS AND THE CAT PURRS

THE eminent English naturalist, Sir Richard Owen, made the interesting discovery that the lion roars simply because the hyoid bone in his throat is loose. In the cat, this bone is stationary, and therefore the cat purrs, and cannot roar; but in the lion and tiger the hyoid is loose, and, even when calling to their mates, the larger members of the cat family, including the leopard and the jaguar, roar.

The roars of the jaguar and leopard are "like hoarse, barking coughs; an interval of about one second separates the expiratory efforts," says Sir Richard. The cheetah and the puma are like the domestic cat; their hyoid bones are firmly set in place, and they can purr.

HE WAS NOT A JOSHUA

LITTLE sister and brother had quarreled. After supper, says Harper's Magazine, mother tried to establish friendly relations again, and quoted to them the Bible injunction: "Let not the sun go down upon your wrath."

Turning to Edward, the older, she said, "Now, Edward, are you going to let the sun go down upon your wrath?"

Edward squirmed a little as he looked up into her pleading face.

"Well, how can I stop it?" he asked.

The CHILDREN'S PAGE

THE RACE ON THE ICE

BY G. M. SMITH

AFTER the famous race through the forest, early in the winter there began to be talk of a race on the ice, once round the big lake, to see which of all the wood folk was the fastest on skates. Again there was much boasting, but the three deer, Prong Horn, White Throat and Velvet Eyes, had nothing to say. They did not care for ice racing,

hard ice! The judges watched them fly down the side of the lake, round to the right along the curving shore, and back on the farther side. The five kept almost in line. Once Mikey Mink got ahead of the others for a short distance. Then Billy Bear and Ray Coon had a sharp brush for the lead and forged ahead of the other three. But the effort

eager to tell. So there was much confusion and a great clamoring until old Roundface Owl came tumbling along with his camera under his arm.

"Hoot! Hoot!" he called. "I snapped a picture just as they crossed the line. That will tell us who won."

And when the picture was printed, it settled the question. Bouncer Rabbit was the winner. The picture showed it plainly enough, and the others crowded round him to pat him on the back, for they all liked him. The four skaters whom he had beaten were prompt to tell him that they were ashamed of their boasting.

"I'm glad you won," said old Grandpa Fox, the wisest of all the wood folk. "You went into it with no boasting, yet determined to win; and that is the right way to enter a race. Moreover, it was a hard, close race from start to finish, and that is the kind of race that is best worth winning."

"Good! Good!" cried the others when Grandpa Fox had finished his speech, and they all crowded round the blushing Bouncer to shake his hand once more.

THE LOVE MITTEN

BY ETTA ELLSWORTH

AUNT JOSEPHINE is coming! Good! Good!" exclaimed Mary and Harold when the postman brought the letter.

"She always tells us lovely stories out of her mouth," said Harold. Besides, Aunt Josephine lived in the country, with the cows and the hens and the sheep, and her stories were "truly stories."

The children could hardly wait until the time for Aunt Josephine's train, and when she arrived at last, how eagerly they watched her while she unpacked her trunk!

To Mary she brought a pair of warm brown mittens that she had made herself. As she handed them to Mary she said, "With every stitch auntie knitted in thoughts of love, and wondered where Mary would wear these mittens, and thought how carefully she would keep and treasure them."

To Harold she gave beautiful reins for his play horse. "When I was knitting them," she said, "I gathered the colors of the rainbow,—red, orange, yellow, green, blue, indigo and violet—so that the boys might be reminded of the beautiful colors that the sunshine has given us to enjoy."

The next morning was cold and crisp. Mary begged to wear her new mittens to school. Mother told her that she could wear them, but that she must be most careful not to lose them. Mary meant to be careful, of course, but she was so eager to get home and see Aunt

Josephine that in some way she lost one of the mittens on the way. She came in crying as if her heart would break. She was surely like the naughty kitten who lost her mitten and could not have any pie! What if Aunt Josephine should not tell a story to-night?

After supper, however, Aunt Josephine said, "Now we will go upstairs for the story," and Mary and Harold went up two steps at a time. Not a word did Aunt Josephine say about the lost mitten—much to Mary's great relief; and they sat on the floor at her feet before the warm fire as she began with the magic words, "Once upon a time."

"Once upon a time," she said, "there were two little lambs named Pet and Babe. They lived in the meadow of Farmer Jones with many other little lambs and their mothers. But Farmer Jones had taken those two for his very own. He said that when they grew into big sheep he should keep their wool for himself. All summer Babe and Pet scampered and chased each other in the meadow until winter came and they had to be taken into the barn for the cold weather.

"As the days grew colder and colder, Farmer Jones watched over his sheep; he filled their racks with hay and watched the troughs to see that each one had enough fresh water, for in the spring they were all to be sheared, so that their wool might make warm clothes for some boy or girl.

"One lovely spring morning the sheep were all taken to the river to have a good bath before they were sheared, so that their wool might be white as snow before it was cut. Babe and Pet followed the other sheep to the water and there waited to be sheared, for they, too, wanted to give their wool to some girl or boy. Farmer Jones said to himself, 'I'll save their wool for a winter suit for myself,' and as he was putting the wool into bags he was careful to save the wool of Babe and Pet in a separate bag.

"The next day Farmer Jones had a visitor. He took her out to see his sheep. She said she was soon to make a visit to the city to see a girl and boy who never had a chance to see lambs and sheep. 'How they would love to see Babe and Pet!' she said.

"I think I should like to send them a little present," said Farmer Jones, "and I will send the wool of Babe and Pet off to the factory to have it made into yarn. Then I will send it to you, and you can knit something for them."

By the time Aunt Josephine had got thus far in her story Harold and Mary began to guess who that visitor was, and to realize that their mittens and reins came from the wool of Babe and Pet.

"So we must all learn to be more careful of our gifts," Aunt Josephine said, "for Babe and Pet would be so sorry to know that their kindness had been wasted, and Farmer Jones would be so grieved to learn that all his thoughtfulness —"

Just then the doorbell gave a very loud ring—then another loud ring. Some one was at the door with a small brown thing in his hand. A schoolmate of Mary's had found the love mitten!

A little later bedtime came, and soon the children were sound asleep, dreaming of Farmer Jones and his pet lambs.

PUZZLES

1. BEHEADINGS.

My whole is dishonorable; behead and I will argue; behead thrice and I am a near relative; behead and I am a preposition.

My whole empties the pocketbook; behead, I am an article of food; behead, I am very cold.

2. RIDDLE.

No end, no beginning,
A form, but no face;
It goes always around
While it's still in one place.

No corners or sides,
But plenty of middle—
What answer is yours
For this curious riddle?

3. STAR.

From 1 to 2 is a county in Michigan; from 1 to 3 is to make good; from 1 to 4 is another county in Michigan; from 1 to 5 is a path in the heavens; from 1 to 6 is a point in the heavens; from 1 to 7 is to get away; from 2 to 3 to 4 to 5 to 6 to 7 is an Indian.

4. CURIOUS ARITHMETIC.

Take five away from half of ten and leave an exclamation.
Take fifty from a tool and leave the same;
Add fifty to a garden tool and find an excavation;
Take fifty from a rod—a man of fame;
Add fifty more than once to us and have a place for water.
Ten from a tool—an article you name;
Add fifty to a donkey small and get a little daughter.
One hundred from some pupils leaves the same;
One hundred from some butter fat will leave a lot of paper;
One thousand put to "sick" will grind your grains;
Add fifty when you clear your debt and then you cut a caper;
Take one from me and naught at all remains!

THEY CAME FLYING DOWN TOWARD THE FINISH LINE

anyway, and they well remembered the time when Bouncer Rabbit had beaten them in the race through the forest in spite of their boasts. Nor did Bouncer Rabbit do any boasting, for he was too modest and too thoughtful of others to boast, and the victory in the forest race had not made him vain.

But Gray Squirrel, Willy Wolf, Billy Bear, Mikey Mink and Ray Coon—how sure each of them was that no member of the big family of wood folk could skate round the lake as fast as he could! They did not think for a moment that Bouncer Rabbit was worth talking about as a skater, and Bouncer said nothing, but smiled in a friendly way and waited for the day of the race.

The great day came at last. It was a disappointment to Gray Squirrel when he found that there were no skates small enough for him, but he bore the disappointment bravely when they asked him to be one of the judges. The other judges were Grandpa Coon and Grandpa Wolf at one end of the line, and at the other end, besides Gray Squirrel, Grandpa Fox, Grandpa Rabbit, Whisker Rat and Sammy Sparrow. Grandpa Fox made sure that he had his spectacles on, and then all was ready for the race. Roundface Owl was to have been one of the judges, but some one objected on the ground that the sun might suddenly come out from behind a cloud and blind him, as it did in the forest race; so he contented himself with getting his camera to take pictures of the race.

There were five racers in all—Bouncer Rabbit, Willy Wolf, Billy Bear, Mikey Mink and Ray Coon. Each was eager for the test. There were two more judges than there were racers, and it seemed reasonable to hope with so many judges there could be no mistake about who was the winner.

When the five were ready in line, Grandpa Fox barked a sharp "Go!" and off they dashed. Zip! zing! zip! How the skates rang on the ice!

IF ONLY WANTS CAME TRUE!

BY JOHN MORRISON

If only wants came true, 'twould be
The finest world I know;
And I would do the greatest things,
And make things happen so!
And school would never keep at all,
Not the whole year through,
But every day would be for play—
If only wants came true!

I'd be the pitcher of the nine,
And pitch two games a day;
And every time I came to bat
I'd knock the ball away
Beyond the fence in centre field;
And what would people do?
They'd shout in joy, "Oh, he's the boy!"—
If only wants came true!

There'd be a Christmas in each month,
And skating all the year,
And yet good swimming all the time—
Though folks might think that queer.
And then I'd sit up late at night,
And have no chores to do;
And what a heap of things to eat—
If only wants came true!

And then when I grew up I'd be
The driver of a van,
Or else a sergeant of police,
Or else a motorman;
I'd buy a circus and a farm,
And have an airship, too,
And then I'd fly across the sky—
If only wants came true!

THE ANIMALS OF PUZZLE-LAND

BY WALTER WELLMAN

AFTER the boys and girls of Puzzle-Land had the parties that you may remember reading about a few months ago, they set out one day to visit the "Zoo." The pictures below tell you the names of some of the animals that they saw there. How many of them can you make out? You will find the right answers next week, with the answers to the other puzzles that are on this page.

THE LOST STORY

By Elizabeth Sears

"MISS BRUCE!" So angry was the voice of the man who appeared suddenly beside her desk that Margaret Bruce jumped. Something was wrong—and probably she was to blame.

She looked up at Mr. Spencer, the editor of Goodrich's Magazine, to whom she was assistant, and her eyes were as round as those of a frightened child.

"Where is that story by Allan King?" the editor asked impatiently. "Come in last week—should have been read before now—important, very. Please look it up and bring it to me."

Before the girl had time to get her breath, he hurried back to his office.

Allan King? She had never heard his name before—much less seen a story from him; but she knew that every story sent to the office came to her as soon as a record had been made of it in the entry department. She searched quickly through the box in which she kept the manuscripts until she had read them; then, with increasing nervousness, she searched through her orderly desk.

Almost four weeks before, Margaret Bruce had come to the big publishing house of Goodrich Brothers on a month's trial. Under any circumstances those first few weeks would not have been easy for a sensitive girl like Margaret; but Mr. Spencer's irascible, faultfinding nature had made them doubly hard for her. The last week had been the worst of all. One thing after another had happened to annoy the editor, and the fact that in most cases they concerned details that he had neglected to explain to her did not help matters.

And now a manuscript had been lost! Straightening up from her desk, she pushed back a strand of hair from her flushed face. Perhaps Mr. Spencer was mistaken in thinking that the story had come in; she could easily find out.

Helen Eaton, the entry clerk, was Margaret's friend, and she looked up with a smile as the girl came to her desk.

"Helen," Margaret said quickly, "will you please look up for me a story by Allan King? Mr. Spencer thinks that it came in last week, but I can't find it."

"Yes, it came in," answered Helen. "I remember it."

She drew her entry book toward her and ran her fingers deftly through its pages.

"Here it is. The Conflict, by Allan King, April 22. You must have it, Margaret, for the manuscripts go straight from my desk to the box in your room. Let me help you look for it."

Together the two girls again looked through Margaret's box and desk, but they did not find the story. The other girls in the room joined in the search; even the stenographers looked through the stories that they were returning to the authors, but The Conflict had completely disappeared.

The bright flush faded from Margaret's face and left it white and drawn.

"You know, Margaret," Helen said, "even if the story is lost,—and it will probably turn up to-morrow,—the firm is not responsible. Don't feel too badly about it. Mr. King undoubtedly has a carbon copy that he'll send us."

"It's more serious than that," Margaret replied, trying to keep the tremor out of her voice. "One of the girls just said that Mr. Spencer worked hard to get this story. She heard him talking about it to one of the editors. Allan King has never sent us a story before, and I'm afraid that Mr. Spencer will be very much displeased."

Much as Helen wanted to comfort her friend she could think of no suitable answer, for she knew that Mr. Spencer would probably receive the news just as Margaret expected him to receive it. Everyone in the office had had occasion at some time to suffer from the short temper of the editor of Goodrich's. Helen could not help comparing him with Mr. Folsom, the head of her department, who had never given her an unkind word during the two years she had worked for him.

When Helen returned to her desk, she still thought of the story; possible hiding places for it kept coming to mind even as she worked. Her friendship for Margaret was strong and dated back to early girlhood. Every summer for seven years Margaret had come to visit an aunt in the New England village where Helen's father was the pastor of a small church, with a salary sadly out of proportion to the needs of his large family.

When the old aunt died, Margaret's visits to the village ceased. Then came the year when Margaret went to college, and Helen, who longed ardently to join her, went instead to New York to take a position with Goodrich Brothers. There were too many little brothers and sisters growing up in the Eaton family to make college possible for Helen.

For a little time the girls almost lost track of each other, and then chance took a hand. One day a pale-faced girl in black came to take the position of assistant on Goodrich's, and Helen recognized Margaret Bruce.

That night, as Helen hurried home, she

torn between joy at having found her friend again and sorrow for the reasons that had brought them together. For Margaret's father had died suddenly, while she was still in college,—her mother had been dead for years,—and there was almost nothing left of the large estate that he was supposed to have owned. It was an old, old story, but Helen could hardly believe that it had happened to her friend, whom she had always looked upon as the most fortunate of mortals.

In fact, Helen hesitated to propose to Margaret that she come and live with her in the quiet, old-fashioned boarding house where she had spent her two years in New York; but when she at last mustered courage enough to make the suggestion, Margaret accepted it eagerly.

In the weeks that had followed, the two girls had dropped back into their old intimacy as naturally as if they had never been separated. And now everything would have been going well except for Mr. Spencer.

All that day he kept rushing out of his office to ask whether the story had turned up; and the crosser he got the more worried Margaret looked. At five o'clock the two girls went home together. It was a silent walk. Margaret did not dare to think what would happen at the end of the week if the story were not found. How could she expect to be recommended to the firm under the circumstances—especially by Mr. Spencer, who certainly was not inclined to make allowances.

"It wouldn't be fair!" she burst out suddenly, when they had reached their room. "No one can be sure that I ever had that story! It wouldn't be fair to—send me off for that—" The tears that she had managed to keep back all day began to fall.

As Helen gathered her into her arms and tried to reassure her, she vowed to herself that she would do something the next day. She would find that story if she had to go through all the manuscripts in the office.

Early the next morning Mr. King telephoned to the office of the publishing house to ask why he had not heard from his story. Mr. Spencer rushed into Margaret's room, and, after a few words very much to the point, rushed out again, and almost collided with Helen at the door.

Margaret was not pale any longer. Two bright red spots burned in her cheeks. She said nothing, and Helen made no comment, but hastened to announce that she had an inspiration.

"Weren't you reading proof on the twenty-second?" she asked. "You might have gathered up the manuscript with some pages of proof and sent it upstairs to the printer."

Margaret nodded.

"I thought of that; but I asked up there, and they hadn't seen it."

Helen went away again without saying anything; but she knew Mr. Dunn, the head printer, pretty well, and she also knew how busy he was with the half dozen magazines that the firm published every month. The chances were that no one had bothered much to look for the lost story. So she went upstairs and told her troubles to Mr. Dunn.

"Yes, yes, I've heard about that once," he said rather shortly. "There's all the copy that went into Goodrich's last month; you can look it over if you want to."

Helen climbed to a high stool at a proof reader's desk that happened to be unused and began to go carefully through the pile of typewritten pages. After a few minutes Mr. Dunn came over and stood beside her.

"I suppose you know," he said, leaning a moment against her desk, "that Miss Watson is leaving next month to be married?"

Helen's heart gave a little jump as she looked up quickly. The old man turned away, but not before she had caught a kindly twinkle in his eyes that belied his gruff manner. She had heard that Miss Watson was leaving, but she had not known when. In fact, Mr. Folsom had told her that she had been spoken of to fill the vacancy. It would be a real promotion.

For the moment, as she perched on her high seat, she forgot Margaret and her troubles.

While the great printing presses crashed and pounded round her, she idly indulged herself in bright daydreams; but not for long. With a start, she remembered the work in hand, and began again to search the papers. Suddenly, with a cry of triumph, she held up the missing manuscript.

Things were brightening! Picking up the story and waving it joyously at Mr. Dunn, who only deigned to nod grimly, she hurried downstairs to tell the good news to Margaret; but at the door she paused, halted by the sound of Mr. Spencer's voice raised angrily. Poor Margaret! The other girls were bending over their work, trying not to hear.

"What a disposition that man has!" Helen said to herself indignantly. "He'll be furious when he hears what happened to his old story."

And then, for the second time that day, Helen had an inspiration. She did not hesitate a moment, but, walking straight into the room, laid The Conflict on Margaret's desk.

"Mr. Spencer," she said, "I'm sorry that

DRAWN BY EMLEN MCCONNELL

"I SUPPOSE YOU KNOW," HE SAID, "THAT MISS WATSON IS LEAVING NEXT MONTH TO BE MARRIED?"

you've had so much trouble. I have found the manuscript—and I'm sorry about the delay."

If she had spent an hour in planning her words, she could not have succeeded better. Mr. Spencer took them just as she had meant him to take them.

"Thought you never made mistakes in the entry department!" he answered angrily. "Greatest possible inconvenience, Miss Eaton—shall be forced to speak to Mr. Folsom. Miss Bruce, I beg your pardon." And before either girl could answer, he was gone with the manuscript.

Margaret was as completely deceived by Helen's explanation as Mr. Spencer had been. "Now you're in trouble, Helen. I'm so sorry!"

"He can't hurt me," Helen answered, and smiled bravely; but as she walked slowly back to her desk a very real doubt of the truth of her words assailed her.

Ordinarily she would not have greatly objected if a complaint were made against her in such a good cause; but just now, if there were anything in Mr. Dunn's hint, the results might be serious. Already she began to wonder what she could say if Mr. Folsom should question her. How could she be truthful to him and loyal to her friend?

Helen took this new problem home to luncheon with her, and it interfered with her meal so thoroughly that her plate was carried away almost untouched. Everything seemed so confused! If she could only slip away somewhere and think things out; but the noon hour was soon over, and she found herself back at her desk with her mind still unsettled. Her only hope was that Mr. Spencer might relent.

But presently she saw Mr. Folsom coming toward her, and something in his grave, kind eyes told her that he had heard the complaint. He stopped beside her desk and looked searchingly down at her. Helen's heart began to beat quickly.

"Miss Eaton," he said, "Mr. Spencer has made a complaint of carelessness against you, the first that has come to me in the two years that you have been in my department. It is particularly unfortunate at this time. What have you to say about it?"

With a hand that trembled slightly, Helen picked up a pen and carefully traced lines on the blotter before her. Now was the time to speak; she could clear herself with a word. How could she fail this man who was doing everything in his power to help her?

She raised her eyes determinedly. "I'm so sorry, Mr. Folsom—but I have nothing to say."

For a long moment the man looked down at her. "I'm sorry, too, Miss Eaton," he said at last, "very sorry." He turned and went back to his office.

Helen sat quite still at her desk. "Particularly unfortunate at this time!" The words seemed to pound on her throbbing brain. She had thrown away her first big chance—no, she had given it away, and she was glad of it. Oh, no, she was not, she was sorry! Things were more confused than ever. At last, lifting her eyes wearily to the clock, she was surprised to find that it was already five o'clock. A pile of neglected manuscripts still lay on her desk—and she was very tired.

She was glad of the excuse of unfinished work when Margaret came to walk home with her. She had to brace herself to meet her friend's frank eyes. She could not stand their scrutiny now. She felt that she must be alone.

The office emptied rapidly. For a while she worked hard; the mechanical task that was so familiar to her gave her some relief from her problems. But at last there was nothing more for her to do. Now was the time to think things out to a conclusion.

Everything was quiet on that floor; the elevator had stopped running. There must be some men still working on the floor above, for she could hear a press going. It seemed to beat time to the throbbing in her head.

Helen stirred impatiently. What was the use of pretending—of putting off thought any longer? She was wretchedly unhappy. And there was no help for it!

No help for it! A sudden thought leaped to her mind, and she sat up erect in her chair.

It might not be too late! She would not sacrifice herself in this way even for Margaret. She could get Mr. Folsom on the telephone.

With burning cheeks, the girl sought to justify herself. There were her little brothers and sisters, and what she owed them. There was Mr. Folsom and her duty to him. And then there was herself. It was not right for her to lose such a chance!

The telephone operator had long since gone, but Helen knew enough of the switchboard for her purpose.

Seizing one of the wires, she pushed in a plug for Central. The answer seemed a long time in coming, and when it did come it sounded faint and far away.

"Number? Number!"

Helen tried to answer, out something seemed to choke her.

"Number? What number do you want?" the operator called impatiently.

With a hand as heavy as lead, Helen pulled out the plug without answering and stumbled back to her desk. The loyalty of friendship had won! But, shaken and exhausted, with her head pillowed on her arms, Helen sobbed alone in the empty office.

The next morning, as Helen was listlessly opening the mail piled high on her desk, Mr. Folsom came out of his office and stood beside her. It was a hard moment for Helen, but she nerved herself to meet it. She guessed why he had come, and only hoped that she could keep from showing him her disappointment.

So, summoning all her courage, she looked up and said good morning with as near an approach to her usual manner as she could manage. To her surprise he was smiling down at her even more cordially than usual.

"I had a talk with Mr. Dunn last night, and then I did some thinking," he said.

Helen's heart seemed to skip a beat. What did he mean?

After a slight pause, Mr. Folsom went on: "That was indeed very generous of you, Miss Eaton."

Still trying to understand, Helen stared up at him. She felt that she must say something, but nothing came to her lips except a faltering, "Oh, thank you, Mr. Folsom!"

"But how did you happen to see Mr. Dunn?" she asked at last.

"I'm not certain whether it was accident or not," he answered, still smiling. "Mr. Dunn notices more than we give him credit for sometimes. And, by the way, Miss Eaton, that matter about Miss Watson's position is settled. You are to have it—if you like."

If she liked!

"Oh, thank you!" Helen murmured again huskily, but with a joyous smile.

IMPOSSIBLE TO MANY

DOROTHY'S aunt was trying to explain "standard time" to her, but Dorothy was not quite sure that she understood.

"Well, never mind," said her aunt; "you are only in the third grade. When you have gone to school a little longer, you will learn all about it."

"Oh, yes!" answered the little girl, with an assuring smile. "Our teacher says that even lots of eighth graders don't understand longitude and latitude."

PROVERBIAL WEATHER

YOU sometimes hear it said that weather proverbs cannot have any practical use in this enlightened age, since almost every country maintains its own weather service and supplies scientific forecasts to its inhabitants. Our own Weather Bureau in Washington, however, after carefully sifting these ancient maxims, has officially adopted a number of them for the use of its observers, both amateur and professional. Scientific meteorology is not yet sufficiently advanced to prophesy with any degree of certainty whether a season will be warm or cool, good or bad for crops. Not so with proverbial meteorology. There are a number of proverbs that rush in where the angels of science fear to tread, and, according to the government experts, not a few of these homely sayings hit the nail of truth fairly on the head.

"Frost year—fruit year," or "Year of snow, fruit will grow," is one of the proverbs that farmers have found to be quite truthful. This proverb, known in still another form as "A year of snow, a year of plenty," has its basis in the fact that a more or less continuous covering of snow, incident to a cold winter, not only delays the blossoming of fruit trees until after the season of killing frosts, but also prevents the alternate thawing and freezing that is so injurious to wheat and other winter grains.

Scientific prophecies concerning the immediate weather are usually based on the appearance of the sky and the sun, moon and stars. "A red sun has water in his eye" is usually a faithful forecast of rain, because the redness of the sun is induced, for the most part, by the moisture in the atmosphere, which holds in suspension the particles of dust and smoke that cause the peculiar color. Water vapor both scatters and absorbs the blue and other short-wave-length colors of sunlight to a greater extent than it does the longer red waves. This effect becomes more marked as the particles coalesce. Hence, when the atmosphere is heavily charged with dust particles that have become water laden we see the sun as a fiery red ball.

Next to the color of the sun, the appearance of the sky is the favorite medium in the hands of prophets to foretell the coming weather. From an old poet we have:

A red morn that ever yet betokened
Wreck to the seaman, tempest to the field,
Sorrow to the shepherds, woe unto the birds,
Gusts and foul flaws to herdsmen and to herds.

There are other and more easily remembered lines that express the same thought; such, for example, as:

Sky red in the morning
Is a sailor's sure warning.
Sky red at night
Is a sailor's delight.

In many ways the most interesting of the proverbs that deal with the connection between the weather and the color of the sky is the one that, according to Matthew, Christ used to answer the Pharisees when they asked that He show them a sign from heaven:

He answered and said unto them, When it is evening, ye say, It will be fair weather; for the sky is red. And in the morning, it will be foul weather to-day; for the sky is red and lowering.

The cause of the fair weather that follows a red sunset and of the foul that comes after a red sunrise is well known to scientific meteorologists and, because it is as near infallible as any general forecast can be, the proverbs of this nature have been officially approved by the Weather Bureau.

Shakespeare, who appears to have been a good weather prophet, gives us another sign by which to interpret a different kind of sunset:

The weary sun hath made a golden set,
And by the bright track of his fiery car
Gives signal of a goodly day to-morrow.

This is the expression of the scientific truth that an absence of moisture in the air brings into prominence the yellow (shorter-wave-length) colors and therefore presages dry weather.

If, however, the sky be neither red nor yellow, but is overcast with a uniform gray, we know that innumerable tiny water globules are present—a condition that favors rain and justifies the proverb:

If the sun is set in gray,
The next will be a rainy day.

Many proverbs foretelling rain and bad weather are based on the appearance of solar or lunar halos and coronas, and, as these form only when there is much moisture in the air, the proverbs of this class are well founded. Typical of such sayings is that of the Zuni Indians, which predicts, "When the sun is in his house, it will rain soon."

Others refer to the apparent diameter of the circle in connection with the proximity of the bad weather. Thus we have, "The bigger the ring the nearer the wet"; "When the wheel

is far, the storm is n'ar
—when the wheel is
n'ar, the storm is far."

Many persons have supposed, and some still maintain, that the moon controls the weather, and there are numerous proverbs based on this assumed relation. That belief is no doubt due to the fact that the appearance of the moon depends upon the conditions of the atmosphere, and, therefore, proverbs based upon phenomena of this nature are more or less sound and of much value when applied to local conditions.

Thus "Clear moon, frost soon" and "Moonlight nights have the heaviest frosts" are true because on the clearest nights the cooling of the earth's surface by radiation is greatest and most likely to cause precipitation in the form of dew or frost.

"Sharp horns do threaten windy weather" is another interesting proverb based on the fact that when the air is clear sight is interfered with by atmospheric inequalities that wind will eliminate. Therefore, when the moon's horns appear sharp, we know that these inequalities do not exist, and the natural inference is that they have been smoothed out by strong winds, which will later reach the surface of the earth.

Like the sun and the moon, the stars have furnished a number of proverbs concerning the weather. Many of these are only nonsense, but a few have decided merit, as, for instance:

When the stars begin to huddle,
The earth will soon become a puddle.

This contains the germ of an excellent forecast. The scientific reason behind the couplet is that when a mist, caused by the beginning of condensation, forms over the sky, the smaller stars cease to be visible, while the brighter ones shine dimly with a blur of light about them, each looking like a small confused cluster of stars. Hence comes the idea that stars can "huddle" together at one time and be separated at another.

The height, extent and shape of clouds depend upon the humidity, temperature and motion of the atmosphere. Consequently they often furnish reliable warnings of the coming weather. Thus one proverb correctly says, "The higher the clouds, the finer the weather." But this saying must be restricted to stratus clouds or other more common clouds. It does not apply to those wispy or cirrus clouds, the highest of all, that float from five to eight miles above sea level. In connection with these the proverb says:

Mackerel scales and mares' tails
Make lofty ships carry low sails.

Part of the air that forms the strong upward current near the centre of a storm rises to great heights and there comes into contact with the swiftly moving layers that carry it and its ice particles far ahead of the rains. As the resultant clouds are only the overrunning part of a storm that is coming from the same general direction, the proverb is evidently well-founded.

When the air is damp and the day is warm, great cumulus or thunderhead clouds are likely to form and produce frequent local showers. Hence:

When clouds appear like rocks and towers,
The earth's refreshed by frequent showers.

The equalization of the temperature by means of the presence of a large amount of moisture—warming the cold places by condensation and chilling the warm ones by evaporation—is responsible for the easy transmission of sound on a day when rain is imminent. Therefore there is good reason to accept the proverb that says:

Sound traveling far and wide,
A stormy day will betide.

Decrease in atmospheric pressure and increase in humidity are two other storm portents that have led to a number of well-founded proverbs or accurate observations. Thus we find it stated that the approach of a storm is heralded by the rising of water in wells, by the more abundant flow of certain springs, by the bubbling of marshes, by the bad odors of ditches, and various other phenomena, all of which are due to that decrease in atmospheric pressure which precedes a storm.

The increase of humidity—favorable to precipitation—is indicated by the gathering of moisture on cold objects, by the collection of perspiration on our own skin owing to diminished evaporation and by the dampness of many substances that easily absorb moisture.

The last effect is illustrated by the packing of salt, the tightening of cordage and the strings of musical instruments, the damp appearance of stone walls and columns, the settling of smoke and a number of related phenomena, all of which have been appealed to with more or less justification from science as evidence of a coming storm.

You Can Be Sure of Goodyears

You are sure of a good tire when you buy a Goodyear Tire because *we* are sure. *We make sure.*

All our effort over the last decade—in the selection of material, in the pursuit of experiment, in the manufacture of the product itself—has been to make this sureness positive and constant.

We have spent vast sums in processes, tests and inspections, and developed machines and special methods, all to this end.

And today there is not a single inexpert moment in the making of a Goodyear Tire.

The object desired—certain and invariable *goodness* in every tire sent forth—has been accomplished. Everywhere, Goodyear Tires stand for a definite measure of value.

Motorists, generally, know that this measure of value commonly exceeds what can be had for like investment elsewhere, and for that reason more Goodyear Tires are sold than any other brand.

Motorists, generally, know they are sure of a good tire when they buy a Goodyear Tire.

You can be just as sure.

For the success that has been ours, and which we trust will continue to be ours, we realize rests and must rest upon such confidence of the public in Goodyear products.

And so realizing, it is inevitable that we shall seek to sustain this confidence in Goodyear products, by continuing to *make sure.*

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

The Goodyear Tire & Rubber Company, Akron, Ohio

MALINDA KIVETT'S WEDDING

By Anna Brownell Dunaway

"WHEN Bright Pruitt married Malinda Kivett in the spring of '44," grandmother began reminiscently, and the girls looked up with interest, "he rose before sunup and rode on horseback to the Kivett place, twelve miles away."

had a high neck and long sleeves." "Such styles!" commented Evelyn. "Didn't the people look curious in those days!"

"Just imagine Richard's coming for me on horseback in all the glory of his frock coat, silk hat and white gloves!" said Evelyn, with a smile. "He'll be only too glad to hide such magnificence within a taxi."

She blushed a little as she bent over her sewing. She was embroidering French knots in a dainty ribbon-run gown for her wedding trousseau.

"Bright Pruitt had no magnificence to hide," said grandmother, "and an ox sled was his nearest approach to a taxicab."

"Poor Bright!" cried Evelyn, laughing. "And how did he look? Was he attired in the conventional black?"

Grandmother broke off a thread before she replied. "Land, no, child! Bright Pruitt was glad enough to have a suit of homespun made out of wool that had been sheared from the sheep, washed, picked and colored, carded, spun and woven in town. It was blue in color, and his mother was his tailor."

"And not even a posy in his buttonhole, I dare say," said Evelyn.

"Well, I should say not," said grandmother severely. "People would have thought he was crazy. And there were no ushers or flower girls or ring bearers, either. A wedding seventy years ago was vastly different from the pomp and glitter and ceremony of to-day. Those were simple times, my dear."

"But, as I was saying, Bright Pruitt dressed himself by candlelight, putting on his blue homespun and his best shirt made from linen spun from flax of his own raising."

"In those days in Indiana, travel was not what it is now; the roads were hilly, rough or swampy, as the case might be, and there were innumerable gates to be opened in the stake-and-rider fences. So twelve miles was spoken of in the local vernacular, as 'right smart' of a distance."

"That is why Bright made so early a start, for the wedding was to take place in the forenoon, and be followed by a wedding dinner to which neighbors and friends for miles round had been invited."

"When he arrived the guests were already assembled, the minister had come from Monrovia three miles away, and Malinda, with cheeks like red roses, was shyly mingling with the company."

"There was no wedding bell or canopy or palms. When the minister rose, Bright and Malinda walked over and took their places in

do now," retorted grandmother. "But to go on with the wedding. I remember they had a great dinner of turkey and quince preserves and pound cake. There was boiled beef and cabbage, too, and rye bread. We have no such eating nowadays, child. Nothing in modern cookery can compare with it."

"While the dinner was in progress the sky became overcast and presently rain began to fall in driving sheets. It rained all that afternoon and far into the night. By morning the muddy pond known as 'the lake,' between the Kivett and the Pruitt farms, had overflowed, and the surrounding country was a vast, seething river. In those days there was no drainage system, and rains like that made travel impossible."

"The neighbors dispersed quickly before the roads should become impassable, but it was out of the question for Bright and Malinda to travel a distance of twelve miles with their household goods on an ox sled."

"The infare was to have been held the following day at the log cabin that Bright had built near his parents' home, but of course it had to be given up, and Bright and Malinda had to stay for several days at the Kivetts' before they could go over the road."

"I saw Malinda brush away a tear, for she hated to give up her housewarming."

"Well, I'll never forget the morning they left for their new home. I had slept late, and when I opened my eyes I saw Malinda tripping in and out among the big beds, patting them and making them up deftly."

"She spoke to me kindly: 'Get up, little Ann; the sun is an hour high!' Then she helped me dress and smoothed my hair with deft fingers. It was a beautiful spring morning. The sap was running in the maple grove, and the orchard was just beginning to bloom. Malinda, carrying a pitcher, started for the spring. I caught her hand and cried gayly, 'Let us run a race to the spring house!'"

"She threw back her head and ran with me like a young deer. She reached the spring house first, and, laughing merrily, caught me in her arms and kissed me."

"Then, all at once, her face sobered. 'I mustn't do this any more, little Ann,' she whispered."

"I begged her to tell me why."

"She smoothed her rumpled hair with sweet dignity. 'Because I'm married now, Ann,' she said."

"But I was not satisfied. 'And can't you play any more when you are married?' I questioned."

"Some day you will understand, little Ann," said she. "When we are married the real business of life begins."

"Not long after, she mounted the horse her father had given her for a dowry and rode away with Bright to their one-roomed log cabin."

"On the ox sled were loaded the two spinning wheels, the bedding, the iron kettles, delft dishes and pewter spoons. The cow, which was also a part of Malinda's dowry, followed behind."

"Bright's father had given him a horse, saddle and bridle, and his mother a corded bedstead and a feather bed."

"Malinda turned once, at a bend in the road, waved me good-by and smiled in her sweet, serious way. And I thought of her words to me at the spring house: 'When we are married the real business of life begins.'"

"Poor, poor Malinda!" cried Evelyn, and her eyes were soft with tears. "Just think of starting housekeeping in one room! Why, it wouldn't hold the presents that Richard and I will get! I suppose poor Malinda lived and died in that backwoods cabin, and never saw a chafing dish, or knew the difference between a rabbit and a soufflé —"

"Child," said grandmother, "this is the true story of your Great-Aunt Malinda Pruitt. And she lived to grace a governor's mansion. But more than that, she was known far and wide for her gracious personality. She made her cabin home to blossom as the rose. She was a gentlewoman, a real helpmate, a wise mother, a sympathizing neighbor and a sincere friend."

For a moment Evelyn was silent, and then she said:

"What a life, and what achievement! It makes me feel so useless. Why, I have never pieced a quilt, have never even seen a spinning wheel, have never —"

She stopped speaking suddenly with a catch in her voice. "O grandmother, thank you for telling me! I will try to make as fine a business of my married life as Great-Aunt Malinda did of hers."

WHY THE CHANDLER LEADS

FOUR years ago the Chandler Six was announced to the public. Three years ago it was still an infant in the industry, though beginning to attract rather wide attention. Two years ago, with a radical reduction in price without any cheapening of the car, it became the talk of the trade and public alike. A year ago it had come to be recognized as having very substantially arrived. Thousands were buying Chandlers.

Today the Chandler occupies one of the foremost positions in the whole industry. All of which would seem to prove that the Chandler idea—to build the best six-cylinder motor car and sell it at a moderate price—is just as right today as it was four years ago.

Chandler leadership is founded on motor superiority, attractiveness of body designs, splendid equipment, and a price free from inflation.

We Pay You Twice

—an Extra Bonus every month; doubled if you win three or more

FOR new subscriptions sent us between January 1 and July 1, 1917, you will not only receive a Premium for every new subscription and a Winner's Gift for every multiple of five new subscriptions, but you will also receive a Monthly Cash Bonus as follows:

Class A Bonus	For an average of Five new subscriptions per week, totaling twenty in any calendar month, we will give a Cash Bonus of \$10.00
Class B Bonus	For an average of Four new subscriptions per week, totaling sixteen in any calendar month, we will give a Cash Bonus of \$7.00
Class C Bonus	For an average of Three new subscriptions per week, totaling twelve in any calendar month, we will give a Cash Bonus of \$4.50
Class D Bonus	For an average of Two new subscriptions per week, totaling eight in any calendar month, we will give a Cash Bonus of \$2.50
Class E Bonus	For an average of One new subscription per week, totaling four in any calendar month, we will give a Cash Bonus of \$1.00

The above offer is to be repeated each month, January to June inclusive

Double Bonus If a subscriber wins Three or more Monthly Bonuses between January 1 and July 1, 1917 (in any one class or in several different classes), we will double his Bonus by sending him on July 16 an extra amount equal to all the Monthly Bonus Money he has earned between January 1 and July 1. Our offer of a Double Bonus will thus enable any Companion subscriber to win as much as \$120.00 in Bonus Money, besides receiving a Premium for every new subscription and a Winner's Gift on every fifth subscription.

Note. (1) Bonus Offers are open to Companion subscribers only (not agents), and are subject to Conditions in October Premium List. (2) The mailing date of your new subscription determines the month in which they will be counted. (3) At the end of each month send statement of number of subscriptions secured, to check with our record. (4) Monthly Bonus Prizes are mailed about the fifteenth of following month.

THE YOUTH'S COMPANION

DRAWN BY HAROLD CUE

BRIGHT AND MALINDA TOOK THEIR PLACES IN FRONT OF THE HUGE FIREPLACE

front of the huge fireplace. Bright's cousin, James Pruitt, and Malinda's cousin, Polly McDaniel, stood up with them.

"Bright and Malinda made a handsome couple. I seem to see them now, as if it were only yesterday. And in the background I can see Malinda's little twin brothers, Hezekiah and Bethira, in their short-waisted butternut suits, clinging to their mother's skirt and sniffing. Malinda had been like a mother to them."

"How did the bride look?" asked Evelyn with interest.

"As nearly as I can remember, for I was only a child of seven," said grandmother, "she was a black-eyed, black-haired girl, with smooth, red cheeks. Just a slip of a girl, too—only seventeen."

"Her dress was of white crossbarred muslin. The Kivetts were forehanded, and Malinda had bought her dress at Monrovia. It was the first crossbarred muslin ever seen in those parts."

"Well, I'm glad she had a white wedding gown," said Evelyn. "And was it made with a round neck and short sleeves and a cute little short waist?"

"Nothing of the kind," replied grandmother. "It was made with a plain waist or boxly sewed on to a rather full skirt, and it

Both Need Bran Daily

Not old folks only, but young folks too, need their daily ounce of bran. It is Nature's laxative. Whoever lives on fine food needs bran to offset it. It must be flake bran to be fully efficient. It must be hidden in a dainty to be likable.

Pettijohn's is a luscious food, with 25 per cent bran flakes. Learn what good days start with Pettijohn's, and you never will omit it.

Pettijohn's

Rolled Wheat With Bran Flakes

Also Pettijohn's Flour—75 per cent patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

PLAYING THE GAME

WHEN, at the time of the Boer War, the most English and Imperialist of British poets, who was also acclaimed everywhere as the unofficial laureate of the British army, made disparaging reference to "flannelled fools at the wicket" and "muddled oafs at the goals," there was an immediate outcry of protest and resentment. Englishmen had been brought up too long on the Duke of Wellington's famous saying that the Battle of Waterloo was won on the playing fields of Eton to believe, even on the word of Rudyard Kipling, that cricket and football could interfere with what the poet had often called "the Great Game" between nations, fought out by diplomats first and soldiers afterwards. England is temperamentally slow to wake up, to perceive a crisis; but it is by no means her devotion to sport alone that hinders her from understanding just when affairs are getting serious. The matter goes deeper than that.

Of course the first epithet the remonstrants made use of was "un-English"; but Mr. Kipling, if he had but known it, could have cited a precedent at once English and royal—for his objections to football, at least. As long ago as 1349 King Edward III issued an order forbidding the game of football entirely because it interfered with the one "rightful sport" of men and soldiers, which in those days was deemed archery. To be sure, the order was little enforced and soon forgotten, and British bowmen—who had won the Battle of Crécy but three years before—continued for many years later to be the best in the world, although they also continued to play football. It was not, however, in those days considered a game for gentlemen, but rather a rough-and-tumble, piebald sport, suitable to the "yokels and 'prentices" among whom it was popular.

Now comes the great war,—the greatest of all wars,—and curiously enough in the British army once more the football comes to the fore, but this time in no mere figurative reference to the playing fields of home. Close behind the trenches, almost daily, the game is played with enthusiasm by eager "Tommys" and applauded by their officers; but that is not all. By more than one regiment, on more than one occasion, footballs have been actually borne into battle and kicked forward under heavy fire across the battlefield—chiefly from sheer dash and bravado, but partly also because to follow the ball, and to have a ball to follow, proved an encouragement and help during the advance. The most notable instance was that of the East Surrey Regiment during the fighting on the Somme. When the Surreys were about to leave their trenches to attack over a mile and a quarter of ground, the captain of one company gave his men four footballs, one for each section commander. At the instant of leaving cover the four commanders kicked off, and the men started after the balls, keeping up, as they had been commanded, a "dribbling competition" down the field toward the distant and dangerous goal. Their captain was killed almost immediately, and men fell fast; but the balls were kept steadily in play. Two were lost or destroyed before reaching the enemy's lines; when the fight was over, two were found well within the captured trenches.

It is an episode to touch the imagination. Not Mr. Kipling, but a lesser poet, "Touchstone," in the Daily Mail has celebrated it in simple but spirited verse:

On through the hail of slaughter
Where gallant comrades fall,
Where blood is poured like water,
They drive the trickling ball.

The fear of death before them
Is but an empty name.
True to the land that bore them
The Surreys play the game!

The two footballs that were kicked ahead to victory have been sent to England, and will be preserved and cherished among the trophies of the regiment as carefully as if they were battle flags.

WHEN THE SULTAN BLUNDERED

THE haphazard way in which the British Empire was put together is illustrated by the story of the occupation of Egypt told by Sir Edwin Pears in *Forty Years in Constantinople*. Mr. Gladstone had always maintained that the British occupation of Egypt was not intended to be permanent. He remained loyal to the conviction that England ought to maintain the integrity and independence of the Turkish Empire. He was really disappointed that the Sultan would not send troops to accompany our army into Egypt as Lord Dufferin asked him to. If Abdul Hamid had had half the shrewdness with which his flatterers credited him, he would gladly have accepted the invitation.

When the Conservatives came into power, Lord Salisbury renewed the declarations that our occupation of Egypt was only temporary, and sent out Sir Henry Drummond Wolff to arrange conditions for its evacuation. Sir Henry succeeded after about two months in coming to an arrangement by which the last soldier was to leave Egypt within seven years, with the condition that in case reoccupation became necessary only British troops should be called in to aid the Sultan. Sir Henry and the grand vizier signed the instrument, and Lord Salisbury promptly accepted it on behalf of Her Majesty.

To the surprise of everyone, Abdul Hamid refused to consent. I never heard any other reason given for such refusal except the desire of Abdul Hamid to administer a rebuff to England. He may have been led to believe that he could get better terms, and that he had made a bad bargain. But I am convinced that the Turkish statesmen saw that the bargain, so far as their country was concerned, was pure gain.

England accepted the Sultan's rebuff, and was not greatly concerned. We were in possession. About a year afterwards it dawned upon Abdul Hamid that he had blundered. He instructed his ambassador in London to see Lord Salisbury and ask for the reopening of negotiations. Lord Salisbury declared that he had no wish to negotiate further, and that he had no proposals to make. The answer probably lost nothing of its abruptness in transmission, and greatly annoyed Abdul Hamid. The Turkish ambassador was ordered peremptorily to demand the reopening of negotiations. It was near the end of the Parliamentary session. Lord Salisbury replied that he was tired, and moreover had made arrangements to go abroad, and the Egyptian question, which was not pressing, would keep perfectly well, and has kept ever since.

SAXON "SIX"

This Car Will Out-perform Any Other In Its Class

You will find the super-ability of this Saxon "Six" motor reflected to your advantage in many ways.

First, in unusual quietness and smoothness.

Engineers estimate the power-flow smoothness of Saxon "Six" to be nearly 98% greater than that of the best less-than-six cylinder motor in its price-class.

Second, in astounding quickness of "pick-up"—from standing start to 45 miles per hour in 23 seconds.

This "less-than-six" we cite required 30 seconds in that test.

Third, in amazing flexibility. Seldom indeed do Saxon "Six" owners resort to gear-shifting.

Fourth, in unrivalled pulling power.

The Saxon "Six" owner revels in the confidence that his car can cope successfully with any set of road conditions motor-ing may present.

Saxon "Six" is \$865 f.o.b. Detroit.

SAXON MOTOR CAR CORPORATION, DETROIT (700)

There has been No Increase In the price of Grape-Nuts Nor Any Decrease In the Size of Package Or Quality Of the Food.

BOYS-OWN A DANDY NEW BIKE GET THIS FREE BICYCLE CATALOG

NO sport in the world more fun than riding a bike. But you want a good bike—one that's made right and that looks right; one that all your friends will envy. That's why you should order it from our big special catalog of Sears-Roebuck bicycles. No better wheels are made than those we handle. Our bikes have every good point of the highest priced makes, yet our prices are low, quality considered. What's the matter with sending today for a copy of our Bike Book? It's FREE. And it's chuck full of information. Tells all about how we make our bicycles. Tells why they excel most others and why they are the equal of any on the market. What do you say? Shall we mail you a copy? Remember, a postal card brings it. Just ask for Bicycle Catalog No. 680Y.

SEARS, ROEBUCK AND CO. CHICAGO

TERMS

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

EPILEPSY

EPILEPSY is a chronic brain disorder, of which the most dreaded symptom is the characteristic convulsion, or "fit." The convulsion may be a violent muscular spasm, terrifying to watch and accompanied by complete unconsciousness; that type of epilepsy has been called *grand mal*. In the form called *petit mal* there is only a slight muscular spasm, or even none at all, and often only partial loss of consciousness; the loss may be so transient that the patient is hardly aware of it. That type of the disease shades off into psychic epilepsy, in which there are no particular physical symptoms, like the convulsion, but only a passing mental confusion.

There is no difficulty about recognizing the more severe forms of epilepsy, but the attacks of *petit mal* may be so slight and so fleeting that a stranger would hardly notice them, although the patient is generally conscious that one has occurred. On the other hand, the bystander may sometimes observe symptoms of which the patient is unaware. In cases of that sort the sufferer turns pale and stares fixedly, his breathing stops for a moment, the sentence that he is uttering is arrested on his lips, and whatever he is holding is likely to drop from his hand. In a moment or two the attack is over, and the patient goes on with what he was saying or picks up whatever he dropped. Sometimes these slight attacks occur between graver ones, and in some cases there is a long period of *petit mal* before *grand mal* declares itself.

Many epileptics have warnings when an attack is coming on; such warnings are called "auras." They take the form of a tingling in the skin or of a sensation of pressure or sinking in the abdomen; sometimes the vision is affected, or spots of light or different colors appear before the eyes. In other cases the warnings are psychic or mental, and the patient thinks he hears voices. Not infrequently an approaching attack betrays itself days ahead by despondency, irritability, foreboding, and a general feeling of illness. When the attack finally comes, it is generally preceded by a loud cry known as the "epileptic cry."

The treatment of epilepsy will be taken up in another article.

AS AN INTELLECTUAL EQUAL

WELL, Rose, how was it?" Charlotte pulled her embroidery out of the bag and settled herself for a chat. "You're looking radiant, but that may be either the satisfaction of success or relief that the ordeal is over. Was she human although professional, or as crushingly highbrow as you dreaded? Most inconsiderate of Billy to have a professor for a sister anyway. If it had been a brother, now, I don't believe you'd have been frightened a bit, even if he'd specialized on prehistoric man, or Chinese dialects, or the literature of the Merovingians! But a sister-in-law is different."

"Charlotte," announced Rose impressively, "she was a darling! It sounds a queer word for a professor of mathematics, but she was. She made you forget all about her being intellectual and remarkable. She was just nice. I liked her the first minute, but I felt shy with her. I thought she couldn't help finding me uninteresting, and I wasn't really at ease until she'd been with us a day or two. The furnace didn't draw properly that day, and the living room was so chilly I felt I must ask her to come into the kitchen with me while I was getting dinner."

"Charlotte, we had a perfectly lovely time. She'd been brought up in a tiny city flat, where the children were never allowed in the kitchen, and as soon as she was older her own kind of work took all her time, so she doesn't know the simplest things about cooking and housekeeping. She was as interested as a child in seeing me do things, and asked the queerest questions, and wanted to help, and did everything wrong when she tried, and got herself all over flour and sticky dabs of everything, and upset the pepper pot and nearly sneezed her head off—it was too funny! She's so dignified, you know, but she just gave herself up to enjoying the lark. And when at last dinner was ready, and I was serving up, she turned serious all of a sudden, and drew a long sigh and said:

"Rose, I don't see how you do it! I might learn to cook one thing at a time, if I really tried; but how any one can cook half a dozen different things at once and make them all come out even I can't understand. It's too complicated for my intelligence."

"She was joking!"

"She wasn't. She had really acquired a respect for my powers—I know it sounds silly, but she truly had—that made her treat me as—as an intellectual equal! Of course I'm nothing of the sort, but I couldn't help being pleased; and after that we just enjoyed each other, and Billy beamed on us both."

"It really does sound as if the professor were a darling," admitted Charlotte. "I'll confess I wasn't sorry to be out of town while she was here, but when she comes again— Well, you know I can cook. If I invite her to a chafing-dish supper, and do my prettiest, do you suppose she'll count

me her intellectual equal, too? I feel an anticipatory uplift at the thought!"

"She might," agreed Rose with a laugh, "but you couldn't delude me. I know better!"

LASSOING AN OSPREY

HOW a fisherman lassoed and captured an osprey, or fish hawk, with a hand fishline is told by a correspondent of the New York Sun. A number of fishermen were on board, he says, and we were anchored with lines out in every direction. I was fishing from the starboard side of the top deck, near the stern, watching the graceful circles of a large osprey, when suddenly it made a dive for a bergie that was floating on the water a short distance from the boat, between two lines, but nearer the line of Mr. John Woods of the New York fire department.

Mr. Woods tried playfully to throw his line over the bird, and somehow he actually succeeded in looping the line round its left wing in such a manner that it could not escape.

The hooks did not catch at all, for they were far beyond, but the osprey was securely lassoed. It was at once an exciting and a ludicrous task to reel in the big bird. It struggled desperately, and had it not been for the length of line beyond it, with a ten-ounce sinker at the end, it might have been necessary to reel it down from the sky instead of up from the sea. When it was brought to the deck and found itself in the strong but not unkind hands of a group of fishermen, it seemed frightened, angry and disgusted; but, strange to say, it did not fight its captors.

Some one suggested killing it, and one man urged sending it to an aviary; but above all the other voices I heard a self-appointed counsel for the prisoner, pleading for its liberty with an oratory effective if not classical: "Aw, let the poor fellow go!" And so, on reflection, said the jury.

When the bird was set at liberty, none the worse for its strange adventure, it shot straight down among the lines again, got the bergie it started out to get, and then leisurely flew away.

AT THIRTY BELOW ZERO

AS has been aptly said, Lord Strathcona was "studiously careless" about his health. His chief affliction was "colds," and it is a wonder that, through his imprudences, they did not lead to serious illness.

An old Montreal friend, Mr. C. R. Hosmer, who is quoted in Mr. Beckles Willson's Life of Lord Strathcona, recalls a typical incident that happened nearly twenty years ago:

Lord Strathcona was declared to be very ill and threatened with pneumonia. His private car was ordered to be got ready for a trip to Florida. He learned suddenly that his presence might be useful in Winnipeg, where the Manitoba school question had come to the front. Without saying a word to his doctor or to anyone, he ordered his car to be attached to the Winnipeg train, and off he went. Lady Strathcona was greatly alarmed, and came to my office the next morning. I was then general manager of the Canadian Pacific Railway telegraphs. We found out that he was as far as the north side of Lake Superior at the time, and that it was thirty degrees below zero there. The night after he arrived in Winnipeg he gave a banquet to the Bishop of Saint Boniface.

When he returned to Montreal, I spoke to him of how deeply concerned, not to say alarmed, Lady Strathcona had been. He smiled and said, "Yes, I remember that cold morning. I had to break the ice in the pitcher when I got up."

THEODORE'S THORN

THUMBING the thin thesis, the thick thesaurus, Theodore Thwait, thirty, thought theories.

Theresa Thwait, thrifty though thrush-throated, —thrilling thousands thronging theatres,—threatened thriftless Theodore, thumping, thimble, the thrumming, theorizing thumbs.

Theodore, thwarted, thrust Theresa thence, thereafter thought the theories, thrashed the themes, thinking Theresa Theodore's thorn, Theodore's thistle.

That Thursday, Theodore thumbing, theorizing —Theresa throating threats, threnodies—thumps thwacked the threshold thoroughly, then the thatch.

"Thunder," thought Theresa.

"Thieves!" throbbed Theodore.

Theresa thumped, threatened, thwarted those three thieves, throwing the thick thesaurus—that thrilled them!

Theodore thanked Theresa. Theresa thawed. Thenceforth Theodore thought Theresa the thrill- ingest theme.

WASHINGTON AND THE CORPORAL

MARY'S teacher had asked the class to re- write in their own words a story she had told them the day before about Washington and one of his corporals. Mary had been absent and had not heard the story, but it did not occur to her to tell her teacher and ask to be excused. "Can't" was not in her vocabulary. Her ideas of corporals were somewhat hazy, but she made up in originality what she lacked in accuracy. She wrote industriously, and soon produced the following masterpiece:

"George Washington was riding through the woods one day with some of his men. As they were riding along he saw, way up in the top of an old tree, a big corporal sitting on a nest of little corporals. One of the men shot at the big corporal but missed him and he flew down and pecked George Washington on the nose."

AN ANIMATED HAT

THE Tatler has the following account of a nearsighted old gentleman who lost his hat in a sudden gale. The old gentleman started in pursuit of his fast-disappearing headpiece, and finally thought that he saw it in a yard behind a high fence. Scrambling over with great difficulty, he started to chase it, but each time he thought he had caught it it seemed to move away. Then a woman's angry voice broke on his ears.

"What are you doing there?" she demanded shrilly.

He explained mildly that he was only trying to retrieve his hat.

"Your hat!" she said. "Well, I don't know where your hat is; but that's not a hat you're chasing; it's our little black hen!"

More Than One Million Three Hundred Thousand (1,300,000) Discriminating Women Every Month Turn to McCALL'S MAGAZINE

March and April numbers may sell out before your order reaches us—buy them at 10c each at any News-stand or McCall Pattern Agency.

We suggest that you send your subscription now to start with April (printed in March), our Easter Annual Spring Fashion Number.

McCALL'S MAGAZINE

Announces a Change in Price

The pages of McCALL'S for 1916, end on end, would reach from New York to San Francisco forty-five (45) times, and weigh over ten million (10,000,000) pounds.

In 1917, raw paper, of the high grade we use (one of the biggest items of expense in publishing a magazine of large circulation), will cost nearly twice as much as we paid last year. Besides, ink, type metal, engravings, labor—in fact, everything that goes into making McCALL'S—has nearly doubled in cost.

To lower McCALL standards, or cheapen McCALL quality, was unthinkable. The one and only thing to do was to increase our subscription price and keep on improving our magazine.

McCALL'S is now ten cents (10c) a copy, seventy-five cents (75c) a year, (\$1.00 Canada; \$1.50 foreign). March number on sale in February; April number, with advance Easter Fashions, on sale in March. However, for a short time only, opportunity is here given to subscribe at the old low rates.

A FASHION AUTHORITY RECOGNIZED FOR NEARLY 50 YEARS

How often you hear, "She hasn't a bit of style." You know women possessing extravagant wardrobes, yet who are never stylishly dressed. You also know women who spend a very modest sum on their clothes and you wonder how they manage to dress so charmingly. Our Fashion Editor says, "STYLE is a matter of TASTE rather than money."

Taste, you will agree, however excellent, must have a reliable guide. THE McCALL COMPANY of New York, founded 1870, makers of McCALL patterns (so favorably known for their style, fit, simplicity, and economy) and publishers of McCALL'S MAGAZINE (monthly), THE McCALL BOOK OF FASHIONS (Quarterly), McCALL'S EMBROIDERY AND NEEDLEWORK, etc., enjoys a prestige of nearly fifty years' success as Fashion Publishers and offers just such a guide in its monthly style news (recognized as authority), richly illustrated in black and white and in colors, by the choicest new, approved designs, and patterns that faithfully reproduce those designs.

1917 EDITORIAL PROGRAM

You and all your family will surely enjoy these added March and April features:

"The Nameless Man," big new serial story of love, mystery and surprising climaxes, just starting, by Natalie Lincoln.

"Latch-Strings Ajar," story of a friendly house by the road and a lonely girl and how her Romance came, Katherine Kingsley Crosby; "The Church that Waked Up," Montanye Perry; "Sixteen," a girl misunderstood, Royal Lerner; "The Thorny Path," about a woman who dared; "Seven Times Seven," married problem, Royal Brown; "Personality" of Jeannette Rankin, first Congresswoman; Color Masterpiece, "Gossip," Carl Marr, etc. Stories and articles follow later from these popular writers: Helen Christine Bennett, Anne Gunter Boykin, Mariel Brady, Helen Topping Miller, William Hamby, Lillian Ducey, and many others.

DEPARTMENTS THAT HELP

Cornell's Domestic Science Classes use McCALL'S. Many home-loving women look upon McCALL'S as a "household necessity" because of these practical service departments:

Correct Social Usage—What Priscilla Learned at Boarding-School, Mary Marshall Duffee; Words—How to Use Them, Emma M. Bolenius, text book Author; Home Millinery, Evelyn Tobey, Millinery Director Columbia University; Common-sense Beauty Talks, Annette Beacon; Paris Fashion Letter, Paris Correspondent; Home Dressmaking, Margaret Whitney; Embroidery, Genevieve Sterling and Helen Thomas; Children's Page, Frederick White; Baby Welfare, Mary L. Read, Director School of Mothercraft; Foods and Food Values, Isobel Brands; Gardens, F. F. Rockwell; Household Decoration, Mary H. Northend; Parties and Entertainments, Martha Grossman; Housekeeping Exchange, Helen Hopkins.

CUT OUT THIS COUPON AND MAIL IT BEFORE MARCH 31, 1917 (v.c.)

Mark a cross (X) before items wanted. Pin this coupon to a sheet of paper, write name and address plainly and mail with Money Order or Check—send 50c or less in U.S. stamps, or send coins or bills by registered mail—(for Canada and Foreign no stamps accepted) to

THE McCALL COMPANY, McCall Building, 236 to 246 West 37th Street, New York, N. Y.

Please send . . . McCall's Magazine one year, 50c enclosed (75c Canada; \$1.00 Foreign).

Please send . . . McCall's Magazine two years, \$1.00 enclosed (\$1.50 Canada; \$2.00 Foreign).

Above prices not good after March 31, 1917. Sample copy of McCALL'S MAGAZINE mailed to any address for 10c postpaid.

Canadian Branch at 70 Bond St., Toronto

Name and address of your McCall Pattern Agency nearest to me.

The New Companion

AT FACTORY PRICE

WE offer but one grade (in five different styles) of New Companion Sewing Machine and that the best that can be produced—

a first-quality family sewing machine, equipped with up-to-date attachments and incorporating new features to be found on no other machine.

Our unique system of selling the New Companion direct from the factory to your home,

however, enables you to obtain this high-grade warranted family sewing machine at a price you would ordinarily pay for an inferior grade. Find out about it to-day. Our booklet tells the story.

No obligation to keep machine if not satisfactory

Every New Companion is sold with the definite agreement that the machine may be returned and your money refunded if it is not satisfactory after a three months' trial in your home. We also warrant each machine for twenty-five years from date of purchase and pay all freight charges to your nearest railway freight station.

If you need a new sewing machine in the near future, send at once for our Illustrated Booklet. This will be mailed free to each inquirer.

AUNT LAVENDER'S MEETING BONNET

By Mary Imlay Taylor

PASADENA PUBLIC LIBRARY

DRAWN BY J. SCOTT WILLIAMS

JOHN COLORED. "I COULDN'T LET THEE DO IT, HESTER. I'VE GOT SOME PRIDE"

"JUST because thee fails once thee shouldn't get discouraged," said Hester Lavender. "Thee hasn't any spunk, John Barney. Doesn't thee remember when thee licked Reuben Slater because he said thee couldn't climb a tree backward?"

"I'm glad I licked Reuben once," replied the young man grimly, "since thee walks home from meeting with him so often!"

"Thee went and climbed the tree backward," Hester continued, turning a deaf ear to his remarks. "Doesn't thee remember how thee caught the bough and then swung backward until thy heels hooked on the tree, and so thee got there? I thought thee almost as great as Abraham Lincoln then! I want thee to climb that tree backward again, John Barney, and not to give up because thy crop of basket willows failed."

"O Hester, as if I'd give up if I could pay to plant it right! Thee knows I've been a fool and done it wrong."

"Thee's been no worse than others; thee must try again. Uncle Laban says thee ought to sell that land."

"But I won't sell it! I won't fail like that!"

"There, now, thee's got some spunk at last! I like to hear thee say that! But is the land worth nothing for another crop? No one thinks thee can succeed with willows; my uncle says they don't pay."

"But they do, Hester!" John cried, eager to defend his hobby.

"They do—folks have raised more than eleven tons an acre. I planted wrong, but I've found out my mistakes. I could make it pay, and thee knows I hate to let the old farm go that mother loved. But all my money went to plant that lowland to willows, and I've failed. I'd show these old wiseacres, if I had a cent to start it again next year."

"Oh, I wish my Aunt Lavender had left me something besides her horrid old bonnet!" said the girl impatiently.

"What in the world does thee mean, Hester?" said John, staring. "Thy aunt left thee an old bonnet?"

Hester nodded. "Just her old meeting bonnet, that's all I got! If—if I had something, I'd help thee."

John colored. "I couldn't let thee do it, Hester. I've got some pride."

She looked at him from under demure lashes. "Wouldn't thee let me help, when thee knows I'm such an old friend?"

John felt a lump in his throat. "Thee is a dear little thing, Hester; but no, I couldn't!"

"Thee knows how to be unkind," said Hester coldly. "Thee needs help to get started; and when I said that, if my Aunt Lavender had left me something besides her old meeting bonnet, I could have helped thee, thee doesn't wait for me to have something—thee gets vexed. Thee's just hateful!"

"But I couldn't take it!" John cried desperately. "A man must work, not beg of a girl!"

"I told thee I hadn't got it!" she retorted, with an angry little sob. "I told thee I hadn't a thing but my Aunt Lavender's old bonnet!"

"Then we needn't quarrel about it, Hester," he said eagerly. "Thee hasn't got it and I couldn't take it, and we're back right where we were; we're —"

"No, we're not!" said Hester. "We've quarreled, John Barney, because thee said thee couldn't take it if I had it to give thee, instead of my Aunt Lavender's meeting bonnet."

"Hester! Now, thee's unreasonable —"

"It's thee who's unreasonable, for thee's refused that which thee can't have—because I haven't got it!" declared Hester. "If thee doesn't value thy friends, if thee won't take help from them, who'll thee go to now?"

"Thee thinks I'll never do anything for myself," he said quickly, flushing to his hair.

Hester's lovely eyes filled with tears. "Thee knows I think thee'll be great yet," she said reproachfully.

His face glowed, and he tried to take both her soft hands in his. "Hester—dear Hester!"

But she slipped away from him and ran.

On the piazza she looked back.

"It's well thee can help thyself," she said demurely, "because thee sees how it is. I've only my Aunt Lavender's old meeting bonnet."

"Hester —"

She was gone; he saw only the flutter of lilac calico as she vanished. But as he went away, a little crestfallen, he picked a spray of mock orange that had touched her cheek. The sweet white flowers comforted him as he trudged homeward to the empty farmhouse and to the acres where his first crop of basket willows had failed. Thinking to begin a fortune by selling the rods to the wicker furniture manufacturers, he had planted all that low, moist land to willows; but being young and very raw at his work, he had planted wrong. All the Friends in that Quaker village had advised him to sell, but sell he would not, and now he was facing failure!

Hester's uncle, Laban Holesworth, shared the general opinion. He disapproved of John Barney's calls upon his pretty niece, and told

Hester so when she fluttered in from her encounter with the young man.

"John Barney's a failure," Laban said, pushing his gold-rimmed spectacles up on his forehead. "Thee shouldn't encourage a trifling young man, Hester."

"I've always known John Barney, Uncle Laban," replied his niece, with her pink cheeks a little pinker than usual. "Thee wouldn't have me slight an old friend in misfortune?"

"Thee can always beat about the bush, niece. Thee shouldn't consider triflers; thee should prefer the sober youths."

"Friend Barney's very sober, Uncle Laban; he's just lost his willow crop."

Uncle Laban's mouth twitched at the corners, but he continued to look severely at the charming figure in the lilac calico.

"Friend Reuben Slater spoke to me to-day of thee, Hester Lavender," he said gravely. "Reuben's a godly young man and he's got a good business. He wishes thee to marry him."

Hester looked down, and folded a tuck in her white muslin apron.

"Thee'll please refuse him, Uncle Laban," she said calmly. "I don't want to marry Friend Slater."

"And why not? Thee can't do better."

"I can't love him; thee knows, Uncle Laban, that a girl can't love a man who looks like a chicken."

"I fail to see what thee means with thy nonsense. A man can't look like a chicken."

"Friend Slater does, Uncle Laban; he has a nose like a beak, and no chin, and he's red-dish. He's just like my old hen Jenny."

"I've no money to leave thee, Hester; it all

goes to my son and his children. And thy Aunt Hannah can't take care of thee. I want thee well married before I die."

Hester suddenly flung her soft arms round his neck. "Thee mustn't die! Thee knows I love thee so!"

"I'd oblige thee if I could," said Uncle Laban, with a grim smile, "but I'm getting old. Friend Slater's a good man, Hester, and thee should think twice. I'd hoped thy Aunt Lavender'd leave thee a little, instead of that silly bonnet! Don't be foolish like her, little Hester. I want thee to marry Friend Slater; promise me thee will."

Hester hid her face on his shoulder. "Will thee let me off a while, Uncle Laban? Just a year—before I promise?"

The old man stroked her hair. "I won't force thee, Hester, but I want thee safely married. Thee mustn't think of triflers, thee hears?"

"But thee doesn't mind if I think of workers, Uncle Laban? Of some one who is doing all he can and —and more?"

"Thee isn't silly enough to think thee's in love?" Uncle Laban almost shouted.

"I was thinking of my Aunt Lavender's old meeting bonnet," Hester said sweetly. "Does thee think she wanted me to wear it?"

"Thee can almost fib, niece! Go upstairs at once and think of Friend Slater!"

Hester went, but when she had locked the door of her room she did not think of Friend Slater; instead she went quickly to an old cupboard and took out a tall, flowered bandbox. It was tied neatly with ribbons and on one side was a plainly written card.

"To all whom it may concern:

"This is the meeting bonnet that I bequeathed, in my last will and testament, to my niece and namesake, Hester Lavender."

Hester had never worn the bonnet; she had never untied the strings of the flowered bandbox, for she had been half-angry and half-amused at Aunt Lavender for leaving her an old Quaker meeting bonnet. Now she slowly untied the bandbox and took out her legacy. It was the Quaker bonnet of fifty years ago, made of dove-colored silk, with a white lining and soft strings to tie under a dimpled chin.

Hester went to her looking-glass and tied the bow with deft fingers.

"Thee's wicked, Hester Lavender," she said to her image. "Thee should think of poor John and his basket willows, and thee can't help him—he wouldn't let thee if thee could! John Barney's so unkind to thee!"

Then, in spite of herself, she dimpled at the image in the mirror, for Hester Lavender in that old bonnet was quite the sweetest picture in the world. She was being worldly, but she could not help turning first one side and then the other to the mirror, and whichever way she turned the vision became more and more beguiling.

"Thee's very wicked," she said again, "but thee might try it and see how it looks in meeting!"

Two days later she was helping Aunt Hannah make the beaten biscuits, when John Barney's voice sounded at the gate.

"Hester!" he called. "Hester, can thee come out?"

"Hush! Thee'll wake Uncle Laban; he's napping!" Hester answered. "I can't come—I'm baking. What does thee want now?"

"Come to the window, so I can tell

thee." John's voice as he pleaded had a quiver of excitement in it.

Hester looked into the oven, then she came. "Thee mustn't be long, or I'll burn the biscuits."

But John was tense with excitement. "Hester, does thee remember what I said day before yesterday—that if I had money I'd succeed?"

"I remember thee said thee wouldn't take it if I had it to give thee, and —"

"O Hester, don't! I've got it. It came this morning from a friend. Two thousand dollars in one-hundred-dollar bills, and just a paper saying, 'Thee can use this without fear. It's from one who believes in basket willows.'"

"O John!" she cried and clasped her hands. "Not really? Who does thee think gave it?"

"Some one who knew father." John was very sober and his face quivered. "Hester, I've got my chance. I'm going to have a crop that'll beat John Henry, thee'll see!"

"I'm—I'm glad, John, though thee was unkind about —"

"O Hester!" His face paled with earnestness. "Will thee wait?"

"For thee to grow willows?" she asked, looking at him demurely. "Thee knows I'll be glad to see thee do it."

"And—if I succeed? D-does thee remember, Hester, when thee named the daisy and pulled the petals, saying, 'Love me, love me little,' and I said —"

"We were very young and simple then, Friend Barney," said Hester severely. "I'm surprised thee thinks I remember —"

"But didn't thee name the daisy for —"

"Thee must smell those biscuits burning! Thee go and grow thy willows," said Hester, disappearing.

Poor John stood irresolute; to enter the kitchen might mean an encounter with Aunt Hannah, who did not approve of him; besides, did Hester mean —

But at that moment the charming head reappeared in the window. "Don't thee get discouraged with trifles, John Barney."

John's eyes flashed with hope. "Hester, does thee mean it?"

"I mean thee must go ahead and grow thy willows," Hester replied with a smile, and closed the shutters.

After that there was much work in John's meadows. The wisecracks of the town shook their heads. John was like his father, they said—all the Barney's were too full of crotchets to succeed. Uncle Laban Holesworth thought so, too, and sent Friend Slater to walk home with his niece. Meanwhile, Hester had nearly demoralized "silent meeting" by appearing in her Aunt Lavender's bonnet. Many of the Friends recognized it, and all of them knew that Hester in that bonnet was the most distracting vision that had ever cast a spell of sunshine and peachblow tinting on that staid and barren place. More than one of the younger members had a stiff neck from sitting sideways to catch a fleeting glimpse of her dimpled cheek and long, brown lashes.

Friend Reuben Slater, walking home with her, remarked upon her unusual headgear.

"They say thee has on thy Aunt Lavender's bonnet," he ventured mildly. "What's the matter with it, Hester?"

"If thee doesn't like my bonnet, thee needn't walk home with me, Friend Slater."

"Thee sometimes says unkind things, Hester. I meant to admire it."

"Thee'd better, for I'll wear it until—the willows bear in Friend Barney's meadows."

"Then thee'll wear it forever," said Reuben, vexed. "Friend Barney's a fool to puddle in the mud with willows. I mind that as a boy he had no sense."

"Doesn't thee remember that he licked thee once?"

"He was a bully," said Reuben, very red.

"Thee was the biggest, but thee didn't like to fight."

"Friends should not fight, thee knows."

"Nor talk behind a friend's back, Friend Slater."

"Thee has a sharp tongue to-day, Hester, and I'm hurt. Thee knows what I said to thy uncle, that I want thee to marry me?"

"I'm to have a year before I think of marrying, Uncle Laban promises."

"Thee'll think of me, Hester?" He was very eager now. "Thee knows I love thee."

"Thee's kind, but thee mustn't expect too much. In a year a girl thinks a lot, and, besides, I'm going to wear this bonnet, and thee doesn't like it."

"I'll buy thee plenty of bonnets if only thee'll marry me, Hester," he pleaded.

Hester had reached the home gate, and she stepped discreetly inside. "Friend Slater, I never cared for bonnets before, but now I'm so much in love with my Aunt Lavender's I can't begin to think of thee and thy bonnets."

True to her word, and quite aware how captivating she looked, Hester, to the amazement of the village, continued to wear that old dove-colored bonnet. But before the end of the year, and while the willow crop was only half grown, Uncle Laban died.

Sad days came then to little Hester Lavender, who had loved her uncle. She was an orphan, and, as he had said, all his property went

to his son and his widow. Hester got two hundred dollars and her uncle's last injunction to marry Reuben Slater—an injunction that was warmly supported by Reuben and Aunt Hannah. The widow was going West to live with her son's family; Hester would soon be adrift. While all that happened, John, toiling twenty miles away among his willows, made no sign. There was a little ache of doubt in Hester's heart. Perhaps, after all, she might better heed her uncle's admonition.

Reuben himself pleaded his cause with all the eloquence he had.

"Dear Hester, thee's had a year, and thee's worn thy bonnet right through it. Now, thee'll let me buy thy bonnets soon, won't thee?"

Whereupon, to poor Reuben's amazement, Hester burst into tears. He tried in vain to comfort her.

"Thee knows I love thee, Hester, but I haven't the gift of tongues. Thee must take me for granted."

"I—I can't!" she sobbed, and left him much bewildered.

Appealing to Aunt Hannah, Reuben got a champion. The old lady labored long and earnestly to persuade the girl from her folly.

"Why did thee act so?" she stormed at last. "Thee's silly, Hester Lavender. Reuben says thee ran out of the room."

"I couldn't help it. He—he looked just like Jenny!" sobbed Hester.

"I don't know what thee means," said Aunt Hannah, "but thee'll have to work for thy living if thee doesn't look sharp."

"I will. I'd like to, thee knows."

"I know thee's a silly little goose!"

That night Hester cried herself to sleep; it was three months since she had seen John, and she had heard that he went home from meeting with Ruth Southey. That night Hester came near burning up Aunt Lavender's meeting bonnet.

It was late the next day when Aunt Hannah came to Hester's door.

"That young man who tried to grow the basket willows and failed, thee remembers, Hester? He's downstairs in the parlor and asks for thee, but thee'd better remember Reuben Slater, and not waste thy time on triflers."

But Hester bathed her eyes, which were suspiciously red. "I hear he's to marry Ruth Southey," she said stiffly, "and thee knows I must wish him joy."

"Thee looks as if thee'd been crying. Don't let him see it; he might think thee cared, young men are so silly."

Hester went downstairs with a prim face.

"I hear thee is to be married, Friend Barney," she began.

"If thee'll have me, Hester!" he cried, and his old shyness suddenly vanished. "Hester—I've won! I got a splendid crop. I'm started now. Hester—dear, will thee?"

She turned from white to red. "O John—the basket willows! Thee—thee didn't love Ruth, then?"

"Thee knows who I love, Hester. Thee'll marry me now?"

It was a quiet wedding. Friend Slater sent a suitable gift, but there was no one there except the two families. Yet when Hester came downstairs dressed to be married, Aunt Hannah cried out in amazement, for there on her head was Aunt Lavender's old meeting bonnet.

"John Barney," said Aunt Hannah, who had been reconciled to the young man, "make her take off that bonnet! Does thee think it good enough for Hester?"

"No, I don't. The most beautiful bonnet in the world wouldn't be good enough for her."

"If thee marries me," Hester said calmly, "thee marries me in my Aunt Lavender's meeting bonnet."

"Bless it!" said John hastily. "If it comes to that, I'd marry thee in a teakettle."

Aunt Hannah held up despairing hands. "Thee's as mad as Hester!"

The bride was lovely in her Quaker dress and her quaint bonnet; John was a proud bridegroom. The wedding cake was cut, the rice thrown, and in the mellow evening sunshine the bride and bridegroom drove home. For a while they did not speak,—words are such poor things!—but when they saw, at last, the old house that John loved and the fields that had just yielded the great crop, they looked at each other with radiant eyes.

"Hester, does thee remember, thee told me to try again?"

"Does thee remember thee said thee wouldn't

take help from a girl, and I said thee couldn't, because I had nothing but my Aunt Lavender's old bonnet?"

"Is that why thee would wear it? I remember thee wanted to help me, but —"

"But thee had it of a friend instead?"

"Did I not?" John glowed with pride. "Don't I wish I knew him? I'd pay him back and love him forever!"

"Thee wouldn't take it from me, but from him; thee rejoiced that I had only a bonnet!"

SERMONS IN STONES

By Andy Adams

REED'S settlement lay at the head of the Cache la Poudre Valley in Colorado. To the west the foothills of the Rockies jutted up to the creek, and there were broad meadows between the bluffs. The sheltered cove, which was well watered with springs, had naturally attracted the first emigrants.

The Civil War drove many men westward. At the close of that struggle a number of families that lived in one of the border states decided to move to a new country and try to mend their shattered fortunes. The colonists elected Isaiah Reed as their captain and, taking their cattle and belongings, moved West until they reached the arid regions; there they turned northward and continued their journey until they arrived at Cache la Poudre Valley.

Anxious father asked Zach Reed, the oldest son of the settlement leader, to go back to the camp in his place. The boy was only fifteen years old, but he had made the trip once with a pack train and, barring accident, could easily reach the outpost in a day's travel. Since all the men were at the camp, Zach was the best messenger that Temple could choose.

"Do you remember the trail?" Enoch asked the boy the evening before he started. "It has rained and snowed on the mountain since the pack train went over. What landmarks do you recall?"

"Yes, I know the way," said Zach. "I remember the blazed trail round the falls on Oak Creek, and where you drop down to avoid the slide rock on Red Mountain, and the game trails near the summit."

"Humph! Three landmarks in thirty miles," said Enoch doubtfully. "Well, I'll have to send you anyhow. Be ready at daybreak."

It was an anxious night in the settlement, for a crisis had come in the fever of the child. Enoch left the bedside only for a few minutes at daybreak to give a final word of advice to the departing messenger.

Zach had prepared to take an old and almost useless gun that his father had given him.

"Leave that old musket at home," said Enoch. "It means ten pounds extra weight on your horse, and scaling the mountain will call for the best that's in him. You'll have to make a forced ride to reach the camp before night. All you need to take along is a little food."

"At our night camp this spring, coming out, we heard wolves howling below the timber line," protested the boy. "They came up within a few hundred yards of our

DRAWN BY H. C. EDWARDS

HE FIRED THE MUSKET AT THEM, THEN RELOADED AND FIRED IT AGAIN AND AGAIN

The members of the party were greatly attracted by the peaceful spot and decided to settle there.

Even to the fourth year after their arrival the men of Reed's settlement relied largely on their rifles for clothing and food. They soon discovered that in the parks just over the front range of mountains there ranged mountain bison—excellent in flesh and vastly superior for robes to the buffalo of the plains.

The settlers hailed the discovery with delight. A good horse could cross the mountain and arrive at the parks in a day, and a pack train could easily make the trip in two days. The mountain bison could only be hunted on foot, by stealth, as they came in the winter to the shelter of the parks. In the late fall and early winter, therefore, the men established a camp in the mountains, where they could cure the meat and dress the robes. When the hunting season was at its height, all of the men left the valley and joined in the work.

During the second fall Enoch Temple, one of the hunters, unexpectedly returned to the settlement. While crossing a mountain stream near the parks one of the pack horses had slipped on a mossy rock and fallen, and before it could scramble to its feet half of its load of salt had been washed away. As salt was necessary in curing the meat, Temple had returned to the settlement to get a new supply. The men at the camp expected him back on the evening of the third day.

Temple found his youngest daughter sick, and during the night the child grew worse. The next day brought no improvement, and her

camp, and our horses pulled their picket pins and rushed up to the fire. I want that gun."

"All right, then, take it; but get started inside of ten minutes. You've got a long ride."

"I've filled one of your pockets with chipped venison and the other with cold biscuit," said Mrs. Reed, as she handed Zach his coat when he was ready to mount, "and in the inside pocket you'll find the needle and thread that your father forgot. Mr. Temple, do you think that he'll be safe?"

"If he'll only use his wits. Here, take my flint and steel, and if anything happens you can build a fire."

"Oh, I won't need it. It's going to be a fine day, and I'll make the camp before sunset."

"Take it," Enoch insisted, and he handed Zach the flint and steel. "Keep your wits about you. Follow the trail like a hound; and if you lose it, any old game trail will lead you to the pass at the summit. Rest your horse an hour several miles this side of the pass, below timber line. And tell your father I'll return the moment I can."

Temple returned to the bedside of his daughter, and Zach Reed, with the unshaken confidence of a boy, rode away on his errand.

The trail led up Oak Creek, and he dismounted at several pools where the men had

caught trout when coming out with the pack train in the spring. He was sure that he had plenty of time, and he said to himself that going over the pass was an easy little trip, in spite of the fact that Enoch Temple had tried to make him think that it was hard. He wished that he had brought along his line and hooks, for he could see fish in the clear water. Once he dismounted at the edge of a thicket and succeeded in killing a pair of grouse, which he tied to his saddle strings. He watched the squirrels cutting down pine cones for their winter stores. Every voice of the mountain called him, and he loitered on the way more than he realized.

Suddenly he saw a snowflake drifting by and, looking up, noticed for the first time that there were clouds overhead. Speaking to the horse, he hurried on. Storms on the mountain were to be expected at this time of year, he said to himself, but probably it was merely a flurry.

It was only when the trail began to fill with soft snow while every step of his horse was carrying him higher into the mountains that he took alarm. Then the very air filled with swirling snow, and almost in an instant, it seemed, the trail completely vanished. He turned back and searched for it, but the snowflakes blinded him and he only became more confused.

He fortunately blundered into a small park, and his horse instinctively turned to the sheltered side of the opening, which was surrounded by a heavy growth of pine. With the flint and steel and a bit of punk Zach kindled a fire in the hollow of a fallen tree. He was lost, and he knew that it would be useless to try to find his way in the swirling storm. He unsaddled his horse, gathered a good supply of wood and found a dry place for his saddle and gun under the boughs of a pine.

The snow fell unrelentingly. For supper the boy spitted a grouse over live coals, and made a good meal. The food cheered him, but when darkness set in loneliness gripped his heart. And then, without warning, wolves began to howl on the farther side of the park, and his horse snorted with fear. Zach immediately threw more wood on the fire and loaded the old musket.

A night of vigil began. Toward midnight the wolves became very bold; Zach saw their eyes in the shadows of the timber. He fired the musket at them, then reloaded and fired it again and again. At each shot the horse bolted, but instantly returned to the protection of the fire. Long before dawn the boy had exhausted his ammunition and had to rely on his bottle of resinous pine to keep the wolves at bay.

But his supply of wood was diminishing, and as the fire burned lower the wolves came nearer. They moved back and forth, snarling in the darkness within a stone's throw of the light. They seemed to be drawing in for an attack. In the dark hour before dawn Zach was on the point of saddling his horse and taking to the open park; but the fire had proved such a refuge that he was reluctant to leave it. Fearing to go for more wood, he used his remaining fuel sparingly. He determined to sell his life dearly.

While he was still expecting an assault the morning light began to come. Presently the horse wandered into the park and, pawing away the snow, began to feed. It took the boy some time to realize that the wolves had gone.

Daybreak showed a whitened mountain side. Snow lay a foot deep in the park, and the branches of the pines were drooping under their load. Zach broiled his remaining grouse and ate his last biscuit. Which way the trail lay was a mystery. While the horse foraged for his breakfast, his rider hovered over the fire and tried to think what to do.

As Zach meditated on his plight, a flood of thoughts swept through his mind. Why was he more helpless than his horse? The animal, timid as a lamb, feared the wolves, but was the first to know when they had gone. He noticed that the animal kept lifting his head, scanning the horizon and scenting the air. Once the horse turned, stared for a moment as if attracted by some object, and then quietly fell to feeding again. The boy felt certain that the animal had noticed some unusual object, and, peering through the branches of a pine, he saw a doe and two fawns enter the park and come almost directly toward him.

The doe passed within thirty steps of the fire, where Zach stood silently watching her. It was no use to pick up the old musket, for the last charge had gone to frighten the wolves. One of the fawns scented the smoke and turned off his course to investigate. He came up within twenty steps of the fire, then, catching a scent that was new to him, dashed off to join his mother and his mate. Holding her course unalarmed, the doe passed out of sight with her fawns.

"If I had only saved a single charge of powder," Zach said to himself bitterly, "I should have had venison enough to last me a whole week. Now I must go hungry."

He put wood on the fire and then stood gazing up and down the mountain side in the hope of seeing a landmark. He decided at last to trail the old doe a short distance. Where the trail left the park he noticed the tracks of other does and fawns that had evidently passed about daybreak, after the wolves had left. At

that, he remembered the saying of Enoch Temple: in case he lost his way, any old game trail would lead him to the pass at the summit. If old game trails, why not fresh ones?

Running back to the fire, Zach saddled his horse and took up the trail of the doe and the fawns. He felt sure that he had spent the night somewhere near the point where Enoch Temple had cautioned him to rest his horse before attempting the last stage to the summit.

A day and a night had taught Zach Reed a severe lesson. Now he was alert and, while he followed the trail of the doe, nothing escaped his notice. The course led constantly higher, and the laboring of his horse became severe. He dismounted and for more than an hour floundered up the forest slope. He noticed that the pines were becoming more and more stunted, and he at last sighted sentinel peaks ahead. Soon afterwards he reached the timber line.

The sun shone forth, and all was clear. As he neared the pass the snow deepened, and the

fresh trails of many animals converged into one. Hundreds of deer and at least several bands of elk had crossed the saddle to the sunny mountain slopes beyond. The doe had led the bewildered boy to the coveted pass.

Looking southwest from the saddle between the sentinel mountains that hedged in the pass, he saw the parks beyond, where the hunting camp was. Evidently the storm had been light on the western slope, for the parks were bare of snow. As the trail was blazed on bordering trees, young Zach had little trouble in following it down the mountain. In fact, the boy soon noticed that his horse could follow the trail under the snow, and so gave the animal free rein. Since a doe had shown Zach the way, he trusted his horse with increasing confidence.

Halfway down the mountain he met two men. They had started out from the hunting camp to look for Enoch Temple, whose failure to appear had alarmed the hunters. At a word

of explanation from Zach they turned back. On the way the boy explained his delay and told his experiences of the night.

"You ought to feel friendly to that old doe," said one of the men as they rode along.

"I do," said Zach. "And I'm glad, now, that I wasted my powder on the wolves."

"All you needed to keep off the wolves was a firebrand," said the other hunter; "better off without a gun."

"That's what Mr. Temple said. If I had taken his advice, I'd have been over the pass before the storm struck yesterday. This trip has taught me a few things."

The next day Enoch Temple forged his way up to the pass. In the settlement they had seen the storm come up and had feared for the safety of the boy. Enoch read in the snow the story of Zach's night on the mountain and how he found the trail in the morning. Then he returned to the settlement. His child was better, but he did not yet wish to leave her.

OBLIGATIONS OF CITIZENSHIP

By William E. Borah

NOT the least among the evils of the great war, so far as our own country is concerned, is the fact that it has diverted attention from our domestic affairs. It has virtually excluded from the press and from the public mind the consideration of all questions other than those that concern the gigantic conflict. We can hope, however, that, after this world crisis is ended and after we have made a start in bringing order out of chaos, we shall turn our attention to our vital and imminent home questions.

We cannot begin too soon to consider them, and we shall have to deal with them in thorough fashion. We must examine original principles and give some attention to the things that we have too long taken for granted. While striving after new things we need to turn back and consider some of the old and simple principles of good government.

One thing that is entitled to our consideration is the indifference in these days of so large a part of our well-to-do and responsible people to the primary duties and obligations of citizenship. Men who are among the best qualified by training and experience and who have the most time to give to public questions and to selecting fit candidates for public office have got into the habit of passing over such matters with perfunctory attention. Some even entirely disregard their duty in that respect.

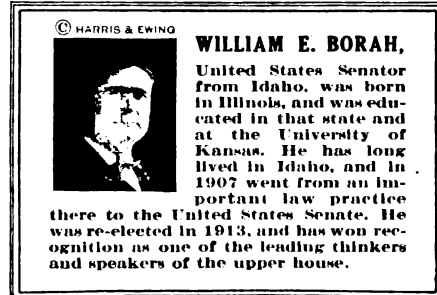

THE GREAT STAY-AT-HOME VOTE

MANY of us seem no longer to appreciate the right of a citizen to assist in selecting those agents upon whose conduct depends the welfare of the state and of the nation. The power to spend the public funds, to regulate the amount of taxes, to form our national policies, is in the hands of those to the selection of whom thousands—and the number increases each year—give no thought whatever.

In one state alone, in a recent presidential election, after a most thorough and somewhat exciting canvass, more than a hundred thousand voters remained away from the polls. So utterly lacking were they in a sense of duty, and in the inspiration that should come to all who witness the choosing of a chief magistrate for a hundred millions of people, that they failed to record their views or preferences as to who he should be. If they were unable to make a choice, it was a sad comment on their intellect; and if, having a choice, they were too much engrossed with purely personal affairs to record it, it was a conclusive verdict on the quality of their citizenship.

In fact our most important elections are often decided by the stay-at-home vote. The course of the government, its policies, our entire administration of public affairs, turn in effect upon the indifference of the citizen. The evils that flow from his neglect of those primary duties may be said to be the beginning of all those evils that seem ever to accompany free government. If the people were as vigilant about choosing their public servants as they are about choosing their corporate officers or their trusted employees, it would be virtually impossible for extravagance or "graft" or the many evils of "bossism" to exist under our form of government.

We have given much attention of late to what is called a movement for popular government. We have considered the advisability of incorporating into our system of government the initiative, the referendum and the recall. We have at times become violent in expressing a desire for what we choose to call more effective instrumentalities of government; apparently we have coveted greater obligations and more manifold and complex duties. Putting aside for a time the question of the benefits to be derived from adopting and using such instrumentalities of government,

the question remains, Would we use them if we had them? Would they not lie like tools by our side, rusting and cumbersome?

It would seem that if the people were greatly concerned over any one thing above all others, it would be in framing the constitution of their commonwealth—their charter of government, with which all laws and institutions are to conform and the spirit and wisdom of which enter into the moral fibre of the community. The constitution fixes the rights of the whole people, defines and circumscribes them, supposedly for many years ahead. No provision should ever be written into a state or national constitution that is not of sufficient worth and of such general application as to make it in a large measure a fundamental and permanent principle of human conduct.

But an examination of the votes on the adoption of state constitutions, and especially on the adoption of important amendments to state constitutions, discloses the fact that less than one third of the qualified voters of most states signified their preferences in the matter. The figures reveal a shameless and indefensible betrayal by the citizen of his first duty to society, to his neighbor, to the state and to the general government.

We cannot study the statistics of those votes without concluding that what we need in this country above all other things is an old-fashioned revival of civic righteousness—the thorough preaching of the gospel of civic responsibility. The power and the influence of a state depend, not on the manifold laws on its statute books, or on the number of complex and experimental theories that it tries, or yet on the omnipotent care of an expensive bureaucracy, but rather on the earnest, sustained, vigilant use of the instrumentalities at hand and on the faithful observance of every obligation that binds the citizen to the community, to the state and to the country.

A long and arduous struggle has been going on to establish permanently the direct primary system, the object of which is to place in the hands of the people the privilege of selecting those who are later to stand for election. That there was a great agitation for it on behalf of the people is well known, yet the indifference to its privileges and its use has been conspicuous. Before a true test could demonstrate its wisdom or unwisdom it was utterly disregarded. With a few exceptions the vote at the primary has been shamefully small. The fight for the repeal of the primary law has already begun, and the strongest argument, or at least the argument most effectually advanced, is that it is not being used.

A STORY OF SAMUEL ADAMS

THE demand for the primary system and the failure to use it when once it had been obtained are another illustration of the common belief that the mere enacting of a law will of itself bring the desired relief. It is a weakness in the people to covet more power than they have the energy or public spirit to use. A great and growing people are entitled to every advance in government that foresight and wisdom can devise, but it is indispensable that they keep pace with all those things and meet in full measure the responsibility that their advance in government imposes.

Unfortunately, as communities grow, governments become, not simpler, but more complex, and moreover the interest of the citizen in public affairs too often diminishes. There can be no such thing as efficiency and permanence in free institutions except through the continuous and unbroken interest of the people at large in all matters of public concern.

The story is told that at the time Massachusetts was considering the ratification of the Federal Constitution, Samuel Adams, the noble pioneer of American independence, was wavering in his support. The mechanics and workingmen of Boston called a meeting at the old Green Dragon Tavern and passed resolutions earnestly urging that the Constitution be ratified and adopted. Those resolutions they put into the hands of a brass founder to be delivered to Mr. Adams.

"How many were present when these resolutions were adopted?" asked Adams.

"More, sir, than the Green Dragon would hold," said the sturdy mechanic.

"And where were the rest?"

"In the street," replied the brass founder.

That casts a significant side light on that crucial period when we were engaged in the task of bringing strength out of feebleness and order out of chaos by establishing a national government. What could be more interesting than to see the mechanics of Boston solemnly considering and discussing the most remarkable document, as it has been called, that any body of men ever put forth? The same serious and constant consideration of matters of public concern by the same class of people is essential to every hour of the existence of the government.

If the better class of citizens or a large part of them remain away from the primary or the election booth, and if at the same time those who profit by dishonest politics attend, as they surely will, the short ballot will be wholly ineffective to accomplish what its supporters hope it may accomplish.

VANITY OF UNUSED REFORMS

IT is time that the responsibility for bad men in office, for "invisible government," for venal and corrupt practices in public servants, be put upon those whose neglect of duty enables evil influences to control the election. The better element is always in the majority in every community and can always control the situation if it desires to do so. When things get insupportably bad and the people are thoroughly aroused, how quickly are desirable changes brought about! But when the people seem to have disposed of the particular condition that thus arouses them, they fall back into a state of indifference and let the sinister influences have the field again.

Truly, eternal vigilance is the price of good government. We cannot find or enjoy it through any other means. Our blessed old republic was not framed for laggards or cowards, but for brave men and women ever and always alive to the duties and obligations that rest upon them as citizens.

We seem sometimes to labor under the strange belief that legislation can take the place of that individual exertion required of a citizen. We discover some new evil and immediately become excited over the passage of a new statute, and then we leave the statute to execute itself. We see the workings of the "invisible government," realize the demoralizing tendencies, and urge ballot reform. But a short ballot is no better than a long ballot if we leave both to the use of those whose interests are sustained by the emoluments and favors of "invisible government."

Of course wise legislation is indispensable in the growth and advancement of a people. Adapting laws and constitutions to the civic and economic changes of an energetic people

is one of the most important as well as one of the hardest tasks that the statesman has to perform; but no code of laws can be wise enough to bring good government unless the citizen gives his constant attention and interest. The lesson that we must learn again in this country is that, although we can have some kind of government without individual sacrifice of time and effort, we cannot have a republic. A republic presupposes an activity and interest commensurate with the power and opportunity of the individual citizen.

A short time ago I read a book designed to disclose the distrust that our fathers had in the people at the time our government was formed. The book leaves the impression on the reader that the makers of the Constitution conspired against popular interest and popular rights. I venture to say, however, that no men ever trusted the people more profoundly than the men who framed the Federal Constitution.

At the time our government was framed and submitted to the people for approval free government was looked upon as the dream of enthusiasts. To transfer sovereignty from the rulers to the people was in itself regarded as the theory of madmen. To build and put into operation against the world's prejudices and beliefs, and in the face of countless centuries of disaster and ruin, a strong and stable government, the sole sovereignty of which was to be in the people, was the gigantic task of those men.

What they did was so far in advance of anything that had gone before that it met

on every hand with doubt and discredit, if not with mockery and derision. And never until our institutions were tested in the crucible of civil conflict did the world at large believe that the work of the fathers could endure.

To my way of thinking, no body of men ever showed higher faith in the patriotism and self-governing capacity of the people than they who finally said, "This is the wisest and best we can do, and it is submitted to the people for approval." Time has demonstrated that some changes in that form of government were essential to meet the changing conditions of social and economic life. But in its fundamental conception and in its fundamental principle it was a manifestation of the most profound confidence in the people.

But the whole vast structure depends for its efficiency on the constant attention and unwearied fidelity of the individual citizen. The question in these days is not whether the work of the fathers was efficient and wise, but rather whether we are prepared to live up to the responsibilities and the ideals required for successfully carrying on the government that they framed.

If we are prepared to do our duty, we shall be the happiest, most prosperous and best-governed people on the face of the earth. But unless each citizen is interested enough to perform his duties to the state and to the nation, we may pass laws and continue to pass laws, we may make our government more popular and more responsive, and still suffer the ten thousand evils that flow from the maladministration of government.

violence that made Nathan hesitate; it was the dominating power of the soul that looked out from Ralph's eyes.

The engine bell rang. The slow puffing of the locomotive began. The train moved out, increasing in speed as it went, until the last car swept by. Still Nathan stood motionless and silent. At last he wavered, and Ralph, who thought he was going to fall, slipped his arm under that of his friend and turned his face toward the hill.

"We'll go back home," he said.

They went by unfrequented streets, where they would meet few people. Some workmen going early to work turned and looked back at them and laughed. Nathan winced but said nothing. At University Place the two young men turned and went in toward the campus. When they reached Dean Robinson's house they stopped. The shades were still drawn, but smoke was rising from a chimney.

With his arm still locked in that of his companion, Ralph started to mount the steps.

"Where are you going?" Nathan asked.

"We're going to have it out with the dean."

Disreputable in face and clothing as he was, Nathan did not demur. His power to protest was gone. Ralph rang the bell, and the dean himself came to the door, fully dressed. He motioned them to enter. They followed him down the hall and into his study, where a wood fire was burning on the hearth. Nathan instinctively took a chair where he could crouch over the warm blaze.

"I've been expecting you," the dean said to Ralph. "I heard that you were out looking for him, and I knew you would find him and bring him here."

"Yes, I found him at the Union Station. He was about to take a train out of the city. He himself did not know where he was going. I induced him to change his mind. I have not asked him a question. I do not know where he has been or what he has done. You gave me three days to bring him back. This is the morning of the second day."

The dean looked at the speaker inquiringly. "Was not that before this final break?"

"Yes, but it was this final break that brought him to the end of the road. He has turned back. He needs help now as he never needed it before, as he never will need it again. Dean Robinson, you can save him."

The dean sat and gazed long and thoughtfully into the fire. The sense of college discipline, which he must maintain, and his own human sympathy and love, which he could not keep back, were warring against each other.

and now stood erect; the light of devotion and determination was in his eyes.

The dean turned again to Ralph.

"Will you vouch for him?" he asked.

"With all my heart."

"That's all this morning," the dean said, rising. "I promise you nothing, Orchard. The matter may be taken entirely out of my hands. Take Brill to his room. Keep him there for at least two days. As soon as he is able set him to work. After that, if you hear nothing from me send him to his classes."

"Dean —"

"Not a word. Take him away."

But he shook hands with both young men, and led the way to the street door.

The college walks were still deserted. The fog was scattering, and the April sun was flooding the campus with the yellow glow of morning. Birds were chirping in the trees, which were just coming into bud. On the broad sweep of lawn a thousand gems of dew were glistening. On all things lay the touch of glorious spring.

From a window the dean watched the two young men until they entered Allingham Hall; then he went back to his study, sat down at his table and wrote a telegram to Nathan's father.

Adam Brill had already received the letter that the dean had written to him. It reached him on the evening after Nathan's disappearance. The letter was brief and to the point. It read:

Your son has reached a point where dismissal is only a matter of days. I think it extremely advisable that you should come on here at once. When you reach the city, call on me.

Arlington E. Robinson, Dean.

The letter was not wholly unexpected. There had been previous warnings. Within two weeks Brill had written to his son a peremptory demand that he should mend his ways. Since then he had had no word from him. Whether the silence boded good or ill he did not know; but as the days went by his fear had grown and robbed him of all comfort and rest. When the dean's letter came, Adam Brill knew that he must face the inevitable. His boy's college career had doubtless come to an inglorious end. Bitterly and cruelly disappointed, he had only to gaze on the wreck of his hopes. It would be a sorry journey for him to the university town.

He went to bed, but not to sleep. Unhappy thoughts and miserable forebodings drove all sleep from him the whole night long. At eight o'clock the next morning his horse was harnessed and at the door. Bag in hand he went down the walk to the gate. The lawn on either side of him was fresh with the tender green of spring. Lilac buds were purpling at the fence. From beyond the meadows came the rippling noise of running water. Over all the sun shone. But Brill saw nothing of the splendor of the April morning.

Then flying down the road from Little Bethel came a boy on horseback with a telegram for Brill. As Adam started to open it his face turned a shade more gray, for he knew that it was from Dean Robinson. It read:

Son in good hands. Hopeful outlook. Do not come unless I advise you later.

He drew a long breath, replaced the telegram in its envelope and thrust it into his pocket.

"Put the horse up, Jim," he said to the man who stood waiting. "I won't go to-day."

Jim stepped into the wagon and drove the horse back up the lane toward the barn. The messenger from Little Bethel swung round and went lazily up the road.

But Brill did not reënter his house. He stood there by the stepping-stone on which his bag rested and looked off across the fields toward the river. Then he took the telegram from his pocket and read it again.

As he was folding it for the second time Stanley Orchard came sauntering up the road. Brill did not see him at first. It was only when he heard footsteps on the hard side path that he looked round. There was a smile on Orchard's face as he approached, and the thought flashed through Brill's mind that Orchard knew of the sad crisis in Nathan's college career, and was gloating over his knowledge.

"Good morning, Adam! It's a fine day." Through all their twenty years of differences and antagonisms Orchard had never failed to greet his rich neighbor on meeting him, except on that one morning at the station when Ralph had started for college. Brill gave a nod of recognition and Orchard passed on. It was strange, Adam thought, that his neighbor should be careless and light-hearted when disaster was looming ahead of him; for it was now a foregone conclusion that the ejectment suit would be decided at the coming June term of the county court in favor of Brill, and that Stanley Orchard would be dispossessed of the home in which he had lived for almost twenty years.

As Brill gazed after the retreating figure the question that Nathan had propounded to him on Christmas night came again into his mind,

NORTH FORTY EAST

By Homer Greene
In Ten Chapters Chapter Eight

IT was not at first apparent to Ralph whether Nathan realized who it was that had stopped to speak to him, or whether he had assumed his gruff

train of coaches behind it slowed down and stopped. People crowded about the steps of the cars. In the confusion no one noticed the two young men moving down the platform and stopping at the entrance to the first coach.

To Ralph the moment was appalling. What should he do? Restrain him by force? Call an officer? It was a matter of life or death for a soul. It was time to act. He gave a sudden

manner to discourage advances, even from a friend. Yet he did not try to shake off the firm hand that had been laid on his shoulder.

"I want you," Ralph repeated. "Come along with me."

"No," replied Nathan, "I can't. I'm waiting for a train."

He had lost his overcoat, and the penetrating April morning air had chilled him through.

"You're not going away?"

"I am going away."

"Where?"

"I don't know. Anywhere. The farther the better."

"You have no money."

"I'll beat my way."

"Oh, no! You're coming back up on the hill with me, to get warm and to sleep. And when you're rested we'll talk it over."

"There's nothing to talk over. Oh, I know. It's all up with me. I stretched the thing to the limit and it broke; that's all."

"It's not all up with you, Nate. There's a way out. There's always a way out. Come with me and I'll prove it to you."

"You're kind," Nathan's voice took on its old, affectionate tone. "You're kind, but it's useless. I know. The hill is gossiping. The dean is scandalized. He has written to my father. I'm going. The sooner I'm gone the sooner the whole thing will be forgotten. I've disgraced everyone who ever cared for me."

"Nonsense!" exclaimed Ralph. "The dean told me he would do anything on earth to save you."

"The dean is the best-hearted man in the world; but it's too late. I've got beyond it."

It seemed useless to try to reason with him, so complete was his despair; but Ralph had not yet exhausted his methods of appeal.

"You'll break your father's heart," he said. Nathan stood for a moment in silence.

"My father will come here," he said slowly; "that's one reason why I'm going. I can't face him."

"Nor can I face my mother and tell her that I stood here with you like this and let you go."

"Your mother, yes; there's the rub. It'll hurt her, I know. But when she learns what I've done already, she'll never want to see me again anyway. It's no use, Ralph, I'm going. The train's coming now. Good-by, old man!"

He held out his hand to Ralph, and started down the platform, limping a little as he walked. Ralph took the outstretched hand in one of his, but still retained his grip on Nathan's shoulder. With rumble and roar the engine went sliding by them, and the long

DRAWN BY B. J. ROSENMEYER

IN A FLASH BRILL REALIZED THAT HE HELD IN HIS HANDS A FIELD BOOK THAT HAD ONCE BELONGED TO CLEM OWENS

wrench to his companion's shoulder and swung him round so that they stood face to face.

"Nate," he cried, "I won't have it! I don't deserve it. You're treating me worse than you would treat a dog. This is the one big thing I've ever asked of you, and I tell you you've got to give it to me. Do you hear? You've got to give it to me."

Nathan looked at him wonderingly. He had never before seen his friend in such an outburst, except possibly on that day on the hill when Ralph had told him to go. The memory of that incident flashed now across his mind.

"I know, Ralph; you've been a thousand brothers to me, but —"

"And I'll be a thousand brothers to you yet, if you'll only be fair and decent with me. You can't go on that train. I'll knock you down first. I'm in dead earnest, I tell you."

He had taken his hand from his companion's shoulder, and his fists were clenched at his sides. But it was not the fear of physical

"I don't know," he said at last. "There will be a faculty meeting this morning. If there were any excuse, any defense, any explanation — Brill, what have you to say?"

The young man roused himself.

"I've no defense. I've earned my punishment, and I'll take it without a word."

But Ralph interrupted. "He's had his punishment. He'll feel the pain of it for years. He's in my hands now. I've brought him back this far; I want to take him the rest of the way."

"What have you to say, Brill?"

"Nothing—except that it's true as he says," answered Nathan humbly. "I'm in his hands. I'm asking nothing for myself. I deserve nothing—except punishment. But whatever he wants me to do, here or elsewhere, I'm going to do it. That I promise. He's done a thing for me that no one else on earth would have done, or could have done. He can ask anything he wants of me and he shall have it."

He had risen from his chair as he spoke

as it had come many times since the boy had asked it: "Is it worth while?" Was it indeed worth while to pursue relentlessly as he had done, as he intended to do, this simple-minded neighbor whose only fault was his reckless indifference to the serious business of life and whose only vice was the wagging of his boastful and irritating tongue?

Since that winter night, the memory of which clung to him with a strange persistence, Brill had gradually been losing his zest in the pursuit of his adversary. The contemplated pleasure in his coming victory was growing ever and ever less keen in his mind. The grim joy of the hunt was palling on his taste. But at this stage of the pursuit he could not afford to give up and stand beaten and humiliated in the eyes of all his neighbors. If wrath and resentment were disappearing, pride remained and forced him on.

Orchard was indeed light-hearted as he passed on leisurely up the road toward his home. The beauty of the spring morning appealed to him. As he walked, he whistled a response to the happy birds that seemed to be calling to him from the trees. In this glorious April sunlight impending disaster seemed to him far away. He knew what his fate was to be as well as his rich adversary did, but he thought of it to-day as only one of the many misfortunes that had followed him all his life, from which there was no way of escape. In his own words, he was "ready to grin and bear it."

The important thing was that, no matter what disaster might fall upon him, the royal road to learning along which his son was making such splendid progress could not now be successfully blocked.

At a turn in the road Orchard, looking ahead, saw Old Tompkins hobbling toward him. When they came abreast of each other the old man stopped, leaned with both hands on his cane and looked up without speaking.

"Well, Tompkins," said Orchard, "how's the walking this morning?"

"Jest as good fer me as 'tis fer you."

Orchard laughed.

"And better for Clem Owens," continued the old man, "than 'tis fer either of us. He's dead."

"What? Clem Owens dead?"

"Yep; died twenty minutes pas' five this mornin'. Bfuk the compac'."

"The what?"

"The confidential compac' 'twix' him and me which was to las' till death do us part."

"You don't say so?"

"Essackly. Ain't nothin' hid now that shall not be made known."

"Guess that old survey book of his is hid good and safe, all right."

Old Tompkins gave a cackling laugh.

"Stanley, you 'member how I done chores fer ye when ye was sick las' spring?"

"Sure I remember it. Gave you twenty-five cents a day."

"That's right. And when it come to where ye could use a man fer a full day's work ye jumped over me and hired Abe Groner fer a dollar forty. 'Member it?"

"Why, Tompkins, you couldn't do a full day's work to save your soul!"

"Mebbe I could and mebbe I couldn't. Didn't git no chance to try. It's a long lane 't has no turn, eh, Stanley?"

"That's foolish, Tompkins. I had to hire some one that would give me my money's worth."

"Jes' so! When ye want some val'able information, Stanley, jes' you go to Abe Groner and git your money's worth."

The old man shaded his eyes with his hand and gazed down the road so intently that Orchard, too, turned to look in the same direction; but nothing unusual was to be seen.

"What are you driving at this morning, anyway, Tompkins?" asked Orchard.

Old Tompkins put his curved hand to his mouth and whispered shrilly, "Nawth fawty east, eh, Stanley? Nawth fawty east."

He looked quizzically at Orchard, laughed a little, and then turned his face down the road and hobbled on. Orchard stood for a moment gazing after him and wondering at his foolish resentment; and then he, too, laughed a little and turned and went his way.

When Old Tompkins reached Adam Brill's place, he opened the gate and went up the path to the house, with his cane clattering noisily on the flagged walk. Brill was seated on his side veranda still considering his controversy with Stanley Orchard. He had determined to carry his case at law to its inevitable conclusion; his self-respect demanded it. His lawyer had told him that his case was perfect—if Clem Owens' old notes of survey did not turn up in the hands of his adversary. The possibility that such an unfortunate thing might happen had of late given him some uneasiness. Suppose at the trial of the case Orchard's lawyer should suddenly produce the notebook, prove it and put it in evidence? There would be a quick and disastrous ending of his suit. He would have to meet the gibes of Stanley Orchard and the ridicule of the whole community.

That the book should turn up was of course a remote possibility, for he had searched the township over for it without finding any clue;

but suppose it should appear? Those thoughts were passing through his mind when he saw Old Tompkins come clattering up the walk. Without any invitation from Brill the old man climbed to the veranda and seated himself in a chair.

"Goin' to be a right fine day," he said, when he had recovered his breath.

"Looks like it," replied Brill shortly, for he was not greatly pleased at the intrusion.

"Hear about Clem Owens dyin'?"

Brill faced the old man with awakening interest.

"No. Is Clem dead?"

"Yep. Died this mornin' at twenty minutes pas' five. Bfuk the compac'."

"So Owens was dead. Might not his death in some unexpected way reveal the whereabouts of the old notebook? The thought disturbed him so much that for the moment he did not realize the oddity of Old Tompkins' remark

about the compac. When his mind did recur to it, he asked, "What was it you said about a compac?"

"I said that the secret compac' betwix' me and Clem is bruk by death and I ain't under no more obligations. On things that was hid the light of day shall now fall."

As he spoke he took a small parcel from the inside pocket of his coat with trembling fingers, untied the twine that bound it, removed the many folds of brown paper that covered it, and handed it to his host. In a flash Brill realized that he held in his hands a field book that had once belonged to Clem Owens. His heart beat fast as he turned the leaves, and his fingers trembled. On a certain page he found the heading "Oct. 26th, 1867," and under it were the notes of the survey made by Owens on the day he ran the division line for Adam Brill and Stanley Orchard!

TO BE CONTINUED.

THROUGH A FOREST FIRE

By Grayman Andrews

POKING a potato from the live ashes of the camp fire, Ned Darrow jabbed it with a pointed stick.

"Huh! Hard as a bone. Well, back you go!" he exclaimed, and rolling the potato into the fire again covered it with ashes.

He went and squatted on a log where he could not catch the tantalizing odor of the half a dozen brook trout that were toasting on a slab before the fire, and gazed round him. Behind him lay the tumbling heights of Eagle Crag, from which two mountain chains branch out to form a giant V—Indian Range to the east and the Bitter Berries to the west. In front of him lay the inclosed valley known as The Valley of the Lost Shepherd. Far to the south, where the mountains lie farthest apart, there is a gently undulating patchwork of apple orchards, but at the point of the V the valley becomes a rugged cañon that ends far up the slope of Eagle Crag.

Ned's tent was pitched near the mouth of that cañon beside Bitter Creek, which races tempestuously out of the deep gully and winds down the valley.

John Larkin, a traveling salesman, had employed Ned as guide for his annual hunting trip; and he had not made a mistake in his choice. Darrow was a boy of the outdoors. For eighteen years he had lived in that part of western Washington, and he knew the mountains thoroughly.

As the sun rose over Indian Range, Ned started from his reverie.

"Time to get up!" he cried, throwing a stick at the tent. "What do you think this is, a rest sanatorium for invalids?"

A sleepy yawn answered him; then a voice more sleepy than the yawn. "Ned, you're a hard master [yawn]. Do you always [another yawn] get a fellow out this early?"

"Early!" Darrow scoffed. "I've caught and toasted a mess of trout since early morning. Shake round in there. How can you expect me to show you a bear if you sleep until noon?"

John Larkin, a clean-cut, energetic, businesslike man, thrust his tousled head out of the tent.

"What a morning!" he cried enthusiastically. "We'll get a bear to-day, Ned."

Their expedition took them far back into the cañon that morning—so far that there was nothing to remind them of civilization except a plank-ribbed board tube, about four feet square, that was strung along the side of the gulch two hundred feet above the creek. The tube was an irrigating flume that carried a stream of water from the source of Bitter Creek down to the apple orchards miles away; it ran down the cañon with just enough fall to make a steady current, while Bitter Creek foamed and raced and fell over the cataracts and falls, farther and farther below the man-made waterway. Occasionally, as the hunters crossed a small clearing, a flock of grouse whirled into the air; once a coyote loped over a ridge and met a bullet from Larkin's 30-30; but they could find no trace of a bear.

As they were resting at noon, Darrow looked up with a puzzled expression on his face. "Do you smell anything, Mr. Larkin?"

The older man sniffed in all directions.

"No, I don't—well, yes, now I do. What—"

"It's smoke." The boy jumped up and pulled Larkin to his feet. "There's a fire somewhere. Come on."

Ned had turned pale. Racing at top speed to a little ridge from which he could survey the cañon, he jumped upon the highest point and fixed his gaze toward their camp, which now lay far below them.

"There—there it is—a forest fire!" he cried, pointing.

A column of smoke rose from the heavy pine woods between them and the camp. As they watched, too much dumfounded to move, a tongue of fire licked up the sides of the cañon, like two long arms spreading out to make sure that the trap was closed. The column of smoke changed into a long, unbroken, devastating

blanket that swept up the gulch toward them. They were caught like sheep in a runaway—Eagle Crag was at their backs, Indian Range and the Bitter Berries shut off their escape to left and right, and fire was in the cañon below them!

Larkin stared in alarm, first at the advancing line of fire and then at the mountains.

NED TUGGED AT LARKIN'S SLEEVE AND PLUNGED INTO THE TUBE

"We're trapped, Ned!" he cried huskily, as he realized their position. "What can we do?"

Darrow was searching his mind for a plan of escape. Stories of forest fires and plans for fighting them flashed through his mind. He tried to remember some accessible clearing big enough to shelter him and his companion; but there was no large open space that they could possibly reach.

"There must be something that we can do," Larkin said, seeing the hopeless look on his guide's face.

"We'll back-fire, but I'm afraid it's too late."

They worked like mad gathering brush, chopping wood and piling it under one of the smaller trees. Then they touched fire to it and began to spread the blazing branches.

The long line of licking flames and belching smoke below them had swung its ends round in a semicircle, and was racing up the gulch not a mile away. Huge blankets of ash rose and whirled like storm clouds; a murky pall of smoke hung over the entire sky. As it grew darker, larger flames spit their tongues high above the trees, and the crash of falling pines became a continuous roar.

Pausing breathlessly in their work, the two men looked from the advancing fire to their small, retreating back fire.

"It's no use," said Larkin. "Can't we climb over the mountain to a clearing?"

"It's more than six miles. The fire will be here in fifteen or twenty minutes—" He stopped short and looked toward the flume.

"Come on—run!" he shouted. Throwing aside their rifles, they clambered

up the steep slope. They cut their hands on the rocks and tore their clothes on the brush, but they never paused. As they reached the flume and jumped upon its board covering, a large black bear met them, but only growled menacingly and passed on. With Larkin close behind, Ned ran down the flume to a place where the roof boards had been removed.

"As soon as the—the fire—gets too hot for us," he said, panting, "we'll crawl into this flume—and float down—through the blaze. The boards and water will protect us enough if—if it doesn't burn through and let the water out before—the fire passes."

Larkin looked at the wooden flume doubtfully; but when he glanced down into the fiery mouth of the cañon, his hesitation vanished.

"Good!" he shouted. "But how shall we get out?"

Ned put his hand on the axe. "Chop."

The fire was scarcely a quarter of a mile away. Its hot breath was on their faces. Mid-day had been changed into midnight—a night hideous with the roar of fire and the screams of wild animals.

Ned tugged at Larkin's sleeve and, shouting something that was drowned in the terrible

din, plunged into the tube. Larkin followed him. Although the icy water made them gasp, it was a welcome change from the hot air outside. The flume carried a stream two and a half feet deep; they could wade and float down the current.

As they went on—seemingly for miles into the inky blackness—the rumbling of the fire increased. The water grew tepid and the air became stiflingly hot. Ned knew that if they could stand it only a few minutes longer they would be safe beyond the line of fire.

After minutes so long that they seemed like hours, the roar began to diminish and the air partly cleared itself of the intolerable smoke. Ned grasped Larkin's arm and they tried to stand against the current while he chopped at the boards. To their horror the water so hindered his strokes that he could hardly make an impression with his axe. They could not keep a foothold against the current for more than a few seconds. They were trapped in the flume!

Neither spoke a word as, hacking, pounding, slipping, struggling, they were driven slowly down the flume. Each realized his fate. Farther down, a small valley cuts the side of the cañon and intercepts the course of the flume. At that point there is a long sag, and the water fills the entire tube. There they would be drowned like rats in a cage.

As the current bore them slowly downward, they chopped and tore at the planks like madmen. In two or three places the walls were beginning to burn through, and tiny streams of water were trickling out.

Perhaps there was still hope, for Ned remembered that just above the sag there was a gate in the side of the flume, which was occasionally opened to empty it. If they could open that gate from the inside, they could crawl out. The water, gurgling as it poured down into the depression, roused him to action.

"Larkin, Larkin," he shouted, "over to this side! Quick!" A gleam of light was shining through a slit above the gate. "Get your fingers in there and hang on!"

Ned suited the action to the word, and his companion obeyed mechanically. They stood thus, panting and spent, with their hands clutching in the crack and their bodies braced against the gliding, tugging current. Larkin was the first to speak.

"But how—how do we get out?"

For answer Darrow raised the camp axe with one hand and began to strike at the gate. "If we can cut a hole here at the side, we can reach through and slip the bolt that holds it!"

For what seemed an interminable time they clung to the gate and took turns with the axe. Chopping was next to impossible; but finally they hacked a narrow opening and Ned, thrusting his hand through, pushed back the bolt. The gate gave way with a rush, and the prisoners tumbled out after it and rolled over and over down the sloping side of the cañon.

Ned lost consciousness. When he woke, Larkin was chafing his hands and talking incoherently. The boy rolled over wearily and closed his eyes; and if he did not say anything, it was because he was too happy.

*With flocking snowbirds,
up the gleaming straits
Of frozen rivers edged
with silent pines,
Glad February speeds
on flashing skates,
His wallet stored with
merry Valentines.*

FACT AND COMMENT

REPUTATION is precious, but character is priceless.

Your Written Letter speaks for You to Me;
Then have it Clean and Bright as you would be.

PERSEVERANCE always wins in the long run—usually in a walk.

AMONG the Canadian war exports are fifteen hundred miles of rails that various Dominion railway companies have stripped from their roadbeds and shipped to France for use in the spring military campaign.

THE indomitable spirit of France seems embodied in Gen. Amanrich. Having been retired as a general, at the age of sixty-five, with the decoration of the Legion of Honor, he immediately reenlisted as a private soldier.

THOSE Americans who have bought the birthplace of Lafayette and announced their plan to make it a home for disabled French soldiers have added another link to the chain of friendship that binds the United States and France together. The *château*, which stands in southern France and which is old and picturesque, was purchased of Gen. Lafayette's great-grandson, the grandson of his only son, George Washington Lafayette.

TO say that an army is decimated means, strictly speaking, that it loses a tenth of its men. If, then, an army is decimated ten times, what is left of it? An English publication that raised the question, because the war correspondents so frequently misuse the word "decimate," was astonished to find that many of its readers think there would be nothing left of it. In point of fact, an army of 100,000, decimated ten times, would still number 34,870 men. Figure it out for yourself.

THE Lutheran churches, which have a membership of about four million in this country and of seventy-six million in the world at large, have already begun to celebrate the four-hundredth anniversary of the Reformation. October 31, 1517, was the day when Martin Luther nailed his theses to the door of Wittenberg church. Through the coming year there will be many pilgrims to Trappe, Pennsylvania, where the oldest Lutheran church in America stands. The building was erected in 1743.

BIRDS that remained in the North this winter and bird visitors to the North have found their lot pleasanter than usual, because many park officers are following the good example that private persons have set them in scattering food where the birds will find it. The Biological Survey recently sent out a bulletin that commends the practice and that offers many practical suggestions. Park feeding stations not only save the lives of many birds but also offer city dwellers an excellent opportunity to study bird life.

THE year 1916 made the heaviest drain on the mineral resources of the United States that they have ever known. The output of our mines was worth at least three billion dollars, and our minerals were never extracted with less waste or used to better advantage. Copper stood first, with an output of more than two billion pounds and a value of \$520,000,000—a value more than twice as great as that of the copper mined in 1915. We produced 75,000,000 tons of iron, 597,500,000 tons of coal—in both cases more than we ever produced before in a single year—and 292,300,000 barrels of petroleum.

HOW few of us realize that the simplest courtesy on our part may give a stranger in the community an impression of it that he will always cherish! Not long before Christmas a woman from the Far West who was

visiting in New York City lost a small parcel in the crowded subway. She had addressed it for mailing, but had not yet put on the necessary stamps. Nevertheless it reached the person for whom it was intended. Some one had picked it up, put on the stamps and mailed it. When that woman goes home and hears some one say that New Yorkers are selfish, she will tell the story of that parcel, and those to whom she tells it will repeat it to others, and they in turn to others still; and so the little wave will go in an ever-widening circle. Many a city has spent thousands of dollars for advertising that was less effective.

ONE-MAN POWER

AN interesting discussion, which unfortunately took a semi-political turn, occurred in the United States Senate on the resolution proposing that the Senate approve the President's note to the European belligerents. The resolution was opposed on the ground that the conduct of foreign relations belongs exclusively to the Executive, and that any interference by either House of Congress, even a mere vote of approval, would be contrary to our traditional policy and likely to establish a troublesome precedent.

How mischievous such interference might be is easily seen if we imagine the case reversed. Suppose that, instead of being asked to approve an act of the President in relation to foreign affairs, the Senate had been asked to condemn it, and had done so. The action would have completely nullified the influence of the government and subjected it to the deserved ridicule of the world. In the matter of the President's note the advocates of the resolution, although they denied that it violated the unwritten law of custom, nevertheless accepted a skillfully drawn amendment that rendered the resolution harmless, and so it passed with little opposition.

No doubt serious danger may arise from trusting the foreign relations of a country to the discretion of one man, however able he may be; but there is no other way. To allow them to be conducted by a numerous body is to practice "diplomacy by town meeting." No government in the world ventures to do it. All the correspondence and the suggestions of negotiation and arbitration before the outbreak of the present war were carried on without consultation with any legislative body or advice from it; and in each country the declaration of war was made by the executive power. That final act of declaring war our Constitution reserves to Congress; but experience shows that the preliminary diplomatic correspondence may sometimes force the President into such a position that Congress can do nothing else than to declare war.

But although it is obvious that the foreign relations should be in the hands of the President, as they always have been, the power that he thus holds is, after all, merely a derived power. The Constitution does not confer it, or even mention it; but it does intrust the President with the duty of "receiving ambassadors," and that duty has always been held to carry with it the power to decide between a revolutionary government and that which it replaced, and to negotiate treaties. All the rest is inferred, and has been inferred from the first. In 1788 Alexander Hamilton, arguing in the *Federalist* that the President should have the power to appoint the foreign secretary,—that is, the Secretary of State,—casually assumes as a part of his argument that "the actual conduct of foreign negotiations" is a function of the President's. Washington exercised the power from the beginning, and, like all his successors, had a free hand.

It is an admirable rule for every country and for all time that partisan politics cease at the frontier. It will be an evil day for the United States when either party tries to make the acts of the President in conducting our foreign relations a party issue in Congress in order to put the other party "in a hole."

CHARM

WHAT man or woman would not like to be charming? Who would not like to feel that he has a quality certain to win him at once the liking and the interest of those whom he meets? And how many men and women make a conscious and determined effort to acquire that quality, and not only fail but lose character in the attempt!

Charm is not like the moral qualities, which a man may exercise and strengthen. For example, you may enlarge your capacity for prompt and vigorous action, you may increase your power of industry, you may rear qualities of endurance and unselfishness on an unpromising foundation. But if you deliberately try

to acquire a trait that is one not of character but of personality, you do worse than waste your time; you compromise your integrity. Becoming self-conscious in the pursuit of an end that is not to be attained through self-consciousness, you are constantly suppressing your best self. Instead of being a natural person, you become one who is calculating effects. It is, of course, not always reprehensible or demoralizing to assume a spontaneity of manner or a responsiveness that you do not feel; sometimes the exigencies of a situation require a person to make that effort. But there are people who practice the art of being charming,—quite as if it were an art,—who simulate enthusiasm, animation and responsiveness as a means of making themselves always agreeable. They may make a good first impression, but they do not wear well; they soon become tagged as insincere.

CONJUGAL COMPLIMENT

AGIRL gets accustomed to having pleasant things said to her and grows to like it. To be sure, fathers and brothers are occasionally disagreeable, but they are in an altogether different class from other men. In society, at balls and parties, friends and partners say kindly words, pay graceful compliments, and generally appear to regard her as company worth having.

Then the very special young man comes along, and all his speech is compliment, more than compliment, gentle and wooing and tender, until she grows to feel herself of vast importance, at any rate to him. Above all, it is evident that he cannot exist without the constant companionship of his beloved, and rather than imperil his future happiness she consents to make the companionship permanent.

Marriage is a thing of sufficient consequence to a man; but few men can imagine its enormous consequence to a woman. It means the upheaval of her life from its foundations, in every possible way. Among the changes, not the least is the altered attitude of him whose unfailing felicity she hoped to assure by going to live with him. No doubt she has assured it; no doubt she has brought him what in his heart he prizes and appreciates and is grateful for; but his manifestations of that state of mind are disconcertingly different from what they were. The graceful compliments are not forthcoming, and, above all, she discovers that he can live very well away from her and that he does not disguise the fact.

The first tendency is to ascribe the change to the natural brutality of man; but perhaps there are other causes. Laziness has something to do with it. The ingenuity of compliment cannot always be kept up to fever heat. And there is an element of sincerity. When courtship is over, and the struggle of life has begun, and there are rubs and disagreements and frictions, it seems more honest to admit it, and not to salve over frayed nerves with fine speeches. There is a certain justice here, and sincerity is not to be despised; but it should be remembered that sincerity does not, at any rate, require the uttering of disagreeable things. On the other hand, there are always pleasant things that can be said, and they should be said.

What makes happy marriages is not great gifts or great sacrifices. It is not even necessarily great love; for great love is often exacting and harsh. It is just the habit of saying tender and kindly words, of giving at the right moment and in the right way the praise and the affection that make difficulties disappear and that turn rough and barren places into smooth and smiling ones.

GREGORY RASPUTIN

FOR the third or fourth time the newspapers have reported the assassination of Gregory Rasputin, the mysterious zealot who has long maintained a strange ascendancy over the imperial family of Russia. This time the report is more circumstantial than ever, and bears the signs of truth.

Rasputin was a figure that could rise only in semi-Oriental, semi-medieval Russia. The son of a Siberian peasant, without any education to help him forward, he has used his vivid, hypnotic personality to push his way to the most influential position in the empire. He is often called a monk, but that does not mean that he was ever an ordained priest. He was an itinerant preacher, whose voice was lifted up all over Russia against the formalism and corruption of the Orthodox church and in behalf of a primitive, mystic and, as we of the West would say, superstitious Christianity. His influence over the Czarina began when he foretold the birth of her only son. She

brought him to court, and he soon became powerful there. When, after the physicians had given up all hope of the little Czarevitch's recovery from a serious illness, Rasputin declared that the child should live, and wrestled in prayer by his bedside for three days and three nights, the Czar also submitted to the singular spell of the man.

For several years before the war broke out this dark, eager, ambitious priest was the real ruler of Russia. As you read of him you are reminded of Father Joseph, the gray Capuchin who exerted so potent and occult an influence over the France of Richelieu; but Joseph was a silent, impassive aristocrat; Rasputin was a virile, passionate plebeian, whose power was psychic rather than intellectual.

His life was often in danger from conspirators, for he had many enemies, both among the bureaucrats, whose master he had made himself, and among the liberals, whose hopes for Russia he had more than once defeated; for he was a reactionary—a believer, not in a reborn and advancing Russia, but in the Russia of the past. When the liberal members of the Duma spoke of the "dark forces" that retarded the social and political reforms that they urged, they had Rasputin in mind as perhaps the most potent of them all. He had become, we are told, friendly to Germany and suspicious of the alliance of Russia with the democratic nations of Western Europe. His influence with the Czar, it is reported, led to the fall of Sazonoff and the appointment of Stürmer, a pro-German, as premier. Apparently the opposite forces became too strong for him before his death,—if that has really occurred,—for Stürmer in turn gave way to Trepoff. But the assassination of Rasputin was followed by the return of the reactionaries to power, since it aroused the anger of the Czar against the liberals, who if they did not commit the deed approved of it. The death of Rasputin is likely to be a significant event in the dramatic struggle between autocracy and democracy that agitates Russia quite as much as the war it is waging against its external enemies.

IN TIME OF WAR PREPARE FOR PEACE

PEOPLE who criticize the peace societies for being inactive during the greatest war of history evidently do not know that, little as the societies can accomplish in Europe, they are profitably busy elsewhere. The Carnegie Endowment for International Peace, to cite one instance, is doing educational and constructive work of greater scope than ever before.

The most important field in which the Endowment has been laboring is South America. Now that financial and commercial needs have brought the two continents face to face, the Endowment is using every means to get the peoples of both to understand each other and to work together for peaceful international relations.

One of the measures taken to that end was the visit of former Senator Theodore E. Burton to the principal South American republics. Following close upon the tour of Mr. Robert Bacon, it kept alive interest in the practical question of ways and means. The reports of the two trips, printed in Spanish, Portuguese and English, have been in great demand.

Especially important is it that mutual understanding and coöperation between the countries of North and South America should be shared and formulated by their scholars, economists and publicists. With that end in view, the Endowment very much increased the size and effectiveness of the Second Pan-American Scientific Congress, held last winter in Washington for ten days during December and January, by inviting guests from all the South American republics in addition to the delegates appointed by the several governments. After the adjournment of the congress, many of the guests visited the educational centres of the East. The hospitality they received and the things they saw will help to give them a friendly understanding of our people.

Even more useful as a means of bringing together the thinkers of North and South America for mutual public benefit was the founding of the American Institute of International Law, which was formally inaugurated in connection with the Second Pan-American Scientific Congress. Its objects are to formulate the principles that should govern the relations of the American peoples with one another and to disseminate those principles in each of the twenty-one republics so as to create a Pan-American public opinion favorable to them.

There is a chance, while in Europe the old

rules are proving inadequate, to harmonize international law with the ideas of justice that are held in the Western Hemisphere. Whatever a peace endowment can do toward that end is worth doing.

CURRENT EVENTS

CONGRESS.—The House voted 193 to 153 against the proposal to abandon pneumatic mail delivery in Chicago, St. Louis, Philadelphia and Boston, and to cut in two the tube service in New York.—Mr. Daniels, Secretary of the Navy, went before the House naval committee and testified that he had broken off negotiations with private ship-building companies, particularly the Fore River Company, because they asked what he believed was an exorbitant margin for "profit and overhead charges."

VIOLATION OF NEUTRALITY.—A jury has convicted Franz Bopp, German consul at San Francisco, of violating the neutrality of the United States by plotting the destruction of ships sailing from Canadian ports. Four members of his office staff were convicted at the same time.

MUNITIONS EXPLOSIONS.—On January 11 the works of the Canadian Car & Foundry Company at Kingsland, New Jersey, caught fire, and thousands of shells, which were being made for the Russian government, were exploded. No one was killed, but the loss was put at nearly or quite \$17,000,000.—The next day the Du Pont

A MUNITIONS FACTORY IN NEW JERSEY WRECKED BY AN EXPLOSION

powder works at Haskell, New Jersey, blew up. Two persons were killed and several injured; the loss was \$1,500,000.—There were of course rumors that both disasters were incendiary in origin, but when this record closed there was no proof that such was the case.

THE "LEAK" INVESTIGATION.—The Committee on Rules, having received broader powers of inquiry, with the authority to engage counsel, from the House of Representatives, resumed the investigation of the rumors that connected government officials with the stock-market flurry that followed the President's peace note. Mr. Thomas W. Lawson was the chief witness. His evidence was wholly hearsay, but in the course of his testimony he mentioned the names of Secretary McAdoo and Mr. Warburg of the Federal Reserve Board as having and perhaps using advance knowledge of the President's note, and repeated the charge that the news had come through Mr. Tumulty, the President's secretary. He named Harvey Fisk & Sons, Bernard Baruch and C. D. Barney & Company, New York stock-broking firms, as having knowledge of the "leak," and repeated the report that Count Bernstorff had profited by it in the stock market. Many of the persons named were subpoenaed, and under oath denied the allegations concerning them.

ADM. GEORGE DEWEY

RECENT DEATH.—On January 16, Adm. George Dewey, aged 79.

PEACE NOTES.—On January 11 the reply of the Entente governments to President Wilson's peace note was made public at Washington. It declared that the aims of the ten allies, which they must insist on if peace were to be discussed, included: Full restoration of Belgian, Serbian and Montenegrin territory with a payment of indemnity to each nation; the evacuation of occupied territory in France, Russian Poland and Roumania, together with reparation to each country; the restoration of Alsace-Lorraine to France; the expulsion of Turkey from Europe; the liberation of Italians, Poles, Bohemians, Serbians and Roumanians now governed by Austria-Hungary, and satisfactory guarantees, through a reorganization of the European nations, against another such war as the present one. The reply was felt to make further discussion of peace unlikely, for German public opinion was quick to declare that the Central Powers could discuss such terms only in case of their complete defeat. Herr Zimmermann, the German foreign minister, said that his government could not with dignity make public

the terms it had been ready to discuss, since they were so moderate that the world, in view of the Entente reply, would take them to be equivalent to a German surrender.—On January 17 another note, explaining more in detail the aims of the Entente, was handed to our government by the British ambassador.

MEXICO.—On January 15 the American-Mexican joint commission dissolved; its sittings were without definite result, since Gen. Carranza has declined to agree to the protocol it drew up. The American commissioners recommended to President Wilson that he send an ambassador to Mexico and try by diplomatic negotiations to arrive at an agreement concerning the protection of American life and property in Mexico and the policing of the border between the two countries.

THE EUROPEAN WAR

(From January 11 to January 17)

The armies of Mackensen and Falkenhayn pushed slowly forward to the river Sereth, and on January 15 Berlin declared that the last position held by the Russians on the west bank of the lower river had fallen into German hands. The passage of the Sereth has not yet been attempted. On the eastern flank, the city of Galatz, the last important place on the Danube still in the possession of the Russians, was under bombardment.

On the other flank, among the foothills of the Carpathians and along the upper Sereth, the German advance was less marked; indeed the reports from Petrograd declared that the Russians were on the offensive there and that they had checked the enemy north of Peshani and in the valley of the Kasino, which is a tributary of the Sereth.

In spite of the severe winter weather the Siberian troops on the Dvina front near the city of Riga continued their attacks and gained several villages from the Germans along the river Aa. It was not clear how serious an affair the Russian drive was intended to be. Berlin declared that it could not in any event divert any troops from the Roumanian front.

On the French front the artillery was chiefly busy, although the British made successful trench raids near Beaumont-Hamel.

In Egypt and Mesopotamia there was more activity. The British expedition that took El Arish on the peninsula of Sinai moved north-east, drove the Turks out of their positions at Rafa, and took about sixteen hundred prisoners. Rafa is only about sixty-five miles southwest of Jerusalem. Conflicting reports came from Kut el Amara. The Turks declared that all assaults had been repulsed; London gave out word that the British had cleared the right bank of the Tigris and were making steady advances toward Kut.

The Entente Powers notified the Greek government that its reply to their ultimatum was not wholly satisfactory, and that the blockade would be lifted only when the Venizelist prisoners were set at liberty and the disarmament carried out. It was rumored at Rome that the Entente Powers were considering deposing King Constantine and making the Duke of Aosta, cousin of the King of Italy, king in his stead. The action of the Italian government in calling out fresh classes of troops was interpreted as bearing out that rumor.

The British battleship Cornwallis was sunk by a submarine in the Mediterranean; thirteen of the crew were lost. The Japanese cruiser Tsukuba blew up in Yokosuka harbor; one hundred men were drowned. The central committee of French shipowners called the government's attention to the danger that the French merchant marine would disappear if the submarine activities of the Germans were not checked.

The German government made public the statement of a survivor of the U-41, which was sunk by a British patrol ship flying the American flag. The statement throws additional light on the bitterness of feeling between the submarine crews and their enemies.

The rumors that a German commerce raider had got clear of the British blockade and was at work in the South Atlantic were substantiated when dispatches from Pernambuco announced the landing there of two hundred and thirty-seven men from vessels sunk by the raider. On January 17 the British Admiralty admitted that a dozen or more British and French vessels had been sunk within five or six weeks, most of them loaded with horses and ammunition. The name of the German vessel was unknown when this record closed.

Great Britain has been deeply stirred by the report of the committee appointed to investigate the reports of improper influence exerted on army officers by persons high in social life. The committee found that Mrs. Cornwallis-West, a leader in London society, and the mother of the Duchess of Westminster and the Princess of Pless, had used her influence first to advance and then to break a young officer, and severely censured the lady herself and the officers who had yielded to her influence. The report even mentioned Viscount French as having been unduly complaisant to highly placed ladies during his command at the front.

31 Extra Features
24% Added Luxury
100% Over-Strength

Mitchell
SIXES

Now Also
An \$1150 Model

Your Mitchell dealer now can show you the Mitchell in two sizes. One is called Mitchell Junior. It is simply a reduction of the larger Mitchell.

It is for men who want a 5-passenger car, and who don't want to pay for size and power not needed. It has 40 horse-power

—enough for five passengers. It has a 120-inch wheelbase—more than ample room.

It brings all the Mitchell attractions—nearly all the Mitchell extras—in a car at a lower price. We have doubled our capacity to build as many as we build of larger Mitchells.

Hundreds of Extras

In both the Mitchells you will now find hundreds of extra features.

There are 31 features—like a power tire pump—which nearly all cars omit. To include them this year on the Mitchell output costs us \$4,000,000.

There are many added luxuries. We have added 24 per cent to the cost of finish, upholstery and trimming. The Mitchell is now one

of the handsomest cars in the world. And savings made in our new body plant pay for all this added beauty.

And the Mitchell now has 100 per cent over-strength in every vital part. That is, each part is twice as strong as need be.

Our former standard was 50 per cent over-strength. That gave us marvelous endurance. But this new standard means a lifetime car.

Due to John W. Bate

All these extras are paid for by factory savings. They are due to John W. Bate, the great efficiency expert, who built and equipped this plant.

Under his methods our factory costs have been cut in two. Nowhere else could a car like the Mitchell be built at anywhere near our cost.

The result shows in these extras. Over 440 parts in the Mitchell are built of toughened steel. The most important parts are built of Chrome-Vanadium steel. Steering parts and axles

are all oversize. Then the extra features and extra luxury are found in no other car at this price.

Go and see these extras. See what they mean to you. It will certainly mean, if you buy a fine car, that you want a Bate-built Mitchell.

TWO SIZES	
\$1460	For 7-Passenger Six—48 h. p. 127-inch Wheelbase.
\$1150	For Mitchell Junior—40 h. p. 120-inch Wheelbase Six.

O LITTLE BIRD, TEACH ME TO SING

By Maud Morrison Huey

OH, why do you sing, sweetheart, sweetheart?

O little bird, why do you sing?
The skies are gray and the cold winds blow,
And the earth is wrapped in a sheet of snow.
The nest you made in the sweet, young spring
Is empty, oh, long ago,
And still you sit in the tree and sing.

And the song is the same, sweetheart, sweetheart;

O little bird, why is it so?
Why do you sing as you sang in May,
When all that you loved has been taken away?
I know you are hungry and cold, although
You sing in the same old way.
There's not a seed showing above the snow.

My life is empty, sweetheart, sweetheart;
O little bird, teach me to sing!
The dreams that I made in early May,
The years have taken them all away.
My hopes lie buried beneath the snow.
O little bird, what do you say?
That the world would be brighter if I should sing?

GOD AND HIS WORLD

HOW can there be a God of goodness and mercy and love when the world is full of agony? If He is all-powerful and all-loving, how can He let such things be? It is the question of tortured souls of every generation—never, perhaps, asked by so many aching hearts as during the past two years. Is there an answer? Does He prove Himself to men, or is He only a dream of the weak and the credulous? Science cannot answer the question, for God is not measurable by mechanical devices but by human experience. At one of the Northfield conferences a speaker described such an experience.

A certain man had become totally deaf and, in rebellion at his misfortune, had lost his faith. Looking at the world through the lens of his own bitterness, he saw only cruelty and injustice. After a while he learned lip reading. It gave him back much of what he had lost, but did not soften his bitterness. He was still angry with the God in whom he did not believe.

One evening, sitting at his window, he saw a man and a woman in the little park in front of his house. Something in their attitude betrayed their misery. He got his glass and "listened"; he could read their words clearly. They had come to the end of their resources, and were saying that the only thing that seemed to be left was to end it all. A fierce anger swept the watching man.

"That," he cried, "is a specimen of God's administration! I can do better than that, at least. I'll take care of those poor wretches myself."

He sent for them and had a long talk with them. As a result of the talk he put the young woman into a school where she could learn to earn her own living and he found a position for the man. The experiment turned out so well that he began to search for other people to help, and still others. His life became very rich and full.

One day he began to think back. The trail led to his own deafness, which had been the direct means of his discovering the first two whom he had helped. Every step of the way was clear; the God he had denied had led him all the way. When he began to do God's work he knew that God was!

It is the proof that never fails. No man or woman can honestly try to live the life of love and service that Jesus Christ asks of his followers and not know that God is—that He is caring for his world to-day exactly as much as He did two thousand years ago, and that the reason there is still such endless pain and sorrow in his world is because there are still so few among the millions of earth who yield themselves to work with Him.

MARIE RIBOT

THE handkerchiefs that Mrs. Lindsay had ordered monogrammed were so exquisitely embroidered that she gave an exclamation of delight when Madame Alphonsine showed them to her.

"Why, madame, they look as if fairies had done them!" she declared, as she bent over the dainty things.

"I am pleased that madame is pleased," Madame Alphonsine replied. "We do our best; it is our reward to be appreciated."

Mrs. Lindsay examined still more closely the exquisite work. "I should so like to meet the woman who did this," she said. "I should like to thank her myself. Would you allow it?"

"But yes," madame replied quickly; "of a certainty. It would be an honor. It was Marie Ribot. She shall come."

That was the beginning. It was many months before Marie Ribot would permit even the beginnings of friendship; months more before Mrs. Lindsay felt herself really given the freedom of the tiny, spotless, two-room home where Marie Ribot lived with her little adopted daughter. Marie was forty-four. Her thin face showed the marks of privation, yet she carried an atmosphere of joy that baffled her friend. What in the hard days of work, the meagre pay, the endless contrivances necessitated by the "small, heart-breaking arithmetic" could bestow such radiance? It was Mrs. Lindsay's problem for months, and at last one day she learned the secret.

Marie, apologizing for keeping at work while she talked, was doing up a tiny jar of jam for a sick friend. From a store of wrapping papers she selected a white piece and cut it thriftily; from a box of string she chose a piece of green, tying it in a tiny rosette; last of all, she picked a leaf of sweet geranium from a plant in the window and slipped it through the bow.

"What an artist you are, Marie!" Mrs. Lindsay exclaimed. "How did you learn it?"

Marie was silent a moment before she answered. Then, "From my grandmother. She—*grandmère*—talked always of the gifts of the good God—always giving, giving to his children. So those who had his love in their hearts must give, too. I was young then, and impatient; and we were very poor. I cried, 'How, *grandmère*, how can we give?' And she said, 'The heart that loves never lacks a gift. Look about you and listen, Marie.' So I looked and listened, especially to her. And I saw how people came to her, and always she gave and gave;

and I saw that often what she had to give was courage, or faith, or kind words about another; and after the blindness dropped from my eyes, I saw that that was what people wanted most. Madame's kind words about my work—what was that but a gift? And then there are so many other things: bits of tin foil, ribbon, bright papers for the children—it is wonderful how they come—a leaf, a blossom. So the good God gives his children the joy of giving."

WRESTLING WITH A GRIZZLY

A FEW years ago Mr. Howard Morgan, a contributor to Forest and Stream, went with a friend named Keppler on a hunting trip into the Semenow Hills. There, on the evening of the first day of their trip, they had one of the most remarkable adventures that have been chronicled in a long time.

We had finished supper, says Mr. Morgan, and were comfortably stretched before the fire. Suddenly we were startled by a most prodigious snorting and grunting, and out of the darkness, accompanied by an avalanche of sand and gravel, slid a big grizzly bear.

With a shout of warning, Keppler sprang backward, tripped and fell directly into the path of the bear. The grizzly, probably more frightened than we were, and grasping at anything that offered to stop his mad flight, caught Keppler round the body, rolled over a couple of times, and brought up with a crash against a big ash tree at the foot of the hill.

Fearing for Keppler's life, I reached for my rifle, but a swirling aftermath of the slide swept me off my feet and part way down the embankment. As I crawled to my knees, I made out by the flickering light of the fire Keppler locked in the deadly embrace of the bear. Backward and forward they slid in the shifting sand; Keppler's long arms were wrapped about the bear's middle, and his face was buried in the brute's hairy breast. As I watched, afraid to move, the hunter slipped, and both fell, with the bear on top. Over and over they rolled, with the man clinging close to the great body, and the beast clawing the air and snapping his jaws viciously.

Keppler, powerful as he was, could not stand the strain for long. His legs, which he could not protect, were torn and bleeding.

I began to realize that I must do something, and that quickly. I scrambled up the bank and dug frantically in the sand for the rifles. At last I grasped one, shook the sand from it and, steadying myself against the great boulder, waited my chance to put an end to the struggle. Suddenly Keppler let go, sprang backward and ducked like a flash, not a second too soon to avoid a vicious blow of those great open claws. I raised the rifle.

"No, no! Don't shoot," Mr. Morgan! I've got him!" called Keppler breathlessly, as he dodged quickly behind the boulder.

The bear rushed headlong toward us, stumbled and brought up against the rock with a thud. His great body crumpled up on the sand, heaved spasmodically, then lay still.

I turned to Keppler; the man was drenched with blood. With a cry of horror I ran to him; but he motioned me aside and, dragging the huge bulk of the bear over on its side, pulled out his eight-inch hunting knife, which, during the battle, he had managed to draw and to thrust up to the hilt into the grizzly's heart.

Except for a violent shaking up and some badly lacerated shins, Keppler was none the worse for his experience.

MAN'S WORK

IN the hills of northern Georgia the Berry School for Boys believes in doing whatever needs to be done. Its motto is, "Be a lifter, not a leaver." But the position that it holds and the ideals that it maintains were not attained without a struggle. In The Men of the Mountains, Mr. Arthur W. Spaulding tells the story of one of the first crises in the history of the school.

The mountain boy was ready to plough in the fields, chop in the woods, hammer on the house; he was not wholly off his ground in milking the cows, cooking his food and making his bed; but there were some things required of him that were too obviously woman's work. The first Monday, Miss Berry summoned her young guard of mountaineers for their first lesson in laundering. The laundry was a wash-tub out under a tree.

"Now, boys," said Miss Berry, "we are going to wash clothes. I will show you how. Then each boy is to wash his own garments."

There was silence, an electric silence, while the mountaineers considered. Then their spokesman, a tall, strapping young fellow, said, "No, ma'am! I ain't never seen no man do no washin', and what's more, I ain't goin' to do it."

Calmly Miss Berry played her last card. "If you will not do the washing," she said, "you may watch me while I do it for you."

Into the tub went her round, white arms. It was her first washing, likewise. Up and down "sloshed" the clothes over the washboard; up and down bent the back of the gentle washerwoman. The boys stood sheepishly regarding her. Exhausted, she finally straightened her aching back and leaned in weariness against the tub. The chivalry of the mountaineer asserted itself at last.

"I ain't never seen it done," declared the boy who had spoken before, "but I'm a-goin' to wash them clothes."

And dashing in, he led his companions in a charge to victory.

A PERILOUS NIGHTMARE

NOT every nightmare is so dangerous as that which the Venerable W. H. Collison describes in his book, *In the Wake of the War Canoe*, which describes his travels and adventures among the Haida Indians in the Queen Charlotte Islands and along the coast of British Columbia.

After our evening meal and prayer we cut away the undergrowth and spread out our mats and blankets. While we were thus engaged our old friend the trader, who was looking on, anxiously inquired, "Must we lie down there?"

"Yes," I replied; "It will be all right when we have spread our mats and blankets."

"I'm afraid to lie down where there are so many reptiles," he replied.

"Oh," I assured him, "there are only harmless field mice and frogs; you need not be afraid."

We assigned our friend a place to sleep in the centre, with Chief Cowhoo on one side, while I lay on the other. In the middle of the night I was roused by a loud whoop, and at the same moment I received a violent blow in the face. I sprang to my feet, believing that we were attacked. Chief

Cowhoo and the other Haidas had seized their guns and stood at bay, peering round for the enemy. The camp fire had gone out and it was dark. "Who struck me?" inquired Chief Cowhoo indignantly. Before I could reply there was another yell, and instantly our friend began to rain blows round him right and left, while he continued to cry out in rage and terror. He was in a nightmare, from which I roused him with difficulty. I told the trader that the Indians who had been hit thought he had gone mad.

"Oh," he replied, "I could not sleep for some hours because of my uneasiness, and when at length I slept I dreamed that a large snake was crawling toward me and trying to crawl into my mouth. It must have been in my efforts to prevent it that I struck out."

I explained this to the Indians, and they burst into roars of laughter at our friend's expense. We all settled down to rest again, thankful it was no worse.

NO SUBJECT FOR MIRTH

Friend (examining photograph)—Ay, it's no so bad, Donald, but you're looking so dour, mon. Why didn't ye smile a wee bit?
Donald—Smile! D'y'e ken I had to pay twa shillings for 'em?
—George Belcher in the Tatler.

MR. TINKER'S STORY

"NOW, tell me all about what you have been doing since I saw you last," said Mr. Buell, the wool buyer who visited the neighborhood once a year, and who always stayed a night at Josiah Tinker's.

"Well," replied his host, "the only thing out of the common was a vacation trip that wife and I took. But I guess she can tell you about that better than I can."

"No, Josiah," said Mrs. Tinker; "it was all your doing, and it's your place to tell the story."

"Well, then, I shall have to go back to a little accident that I met with that wouldn't be worth mentioning."

"My land!" interposed Mrs. Tinker. "I guess you'd have thought it was if you had seen that young man's face when he drove his machine up to the house with Josiah in it. Of course he was some to blame. He was driving faster than the law allows when his machine sited against the cart; and if there hadn't been a cock of hay for Josiah to land on when he was thrown over the fence, I guess some bones would have been broken, to say the least. Josiah made light of it, and wasn't going to take any pay. But the young man seemed to have means, and he was only too delighted to have Josiah sign off for five hundred dollars."

"Well," Mr. Tinker resumed, "having such a sum thrust on me unexpectedly—"

"Josiah allowed it was just like finding it in the road," said Mrs. Tinker; "and he declared from the start that he was going to make it a case of easy come, easy go. I fell right in with that. I thought I should like to see how it would seem to spend money right and left, instead of doling it out. So we agreed to break loose for once, and not get back into the traces till we'd seen the last of that five hundred. Go on, Josiah."

"Well, we started off one day, early in September—"

"It was the middle of September," Mrs. Tinker corrected. "And even then we didn't really know where we should bring up. Josiah was just wild for a sea voyage, but couldn't decide where to. Finally we concluded to go to Boston first and make some inquiries."

"Well," Mr. Tinker went on, "we got there after an all day's ride—"

"I was tired enough to drop," said Mrs. Tinker, "and glad to stay in the hotel. But Josiah was bound to go out that very night, although I was afraid he would get into trouble. Tell him about that automobile accident, Josiah."

"Why, was there another one?" asked Mr. Buell.

"Oh, Josiah wasn't really in this one," explained Mrs. Tinker; "but he got along in time to see them taking the poor man to the hospital. He found out the man's name, and where he lived, and that he was a workman. You were all stirred up about it, weren't you, Josiah? So nothing would do but we must start out the next day to hunt the family up. We found the place in East Boston, and the name was Gilman. She was just back from the hospital, and said her husband wasn't dangerous, but would be laid up for a while. Come to find out, they were Vermont people themselves; and more than that, her uncle married a Tinker. They had two children, and had had a couple of boarders; though they had just left."

"When Josiah heard that, he asked her if she wouldn't like to take us for a while; and she brightened right up and said she would. So we went and got our things; and there we stayed until Mr. Gilman was able to be out."

"And gave up your sea trip?" asked Mr. Buell.

"Well, not altogether," began Mr. Tinker.

"You know there is a ferry plying between East Boston and the city," said Mrs. Tinker, "and Josiah got his sea trip riding back and forth all day on that. It was what he had been hankering for for years; and it did him a world of good. I didn't go quite so much, for I didn't feel just easy on the water. I enjoyed myself just boarding with Mrs. Gilman. It was a change from getting three

meals a day myself; and although her cooking wasn't anything great, I relished it better than I did the hotel fare."

"Somewhat less expensive?" suggested Mr. Buell.

"No, Josiah paid just the same as they charged at the hotel, and I guess it tided them over a hard place. They got nothing from the man who knocked him down with his machine; didn't even find out who it was. They hated to take so much, but Josiah would have it so. What was it you said, Josiah?"

"Well, I said—"

"Oh, yes; you said Mr. Gilman had been injured without getting damages, and you had got damages without being injured; and you wanted to even it up a little. Go on, Josiah."

"Well, by that time our money was about used up—"

"And I suppose some would say that we hadn't got much out of it," said Mrs. Tinker. "But we came home rested, with something pleasant to remember and nothing to regret. What more could you expect from a vacation, anyway? I didn't mean to interrupt you, Josiah."

"Well, I guess that's about all of it," said Mr. Tinker.

ALASKAN DOGS IN ALSACE

WHEN the transportation of supplies through the snow in the Vosges last winter was of urgent importance, the French army authorities conceived the idea of using dog-drawn sleighs, and several hundred trained animals from Alaska, northwestern Canada and Labrador were obtained. With the ending of winter, the dogs continue to be useful in another way. In the London Chronicle, Mr. H. Warner Allen, representative of the British press with the French army, tells how:

They are now being harnessed to two-foot-gauge light railways, which run everywhere behind the front, and they are capable of drawing the heaviest load up the steepest gradient. Eleven dogs, with a couple of men, can haul a load that weighs a ton up the most precipitous slopes of the mountains, and I am told that two teams of seven dogs each could do the work of five horses in this difficult country, with a very great economy of men.

Of the three breeds in service, the best is the Alaskan, although he is perhaps the weakest of them all. His courage never fails, and he will work until he drops.

FOOLING "SUNNY"

HUMAN traits are constantly appearing in our domestic pets, much to our own amusement. If we would only profit by them as we observe them! A real, full-blooded English bulldog has been in our family for seven years, writes a Companion contributor, and as time goes on we find him more and more human.

One of his traits has amused us for years. Sunny, as the dog has been appropriately named, is very particular about his food. Real, old-fashioned dog biscuit is beneath his dignity. When a bowl of biscuit is put down for his supper, he sniffs with disgust and turns away. But resting conveniently close at hand is a little papier-mâché model of a bulldog that rejoices in the name of Fido. All that we have to do in order to bring Sunny back to his bowl is to call "Here, Fido, Fido!" and to put Fido in front of the dinner. So long as he feels that some other dog may possibly get the food, Sunny will eat every crumb, and with a grunt of satisfaction nose Fido out of the way. Is not that precisely the nature of some humans?

THE STARVATION POINT

TO the question, "If there were a siege, how long do you think the soldiers and civilians could live after the food supplies gave out?" an English paper answers: Science tells us that, if he can get drinking water, an ordinary man can exist for thirty days without food. At the end of that time, the machinery of the body will not be spoiled, and can be brought back to its former strength by careful feeding.

About a quarter of our body weight is fat, and it is mostly this fat that is absorbed as food during the period of starvation. We can absorb and burn up our muscles until sixty per cent of their weight is gone. We can do the same with from thirty to forty per cent of our livers and digestive organs, and twenty per cent of our lungs. Our hearts can lose ten per cent, and our brains and nervous systems can lose five per cent.

It will be seen that the more vital organs—brain and heart—yield least of their valuable substance for the life of the body, while the less essential substances—fat, muscle fibre and so forth—are consumed first.

"THIS SEAT IS ENGAGED"

IN the train, says the Manchester Guardian, they were telling stories to illustrate "the impudence of some people." One passenger said that on getting into the train at Manchester he made for a vacant corner seat and was warned off by the man opposite, who said that the seat belonged to a friend of his. After having stood in the corridor for twenty minutes, the late comer put his head into the compartment and inquired:

"Where is that friend of yours?"

"Oh, he's getting on at Crewe," was the reply.

The distance from Manchester to Crewe is more than twenty-five miles.

THE NEED OF HASTE

The Doctor—Mrs. Brown has sent for me to go and see her boy, and I must go at once.

His Wife—What's the matter with the boy?

The Doctor—I do not know; but Mrs. Brown has a book on What to Do Before the Doctor Comes, and I must hurry there before she does it!

THE CHILDREN'S PAGE

KNITTING FOR NATHAN

By Irving Palfrey

It comes about in a curious way that three little girls who live in Chicago have just been knitting three pairs of stockings for a Boston boy. The girls are two sisters, Alice and Mary, and a friend of theirs named Elizabeth, who lives on the same street. The boy is Nathan Strusky, who lives in a crowded tenement of the North End of Boston, not far from the Old North Church, where the signal lanterns hung on the night of Paul Revere's famous ride.

Last summer Alice and Mary made a journey to Boston with their mother. What a wonderful trip it was for all of them! It was mother's first trip to the East, and so everything in the historic old city where her ancestors had lived was as new and interesting to her as to Alice and Mary. They went to the parks and the beaches, to Lexington and Concord and Plymouth, and to the many historic shrines that all visitors seek out in the city itself. And of course they visited the new home of The Companion, where they saw hundreds of men and women busy with the work of preparing and printing and mailing the paper that the mail man has brought to their door every week since they can remember.

Then came the day when they had the adventure on the Common—and here is where Nathan Strusky comes into the story. They had visited the State House on Beacon Hill, and were resting a while on a bench under the great elms of the Common. It was very cool and quiet there. The only person near them was a barefooted boy who was feeding two squirrels. As the girls watched him they were sorry that they had no nuts to offer the friendly little creatures.

After a few moments Alice left the bench and ran to the shore of the Frog Pond, a few rods away. Several children were sailing little boats there, and one of the boats had tipped over and was floating on its side near the shore. The little fellow who owned the boat could not reach it and was beginning to cry.

"That's all right!" called Alice cheerily. "I'll get the boat for you."

But when she knelt down and reached out her hand for the boat, she found the distance greater than she had thought. She stretched a little farther, and then a little farther—and then there was a sudden splash and a scream that brought persons running to the spot from all directions.

Mother and Mary, still sitting on the shaded bench, saw what had happened, and were at the shore of the Frog Pond in an instant; but quick as they were, the barefooted boy who had been feeding the squirrels was quicker. There was a second splash, and the boy was in the pond beside Alice. The water was not deep, and the boy pushed and pulled Alice to the safety of the shore almost before she knew what had happened—except that she was well aware that she was drenched from head to foot and that many persons were gathering excitedly round.

Then mother, and Alice too, tried to thank the boy who had acted so promptly.

"It is nothing, ma'am," said the boy, with his dark eyes shining and his breath coming quickly from his efforts. "Of course any boy would do as much."

"But you are hurt," said mother, and she pointed to one of his bare feet that was red with blood.

"Oh, that's nothing, either!" insisted the boy. "I guess I cut my foot on something when I jumped into the water."

Mother was anxious to get Alice where she could have dry clothing, but before they hurried away she found out that the boy's name was Nathan Strusky, and she carefully wrote down the address that he gave her.

All that was last summer. When Alice and Mary were back in their Chicago home and in school again there was much to take up their time and occupy their minds. But when the

SO IT CAME ABOUT THAT THEY SPENT A BUSY VACATION

holiday vacation came there were stormy days, one after the other, that kept them in the house; and when it was not stormy it was so cold and windy that they were glad to stay in—they and their neighbor, Elizabeth. Then it was that mother suggested that they might learn to knit.

"In the old times every girl used to knit," said mother, "and it is worth while knowing how. Besides, it will make a cold, stormy day seem much shorter."

The girls were eager enough to learn, but quickly the question arose, "What shall we knit?" There was much discussion, but at last Alice solved the problem by exclaiming:

"Oh, I know! I should like to knit something to send to Nathan Strusky in Boston."

"That is a good idea," agreed mother at once.

"It should be a pair of stockings, then," said Mary. "He was barefooted, you know, and perhaps he needs them this winter."

"And just remember how he cut his bare foot when he pulled me out of the Frog Pond!" said Alice.

So it came about that three Chicago girls—for Elizabeth was eager to have a hand in it, too—spent a busy vacation in knitting stockings. At first there were many dropped stitches, and sometimes a whole row had to be unraveled; but they kept at their task, and the results were such that mother had a new reason to be proud of the girls.

And probably there was no more surprised or pleased boy in Boston than Nathan Strusky was when he opened a little parcel that the mail man brought him a few weeks ago and found in it three pairs of stockings, and three cards that said, "From the girl you pulled out of the Frog Pond" and "From the sister of the girl you pulled out of the Frog Pond" and "From the friend of the girl you pulled out of the Frog Pond."

"How good of them to remember!" said Nathan's mother. "And the knitting is well done, too. Certainly they are smart girls! Now you must send them a fine note of thanks."

It took Nathan a long time to write the note, and at last he had to get his teacher to help him with the task before he was satisfied.

THE FROG THAT WOULDN'T HOP

By Abigail Burton

ONE fine morning old Mrs. Frog hopped out of bed and put the kettle on the kitchen stove.

"Come, children!" she called. "We're going on a picnic to the Big Pool."

"What fun!" cried Reddy and her brothers Eddy and Neddy and Steddy.

Then old Mrs. Frog tied on her bonnet and took the lunch basket on her arm. Reddy took her skipping rope and Eddy and Neddy and Steddy took their nets for catching flies. And nothing had been forgotten except—

"Why, Freddy Frog!" exclaimed his mother. "Aren't you coming?"

Freddy yawned and stretched.

"No," he answered. "It's too far."

Having a son like Freddy was enough to make any mother worry, for a lazier little frog never lived. And fat! Why, his inside grew so much faster than his skin side that really it was a terrible strain on his jacket!

So old Mrs. Frog and the other children went away, hippety hop and hoppety hip, to their picnic at the Big Pool. And the other frog families went hunting, or swimming, or took their croaking exercises. But Freddy Frog still slept on his lily-pad bed.

By and by up came the big, hot sun. He squinted his hottest at Freddy Frog, until at last Freddy Frog sat up and rubbed his eyes.

"I hope mother left some breakfast for me," said Freddy Frog.

But the fire was out and the kettle put away. As for the cupboard, there were no sandwiches and no pickles and no cake in it.

"I'll catch some flies," said Freddy Frog.

So he sat and waited. But a frog that could not jump has not much chance to catch flies. It made him dreadfully hungry to watch them alighting just out of reach, and hungrier yet to hear them buzz. For the first time in his life Freddy Frog wished that he could jump like his brothers.

MY SNOWDROP

By Elizabeth Carrington Young

I have a little snowdrop
That minds not winter weather:
It blooms and blows
In cold and snows.
Now, will you tell me, whether
This blossom white
That doth delight
Our hearts, and cheers us ever,
Is flower rare,
Or baby fair,
Or both of them together?

By and by up came a big breeze.

"Oho!" said the breeze.

He blew his hardest at Freddy Frog, until Freddy Frog had to hold tight to his lily pad for fear of blowing away.

My, but he was out of breath! And my, but he was frightened!

"I wish it weren't so far to the shore," said Freddy Frog.

But it was far, frightfully far for a frog that could not jump. And he would not think of swimming. Such a lazy little frog! And he did not care to be blown into the water. For the second time in his life Freddy Frog wished that he could jump.

By and by up came a big wave.

"Oho!" said the wave.

He dashed his wettest at Freddy Frog, until Freddy Frog was drenched almost through his skin side to his inside!

My, but he was soaked! And my, but he was sulky!

"I hope that wave gets drowned," said Freddy Frog.

It did not, of course. But Freddy Frog did—nearly, for all the big friends of the big wave came hurrying up. They were no friends for a frog that could not jump. And they were all so wet! For the third time in his life Freddy Frog wished that he could jump.

By and by up came a big—something much worse than a sun or a wind or a wave. Up came a big pelican!

"Oho!" said the pelican.

He gobbled his hungriest at Freddy Frog, until Freddy Frog was not perfectly sure that he had not been eaten up already!

My, but he was unhappy! And my, but he was shocked!

"Aha!" said the pelican.

He opened his bill, with its pouch,—it was a shockingly big one!—and he was just bending over to snip up

Freddy Frog and stow him away for supper, when—Freddy Frog jumped! He did not wait to remember that he did not know how to hop. Right over the pelican's head he plopped, and went plump right into the water!—with the big wave and all the big friends of the big wave, too!

But Freddy Frog did not mind them! He dived and swam under the lily pads, and stayed very still, and hoped that he did not show!

"Soup and supper!" cried the pelican. "What became of it?"

He meant Freddy! And he began to poke his bill, with its shockingly big pouch, in and out among the lily pads. And Freddy Frog shivered—although he tried to stay still.

"Frog and icedress!" said the pelican crossly. "I'm hungry. I've had nothing to eat all day!"

It is amazing how anxious that pelican was to find Freddy Frog. But Freddy Frog was more anxious not to be found, and that is not amazing at all when you think that he was to be the supper.

"Will that pelican never get tired of poking his big bill about?"

Freddy Frog got so tired that he could not keep still any longer. And then—he showed! And the pelican was just bending over to snip up Freddy Frog, when—

The pelican stepped on a crab!

She was the school-teacher crab who had taught Freddy Frog his letters. She could not bear to see him eaten, she was so tender-hearted!

"Claws and nutcrackers!" screeched the pelican. "Let go!"

The pelican forgot Freddy Frog. He forgot everything but his foot! The school-teacher crab gave him a final nip, and away that pelican went, flying!

Freddy Frog jumped about, making the fire and putting on the kettle for tea. My, but he was a happy frog! And when old Mrs. Frog and Reddy and Eddy and Neddy and Steddy came hippety hop, hoppety hip home, with a basketful of fresh sandwiches for supper, there was the table spread and the dishes waiting.

"I've learned to jump, mother," said Freddy Frog. "I've learned to jump."

A WINTER BLANKET

By Anna M. Pratt

A million little snowflakes
Came softly down last night,
And wove a pretty blanket
All soft and warm and white.
And now the plants are safe in bed,
And their toes are tucked in tight.

Before starting the youngsters to school give them a piping hot cup of

Instant Postum

School teachers, doctors and food experts agree on two points—that the child needs a hot drink, and that the drink shouldn't be coffee.

Postum fills the need admirably and its very extensive use among thoughtful parents, coupled with the child's fondness for this flavory, nourishing food-drink, show how completely it meets the requirement.

"There's a Reason"

No change in price, quality, or size of package.

"Wet Feet" the Only Discomfort If You Give Him LUDEN'S

After playing outdoors without "overshoes"—the children need Luden's. Quick relief from coughs and colds. No coloring—no narcotics.

In "Yellow Box"—5c

Wm. H. Luden

NATURE & SCIENCE

WHY WE ARE TICKLISH.—In his recent book, *Man an Adaptive Mechanism*, Dr. George W. Crile gives an interesting explanation of the reason for ticklishness. He considers the sensation to be a prehistoric relic of reaction against peril. It is more strange than appears at first glance that the tickle reflex can be excited only in certain parts of the body, by but two types of tactile impression, and that it is invariably accompanied by a self-protective reaction. One type is elicited by a light, running movement on the surface of the skin, which produces a sensation like that produced by a crawling insect. The reflex is an irresistible desire to scratch or rub the affected part. It undoubtedly came into being at a time when insects were a great menace to life, and when only those individuals who evolved an effective defense were able to survive. It may even supply an explanation of man's gradual loss of hair from the body in his long, slow, upward march, since the presence of hair would provide ambush for the insect enemy, whereas the loss of it, together with the evolution of the tickle sensation, would greatly facilitate defense. A second type of tickle reflex is elicited by heavy penetrating pressure in the region of the ribs, the loins, the base of the neck and the soles of the feet—pressure like the penetrating contact of a tooth-shaped body. The reaction in this case is a violent discharge of energy in the form of laughter with cries for mercy, and frantic muscular efforts to be free if the stimulus be continued. If one were tied hand and foot and vigorously tickled for an hour, he would probably be as much exhausted as if he had run a Marathon race or sustained a crushing injury; indeed, persons sentenced to death by torture in the Middle Ages were often killed by prolonged tickling. The fact that the ticklish areas are found in those parts of the body that still are, and always must have been, the points most frequently attacked by savage beasts leaves little doubt that the reaction developed at a time when man's progenitors, like the carnivora of to-day, fought their enemies face to face with tooth and claw; and that the mechanism came into existence as a means of protection against foes.

THE FIELDS OF VERDUN.—After one of the battles of the Crimean War round shot lay so thick upon the ground that it was possible to step from one cannon ball to another all over the field. On the western front in Europe the shells do not lie like stepping-stones, for most of them burst into a thousand fragments, but the quantity of iron that now cumber the earth round Verdun or in parts of Picardy must be thousands of times greater than all that was used in the whole Crimean campaign. It is said that as many as a million shells a day have been fired for days at a time by the Allies in France alone. That figure is, of course, far above the average, but even if only a million shells a week have been fired by both the French and the Germans on the contested ground in front of Verdun the result is a most astonishing quantity of metal. Reckoning the average weight of a shell at 100 pounds, and the duration of the battle of Verdun at 30 weeks, the weight of metal discharged would be 1,500,000 tons, or more than 20 tons to the acre. That makes no account of the miles and miles of barbed wire and constructional steel used on the same ground. Who will collect that immense quantity of scrap when peace is restored? It will be a dangerous business, for the ground contains thousands of unexploded shells and hand grenades. Those who have visited the battlefield doubt if the fields about Verdun will ever again be cultivated. They believe that France will make a park of the region as a memorial to the heroism of her sons who died in defending it.

DO INSECTS MIGRATE?—One of the unexplained phenomena of animal life is the annual migration of birds, though the lines of their great flights have now been accurately mapped in both hemispheres. Mr. Howard J. Shannon, in an article in the Scientific Monthly, entitled Insect Migrations as Related to Those of Birds, maintains that many insects as well as birds make annual migrations southward in the autumn, following well-defined routes that correspond to those taken by the birds of the same regions. The insects include certain North American species of Diptera, butterflies and dragon flies. Mr. Shannon believes that there may be a return migration in the spring, but he is not sure whether such migrants are the same individuals that flew south in the fall or a new generation, bred in the southern winter quarters. Some idea of the magnitude of the migrations may be gathered from the statements of the author in regard to the monarch butterflies (*Danaus archippus*), which "in mingled myriads move forward in swarms, forming a veritable crimson cloud miles in width, and streaming backward for equal distances, casting below them as they go perceptible shadows."

FRESH-WATER MANATEE.—The New York Zoological Society now has on exhibition at the Aquarium in New York City the first fresh-water manatee of the upper Amazon that has ever been shown in this country. The specimen is only five feet long, and therefore is considerably smaller than the thousand-pound brackish-water manatees from Florida that were brought to the Aquarium several years ago. Two other characteristics that distinguish it from other species are the nailless flippers and the white breast. Like other manatees it turns on its back when the pool is drawn off for cleaning, and remains in the position shown in the

MANATEE OR SEA COW FROM THE AMAZON

illustration until the water again becomes deep enough to float it. The manatee is often called the sea cow, because of its fondness for grass, at any rate the sort of grass that grows in the water. Its principal diet at the Aquarium is eelgrass and a loaf of bread a day. The Amazon manatee is much more active than its Florida cousins, and often swims rapidly round its pool. It is also very sociable and will come to the edge of the 'pool' any time to have its back rubbed.

This Boy of Twelve Earned \$84.99

He planted a garden in four rented lots. He went at it as hard as he went at his play. It wasn't all work. He had lots of time for fun. When the summer was over he had taken in \$107.85. His seed, rent, plowing and other expenses had cost him \$22.86. His profit was \$84.99.

Any hustling, ambitious boy can do as well. The one thing to be sure of is the quality of the seed you buy.

FERRY'S SEEDS

are surer than others because they come from pedigreed plants. Fine, vigorous plants are not accidental, they usually spring from vigorous ancestors; seeds of unknown pedigree are uncertain in result.

Ferry's Seeds are selected and then tested in Ferry's trial gardens. D. M. Ferry & Co. make doubly sure for you before they put their name on the packet.

Doubtful seeds are dear at any price.

We will send you, free, Ferry's Seed Annual if you will send us your address.

Ferry's Seeds are sold by dealers everywhere.

D. M. FERRY & CO.

Detroit, Mich.

(and Windsor, Ontario)

A detailed black and white illustration. In the background, a boy and a girl are working in a garden. The boy is standing and holding a basket, while the girl is kneeling and tending to plants. In the foreground, there are three large vegetables: a round, bumpy melon and two long, ribbed cucumbers. The scene is set in a garden with trees and a house visible in the distance.

BLUE STREAKS

\$3⁰⁰
EACH

The Goodyear Blue Streak Bicycle Tire is more than mere material made to serve a useful purpose. It is a symbol of integrity and unfailing honesty.

It is a sequel to the lofty ideal ever held by The Goodyear Tire & Rubber Company—"to give the public the best value possible".

It is a history of Goodyear intention, Goodyear ability and Goodyear achievement molded into rubber.

Goodyear Blue Streak Bicycle Tires represent the Goodyear Company. They cannot falter where this great name is at stake.

The Goodyear Tire & Rubber Co., Akron, Ohio

GOODYEAR

A CHINESE SOLOMON

THE men who really govern China and who make life happy or miserable for the people are the district magistrates. There are about fifteen hundred of them in all. These men unite in themselves many various offices. They are coroners, sheriffs, tax collectors, road surveyors and forest commissioners. They are superintendents of schools and overseers of the poor, and they are at the head of the state religion, and worship at the temples on specified days. There is scarcely any matter into which they may not pry and for which they are not held responsible.

The administration of justice is in their hands. In the court of justice there are no juries, lawyers or men who are entitled to speak for the culprit. The parties to the suit, whether civil or criminal, kneel before the magistrate, who, sitting in his official chair, asks such questions as he sees fit, and as soon as he thinks he has discovered the truth, brings in his verdict. Either party may appeal from his decision to a higher court; still, as the expense of a lawsuit is higher proportionally than in America, that is not often done.

It will at once be apparent that such a man must possess a keen mind, a good knowledge of human nature, and be fertile in expedients. Above all, he must be a man of decision; not because immediate action is required, but in order to sustain his own dignity and command the respect of the people. The magistrate who hesitates is despised.

Some years ago a Chinaman who owned a mill where he pressed oil from beans was visited by a neighbor who came to borrow an immense basket used by the oil man to receive the bean refuse after the oil had been extracted. The Chinese are quite neighborly, so the request was granted, and the neighbor, who was a miller, carried the basket home to use for holding bran.

Time went on, and the following fall the oil man asked for the return of the basket. To his surprise, the miller claimed the basket as his own. In spite of the fact that there were no witnesses, the oil man went to law, and the case came before the district magistrate.

The magistrate asked each man to tell his story, which he did. Each man also acknowledged that he could not produce witnesses. The magistrate recognized that his own reputation was at stake, and also that it was a case where a righteous decision would greatly enhance his own reputation. He did not hesitate.

"Bring in the basket," he said. He had already determined in his own mind that in all probability the oil man was in the right, for he felt that no man in his senses would be likely to go to law about so cheap an article unless it were really his.

As soon as the basket was brought in, the magistrate, with a severe frown, addressed it in these words: "Mr. Basket, each of these two men here in court claims you as his own property. There are no witnesses as to which is telling the truth. Now I order you to tell us to which of them you belong. What, you remain silent! Are you not aware that I am the magistrate of this county? If you do not reply at once I shall order you to be severely punished! Still silent! Here, sergeant, get your paddle, turn over this basket and give him a hundred blows!"

The underlings who were present had great difficulty in keeping their faces straight, but they had to obey, and accordingly the man who was wont to use the stick for beating unwilling witnesses proceeded to beat the basket. He had not delivered many blows before the oil, which had been concealed by the bran, began to ooze forth.

"Hold on," said the magistrate; "that is enough! I thought I should make this basket speak. It is evident that he belongs to the oil man. Take out the miller and give him five hundred blows, and you, Mr. Oil Man, carry home your basket."

LINCOLN AND TOM HOOD

THE late Richard Watson Gilder once said that amid all his trials Lincoln had one compensation in the White House—John Hay. Mr. Thayer, in his *Life of John Hay*, cites these extracts from the Secretary's papers to confirm Mr. Gilder's statement.

"The President came in last night in his shirt, and told me of the retirement of the enemy from his works at Spottsylvania and our pursuit. I complimented him on the amount of underpinning he still has left, and he said he weighed 180 pounds. Important if true." (May 14, 1864.)

"A little after midnight, as I was writing those last lines, the President came into the office laughing, with a volume of Hood's Works in his hand, to show Nicolay and me the little caricature, 'An Unfortunate Bee-ing'; seemingly utterly unconscious that he, with his short shirt hanging about his long legs and setting out behind like the tail feathers of an enormous ostrich, was infinitely funnier than anything in the book he was laughing at. What a man it is! Occupied all day with matters of vast moment, deeply anxious about the fate of the greatest army of the world, with his own plans and future hanging on the events of the passing hour, he yet has such a wealth of simple bonhomie and good-fellowship that he gets out of bed and perambulates the house in his shirt to find us, that we may share with him the fun of poor Hood's queer little conceits."

ROSTAND'S REST CURE

THE French poet, Rostand, according to a recent dispatch from Paris, has his own peculiar method of rehabilitating his mental and physical powers: he goes to bed and stays there. A friend of the poet says that he is taking an isolation cure of three months, which he is passing in bed in his house at Cambo. He sees no one except one servant, everyone takes care to make no noise in the house, and the poet receives no letters or communications from the outside world except through newspapers—the war accounting for this compromise of what would otherwise be perfect isolation.

He has taken one or two of these solitude cures before—once when he was working on *Cyrano*, and once when he was slightly ill. He is not working particularly during this cure, except for some reading. He was feeling out of sorts for some weeks before he took it, which accounts for his decision.

His friends say that these cures have a remarkable effect on his health. He gains a great deal in weight, loses his habitual nervousness, recovers his powers of working hard, and generally becomes his old genial self again.

"HIS MASTER'S VOICE"
REG. U.S. PAT. OFF.

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the identifying label on all genuine Victorolas and Victor Records.

The greatest artists of all the world make records for the Victor exclusively

Besides bringing to you the magnificent interpretations of the world's greatest operatic artists, Victor Records also present to you the brilliant renditions of the most famous artists of the concert stage.

Wherever these great artists appear, in opera or on concert tour, they are greeted by hosts of delighted music-lovers.

But great and enthusiastic as these audiences are, they are far outnumbered by their vast Victor audiences who hear and applaud their superb art on the Victrola.

And because their Victor Records are absolutely true to life, you enjoy in your own home all the exquisite beauty of interpretation which has established Victor supremacy on a basis of great things actually accomplished.

There are Victor dealers everywhere, and they will gladly show you all the various styles of Victrolas and play any music you wish to hear. Ask for a copy of the Victor Record Catalog—the most complete catalog of music in all the world.

Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Important warning. Victor Records can be safely and satisfactorily played only with *Victor Needles or Tungs-tone Stylus* on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

New Victor Records demonstrated at all dealers on the 28th of each month

DRAWN BY GEORGE VARIAN

WITH A JOYOUS WHOOP OF "TAKE HIM, TIGE!" HE THREW HIS LEGS INTO THE AIR AND WENT OVER BACKWARD ON THE BLANKETS

UNCLE Tim Lannigan lived on an eighty-acre farm a quarter of a mile north of the main road. To reach it he had to use a private road. Old Mike Cahill, from whom he had bought the land, had flatly refused to sell him a frontage on the highway.

"Bedad," Mike had said, "it's plenty good fer a County Mayo man anny day in the week. Ye've nivir lived anny place but in beyant somewheres, and ye would not be knowin' how to behave if ye lived on the main ro'd."

"Ye blitherin' omadhaun, ye've been gittin' that biggoty 'tis a wondher ye're not callin' yerself the mayor of the crossroads. 'Tis a fine opinion ye have of yersel, Mike Cahill, and me knowin' ivery mumber of yer family fer three ginerations, and not a wan of thim with the price of a co't or a pair of shoes till ye saw this counthry. And a sorra day fer Ameriky it was."

"Sure and Oi care not a bit fer the talk of ye; 'tis the coin Oi want and down on the nail, or there be no papers drawn. Ye can have a roight of way be the line fence, the wide of two hayracks and four feet over, and it's foolish Oi am to be givin' ye that much."

"Ye'll give me that or there'll be no sale. And the matther of the fence fer the roight of way will be on the pockets of ye and the Doochman next door, fer Oi'm not buyin' the roight to pay for a quarter of a mile of fence fer ye. Oi'm buyin' land."

At last the papers had been drawn and the coin paid; then old Mike had grinned at old Tim and Tim had grinned back.

"'Tis a hard man ye are, Mike Cahill," said he, "and I give warnin' to ye roight now that the cattle ye kape must be on yer own soide of the fence. Oi'll have no rampagin' steers roarin' through me wheat and cornfields. Oi'll kape a big dog will give thim the fole of a foine set of tathe."

So with many a gibe the two old men had parted at the squire's office, where the papers had been signed, and had gone their ways—smiling. For Tim Lannigan and Mike Cahill were really the best of friends, although they had great sport in abusing each other when anyone was by to listen. If they had the side of the road to themselves they joked together and indulged themselves in all sorts of reminiscences, but as soon as some one joined in the talk they began to abuse each other violently.

Within a week Tim had men working on his new house and other men breaking up the prairie sod for spring wheat sowing. He meant to make that back eighty produce to the limit, and look well, too. He had money, and he knew as much about farming as any one in Minnesota; and he had what many

others did not have—a love of order and of neatness. His old farm, which he had lately sold for a good price, had been the best-kept place for miles round.

By hiring many teams and working his own two spans, he planted the whole eighty acres that first spring. In July his grain and cornfields were a beautiful sight. His wife and his daughter, Kathleen, had made flower beds with what help they could get from Tim and the men who worked for him. Labor from daylight to sunset in the fields left the men rather averse to gardening, but Kathleen's smile brought several hours of help from the younger members of the crew.

The crop of wheat was excellent; Tim figured that he should have about sixteen hundred bushels of "number one" to sell at the elevator. He intended to store the wheat and to take tickets for it; then when the price was where he wanted it he would sell, present his tickets and get his money.

As soon as the roads were frozen and worn down a little, Tim set his two teams to hauling wheat; after the snow came the horses drew larger loads on runners. When Tim had delivered the last load he had the agent number his tickets and make his record complete, for he intended to take the checks to the bank for safe-keeping.

But the bank and the elevator were in different places. The elevator stood beside the railway track eight miles west of Tim's place, and the bank was at a village six miles east. The agent offered Tim a lock box in the big safe at the elevator to keep his tickets in, but the old man only grinned and winked at him. The agent flushed hotly, until Tim patted him on the shoulder and told him that he had only been joking.

"Bedad, Tim," said Mike, when his friend told him that he had stored his wheat, "there's wan thing ye should be mindin', and that is the holdup men that work the ro'd ivry year whin the storage men air cashin' in their tickits. Whin ye go to cash in, take wan of the men with ye and pack a gun."

"Oi'll be afther takin' some one better than anny man in town. D'ye moind ould Tige?"

"And whin they have the guns on ye what good will Tige do? Ye'll do better if ye heed what Oi'm tellin' ye. Git ye a gun and kape a bodyguard for the wan day."

"Ye're askin' what Oi'll do and what Tige

will do? Begorra, Oi'll use strategy, and Tige will do the foightin'."

There seemed to be some ground for Mike Cahill's warning, for shortly after the price of wheat began to climb in January and farmers were selling their crops several holdups were reported. In each case the men had been robbed when they had the proceeds of their sales with them;

the robbers seemed to know just when a farmer sold his crop.

The price of wheat went from seventy cents to seventy-five, then to seventy-eight, and at last to eighty. That was a good price in those days, and Mike urged Tim to sell. The old man was obstinate, however; he had set his mind on getting eighty-five cents a bushel for his wheat. The agent said he would not get it and he said he would; so he still held on after all his neighbors had sold.

Two weeks went by, and the price crawled up a cent, then dropped two cents, and then, mustering strength, crept up to eighty-two. There it clung for another two days, and then by quarter- and half-cent jumps worked up to eighty-four. Mike pleaded with Tim to sell, but the old man shook his head.

"Oi'll hold it till spring before Oi'll sell a cint below eighty-foive. That thievin' agent is houldin' on and misprisintin' the prices in hopes he can git me wheat a cint below price."

At last one Saturday morning a neighbor rode past on his way from town and told Mike Cahill that wheat was eighty-five cents for that day only. Mike hurried over to see Tim at once. The old man heard the news with a grin of satisfaction; hitching up his gray mares to the big wagon, he climbed on the high spring seat. As he started out of the yard he whistled for Tige.

Tige was a huge mongrel with enough bulldog blood in him to give him an ardent love of fighting. He always trotted between the horses under the wagon pole and from that vantage point shot forth to meet his enemies. His fights had become so numerous that for some time Tim had kept him at home. Tige was overjoyed at the chance to run with the team again and took his station at once.

At the elevator Tim presented his tickets, which he had brought from the bank.

"Yes, Mr. Lannigan," said the agent, running rapidly through them, "just sixteen hundred bushels. That is thirteen hundred

and sixty dollars. Give it to you right away."

"Wait a bit, me b'y, wait a bit. Thim tickits added up sixteen hundred twelve bushels,

eighteen pounds at the bank this mornin', and Oi see no rason fer shrinkage. Ye don't think, do ye, that twelve bushels, eighteen pounds would leak out of me pocket durin' the ride from the bank?"

The agent went through the tickets once more and apologized. The odd bushels and pounds were there. His nerves seemed to be upset a little by the old man's catching him in a mistake, and he had to count the money three times before he could get it right. At last Tim rolled up his cash and, bidding the agent good-by, strode out to the wagon.

A thaw had set in the week before, and for several days the snow had been gone. The wagon rattled along the frozen road for two miles, and then approached a bridge that spanned a small stream. Because of a curve in the road a man could not see the bridge until he was within fifty yards of it.

Tim was cold and he sat hunched up on the high spring seat. To keep his hands warm he had put them under his legs; he held the reins between his knees. As the wagon rounded the curve, he saw a man standing on the bridge with his back toward him. Tim noticed that the stranger did not turn at the sound of the wagon, as any country fellow would have done.

When the horses' heads were not more than fifteen feet from him the man whirled and with a curt "Hands up!" pointed a revolver at Tim.

In the back of the wagon, just behind the seat, lay two horse blankets. Tim had no sooner seen the man's mask and the pistol than with a joyous whoop of "Take him, Tige!" he threw his legs into the air and went over backward on the blankets; only his feet showed above the seat. Backing into the breeching, the team strove to stop the wagon.

As Tim yelled to Tige the big mongrel came out from under the wagon pole like a cannon ball. His full weight struck the thief in the breast and the man fell. As he struck the ground his revolver dropped from his hand and exploded harmlessly. The landit lay on his back with Tige on top; the dog's jaws were within an inch of the man's face.

Tim climbed down from the wagon, shouting all the time to Tige, "Hould him! Watch him, b'y; that's the stuff! 'Tis a foine pup ye air, Tige! Hould him, b'y!"

Going to the horses' heads and taking a hitch strap off the nigh mare, Tim proceeded to strap the man's arms tight at the elbows. As he rolled the fellow over, Tige hopped back out of the way, but the dog never ceased to growl and to show his terrible teeth. When

Tim had secured the man's arms he picked up the revolver, pulled his prisoner to his feet and "boosted" him into the wagon.

There he made the fellow lie down, and, winding a blanket round him, fastened it with the other hitch strap and a short rope from a halter. That done, he raised the mask that covered the bandit's features. "Let's have a luk at ye," he said.

As he looked, Tim nodded his head several times. "Oi do be undherstandin' somethin' now. 'Twas a foine game before it hit the Oirish. Wid their usual likin' fer mixin' things the Oirish have fixed yer little game."

When Tim drove into his yard he called to his daughter to come out to help him. Kathleen ran out, expecting to find something that he had bought in the village. When she saw a masked man, tied up like a mummy, she turned a wondering look on her father.

Tim, who was enjoying the situation immensely, gave no heed to her. He took the end gate out of the box and, reaching in, grasped one of the man's feet. With a hard pull he slid the bandit half out of the wagon.

Tim and his daughter then carried the trussed man to the door, where Mrs. Lannigan stood with her hands upraised and her mouth agape. When Tim had got the prisoner inside, he assumed the airs of a showman, and with a deal of nonsense seated the figure in a chair.

"Take a sate, Molly, and you, Kathleen, may shtand in front and git the first view of the great and only holdup man in captivity in the Shtate of Minnesota. Air ye ready?"

With a flourish Tim raised the mask.

"O dad, it can't be!" Kathleen cried.

"Why, he—dad, I can't believe it!"

"'Tis true, Kathy, more's the pity. The

very felly that wanted ye to marry him but six weeks before threshin' toime. Now he can sing to a different tune. Can ye run to Moike's house and tell him to come a-runnin'?"

"Yes, father, but what are you going to do with him?"

"That, me dear Kathy, is to be decided later. Go ye now and quickly."

Mike lost no time in coming, and he and Tim held a consultation over the bandit, who had said no word since he had been in the house. Mike was in favor of taking the prisoner at once to the county jail, but Tim counseled otherwise.

"Would that pay back the Gould the b'ys have lost? Would sindin' this foine gintlemin to the pinitinshtery git back a dollar of the hard cash the farmers have been robbed of? 'Dade, and it wouldn't. Now, ye moind who he is, the brother of the agent at the elevator, and with the knowledgement of the toime of payment whin anny man goes out wid his hands full of yeller-backed bills. How does he git the news? From the brother av him, and the wan is as guilty as the other. 'Tis the rayturn of iviry cint or the jail. 'Tis a ch'ice they do be havin' and only wan ch'ice."

It took the agent just half a minute to make up his mind, when Tim and Mike called on him with the prisoner, and not much longer to hand over the stolen money. And it took the two brothers only from one o'clock till the two-fifteen train to get ready to depart from the neighborhood.

Later, whenever Tim boasted publicly of his "strathey," Mike would shout: "Oi'd rather ha' been hild up and losht me cash than have to listen to ye, ye ould blowhard!"

time with an upward sweep of the palm, to call her daughter's attention to the blue sky.

"Yes, it is a nice day," Sara agreed. "But I'd rather go out on a stormy one, when I shouldn't run any risk of meeting people."

"Oh, don't, Sara!" Mrs. Warren begged; but the girl did not hear her.

"I don't want to get like Miss Jane Chapman, boring everyone to death. And I'd be worse than Miss Jane. At least she could hear you if you told her to go home."

"O Sara, please!"

"It's the worst thing that could happen, mother, the very worst. I used to think it would be terrible to be blind, but that's nothing to this. It's like being dead and watching the living, without being able to join them."

"You mustn't be—morbid!" Mrs. Warren cried.

Sara understood the spirit of her protest rather than the words.

"If there were any hope, mother, it would be different. If it weren't the kind there's no help for, I could be as brave as anyone; but to know that I'm going to grow deafer and deafer till I can't hear a sound, that everything's over and done with for me, as much now as if I were eighty, that's more than any girl could endure."

She could not hear her mother's reply, but the pain that quivered across the tired face checked her outburst. Remorsefully Sara stooped to kiss her mother's cheek.

"I ought to be ashamed of myself. I'll go out for a little walk if it'll make you feel better, and I'll walk so fast that no one will dare to stop me to ask a question."

Ever since Sara's trouble had come on a year or so before, Mrs. Warren had not been able to coax her daughter to take a walk of more than fifteen or twenty minutes at the most. To-day an hour and a half passed without her return, and Mrs. Warren became anxious. She was on the point of telephoning to her husband to ask what she ought to do, when the door opened and Sara entered. With an unreasoning terror her mother saw that she was laughing.

manner did not once suggest it. I've invited her to come to see me soon."

"I'm afraid you'll regret it, dear," Mrs. Warren was beginning reprovingly, but she paused as Sara's face suddenly darkened.

"O mother, don't you see? It sounds ridiculous after the big things I've planned and hoped for, but I really got a little satisfaction out of knowing that I'd helped to make a bright spot in Miss Jane's day."

The queer intimacy between Sara and Miss Jane grew rapidly. Miss Jane returned the call promptly—within forty-eight hours, to be exact. She rang the bell with her usual air of expecting a rebuff and asked timidly, "Is Sara in?" So far the programme was familiar enough, but from that point Miss Jane was treated to new and startling variations. She was asked in and invited to take a comfortable chair. Then Sara, carrying a workbasket, appeared, shook hands and seated herself. With a little uncertainty, as if she had expected to wake at any minute, Miss Jane began her customary meaningless prattle. As she talked, her confidence grew. She babbled happily on, and Sara encouraged her by an occasional remark and a smile.

Week after week Miss Jane's calls continued. Mrs. Warren watched, not quite approving; but her dissatisfaction with the new friendship diminished as she saw that for the unhappy, sensitive girl there was balm in realizing that her companionship was the chief joy in Miss Jane's life.

It is doubtful whether Miss Jane ever discovered the extent of Sara's affliction. It did not disconcert the little old lady at all if her questions remained unanswered. Her mind was so inconsequent that it did not astonish her when Sara's occasional remarks introduced topics altogether remote from those she herself was discussing. She told Mrs. Warren that Sara was not at all like a modern girl; that was the highest compliment, Miss Jane felt, that she could pay her.

Miss Jane had babbled on for an hour one afternoon. Sara sat knitting in the chair opposite, now lifting her eyes from her work to Miss Jane's amiable face, now venturing a remark on any subject that chanced to cross her mind. The girl suddenly started so violently that the ball of worsted dropped from her lap and rolled under the sofa.

"I wonder why they always do that?" said Miss Jane. "Balls of yarn and kittens are so much alike, so full of mischief! Of course the yarn isn't really, but the way it runs off under things seems almost playful. Now, what was I saying? Oh, yes! My bonnet was really very pretty, with velvet strings that tied close under the chin, and my mitts —"

Sara's heart was pounding. "She's telling me about when she was a girl," her excited thoughts ran. "She said 'When I was a girl.' Now, how did I know? I couldn't have heard her. How did I know? How do I know? I must—have seen it."

She sank back in the chair, faint and dizzy. Miss Jane purred on contentedly. She was describing a costume that she had worn when she was eighteen years old, and she had every detail at her tongue's end. She was far too happy in having a listener for those fascinating recollections to notice the colorless face of her hostess.

Months before, when Sara had been visiting specialist after specialist, only to hear from each one the same hopeless verdict, Mrs. Warren had tried to lighten her daughter's suffering by suggesting that she learn lip reading. Sara, who had always clung doggedly to the hope of being cured, was in a desperate mood when her mother made the suggestion, and so she took it as an insult to her intelligence. They were trying to quiet her, she thought, by telling her something pleasant, as people sometimes soothed fractious children. She had turned upon her quiet little mother with a look in her eyes that silenced Mrs. Warren in the middle of a sentence.

"If you love me, mother," Sara had said, "never speak of that again. Never!" And until the present time Mrs. Warren had complied with the foolish request.

How foolish the request was, Sara was beginning to understand. "When I was a girl," Miss Jane had said. Without hearing the words Sara had known that they were spoken. Lip reading was not a fantastic fancy devised to soothe the unfortunates like herself. She had done it without trying.

Miss Jane was telling of a compliment once paid her by a young poet. She stopped in the midst of her narrative, confused by an unexpected, indeed unprecedented, occurrence. Sara was giving her words a close, almost terrifyingly close, attention. She had moved her chair a little and her staring eyes were glued on Miss Jane's face. It was no wonder that the poor lady forgot the point of the compliment that she had treasured for forty-two years and that she spoiled the story in the telling.

It was several months afterwards that Mr. Warren, although not an observant man ordinarily, said to his wife, "Seems to me the girl's a little brighter than she was."

"Yes," Mrs. Warren replied, a little doubtfully. "But I'm worried about her."

"Well," returned her husband with some

AN OUTLET FOR MISS JANE

By Harriet Lummis Smith

"ARE any of the ladies in this afternoon?" Miss Jane Chapman stood at the door of Judge Wickham's handsome house. She was a pathetic figure in her shabby finery. Miss Jane loved silks and big feathers and veils and long sashes. In the merciless light of the afternoon sunshine her efforts to present, as she herself would have said, "a genteel appearance," were exposed in all their pitiful futility.

"The ladies are not at home," said Mrs. Wickham's well-trained maid imperturbably, as she took up the card receiver.

Miss Jane blushed and drew back. "I didn't bring a card. I only planned to drop in—informally."

She turned and went down the steps a little tremulously. The maid paused a moment to watch the disappointed lady, and her face wore an expression of contemptuous pity.

Miss Jane Chapman was a bore. Everyone in the little town of Washington Heights was perfectly aware of the fact. Some people hinted that she was not quite sane, but that was nonsense. At sixty years of age Miss Jane was very much what she had been at sixteen—a gushing, unintelligent person of sentimental tendencies. But when Miss Jane's cheeks had been pink and her eyes a lustrous blue, no one had minded her vacuity. Now that her once fair skin was wrinkled and her golden hair a muddy white, her silly little speeches fretted people.

Ah might have been well, however, had Miss Jane had any resources in herself; but her one diversion was society. Miss Jane had never learned to enjoy reading, and her eyes did not allow her to spend much time at sewing. If she had some one to talk to, Miss Jane was perfectly happy. She had nothing particular to say, to be sure, and yet she craved a chance to say it. For years she had been calling at every house that she had any possible excuse for entering. She was as likely to make her appearance at one time of day as another, and when once she had crossed the threshold she found the chance to talk so enticing that it was next to impossible for her to tear herself away.

"I wouldn't mind letting her in occasionally," said the doctor's wife, "if she'd stay a reasonable time, like other people; but the last time she was here she came at nine in the morning, and she was still here when the clock struck three. I had almost to drive her out of the house. Since then Martha has had orders never to let her in."

Miss Jane moved slowly away from Judge Wickham's door that bright afternoon. It was the fourth "perfectly informal" call that she had tried to pay that afternoon. No one had been at home except Mrs. Price, a strictly conscientious lady, who sent down word that she was busy and would Miss Jane please excuse her.

"People nowadays are so restless," said Miss Jane, with a sigh. "When I was a girl, ladies as a rule expected to be home to receive guests. Those days were so much more social! Dear me!"

She shook her head over the many changes that had come about since she was sixteen;

SHE HAD MOVED HER CHAIR A LITTLE AND HER STARING EYES WERE GLUED ON MISS JANE'S FACE

virtually all of them, Miss Jane was sure, were changes for the worse.

From the window of the house across the way a pair of gray eyes watched Miss Jane's discomfiture. A cynical smile curved a pair of lips that were too youthful to smile in cynicism.

"Why doesn't she go home and stay home?" Sara Warren asked herself. "Why does she make herself ridiculous going where she isn't wanted? Oh!"

The exclamation came as Sara felt a hand laid on her arm. She turned and looked down at her mother. Sara was a tall girl, and Mrs. Warren a little woman.

"Have you been screaming yourself hoarse, trying to attract my attention, mother?" asked Sara. "I'm sorry."

"Oh, no, dear!" said Mrs. Warren, raising her voice. "I just wanted to ask you why you didn't take a walk this lovely day."

Sara's face was blank. "Did you ask me a question, mother?" she said quietly after a moment.

Mrs. Warren raised her voice still more loudly.

"Why don't you—take a little—walk?" She gestured toward the window, to make her meaning clear, and Sara partly understood.

"You want me to go out?"

"Such a lovely day!" shouted the mother, separating the words. She gestured again, this

Sara threw herself into an armchair. "Well, mother, I've a surprise for you. I've been making a call."

Mrs. Warren stared at her without speaking. Pulling off her gloves in leisurely fashion, Sara looked up to see the effect of her announcement.

"I'm not taking leave of my senses, mother dear," she went on, with a smile, "though I'm not surprised you think so. I've made a call on Miss Jane Chapman."

"Miss Jane Chapman!"

"Exactly! It seemed to me that two such forlorn specimens should stand by each other. Of course she's a dreadful bore, but I'm proof against boredom. I couldn't hear a word she said."

"But how—I don't see—" Mrs. Warren paused hopelessly.

But Sara guessed her meaning from her expression and her little perplexed gesture.

"We got on beautifully. Miss Jane doesn't care very much about conversational reciprocity, you know. All she wants is to have a sort of human cream jug into which she can pour her confidences. You see, no one in town knows how very deaf I am, and of course Miss Jane doesn't. I sat and thought about things and let her talk. Occasionally I'd rouse up and nod and smile. Apparently luck was with me, for, if I nodded and smiled when I ought to have shaken my head and sighed, Miss Jane's

surprise, "I can't see that it's anything to worry about to have her cheering up."

"But she spends so much time with Jane Chapman."

"I guess Jane Chapman won't hurt her. She's a little queer, but as good as gold."

"It's not natural," Mrs. Warren said with decision. "A young girl's spending hours every day with a flighty old woman, and not seeing anyone else. I can't make it out."

A few days later her husband accused his wife of inconsistency.

"First you worry because she won't see anyone except Miss Jane. And now you worry because she's accepted an invitation to dinner."

"It's the first time she's gone out in company since her trouble came."

"Shows she's getting her balance again," the father said optimistically.

His wife made a little impatient gesture. "How's she going to get along when people talk to her? Here at home we make her understand by pointing to things. I'm afraid it's going to be very embarrassing to her out in company."

"She's got to come to it," said Sara's father, "unless you're going to keep her shut up the rest of her life."

But in spite of his sensible words his face, too, was shadowed.

When Sara took her seat at the table of the hospitable Thrustons the next Friday evening, Mrs. Warren, seated opposite, noticed the girl's air of suppressed excitement. Her eyes were very bright and a spot of scarlet showed on either cheek.

"She's so nervous that she hardly knows what she's doing," the mother said to herself.

Then Mrs. Warren's heart came into her mouth, for young Robert Thruston, home from college for a few days, turned and addressed Sara. The girl looked up as she felt his movement, fixed her eyes on his face and waited until he had finished. Then her mother saw that she was replying.

Mrs. Warren did not faint, although for a few moments she fully expected to do so. She rallied and even made a pretense of eating her dinner; but she could hardly be called good company. Her eyes scarcely left the girl opposite, the girl who had sat morosely silent so many hours out of the past year, and who now was conversing like any other of the guests.

Bedtime came late that night, for after reaching home Sara had to explain the miracle. Seated on a hassock at her mother's feet, with her watchful eyes uplifted, she told her story.

"You know you spoke of lip reading back at the very first and I wouldn't listen. I thought you were just saying it to let me down easy. And then one day I understood something Miss Jane said, understood it without hearing her. Until then I'd never paid any attention to what she was saying, you know. I just let her talk, so as to give her an outlet."

"You dear, unselfish child." The tears started to Mrs. Warren's eyes, but Sara laughed.

"That's a mother's partiality. You said I was unselfish, didn't you? Well, to go back to Miss Jane, when I found that I had read her lips without trying to, I just settled down to business. Poor, dear old soul! How she has talked these last six months, and how I have watched! And when I began to understand, mother, and to get the hang of a story, it was like heaven."

Again Mrs. Warren's eyes swam with tears. "You might have let me help you instead of Miss Jane."

"At first I was afraid I'd make a failure and disappoint you so. And then I made up my mind to give you a surprise. But I've watched your lips and father's as well as Miss Jane's, though I was a little underhanded about it. And in the street cars I've watched people talking, and done considerable eavesdropping that way."

She stopped a moment to laugh. Mrs. Warren, entirely overcome, wiped her eyes.

"Of course it's no use, mother, pretending it's not a handicap; it is, and it's a big one. I can only talk to one person at a time, and sometimes, even then, I make mistakes. Once or twice this evening Bob Thruston looked a little puzzled, and I saw I'd made the wrong answer; but that seems such a little thing compared to being shut up in a glass prison where you can see people but never talk to them. It's just taught me that nothing happens to people that's hopeless. Mother, I believe I'm going to be happy and useful in spite of everything—thanks to Miss Jane."

THE WIGWAM IN CHICAGO, WHERE LINCOLN WAS NOMINATED FOR THE PRESIDENCY

NOMINATING LINCOLN

By the late Franklin Johnson, D.D.

FOR three days in 1860 I was a politician. I had never been one before; I have never been one since. I was at that time a member of the Republican convention that first nominated Lincoln for the presidency. In 1860, when I was a student in what is now Colgate University, I was astonished one day to receive a communication from Oregon saying that the State Executive Committee of the Republicans had appointed me a member of the national convention to be held at Chicago a month later. All the necessary credentials were inclosed.

I had not been chosen by the state convention; but several of those thus chosen were unable to attend the national convention, and the executive committee had been authorized to fill the vacancies. My older brother was a member of the executive committee, and I discovered later that he was responsible for my receiving a commission as delegate.

GREELEY AND THE BURLINGAMES

THE vacancy that I filled occurred because it was then hard to get from Oregon to Illinois; the best way was to go to New York by way of the Isthmus of Panama, and from there by rail to Chicago. Because of that tedious and expensive journey it was necessary to find several delegates who were already on the Atlantic side of the continent. Horace Greeley was one of them; for, although he was not an Oregonian, he was loved and revered in Oregon, as in all the other Northern States of the Union.

At noon of the 16th of May the delegates found themselves in what was called the Wigwam, a vast temporary structure of rough lumber that had been built expressly for the occasion. It was near the river and near the lake, on an angle of land now occupied by business buildings. I was seated on one side of Horace Greeley; on his other side sat Mr. Burlingame, an old man, the father of Anson Burlingame, then eminent, and afterwards to become famous as the confidential adviser of the Chinese emperor. Much of the time Anson Burlingame was in the company of his father, whom he had not seen for many years.

As soon as the convention was called to order and had begun business, it became evident that the acoustic qualities of the Wigwam were perfect, for every voice was clearly heard throughout the vast room. It was evident also that the managers of the convention were men of ability and experience who knew their work, for the business of the day was taken up at once and dispatched without confusion or hesitation, and yet without denying any delegate or group of delegates full freedom of speech and action. The hesitations, uncertainties and doubtful expedients

often observed in such assemblies were entirely absent.

The first day was devoted to verifying credentials, electing officers and appointing committees, the second to adopting rules of procedure and a platform, and the third to nominating candidates. The second day brought before the convention the chief subjects of debate.

It has been said that the convention was remarkable for the fact that each of the presidential aspirants was presented in a speech of two or three sentences, instead of in the long and wearisome eulogy that is now customary. That is true, but there was plenty of long

and wearisome oratory on other subjects. It seemed to me that many of the younger delegates, finding themselves for the first time in a national convention, seized the great occasion to make speeches

for their constituents at home, rather than for the purpose of influencing their fellow delegates.

I was interested to observe Greeley, who touched elbows with me. During the speeches he usually sat with his eyes closed. If the speaker said anything of importance, he opened them at once and paid serious attention. If the speaker merely uttered words without thought, Greeley, after listening for a while with closed eyes, would begin to mutter profane expletives.

Mr. Burlingame was a devout church man; after the convention had adjourned on the second day he met his son, Anson, and expressed to him the astonishment and pain with which he had heard those expressions from Mr. Greeley.

"He is not conscious of what he has said," Anson told him. "When he was young he fell into the habit of using bad language, but he uses it now only under strong provocation, and does not know that he uses it. Tell him how you feel about it, and you will find that what I say is true."

I was present when Mr. Burlingame acted on that advice. "Mr. Greeley," he said, "I have taken your paper for many years, and have learned to regard you as one of the wisest and best men who ever lived. I cannot tell you how I have been shocked to overhear some of your language this afternoon."

Greeley opened his great, innocent eyes. "Have I been swearing, Mr. Burlingame?" he answered. "I didn't know it. I will try not to do so any more. I thank you."

Greeley's knowledge of many of the obscure and ambitious speakers was extraordinary. Mr. Burlingame and I both had opportunity to test it frequently. We would ask him who a speaker was, and he would answer at once somewhat as follows: "He is a member of the Indiana Legislature from Harrison County." Then he would recite some of his votes on certain of the important issues in his state in recent years. How he acquired such knowledge of men is to me a puzzle to this day. I never found him at a loss for an immediate answer.

CARL SCHURZ

MY memory of Greeley is one of affectionate admiration. The great mistake of his life was his ambition to be President; for he was created for another position and another work. He was appointed by nature and training to be an editor and to lead the sober religious people of the Northern States in their thought concerning the great national issues of the period. They honored him as they honored almost no other living man. He was not by nature a statesman. In trying to grasp the presidency he lost his paper, his income, his health and his life. His end was a bitter tragedy, and the generation of young men who grew up under his influence can never think of him without reverence for his character and sorrow that his sun, after shining brightly all his life, went down in tempest.

Among the numerous speakers only one made an indelible impression on my memory. Carl Schurz said only a few words, but he fascinated me. He was a slim young man, who stood erect, with a military bearing. His pronunciation of English was almost perfect. He spoke simply and with no apparent desire to make any political capital for himself. I heard him

many years afterwards at Harvard University, when he was a member of the Hayes cabinet, and many years after that at the University of Chicago, when he was old and bent and much interested in having our government abandon the Philippine Islands. Although he was inclined to be visionary rather than practical, his life was busy and successful to the end, and always useful to his adopted country.

Before we adjourned on the second day it was announced that Col. Ellsworth and his company of Zouaves would give an exhibition of military drill in the Wigwam that evening. Every gentleman who brought a lady would be admitted; but a gentleman who came without a lady would be turned away—a lady was the only ticket required.

I did not know a woman in Chicago, but I went to the Wigwam, hoping to gain entrance without one. I found every opening guarded, and my effort appeared to be in vain. I was about to return home, when I saw three men without ladies walking toward the entrance; I recognized them as among the leaders of the convention, and I was confident that they would not be turned away. I joined them and thus went into the building without being challenged.

For more than an hour Ellsworth and his Zouaves entertained the vast crowd with what seemed to me a gymnastic, rather than a military, drill. The Zouaves, in their uniform of much red and gold, went through all imaginable evolutions and formations. But to what practical purpose? It did not seem to me that they would have any value in actual war.

RUSE AGAINST RUSE

THE same drill was given shortly afterwards in City Hall Park, New York City, before a throng of eight thousand spectators. All the papers of the country described those two exhibitions, and Ellsworth found himself famous at twenty-four years of age. No one could become a member of his company of Zouaves without taking an oath not to drink alcoholic liquors or to use profane language. So far as I know his drill was never tried in actual war. He was put at the head of a regiment in New York City composed of firemen, and called the Firemen's Brigade. I remember seeing them march down Broadway, where they made a fine show with their red trousers and glistening fire helmets. Ellsworth was killed soon afterwards; his early death made him a figure of pathetic tragedy.

The preliminaries of the convention had all been finished on the first and second days, and the third was set aside for making the nominations and completing the business. I was early at the Wigwam, but, early as I was, I found that all the galleries and the standing room on the floor were occupied by expectant crowds. On my way I had been told that the friends of Seward were marching through the streets in a great procession, and that they would appear at the Wigwam later. When I observed how closely the hall was packed, I doubted whether the men in the procession could find places inside; in fact, they did not find places. Something had happened to fill the room that they expected to occupy. What that something was, although long a mystery, has recently become known.

The most confidential friend of Lincoln was Leonard Swett, an able and astute lawyer, at an earlier time his companion of the circuit, and now foremost in advocating his nomination. His friends have told me that he had some trouble in persuading Lincoln to permit his name to go before the convention, for Lincoln was convinced that Seward would be nominated, and that he would be an admirable man for the position. It was only the strong protest of Mr. Swett that prevented him from withdrawing.

On the second day of the convention Mr. Swett learned that the managers for Seward were organizing a great procession of his friends to march early the next morning, gather an army of recruits by the way, get to the Wigwam before the others, occupy all the available space, crowd out the friends of Lincoln, and shout for Seward on every possible occasion.

Mr. Swett determined to meet this ruse with another. He got together the managers for Lincoln and arranged with them to have the friends of Lincoln take possession of the Wigwam while the Seward procession was winding through the streets. As the city was thronged with the friends of Lincoln, it was easy to pass the word round. Upon the success of Swett's plan many votes undoubtedly turned, for there were many delegates who were not strongly committed to any candidate, and who were ready to yield to what appeared to be the voice of the people when they found that the choice was narrowed down to two men.

Certainly the voice of the people in the

This photograph of Lincoln was taken on the day of his speech at Cooper Institute in New York. Lincoln is reported to have said that that speech and this photograph made him President.

Wigwam was heard that day for Lincoln. At every mention of his name the uproar in the galleries was deafening. At each roll call the number of votes for Lincoln showed a gain, until a tide of votes for him swept in and nominated him. The ruse of Mr. Swett was only a device to render another ruse ineffective.

The multitudes in the galleries made it difficult by their prolonged cheering to declare the nomination unanimous; but finally that formality was over, and then an immense charcoal portrait of Lincoln, which had been kept in waiting, was displayed in one of the galleries. Lincoln was not a handsome man, and such an enlargement of his face was an enlargement of ungainly features; but the uproar of joy that greeted the portrait was so great that we could hardly hear a cannon that was being fired on the roof. Out in the streets processions carrying rails were quickly formed; they marched everywhere as they celebrated the nomination of the great "rail-splitter." An uninformed observer might have thought this enthusiasm for homeliness and rail-splitting an undignified outburst of ignorance; but behind all the apparent crudity of it was a profound knowledge of the man and a profound conviction that he was fit for the office to which he had been nominated.

The managers for Seward went home bitterly disappointed; but we have learned, and I do not doubt that they learned, that the result was most fortunate. Seward was remarkable by nature, and he was cultivated by all the influences of the highest schools and the highest society. He was a shrewd diplomat, and knew the political currents and the personal interests that governed Europe as he knew those of his own country. The place that he took and that he filled for so many years was the one for which he was fitted by birth and by training.

If Seward reminds me of a Doric column, fluted and polished, yet not so ornate as to suggest weakness, Lincoln reminds me of a wild tree growing up in the depths of the forest, repressed by the lack of cultivation, knotty and gnarled, scarred in youth by the tread of passing feet, shaken by tempests, yet thrusting its way upward in spite of all, and filling its branches with flowers and fruit. Both were great, and each found the place in which he could serve his country best.

It is interesting to study the characters and follow the careers of some of the other candidates for the presidency whose names were presented to the convention.

One was Simon Cameron of Pennsylvania, who was Lincoln's first Secretary of War. He began as a poor boy and made himself rich by energy, sagacity and honesty in business. He began as an obscure politician, and made himself supreme in his state.

As Secretary of War, Cameron easily succeeded in discharging the complicated and difficult business duties that the place required of him, and the new army had little lack of food, of clothing, of tents, of arms; but he could never bring the army itself into shape. It was composed almost wholly of volunteers, with a few graduates of West Point and a few men who had seen some service in the Mexican War. As a rule, each regiment and company elected its own officers. They were nearly always able men, but utterly ignorant of military affairs.

The leadership of Cameron depended on his skill in placing men in responsible positions, but he could not place those men; they had become officers by election, and he did not even know them. Cameron found himself helpless before the vast collection of formless materials that the early part of the Civil War called together. He gave up his cabinet position, and recommended as his successor Stanton, who became one of the great war secretaries of the world's history.

Of the other men who had some votes in the convention one afterwards proved to have a calm and broad mind but to be somewhat slow and dull; another was a fiery extremist who would have destroyed the Union in his very first efforts to save it; another was an idealist who never, in the whole course of his distinguished life, proposed a practical measure; another was a chivalrous and brave and dashing spirit who would not have seen the difficulties before the ship of state, but who would have driven it against the cliffs, expecting them to give way at once. Some others are now so irrevocably lost in the mists of obscurity that no one knows how to characterize them.

NORTH FORTY EAST

By Homer Greene
In Ten Chapters Chapter Nine

BRILL looked with some uncertainty from the notebook in his hand to the face of Old Tompkins and then back again to the book. In his hands he held the only weapon that his adversary could have used to beat him. For the moment he could hardly realize the extent of the good fortune that had so suddenly befallen him.

"How did this book get into your hands?" he asked after a moment. "Where did it come from?"

Before replying, Old Tompkins looked cautiously from left to right to make sure that no one else was listening.

"From the secret chest," he whispered.

"And what's the secret chest?"

But the old man apparently did not choose to go into details.

"That," he replied, "is my business. It was Clem's and mine. Now he's dead and it's mine. And what's mine is my own. How much is that book worth to you, Adam?"

"That depends on where it has been and who else knows about it."

The old man rose to his feet and raised one hand impressively.

"Not a livin' soul, Adam Brill. Clem Owens and me was the only human bein's that knowed its secret abidin' place. Clem's dead.

beaten down, for he had dealt with Adam Brill before.

"It's yourn," he said promptly, "for half a dollar."

But Brill, stricken possibly with a sudden

sense of disproportion, possibly with a sudden spirit of liberality, rose to his feet, drew a silver dollar from his pocket and gave it to the old man.

"Here," he said, "is a dollar. I want to be perfectly fair with you. And I want you to promise me never to reveal to a single soul what has taken place between us to-day."

Old Tompkins rose in his turn, laid his cane in his chair, took the coin in one hand and gave Brill the other.

"It shall stand," he said solemnly, "as a secret compac' betwixt us. It shall be hid from the knowledge of man."

"Good. That's settled. Now I've got to change my clothes and go to the mill."

He started to enter the house, but Old Tompkins caught him by the lapel of his coat.

"Adam," he whispered hoarsely, his mouth close to Brill's ear, "in that book ye'll find the mystery and secret of nawth fawty east."

"Is that so?"

"Sure as fate."

"Then here's another dollar for you."

The old man released his hold and took the money, too much astonished to express his thanks; then, clattering down the walk, he hobbled vigorously up the road, wondering what had come over the spirit of Adam Brill.

How he had obtained the book and where he had kept it always remained a mystery. Doubtless for some temporary purpose Owens, while still in health, had intrusted it to his keeping. After the surveyor was stricken it was too late to recover it, and Old Tompkins, with his predilection for secrets, had hidden it away until the demand for it, long resisted, should result in making him the hero of a mystery. And now he was going home with more money in his pocket than he had ever earned by a whole day of labor.

With the notebook in his hand Adam Brill entered his house and, passing through the sitting room into his own room, locked the door behind him. There he sat down and read over again Clem

Owens' description of the survey of October 26, 1867. It was a careful, complete and concise record of what had occurred on that day, as Brill remembered it. What a miracle of good fortune it was that had brought the book into his possession instead of placing it in the hands of his adversary! Now he had nothing to fear. He could dismiss every lingering doubt of his success.

Yet, for some reason, unaccountable even to himself, his rejoicing was only half-hearted. He was ill at ease, constrained, unhappy. Of course he would secrete the book or destroy it; therein lay his only protection; but the thought of doing either of those things gave him no satisfaction.

He wondered why he did not feel greater exhilaration. He felt sure that it was not owing to any prickings of conscience. His conscience had never troubled him in any of his relations with Stanley Orchard; indeed, he had always felt that he was fully justified in depriving him of his home. But now that in order to accomplish his purpose it was necessary for him to destroy or to suppress legitimate and vital evidence—was it possible that his conscience was beginning to balk?

But Brill lost little time in considering the matter. Putting the notebook into a private drawer in his desk, he locked the drawer, changed his clothes and went down to the mill; but wherever he went that morning, whatever he did, a vision of the leather-bound notebook lying safely locked in his drawer remained insistently present in his mind. The vision was there while he ate his midday meal; it was there through the afternoon; it was with him still at supper time. He lost it as he slept, but when he rose the next morning it came back again. It was a vision

DRAWN BY B. J. ROSENMEYER

BRILL HAD NOT SPOKEN. HE HAD SAT THERE IN HIS CHAIR RIGID, SPELLBOUND, STARING

The compac's bruk; but the secret of it is locked in my breast. What's the book worth to you, Adam?"

He dropped back into his chair and waited for an answer. Brill slowly turned the leaves of the book. If what the old man said were true, the book was worth much to him. But the dickering spirit that had dominated his whole life rose up strong within him. He would have the book, but he would have it at a bargain. Doubtless the old man, with some dim idea of the importance of the book in the ejectment suit, would hold it at a high price—fifty dollars perhaps, or even more.

"How much do you want for it?" Brill asked finally.

"Well, I s'pose I could sell it to John Oakford; he's a surveyor, too. Or I could sell it to Stanley Orchard if I was a min' to, and he had money to pay for it. Or I could —"

"I asked you how much you wanted for it," interrupted Brill impatiently.

Old Tompkins did not at once reply. He, too, was considering the question of values. At last he said:

"Well, seein' it's you, Adam, s'posin' we say six shillin'?" It ought to be worth every penny of that."

Brill could hardly restrain his desire to laugh outright, but he kept a sober face and fingered the leaves of the book over again.

"I don't know, Tompkins," he said at last. "The book is old. It's pretty badly worn. The binding isn't in good shape. It might have been worth six shillings twenty years ago, but it seems to me that half a dollar would be a pretty good price to pay for it to-day."

The old man gave a grunt of satisfaction. He had put his figure high expecting to be

that logically should have given him much pleasure, but it did not; it annoyed him.

He thought he might get relief by putting the book somewhere else, and accordingly carried it to the factory and locked it in the big safe. But the change made little difference; instead of seeing the book in the drawer of his desk at home he saw it now in his private box in the office safe. The next day brought no relief, and neither did the next, nor any day that followed. He carried the book back to his house. Still he could not free his mind of it. He returned it to his office. The picture of it was still before him.

One day, in desperation, he took it with him up into the woods on the mountain side, and there he built a fire of withered leaves and dry twigs; but, just as he was about to throw the book into the flames and destroy it, he realized that such a course might possibly only add to his discomfiture. Instead of seeing the book reposing quietly in desk or drawer he might thereafter have a vision of the fire on the mountain side, of the crumbling pages in the curling flames; he might have in his nostrils day and night the pungent odor of burning forest leaves and twigs. It was a doubtful remedy, and he dared not try it. Putting the book into his pocket, he scattered the fire and stamped out the smoking cinders; then he turned his face toward the valley and went wearily home.

A few days later he decided to take the book to his lawyer at Mooresville. Mr. Brown had the reputation of being a lawyer who always looked at the business side of a case rather than at the ethical side. Perhaps, Brill thought, by putting the book into Brown's possession, he could shift to the lawyer the responsibility of keeping it, and so rid himself of the presence of that persistent spectre; but when he came into Brown's office he did not mention the real purpose of his visit.

"I suppose," he said, "that the case against Orchard will surely come to trial at the June term."

"Yes," replied Brown, "and we'll make short work of it. I shouldn't wonder if Jackson would let us take a verdict without offering any evidence. The only chance he has is in the possibility of that old notebook of Owens' turning up before the trial."

"And if it should turn up?"

"Then your goose is cooked."

"Suppose I should happen to get hold of it myself?"

"Then lock it up; burn it; sink it to the bottom of the sea."

"Wouldn't you keep it for me?"

Brown laughed a little mechanically. "That would hardly do," he said. "A lawyer must observe the ethics of his profession, superficially at least. At the same time he must keep the secrets of his clients locked safe in his breast."

Brown looked at his visitor inquiringly, but Brill's face revealed nothing.

So, with the book still in his pocket, the harassed man went home and locked it up, as before. But the haunting picture of it he could not lock up. Whether he was waking or sleeping, resting or working, indoors or out, the picture was always with him. Brill would not for one moment have admitted that he was conscience-stricken, but the thing puzzled and annoyed him and made his life wretched.

He had one consolation. The spring days were creeping by, and Nathan, his son, would soon be at home for the long summer vacation. There would be life and activity in the house—youth and laughter and good cheer. Brill looked forward indeed with joyous anticipation to the coming of his son, for he knew that by some means Nathan had pulled himself together, avoided the disgrace of dismissal, and taken up his college work anew and with success. That much he had gathered from his son's letters; there had been no further message from the dean. Brill had asked his son for no explanations and had received none. He knew as little about Nathan's delinquencies as he did about the cause of his reformation.

And one glorious day in June Nathan came home. He came sturdy and erect, with the glow of health in his face, with courage and confidence in his voice, with the spirit of strong endeavor shining in his clear, brown eyes. When Brill greeted his son, his heart was stirred with a greater pride in the boy and a deeper affection for him than he had ever felt before. For the time being at least the ghost of Clem Owens' notebook was laid. The house took on a different aspect. The master of it moved about with a lighter heart than he had known for months.

Nathan talked much of the college, of his work there, of Ralph Orchard's extraordinary success; but he had no word to say about his own fall and rise.

After supper, as they sat on the veranda, neighbors who went by came up to shake hands with Nathan, or else he went down to the gate to greet them; from childhood he had been a favorite in the community.

As the twilight deepened, he broke a moment of silence by starting to his feet and saying:

"I must run up for a few minutes to see Mrs. Orchard. There's something I want to say to her, and it won't keep overnight."

His father watched him as he strode away

under the deepening shadows, and a great sigh of contentment stirred his breast.

So Nathan went up to see Mrs. Orchard, and he said to her what he had it in his heart to say; and, big, strong, sturdy fellow that he was, she took him into her arms and kissed him as she had done when he was a little boy.

When he came home through the darkness a shadow of anxiety was on his face. He had learned some things at the Orchards' about the pending litigation that Ralph had not told him at college. Stanley Orchard, always voluble, had let them escape from his lips.

Nathan entered the house and went into the sitting room, where his father was reading. Brill, looking up to greet him, saw by the expression on his son's face that something had gone wrong. Drawing up a chair, Nathan seated himself at the table opposite his father. He had something that he wished to say, but he hardly knew how to say it. He had broached the subject once before, without success; how could he hope to do better now?

"Father," he said at last, "Stanley Orchard tells me that the ejectment suit that you brought against him last fall is coming to trial this week."

"Yes," Adam Brill answered quietly, "Mr. Brown hopes to get it on day after to-morrow."

"I suppose you expect to win it?"

"Yes; there's no doubt about it. Orchard is foolish to go on with it and have to pay the costs."

"Something might turn up at the last moment that would be to their advantage."

"Nothing can turn up that will help them. The sooner they realize that the better off they will be."

"I think they do realize it, in a way. They are planning to move into the cabin on the upper corner of the lot."

"That is commendable foresight on their part."

Nathan felt that he was making little progress. His father's heart was apparently as hard toward his adversary as it had ever been.

There was silence for a minute or two, and then the boy spoke again:

"You know, father, I can't feel right about it. It sort of goes against me. It doesn't seem to me to be quite fair to take this man's property on a mere technicality."

Brill's face was expressionless, as if it had been hardened in a mould.

"This isn't a question of morals," he said; "it's a question of law."

"I suppose it is; and I suppose the law is on your side. But wouldn't it bring better results if you were generous now to Mr. Orchard and didn't stand on your legal rights?"

"No; he'd only boast that he'd beaten me into submission, and keep on wagging his unruly tongue."

"Maybe that's true. I've no right to interfere. But it hurts me so to see people suffer who have been kind to me."

"What have they done for you?"

"Why, I don't know that Mr. Orchard has done very much, except that he's always been kind to me and patient with me."

"Well?"

"But Mrs. Orchard—why, she's been like a mother to me! Many's the time she's comforted me when things went wrong. She's sung me to sleep on her lap when I was a child. I can't help thinking that some of the few things that are good in me have struggled to the top because of her goodness to me when I was a little boy."

If any emotion stirred in Adam Brill's breast, he gave no sign of it.

"It is one of the penalties for a man's misdeeds," he said, "that his family must suffer with him."

Yet even as he spoke his hands, hidden by the table, were clenched tight to the arms of his chair.

"There's one thing more, father. I've got to tell it to you some time; I may as well do it now. That last time the dean wrote to you, and telegraphed to you, I—I was going to wreck. It wasn't merely neglect of studies; it was dissipation, too. The dean warned me; Ralph pleaded with me, but it was no use. I wouldn't listen, or I couldn't; I don't know which. One night I went down to the city and lost myself. Thrown out of one drinking place, I slunk into another. I slept in the gutter. I had human refuse for companions."

He paused and moistened his lips with his tongue. His face had grown white and his eyes were fixed. Brill did not speak. From under his bushy eyebrows he stared at his son in shocked amazement. Nathan choked a little and went on with his story:

"On the second morning I waited near the station for a train, to take me anywhere, away from everyone I had ever known. Ralph found me there—he had been searching for hours. He dragged me from the steps of the car. He made me go with him. He took me to the dean. He fought for me—he vouched for me. He put me to bed, and fed me, and took care of me. He pushed me back into my work. If it hadn't been—for him—I shouldn't be—here—to-night."

It was no wonder that his voice broke at the last, and that he put his elbows on the table in front of him and hid his face in his hands. Brill had not spoken. He had sat there in

his chair, rigid, spellbound, staring; but when the story was finished his body relaxed, his eyes fell, his chin dropped on his breast.

After many minutes he looked up.

"Nathan," he said softly, "it's time for both of us to go to bed."

The boy uncovered his face and rose and held out his hand with a tremulous smile.

RALPH'S BLIZZARD STORY

By Gorton Veeder Carruth

THE city of Kingston lay helpless beneath the first fierce blizzard of the winter. The storm had begun on Sunday afternoon about three o'clock, and now, at midnight, the streets were drifted deep or else swept bare by the howling northwest wind. The fine, sharp snow streamed over the tops of the buildings and swirled round the corners, cutting and stinging like sharp sand. Electric cars had stopped running and, except for an occasional muffled figure hurrying along with head bent to the storm, the streets were deserted.

Ralph Denton, reporter for the Chronicle, had finished his night's work and had just eaten his supper in an all-night lunch room in Waverly Square. Standing at the door, he was buttoning his ulster as tight as he could before plunging out for the half-mile walk to his room. The arc lamps in the square showed as dim blurs of light through the snow. Once or twice, when the air cleared for an instant, Ralph caught glimpses of the light on the tip of the three-hundred-foot tower of the new city hall that had been building on the opposite side of the square. As he stood looking up he conceived the idea that it would be a new and interesting experience to be up on the balcony of the tower in such a storm.

"It would give me material for a good blizzard story for the Chronicle," he said to himself.

After a moment's hesitation he struck out across the square and a few minutes later pounded at a side door of the huge building. It was some minutes before John Dougherty, night engineer and watchman, a good friend of Ralph's, admitted him.

"Well, what brings you here in a storm like this, young fellow?" John asked in astonishment.

Ralph brushed the snow from his ulster. He was a little doubtful what the watchman would think of his idea.

"Why, it struck me as a good night for a trip up in the tower, John. Don't you want to go up with me in the elevator?"

The man stared. "Up in the tower! Well, of all the fool notions! Why do you want to go up there in a howling blizzard?"

"I think I can get a story out of it for the paper. We don't go in for the descriptive stuff very much, but this would be a novelty."

"You newspaper chaps are always wantin' to stick your noses in queer places, aren't you?"

Ralph laughed. "We have to if we want to earn a living. Now be a good fellow, John."

"Well," said the watchman reluctantly, "I'll take you up, but you'll have to walk down. I haven't any time to fool round up there. I've got the fan engine all to pieces downstairs, and it's got to be in running order by morning."

"All right," agreed Ralph. "I'd a whole lot rather walk down than up."

The building was completed and in use, and the tower was finished except that the clock and the chimes had not yet been installed. The workmen had been trying to get them in before the snow came, but one thing and another had interrupted the work. As Ralph and the watchman went up in the elevator they passed, at a point about two hundred and forty feet high, the landing where the workmen were putting in the mechanism of the clock. There were to be four dials—one on each side of the tower. The hands had been put into place on three sides, but Ralph noticed that on the south side the hole in the centre of the dial was still open.

"I'll wager that you'll get enough of the scenery out there mighty quick," said the watchman as they came to the top landing.

Opening a door on a balcony that ran round the tower, Ralph and John stepped out.

The light on the top of the tower lighted up the whirling snow.

"Whew!" shouted the watchman. "I'll bet it's blowing sixty miles an hour. Look at that snow fly! You can stay here and freeze if you want to; I'm going down."

"I guess I won't stay

"Good night, father! Forgive me for whatever I've said that's hurt you. I had to say it."

For answer the man rose, put his arm round his son's shoulders and kissed him good night, as he used to do when Nathan was a little boy. Then they went upstairs.

TO BE CONTINUED.

THE LIGHT . . . INSIDE THE TOWER SHONE DIMLY THROUGH THE HOLE

through a succession of rapid exercises, jumping, stamping, and swinging his arms until his heart was pounding and he felt a warm glow throughout his body. Then he slipped out of his ulster, took a deep breath, climbed over the railing, gripped the rope and started down.

The wind tore at him, blinding him with the stinging snow. It struck through his clothes like the touch of ice; it caught the loose end of the rope and tossed it far from under him; but down he went knot by knot until he was able to thrust one foot into the loop in the end of the rope. So far, his plan had not miscarried; he hung with his head and shoulders opposite the hole in the centre of the south dial of the clock.

The light on the landing inside the tower shone dimly through the hole. Below him was a sheer drop of more than two hundred feet to the stone pavement. Ralph did not dare to look down. He had not an instant to lose, for already he was chilled through again; he must act quickly before the cold completely numbed him. Owing to the projection of the balcony above, the hole was some four feet away. As he swayed in the wind he reached out one foot and thrust it against the tower. That set him swinging harder, and at last the rope swung him against the tower so that he was able to thrust one arm through the hole and cling there.

Then, with a sudden mustering of his courage, Ralph let go the rope and thrust the other arm through the hole. Now began a struggle that took every ounce of his strength. The hole was not more than fifteen or sixteen inches wide, and Ralph had to lift and drag himself through. It was a tight squeeze; he lost some skin and some buttons, but it was go through or drop, for the rope had slipped from his foot and had swung beyond his reach. After a few minutes of desperate exertion he fell on the platform inside.

The next morning the city editor of the Chronicle stopped beside Ralph's typewriter with three or four sheets of paper in his hand. He was smiling, which was somewhat unusual, and—what was still more unusual—he had come to speak a few words of praise.

"This description of the storm, Denton, is an unusually vivid bit of writing," he said. "I don't usually put that kind of stuff on the first page, but I'm going to this time."

"That's good," said Ralph. "I certainly worked hard to get it."

WILLIAM H. RAU

"BUFFALO BILL"

FACT AND COMMENT

HE who does as well as he knows how to-day will know how better to-morrow.

The sweetest Rest rewards the Worker who Completes the Task he did not wish to do.

CHARITY consists in a man's so ordering his life that he gives the needs of others precedence over his own.

LAST year the products of cottonseed meal reached a value of \$180,250,000, yet only a few years ago the South burned or threw away its cottonseed as worthless. Another generation will doubtless make equally good use of other things that we now regard as waste.

GEN. Peter Osterhaus, who died at his boyhood home on the Rhine a few weeks ago at the age of ninety-four, was the last of the major generals that commanded a corps in the armies that saved the Union. He began his Civil War career as a major in a Missouri regiment, and won his promotions by distinguished service in many great campaigns.

"OF all the lands that I have visited," says Sir Rabindranath Tagore, the poet and philosopher of India, "the United States is the only one where a person eats the inside of a slice of bread and throws away the crust." It is a keen and penetrating remark, which calls attention to a habit that undoubtedly injures the health of the American people more than they know, and that is wasteful to the last degree.

FLY hunting may not be so exciting as some other kinds of sport; still it has certain possibilities. A New York organization offered a substantial prize for the first fly caught in that city in 1917. The only condition was that it be a "wild fly," and not one nurtured and "preserved" for the occasion. Many persons devoted January 1 to a fly hunt. Late in the afternoon a woman found a fly in her kitchen, and so won the prize.

THE twelve hundred reindeer that our government brought from Lapland nearly twenty-five years ago to supply the needs of the Eskimo tribes of Alaska have increased to about seventy thousand. They already furnish the natives with food, raiment and transportation, and Secretary Lane believes that their numbers will so increase in a few years that reindeer venison will relieve the shortage of meat in the United States proper.

THE latest gold dollar that the United States mint turned out has already a collector's value of two dollars and a half—perhaps more. The coin in question is the McKinley souvenir gold dollar that Congress authorized a year ago at the request of the trustees of the memorial to President McKinley. The trustees will sell at a premium the one hundred thousand coins to which the issue is limited, and use the money toward building the memorial at Niles, Ohio.

THE youngest member of the new British cabinet, Sir Albert Stanley, who at the age of forty-one has become president of the Board of Trade, got his training for public service in the United States. He came to this country with his parents when he was a small child, attended our schools and Cornell University, and then for twelve years was in the employ of electric railways in Michigan and New Jersey. Of late he has been at the head of the great underground transportation system of London.

IN the first nine months of last year 5082 young men tried to enlist at the New York City recruiting station of the United States Marine Corps. Of that number only 167, or one in 30, were accepted. The recruiting officer rejected 4272 as unfit, without reference to the medical officer, and of the 810 who reached the medical officer 556 failed to meet the tests. The figures, and others that every recruiting station offers, are used as arguments

for a system of universal military training that would build up a race of young men better fitted for the work of peace as well as for that of a possible war.

NO PEACE AT PRESENT

IT was well that Germany should propose a conference to discuss peace, and that the President should ask the belligerents to state the terms on which they would be willing to end the war. But the two steps have not visibly brought peace any nearer, and they have not disclosed that either party is ready to make the kind of peace that Mr. Wilson in his address to the Senate urged upon them—a peace without victory for either side.

Neither group of nations admits defeat; on the contrary, each of the groups professes its confidence in ultimate victory, and each is no doubt sincere. Neither is willing even to consider the terms that the other, declaring itself to be victorious, would propose, and neither group, after all the terrible sacrifices of life and treasure, would willingly consent to a mere return to the situation that existed at the beginning of the war.

The deadlock becomes more obvious when we examine the details of the recent statements. The Allies have made known their aims in concrete form. They demand the evacuation of Belgium and compensation for the ruin wrought there by the German armies. They insist that Serbia and Montenegro resume their national life and be indemnified for the havoc they have suffered during the past two years. They declare that Italy must have the territory from Austria for which it is fighting, that Germany must return Alsace and Lorraine to France, that Turkey must be driven out of Europe, and that Russia must have free access to the Mediterranean Sea.

The Allies have all agreed that they will make peace only by common consent. If Germany were to reject any one of their principal demands, some one of the Allies would spurn the offer of peace. They have pledged themselves to continue the war until they have gained the objects of every government, or until they are all ready to admit defeat.

We shall reach the same conclusion if we consider the terms that Germany has in mind. We do not need to have Berlin state the German terms in order to know that the Allies would reject them, for Germany would undoubtedly base its offer on the assumption that its arms had been victorious.

No parleying while conditions remain as they are will bring about peace. A decisive victory would hasten the end. The retirement of some power from one or the other alliance would have the same effect; but of that there seems little likelihood. The President has told us that he believes a permanent peace can be had only through a negotiation between unconquered equals. There are others who think that, if peace is made before one or the other party can dictate and enforce its terms, the bloody struggle will surely be renewed as soon as the nations can repair their losses of men and of treasure. But peace, whether permanent or temporary, must wait until events have tamed the spirit of one or both of the belligerents far below the present pitch.

"LEAKS"

THE supposed inability of a woman to keep a secret has been a stock joke for years; nevertheless, it is a notorious fact that there is no government secret so important, intrusted to so few persons,—mostly men!—or so hedged about with solemn oaths that it does not quickly become known to the very persons from whom it was intended most especially to withhold it.

The latest illustration is the "leak" by which advance information about the President's peace note escaped. To be sure, it has not yet been proved that there was a "leak," but no one who knows the circumstances feels any doubt that there was. The evidence that the President's intention to send a note to the belligerents became known to certain men is convincing. They foresaw the effect of the note on the price of stocks, and thereupon sold certain stocks "short." When the news became generally known and prices declined rapidly, they bought the same stocks back again at prices that left them great profits.

The only proof of the "leak" is that the stock-market raid came at precisely the time when a raid would have occurred had news of the President's intention got out, and that no other cause for it has been even suggested. Anyone who can put two and two together could not fail to draw the natural inference.

If there were no "leak," the coincidence is more than extraordinary; it is marvelous.

There have been many parallel cases. Not long ago the government began negotiations for the purchase of the Danish West Indies. Since for one reason or another former plans for the sale had failed, the government of Denmark particularly requested that the matter should be kept entirely secret until a treaty should be made. Although few persons knew of the affair, it was almost immediately betrayed, to the great annoyance of our own government, and to the peril of the negotiations.

Senators of the United States are sworn to keep secret the proceedings that go on when the doors of the Senate are closed to the public; yet the newspapers report those proceedings quite as fully as they report the doings in open Senate.

These are merely specific illustrations of the fact that there are "leaks" wherever there are government secrets. If the whole truth could be known, what revelations there would be of the knowledge that each of the belligerents in Europe has of events and conditions in the capitals of other countries! Of course there are spies everywhere, but they would be helpless if there were no "leaky" government officers and employees. It has been so from the beginning; it will be so to the end. Men no more than women can keep a secret.

A QUESTION OF TASTE

IN the social world woman has long been the arbiter of manners. It is part of the deference shown her by civilized man that he is more polite in her presence than out of it. He stands, he takes off his hat, he forbears from sprawling over a chair or sofa, he eliminates profanity from his conversation, he shows in a hundred ways that he admits her to be a restraining force. In return he exacts from her a finer propriety, a more agreeable address and a higher standard of decorum than he exacts from men. Dr. Johnson was loutish in his own behavior, but he could not endure loutishness in a woman. He believed that a woman's manners, like her morals, were of supreme value to the world. Touchstone in *As You Like It* is but a jester—what men called a fool; yet his one behest to his rustic bride is that she should "bear her body more seeming." Mr. Edmund Gosse says prettily of the stepmother whom he loved that her demeanor was so persuasive, "it would have brought a tiger fawning to her crinoline."

Because women have for centuries dominated their households, and have had but little control or authority elsewhere, their private manners are more unembarrassed and more dignified than their public manners. Socially, they know what is due to themselves and to others. Domestically, they are in every class of life a refining and civilizing influence. But their standard of taste, so preëminent at home, is likely to be lowered abroad. Their understanding of mutual rights, which is the keynote of their personal prestige, becomes confused when they enter the commercial, the civic or the political world and encounter situations to which they are not yet wholly accustomed.

The women who unfurled their suffrage banner in the President's face when he opened Congress committed what was, after all, a trivial offense against taste. Mr. Wilson was busy with his speech, Congress was paying him its usual measure of attention, and a doorkeeper pulled the banner down. The only noticeable thing about the incident is the fact that men, who in private life may have been less well-mannered than those women, had a higher respect for the situation, because they understood it better. Men are also likely to be more polite to their opponents in a debate than women are. They listen with some show of interest, they behave with urbanity; and it is not because they are either interested or urbane, but because they have had long training in the give-and-take of platform civilities.

GAINS FOR PROHIBITION

ADVOCATES of prohibition have recently had occasion to rejoice over three important events favorable to their cause. To take the matters in the inverse order of their importance, the Senate has passed a bill that, if enacted, will close every saloon in the District of Columbia. It is not absolute prohibition, for Washington is the headquarters and the residence of the ambassadors, ministers and legations of other countries, who are accustomed to the use of wine and liquors, and who might be expected to resent the passage of a law that should restrict their privileges. But if the House concurs with the Senate,

there will be an end of much of the evil and scandal that results from the open barrooms in the national capital.

The other bill passed by the Senate forbids the circulation in states under a prohibition law of newspapers containing liquor advertisements. If it becomes a law, it will virtually compel every newspaper in the land to refuse such advertising, or else to decline to receive subscriptions from persons in prohibition states; and even were they to reject such subscriptions they might not be safe against a post-office order excluding them from the mails in those states. So it may be assumed that the proposed law will prevent the liquor interests from advertising in any public journal that has more than a local circulation.

Meanwhile the Supreme Court has rendered a decision of which it is hardly too much to say that it makes the United States government the most effective agent in enforcing the state prohibitory laws. The legislature of West Virginia passed a stringent law forbidding the shipment of intoxicating liquor into the state, even by private persons for their own use. A case was made up to test the constitutionality of the law. The highest court has now decided that it is valid. Heretofore the weak point of all prohibitory laws has lain in the difficulty of proving that liquor brought into a state was intended for sale. Now, when a state excludes it absolutely, and the national government upholds the state in doing so, even to the extent of using its own power to prevent shipments, there is at last a prospect that prohibition will prohibit.

"BUFFALO BILL"

WITH the death of Col. William F. Cody an era came to an end. He was the most picturesque, the best known and almost the last of the old-time scouts and Indian fighters whose services made possible the settlement of the West.

"Buffalo Bill" was no stage hero, no dime-novel scout, although for thirty years he was the manager and centre of interest in the remarkable "Wild West" show and an object of adulation to every live boy in America. He had behind him an admirable history of solid achievement. Living in a little town in Kansas at a time when the struggle between the pro-slavery and the free-soil men was raging, he was early forced by the death of his father to earn his living. He did it by acting as a sort of bill clerk for the freighters who were "toting" West from the Mississippi. Trailing along with the creaking ox wagons, the eleven-year-old boy learned to ride and to shoot, to read "sign" and to meet the craft of the red men with greater craft and courage. As dispatch rider for the pony express he added to his skill as a horseman, a trailer and a shot.

The Civil War broke out, and he enlisted. After honorable service in the war he became a professional buffalo hunter for the Kansas Pacific Railway, under contract to furnish so much meat a month for the section hands. But the army drew him back. He became a government scout, then chief of scouts, and in that capacity served under Gens. Sheridan, Sherman, Carr, Custer, Crook, Miles, Merritt and numerous others distinguished in the long campaign against the Indians. All of them have testified to the skill and fidelity with which he performed his duties.

It will be seen, then, that the boys have had good reason for their hero worship of "Buffalo Bill." He was a real man, and played a man's part in an epoch dotted thick with purple patches and picturesque adventure. And the great aggregation of rough riders that Col. Cody got together was not only incomparably the best exhibition of the kind in the world but also clean, wholesome and refreshing. In it the courts of Europe found something to stir their jaded senses, and America beheld her own vigorous youth. When the long lines of horsemen formed in squadron, and the colonel, white-haired and white-bearded, but straight as a rifle barrel to the last, rode forward on his splendid horse, Tucker, and swept his great gray sombrero from his head with a motion that was grace itself, you went away with the feeling that you had seen something worth while. The era is ended now. There will never be another "Buffalo Bill."

CURRENT EVENTS

CONGRESS.—On January 19 the House of Representatives passed the public buildings bill, appropriating \$33,000,000. The bill has been vigorously assailed as "pork-barrel" legislation. — The President urged on the

Congress the passage of the two bills, known as the Shields - Adamson and Meyers - Ferris bills, which provide for the development of water power in navigable streams or within the public domain.—The Ways and Means Committee has drafted a bill to meet the deficit in the government revenues by increased inheritance taxes and on excess profits of business. A bond issue of some \$300,000,000 is also to be proposed.

THE PRESIDENT ON PEACE.—On January 22 President Wilson read before the Senate a remarkable message, in which he set forth his views concerning the kind of peace that this country would be glad to help make permanent. He held that the peace should be not a "victory" peace, but one agreed to by equals; that it should recognize the fact that great nations have no right to dispose of or to coerce small nations; that Poland therefore be made united, free and independent; that all European nations be "accorded free access to the open sea"—meaning, apparently, the neutralization of the Dardanelles; that the peace should recognize the principle of absolute freedom of the seas; that it should limit military and naval armaments; and that it should recognize an international form of the Monroe Doctrine—that is, that no nation has the right to force its form of government on another. The message was eloquent and elevated in tone; it was received with varying sentiments at home and abroad, according as its readers were in sympathy with its pacific sentiments and ideals. Abroad, the chief criticism was directed against the proposition that the peace should not be a victor's peace; in England and France especially public sentiment believes an Allied victory essential to a peace that has the elements of permanence.

WOMAN SUFFRAGE.—The legislature of North Dakota passed a bill giving women the right to vote for President, and another that submits a constitutional amendment, giving women the entire suffrage, to the vote of the people. Gov. Frazier has signed both bills.

REPUBLICAN POLITICS.—The action of the "regular" Republican majority of the executive committee of the Republican National Committee in electing a vice chairman to the National Committee against the protests of the Progressive members has precipitated another disagreement between the two wings of the reunited party. The men who follow Mr. George W. Perkins have threatened to withdraw from the National Committee and begin the reorganization of the Progressive party unless the act of the executive committee is rescinded and a meeting of the full committee called.

RELATIONS WITH GERMANY.—On January 22 the Department of State instructed Ambassador Gerard to find out whether there were any Americans among the one hundred and three sailors of neutral nations brought into a German port by the steamer Yarrowdale, which was taken as a prize by the latest German commerce destroyer. If there are any such, our government, it was added, would demand their release. It is believed that Germany may take this opportunity to enter on negotiations intended to settle clearly what is to be the status of armed merchantmen on the high seas.

THE "LEAK" INVESTIGATION.—Mr. Sherman L. Whipple of Boston was appointed counsel to the House Committee on Rules, which is investigating the stock market transactions that preceded the publication of President Wilson's "peace note." The committee, in session in New York, ordered the Stock Exchange authorities to get from all the members of the exchange a full record of the dealings of their customers in the stock market between December 10 and December 23, and then suspended the hearings until the records were received.

MEXICO.—The regular troops under Gen. Pershing, who have been in Mexico since Villa's raid on Columbus, New Mexico, quietly began to withdraw toward the border. The War Department would not admit that final orders to withdraw from Mexico had been given, but that result was generally expected. As the regulars return to the border, most of the militia still in service there will be sent home.

THE EUROPEAN WAR.
(From January 18 to January 24)
Winter continued to lock the belligerent armies into their trenches except here and there along the extended fronts. In Roumania there was more fighting than there was anywhere else; most of it was without definite

result, but on January 20 Berlin announced that Mackensen had taken the important town of Nanesti on the south bank of the Sereth near the mouth of the Ramnicu. A Bulgarian force crossed the Danube near its mouth, but it was driven back again.

There were reports that Russian pressure on the eastern flank had obliged Mackensen to abandon Braila, but they were not officially substantiated. Among the Moldavian mountains and in the Trotus Valley the Russians held their own against continuous German assaults. If the Russian line is pierced here, all their positions along the Sereth will be outflanked.

The British gained some further ground toward Kut el Amara, particularly on the east bank of the Tigris, which they cleared of the enemy's troops.

Berlin reported that south of Riga the Germans in repeated attacks had pushed back the Russian line more than a mile.

Elsewhere only artillery fighting was reported.

It was given out that the King of Greece had yielded at last to the Entente pressure and that Greek troops and war material were being hurriedly moved into the Peloponnesus. It was rumored that considerable bodies of Allied troops were on their way to Saloniki, and that as soon as the Greek menace was removed from Gen. Sarrail's rear a lively offensive would be begun in that quarter. The Allied blockade is to be raised as soon as King Constantine has complied with the final demands of

the Allied ultimatum. Representatives of the four chief Entente Powers are to be stationed at Athens, and the King will not be permitted any longer to paralyze the military activities at Saloniki, according to the present plans of the Entente.

Additional classes of the Swiss army have been mobilized. Switzerland still fears that its territory may be violated—presumably by Germany, since the other nations would have no object in doing so. The new German law prohibiting all importations into Germany except by permission of the Chancellor has also caused considerable uneasiness and loss in Switzerland. The step was taken in order to restrict importation to indispensable commodities, to reduce the unfavorable trade balance, and prevent the further depreciation of German exchange.

On January 23 news came from London of two naval engagements in the North Sea; only the smaller craft were engaged on both sides. In one of the clashes a British destroyer was sunk, and in the other, one and perhaps more German vessels were destroyed. Unofficial reports from Holland were that no less than eight were sunk or crippled. It is believed that the German boats were trying to get away from the harbor at Zeebrugge, where they were in danger of being frozen in.

A great explosion destroyed one of the largest munitions plants in England on January 19. The plant was situated in East London,—more definite information has not passed the censor,—and the explosion caused the death of sixty-nine people and the destruction of an immense amount of property.

Germany has withdrawn the accusation of unneutral conduct it made against Mr. Vopicka, the United States minister to Roumania.

The German commerce raider, still at large in the Atlantic, is believed to be the Möwe, which once before got free on a career of destruction and safely returned to Germany. It is not certain how many ships she has sunk, but about twenty-one, according to the latest reports. It is believed that one or two of her prizes have been armed and supplied with a prize crew, in order to assist in the raid on British commerce; the steamer St. Theodore is named as one so equipped. On January 19 Berlin announced that the British steamer Yarrowdale, one of the Möwe's prizes, had come into a German port with 469 prisoners—the crews of captured merchant vessels.

Lloyds announces the sinking of six or seven merchant ships, presumably by submarines, almost every day. Most of them are British, but French, Norwegian, Danish, Japanese and Spanish ships were in the list this week. Details of the place and circumstances of the sinking are rarely given, and it is hard to tell whether the vessels are or are not warned.

The Czar addressed a rescript to the new premier, Prince Golitzin, calling on him to bend all his energies toward supplying the Russian armies more efficiently. The new ministry has not shown its hand yet. Liberal Russians and the allies of Russia in the field are uneasy at the increasing influence of Protopopoff, the Minister of the Interior, who has succeeded to the views of Rasputin and to some extent to his power at court.

INSIDE A BRITISH SUBMARINE THE OFFICER IS LOOKING THROUGH THE PERISCOPE

Boys: Plan NOW for Your Summer

ALREADY Fisk Bicycle Clubs in all parts of the country are clearing the decks for the summer's fun—electing officers, arranging for the "Big Doings" and planning for the most active club sport in years. This is by all means the best time for you to form your own Fisk Club, so you will be ready for the summer fun right from the start.

Let Us Help You Form Your Fisk Bicycle Club

We'll be glad to show you just how to go about it—and will fit you out without charge, with many of the things you will need, such as outing hats, membership buttons and wheel pennants for each member, signal officer's flag, club pennant and so on.

Write Now for FREE Booklet "How to Form a Fisk Club"

This will tell you everything about your club, contains complete signal drill code, and other information club members should have. Send for your copy right away. Use coupon below.

Free Subscription to the Fisk Club News

This interesting little magazine is of general interest to all boys who love outdoor sports. It tells of the activities of the boys who are members of the Fisk Bicycle Clubs and has illustrated accounts of their fun. We will be pleased to add the names of a few more boys to the subscription list, free of charge. Use coupon below.

THE FISK RUBBER CO.
of N. Y.
Chicopee Falls, Mass.

THE CHILDREN OF THE CHILDLESS

By Dora Read Goodale

YE lonely, longing, desolate hearts,
By childish love unblest,
What little, lonely, anxious hearts
Starve for a mother's breast!

So many half-clothed bodies,
Hungry, and pinched with woe,
Ache for the gentle kisses
Your lips ache to bestow!

Somewhere the locks you dream of—
Tangled, matted, defied;
Somewhere the child you long for,
Wanting the look of a child.

Somewhere a rich endowment,
Ungauged, with none to care;
Somewhere a precious task laid down;
Somewhere? Nay, everywhere!

Bow to the pangs of the spirit!
Stretch your arms to embrace
The wastage of human progress—
The orphanhood of the race.

Own the debt of your being,
A rich birthright for these;
Pour forth service unstinted—
Balm and tendernesses:

And your dawns shall ripple with laughter,
And hope shall sing in your blood,
And a child shall thaw his unsmiling heart
At the flame of your motherhood.

INSIDE AND OUTSIDE CROWDS

"N"O," said David Donaldson with decision, "I won't go into the church. You're all right yourself, Fred. If church members were all like you, it would be different. But I can't stand the hypocrites you've got in with you. Look across the street; there goes Dr. Jamison—a long-faced, praying scoundrel, and everyone knows it. I'd rather stay on the outside than associate with such men."

At the next corner his companion turned. "Let's go down Fort Street," he suggested.

David drew back. "What for?" he ejaculated. "That's not an agreeable walk, if you ask me."

"Oh, just a little way. We've plenty of time."

In silence they walked two or three blocks. Then they came to the worst place in all the hideous length of Fort Street. A drunken woman staggered from a crumbling shed marked "Saloon." Two men were bawling loudly on the corner. Little children playing at marbles were fighting and swearing as the game went on. A coarse-voiced man was beating a decrepit horse because it could not pull its heavy load.

The young men walked silently along, and their faces showed the disgust they felt. At last Fred waved his hand toward the street, abounding with its unclean life.

"Dave," he said, "I like you; you're a good fellow. If everyone outside the church were like you, I might stay out myself. Perhaps I could be as good a Christian out as in. But I can't stand the rest of your bunch. Look at those men and women, those children. Dave, I haven't much use for your outside set. They are low, they are indecent, they are—inhuman. You are all right, but I can't stand that part of your crowd."

David turned upon his friend in anger. Was he to be thrown in with that riffraff? Then he paused. After all, was his friend Fred, a genuine, sincere Christian, to be counted in with the hypocrites inside the church? He laid his hand on his friend's arm and smiled.

"Your point is well taken, old chap," he said. "If you put it that way, I admit that in spite of your hypocrites you people inside the church have got the best of us outside. I'll go with you next Sunday."

☪ ☪

THAT "FEELING" IN THE FAMILY

"Y"ES, there is some feeling between the Farrar sisters—

"And a very sweet, sisterly feeling I hope it is," said a gentle old lady who was passing through the room. The door closed; the two women in the window seat continued their discussion of the sisters whose feeling for each other was in nowise friendly.

Why is this "feeling" so often observed between members of the same family? A certain man who for three years has worked night and day inventing an electrical labor-saving machine meets a friend and pours forth, perhaps in more or less technical terms, his faith in the work to which he is devoting his life. He passes on, comparing his attentive, sympathetic friend with his brother, who sometimes leaves the room with a frown when he tries to talk about the subject nearest his heart. The politely attentive friend probably enough tells the first man he meets that he has wasted ten minutes that morning listening to Brown "rave over that crazy notion of his"; and that very day Brown's brother whirls round in his office chair and confides to his partner: "I don't know one thing about electricity,—the subject gets on my nerves,—but I have faith in John. When he needs more cash he can call on me. Some day there will be one member of our family to be proud of!"

Now, this brother does not weary John with a recital of the names and business reliability of all his customers; why should John be offended because the merchant cannot patiently listen to his "ravings"? Members of a family, as individuals, have rights that are too often overlooked.

A theological student produced several of his sermons one morning and began to read them to an admiring father and mother, and to a married brother who was supposed to be filled with admiration. As he turned page after page he noticed that his brother was nodding and grimacing to the infant that lay gurgling in his arms. At last he could stand it no longer.

"I care no more about your baby than you do about my sermons!" he cried hotly as he left the room.

That young man had never held a baby in his arms and did not know the overpowering sensation it gives—especially when the baby is your own. The young father, an accountant, had never risen to the heights to which a man ascends when he reads the words he has written for the help and betterment of mankind. It was easy enough for "feeling" to arise; until both learn tolerance, it will not subside.

An ideal situation exists in a family in which the

daughter is a writer of pleasant short stories. Her unimaginative father revels in facts but cares nothing for fiction. He considers it as his duty, however, to read his daughter's stories. One night his daughter found him in the library so engaged.

"O father, don't waste your time over that!" she cried. "You are too tired." But her dutiful father continued to read of poor Aunt Matilda's grief when she discovered the theft of her Christmas bank. A minute or two later he looked over his glasses at his daughter, who was intent upon her embroidery, closed the magazine quietly and picked up a paper at his elbow. Aunt Matilda was forgotten.

"Eleanor," he presently demanded, "did you know that it was estimated that about seven hundred million dollars' worth of material is wasted in this country in a single year?"

"No, father, I didn't," replied the young woman, about whose lips there lurked only the suspicion of a smile. She was not aware of this startling state of affairs and, after five minutes, could not have told whether the country wasted millions or billions of dollars. But she loved her father and admired him for his knowledge of many subjects that interested her not at all. She knew that her father loved her and that he was proud of her work, which others admired. There was not the slightest "feeling" between them.

A broad-minded person can live peacefully with anyone—even the members of his own family.

☪ ☪

THE SMOKE CURE

SOME seventy years ago there lived in the valley of the Genesee a man named Stoner, known far and near as "The Honest Old Dutchman." Like many another settler, Stoner added to his income by making shingles, for which the virgin forest offered ample material.

The great, straight-grained pines were felled and sawed into sections of shingle length. From these cylindrical sections the shingles were split, and skillfully shaved by hand and packed into bundles, to be drawn by ox team to the market fifty miles away.

To make sure that the shingles were of uniform quality, it was customary for the buyer to draw out one here and there from a few bundles; but those bought of "The Honest Old Dutchman" were no longer drawn, for they were made on honor.

On one of Stoner's trips to the city he received, among other things, a barrel of pork in exchange for his shingles. When good Dame Stoner came to cook the pork, she found it spoiled, "shprung," as the natives put it.

"Meester Turner," said Stoner, on his next visit to the trader, "dot pork you solt me shprung. Nein goot. Bah!"

"Oh, smoke it a little, Mr. Stoner, and it will be all right," Turner advised him airily.

"You dinks dat schmoge business make bad dings goot?" inquired Stoner.

"Yes, just remember that, Stoner. Smoke will fix it," assured Turner.

"All right," promised Stoner. "I 'member dat schmoge business."

Reaching home he set to work making a load of shingles of the poorest material available,—worm-eaten, brashy, worthless,—using his prime shingles only to face the bundles. Turner readily accepted the load without drawing, and paid for it, and the two men parted without reference to the "shprung" pork or "de schmoge business." But when next they met the buyer's complaisance had vanished.

"What do you mean, Stoner," stormed Turner, "by bringing me such rotten stuff as that last load of shingles? Worst I ever saw. Honest Old Dutchman, indeed!"

"Dose shingles pad?" inquired Stoner innocently. "Oh, shust schmoge 'em a leedle, Meester Turner, schmoge 'em a leedle dey pe all right."

☪ ☪

MRS. GUNNEY'S ULTIMATUM

"B"ASSETT," requested Mr. Gunney, leaning over the counter of the general store, "I wish you'd give me 'bout a pound of crackers and mebbe five cents' wnth of cheese. You needn't wrop it up," he went on as Mr. Bassett reached for the twine. "I expect to eat it right here, if you don't mind the crumbs."

Caleb Peaslee, watching placidly, turned to Mr. Gunney.

"Ain't that a kind of light diet for you, Obed?" he asked. "Wife ain't left ye, has she?"

Mr. Gunney shifted his feet and reddened perceptibly.

"Wal, yes," he admitted. "I d'know but ye could call it that. She's gone over to Dedham for the day."

Caleb grinned with neighborly malice.

"She didn't leave a great sight of grub cooked up," he said, "if you're down to crackers and cheese already. What you ben doin', Obed?"

Obed looked at Caleb with a whimsical smile.

"'Twas my fault, Caleb," he admitted sheepishly, "and now I'm gettin' paid out for it."

"Probably it was six months ago—my wife says 'twas, but it don't seem nothin' like that long ago to me—that she begun to pester me 'bout fixin' the kitchen chimley. She claimed it didn't draw as it ought to, and, to be honest, there were times when it smoked consid'able. But you know how 'tis. A man does the work that seems to be crowdin' him wust, and lets the rest go with a lick and a promise—and in this case 'bout all the chimley got was the promise."

"Course I was cal'latin' to fix it when I got round to it, but it was one of them jobs that seems 'sif they can be done 'bout as well one time as another, and fin'ly my wife quit talkin' 'bout it, and I let it go out of my mind complete."

"I noticed from time to time that when she'd be cookin' and I was round the kitchen she'd be kind of short and curt with me, and her mouth would be shut sort of tight; but that ain't uncommon with most women, and it's better to let 'em alone at such times, I've found."

"I s'pose what brought things to a head was my goin' off with Ben Somers yesterday. I suppose I might jest as well and better been at home fixin' that chimley; as I told you, since she quit talkin' 'bout it, I ain't thought of it scarcely. I told her them very words this mornin', and they only made her madder."

"Wal, s'she, 'you pay heed to what I say this time, for it's my last word."

"There was food 'nough cooked this mornin' for one person's breakfast," she says, bitin' the words off short, "and I et it myself. What you're goin' to do for breakfast I don't know, but I ain't goin' to get it for you—not on that stove, with the chimley in the shape it is now!"

"I'm goin' to get ready now," s'she, "and go over to Dedham for the day. I'll be back to-night,

and if by that time you've got that chimley fixed, well and good. But," she says, with her mouth shut tighter'n any bear trap you ever see, 'not one spoonful of victuals do I cook over that stove till it is fixed—and you can lay your mind to that!"

"And with that," continued Mr. Gunney gloomily, "off she went, and I make no doubt she was in the right on't."

He rose and brushed the cracker crumbs from his lap.

"I guess I'd better be gettin' back to work on that chimley," he remarked soberly; and Bassett and Mr. Peaslee grinned in sympathy.

ENGLISHWOMEN ON THE FARM

WE have heard many stories in this country of the way in which the women of Germany, France and England have taken up the work that the men have had to lay down as they stepped into the trenches; work in many cases that women have rarely done before and for which they were supposed to have no qualifications. One of the most interesting things is the way in which women of society or of the stage—the types that are supposed to be least fitted for hard labor and least supposed to engage in it—have volunteered for the roughest sort of work in the factories or on the farm.

The picture shows three young women who have undertaken to carry on the work of King George's famous stock farm at Sandringham, in Norfolk. It was originally published in Country Life, which says:

The King has been very fortunate in obtaining the services of Miss Marjory Maxfield, Miss Hilda

Hobson and Miss Phyllis Hobson. They took up farm work about eight months ago as the form of patriotism they preferred, and certainly at Sandringham their powers of endurance and hard work are thoroughly tested. Live stock make both early and late demands on attention. It is necessary to be up betimes to feed and milk them, and until darkness comes the work continues. But the three ladies are keeping up the establishment to the very high standard with which it is associated.

Women are at work on farms in every part of England, and in many cases their work is prized not as a last resort in an emergency but because it is faithful and intelligent and competent. A certain farmer went to the labor exchange seeking for hands to help him with his beets. There were only six young women available, and they had previously been singers in an opera troupe. He laughed at the idea of engaging them, but finally consented to give them a trial. They cultivated the beets so well that they carried off a prize that had been offered for the best crop in the neighborhood. At the end of the harvest they were as much pleased as the farmer, and agreed to come back the next year.

It need not be supposed that they lived in any rough fashion. On the contrary, a neat cottage was provided where all the six lodged together. They brought a piano with them and made themselves quite comfortable. We may well believe that they went back to their professional work full of health and vigor.

☪ ☪

A COMMERCE RAIDER OF OTHER DAYS

SINCE the European war began, the interest of the world has more than once been engaged by the romantic exploits of some roving German cruiser—the Emden, the Prinz Eitel Friedrich or the Möwe. The adventures of those daring rovers when the history of the great war is finally written will make one of the most interesting chapters.

The feats of the German sailors recall the deeds of a very brave and clever officer who acted as a commerce destroyer in the service of the Confederacy during the Civil War. Lieut. Charles W. Read, a Mississippian in his early twenties, who had been in the United States Navy, joined the Confederate cruiser Florida on November 4, 1862, while she lay at Mobile undergoing repairs. Read had already seen gunboat service in the fighting at New Orleans.

On May 6, 1863, off the coast of Brazil, the Florida captured the brig Clarence, bound from Rio de Janeiro to Baltimore with a cargo of coffee. Lieut. Read suggested that he be permitted to take the captive, with her cargo and papers intact, and, proceeding to Hampton Roads, gain entrance there, and either cut out a gunboat or burn the shipping gathered in the Roads. Capt. Maffit gave him a howitzer, and detailed an assistant engineer and twenty men for the enterprise.

A month later, off the South Carolina coast, the Clarence captured and burned the bark Whistling Wind, from Philadelphia to New Orleans with coal. The next day it picked up the schooner Alfred H. Partridge, and Read put her captain under a five-thousand-dollar bond to deliver the cargo of arms and clothing to the Confederates. On June 9 he took the brig Mary Alvina, Boston to New Orleans with commissary stores. From his prisoners, Read came to the conclusion that an attempt to enter Hampton Roads would meet with certain failure, and he turned his attention entirely to destroying Federal commerce. On June 12, within eight miles of Cape Henry, he made four captures: the bark Tacony, the schooner M. A. Shindler, the schooner Kate Stewart and the brig Arabella. Since the Clarence was a poor sailer, the young commander transferred his crew and howitzer to the Tacony. The Clarence and the M. A. Shindler he burned. The Arabella he bonded for thirty thousand dollars and the Kate Stewart for seven thousand dollars, and he used the latter to take ashore some fifty prisoners.

Those captures stirred the shipowners, and the

shipowners promptly stirred up the Secretary of the Navy. The naval commanders at Newport News, Philadelphia and New York were ordered to send out vessels to chase the raider, which they did. Meanwhile the Tacony, under her new colors, captured the brig Umpire, which, with her cargo of sugar and molasses, was burned on June 15. Five days later the Tacony seized the packet ship Isaac Webb, Liverpool to New York with 750 passengers on board, and Read bonded her for forty thousand dollars. The same day he destroyed the fishing schooner Micawber. The clipper ship Byzantium and the bark Goodspeed, both bound for New York, were sunk on the next day, which was June 21.

By that time there were more than twenty Federal vessels pursuing the Tacony, and the shipping interests of New York were almost in a state of panic.

Read now sailed northward, and off the coast of Massachusetts captured four fishing schooners on June 22. The following day he took two more. On June 24 he held up the ship Shatemuc, from Liverpool to Boston, carrying a large number of immigrants, and bonded her for one hundred and fifty thousand dollars. That night he captured the fishing schooner Archer.

As the ammunition for the howitzer had become exhausted, Read transferred his crew to the Archer and burned the Tacony. On the morning of June 26 he picked up Portland Light. Two fishermen, who mistook the schooner for a pleasure party, piloted her into Portland Harbor. The following morning at half past one o'clock Read and his men boarded the revenue cutter Caleb Cushing. She was captured without an alarm's being given, but the tide was running in before her new masters could get her under way, and the wind had dropped. They did escape from the harbor, but about twenty miles outside two large steamers, bearing soldiers and armed civilians, overhauled the cutter. Read had not been able to find the vessel's stock of ammunition, and after firing a few rounds at the pursuing steamers he put off his prisoners, set the cutter on fire and, with his crew, took to the boats. He surrendered to the commander of the steamer Forest City.

Lieut. Read made a brief report of his cruise on July 30, from Fort Warren, and a more detailed one the following year under a Richmond date. So far as the records show, no lives were taken in the course of the raid.

MEETING A SHELL FACE TO FACE

A BRITISH aviator who has been flying in France since the beginning of the war told Popular Mechanics the story of meeting a shell from a German seventeen-inch gun while he was in the air:

I was at an altitude of about six thousand feet one day, and climbing higher at an easy angle, when one of those big fellows, almost at the end of its long flight, came ploughing along in the opposite direction. First, a dark little blur appeared ahead at an angle of about thirty-five degrees above me. At first it seemed to be coming right at me, and I swerved to the left in an instinctive effort to dodge the threatened blow. Then a sort of droning hum became audible, and that sound increased during the two or three seconds that elapsed before the big missile came up to me and swept past. It was probably several hundred yards away at its nearest, but the distance seemed less.

A few faint stirrings of air began to rock my machine even before the shell went by, but the full force of the "air wash" came a fraction of a second later. Then an almost solid wall of air nearly threw me on my beam ends, and I was really hard put to it to get the reeling machine back on an even keel. For the next mile or two the air was like water in the wake of a big side-wheeler,—all chopped to pieces,—and the machine rocked like a springless motor lorry going over cobbles. The air was disturbed for some seconds after a loud roar astern had told me that the shell had come to earth.

TWO HONEST MEN

THERE are at least two thoroughly honest people in Sacramento, says the Union of that city, and that is why Miss Maud Williamson got back a five-dollar gold piece that was in other hands for more than a week. The money was returned to her by a blind peanut vender who has a stand at Twenty-eighth and M streets.

Miss Williamson bought a bag of peanuts from the man and accidentally gave him a five-dollar gold piece instead of a nickel. She missed the coin not long afterwards, but it did not occur to her that she had paid it out accidentally until some one suggested that possibility to her several days later.

She went back to the vender's stand and asked him if he had accidentally taken in a five-dollar gold piece instead of a nickel. He put his hand into his coat pocket and took out a scrap of paper in which the missing gold coin was wrapped. He explained to Miss Williamson that one of his customers had been honest enough to return it to him when he gave it out as five cents in change. He had put it away safely, for he expected that sooner or later it would be called for.

☪ ☪

GENUINE

THE hard-working shopkeeper, according to London Opinion, had vainly ransacked his stock in his efforts to please an old lady who wanted to purchase a present for her granddaughter. For the fifteenth time she picked up and critically examined a neat little purse.

"Are you quite sure that this is a genuine alligator skin?" she inquired.

"Positive, madam," quoth the dealer. "I shot the alligator myself."

"It looks rather soiled," said the lady.

"That, madam, is where it struck the ground when it fell off the tree."

☪ ☪

VIA SWITZERLAND

A FRIEND of The Companion who read its account of the genesis of Lincoln's phrase, "Government of the people, by the people, and for the people," calls our attention to a letter in the New York Nation that discloses an anticipatory parallel in a speech by Dr. Schinz, a member of the Superior Court of the canton of Zurich, at a meeting of the Helvetic Society in 1830.

"All Swiss governments," he said, "must recognize that they are merely governments of the people, by the people, and for the people (*aus dem Volke, durch das Volk, und für das Volk*)."

ST. VALENTINE'S DAY AT THE "ZOO"

By B. S. WYCKOFF

WHAT a flutter and what a flurry there was when the mail man reached the "Zoo" on the morning of St. Valentine's Day! The mail man was a little late, for he had more mail than usual to deliver along the way. When he finally opened the door and stepped into the main room, with his hands full of letters and his bag bulging with them, there was such a chattering and roaring and grunting and trumpeting as the "Zoo" had not known in many a day.

"Well, well, friends," cried the mail man, "here's mail for all of you to-day—lots of it! And such big letters, too!"

Right and left he handed out the letters—first to Major, the elephant; old Rhino, the rhinoceros; Jocko, Pansy and Fritz, the monkeys; and Polly, the parrot, and then to the bears, the lion, the tiger, the giraffe, the turtle, and to all the other birds and beasts that crowded round him, each one eager to see what St. Valentine had sent.

"Just look at mine!" trumpeted old Major, the elephant. "What a beautiful picture! And these lines, too!"

In Jungle-land, in Jungle-land,
Our hearts are beating true;
We wish that you were back with us,
And not in that old Zoo.

When he read the lines old Major sighed so loud that he shook the building. He was just

beginning to tell the others about his childhood home in Jungle-land, when Rhino, holding his valentine on the end of his horn, began to grunt.

"Here is what I got," said Rhino. "I don't quite understand what it means."

Dainty creature that you are,
Take this message from afar;
Borrow wings of a humbebee,
And fly across the world to me.

All the animals chuckled, for they knew that some one was having sport with old Rhino; but before anyone got the courage to tell him so in plain words, Jocko began to chatter wildly.

"My valentine is the biggest and best!" he cried. "See that beautiful picture, and just listen to this."

Oh, fairest being of the Zoo,
Take the heart I dare to send;
At the slightest frown from you
It would break and never mend.

Pansy and Fritz were trying to read aloud their valentines, too, but they had to give up doing so because Polly Parrot was chattering away so noisily over hers. This is the way her verse ran:

Handsome bird of the curving beak,
Day and night I hear you speak;
Every single word you utter
Sets my foolish heart aflutter.

Then Mr. Brown Bear proudly read his

valentine, which came in an envelope that bore the postmark of a town in the far-off mountains:

They think that I am sleeping
In my den beneath the pine,
But all the time I'm dreaming
Of my beary valentine.

Mr. Polar Bear growled a little when he opened his letter, but soon he smiled and read the message to the others:

O bear so big and white and growly,
In regions near the Pole,
Where winds are always keen and howly,
There lives a kindred soul
Who sends across the land and sea
A loving greeting down to thee.

"Just listen to my valentine!" cried the tiger. "I don't think much of it!"

Tiger, tiger, purr away
Lazily throughout the day.
All the children fear you well;
Why they do I cannot tell,
For I'm very certain that
You are nothing but a cat.

Prince, the lion, had the longest valentine of all:

Held by cruel bars
All thy lonely days,
Longing for the stars
And the jungle ways,
Do not fret and rage
That unhappy fate
Keeps you in a cage
From your loving mate.
Know how proud is she
That you play your part
Ever royally,
With a lion's heart.

Then the other animals in turn read the valentines that the mail man had brought them, and all the morning the "Zoo" was in such an uproar that the visitors—whose eyes could not see the valentines—did not know what to make of it. And the birds and animals were so busy reading and re-reading valentines, and talking them over with one another, that they could hardly stop to eat dinner.

father about her valentine he said, "No, little daughter, and I am afraid you will not have any for several days. The floods down in the valley have washed away the tracks, and the trains cannot come up the mountain. I am afraid you will have to be patient a little longer."

She was a disappointed little girl; but she tried hard not to think about it, and went to bed and was soon fast asleep. In the morning, bright and early, she woke up, and the very first thing she thought was, "Now it really is St. Valentine's Day!" and then, "But the floods are keeping back all my valentines, and I won't have a single one. O dear!"

Just then she heard a little noise—tap! tap!—on her window, and there on the window sill was a white pigeon! She opened the window and he spread his wings and tried to fly in, but he was so tired he just dropped to the floor. Then Edna picked him up to warm and stroke him and saw something on his leg. When she looked to see what it was, she found a tiny letter tied by a little band to one of his legs. Downstairs she ran, calling, "Father! Mother! Look! look! See what I have! A valentine has come, in spite of the floods. Snowflake has brought it. Please take it, and I will carry him out to the pigeon house to rest and have some breakfast. When I come back you may read my valentine."

Away she went, and was back in a moment to hear what the valentine said. Here it is:

TO EDNA

Over mountain, plains and valley
I've flown for many a day,
And now that I have reached here,
I hope you'll let me stay.
I was lonely and unhappy
Far from you and all the rest,
For it's hard to be away from home
And those you love the best.
So the little girl who took me
Sends me flying back to you,
To bear a loving greeting
From a heart both kind and true.

DREAMS FOR THREE

By MIRIAM CLARK POTTER

Three little dreams flew in from the south,
And they flew in a swift, straight line.
One was a dream of peaches and cream,
And that little dream was mine:
I dreamed that a pretty white cloth was spread

With the round moon set for a dish,
And I ate in state of peaches and cream
As much as my heart could wish.

The next little dream was a funny one!
It came to Molly O'Leary;
She thought that she rode on a great green goose

That bucked like a Texas steer;
It flopped about till it knocked her off,
And it cackled, "Gingerbread joke!"
And Molly wondered what that could be,
And while she was wondering woke.

The last little dream was best of all.
It flew to Elizabeth Lee.
She swung in a hammock, embroidered
with snails,
Way up to the top of a tree;
And there she found all cuddled away,
In a sort of cottony nest,
The Little Lost Princess of Shut-Eye town!
No wonder her dream was the best.

✿ ✿

MY VALENTINE

By MARY CATHERINE PARSONS

I have a little valentine
That some one sent to me.
It's pink and white and red and blue,
And pretty as can be.

Forget-me-nots are round the edge,
And tiny roses, too;
And such a lovely piece of lace—
The very palest blue.

And in the centre there's a heart,
As red as red can be!
And on it's written, all in gold,
"To YOU, with Love from ME."

WHY NOT?

By L. J. BRIDGMAN

IF ONE MOUSE AND ONE MOUSE
TOGETHER ARE CALLED "MICE,"
THEN ONE SPOUSE AND ONE SPOUSE
TOGETHER SHOULD BE "SPICE"!

EDNA'S VALENTINE

By SUSANNA C. MABEE

IN a little house far up on the side of a high, high mountain, there lived a little girl named Edna. There were a few other houses near, where the men lived who brought the gold up from the mines deep down in the mountain, but there were no little girls or boys for Edna to play with.

Often she would have been lonely had it not been for the pigeons that lived in a little house all their own in the yard. Such pretty pigeons they were! Some were white, some were gray, and some were both gray and white with shining purple feathers on their necks. They were so tame that they would alight on Edna's shoulders or her head, or perch on her knee to eat from her hand.

One Christmas time, when Edna was nearly six years old, Grandmother came for a visit, and brought with her a little cousin whose name was Alice. They stayed for ever and ever so many days, and Edna, at last, had a little girl to play with. What fun they had with the toys that Santa Claus had brought them and what fun they had out of doors with the pigeons! Alice was so kind and gentle that in a little while the pigeons were no more afraid of her than they were of Edna.

By and by the time came for grandmother and Alice to go home, and then Edna gave Alice one of the pigeons, a white one named Snowflake, to take home with her. Alice carried it in a covered basket, and she was so happy to think that she could have pretty Snowflake for her very own.

Edna missed Alice very much when she had gone; but she was a happy-hearted little girl, and so did not fret about it but made the most of playing alone again.

One morning mother said to her, "Valentine's Day is coming soon. Don't you think we should be making some valentines?"

"Oh, yes, mother!" she cried; "and I must go right to work, for I love so many people I shall have to make a great many."

So they went to work and made a lot of pretty valentines, and father carried them to the post office and started them on their way to all the people that Edna loved. Then Edna began to wonder whether anyone would send her a valentine. Every day when her father came home she asked if he had brought her one. He always said, "Oh, it's not St. Valentine's Day yet." At last the evening before Valentine's Day came, and when Edna asked her

This little rime shall be
a sign
I love you best of any;
So you're my own
dear Valentine,
And I'm your
true love,
Benny.

Ask any questions you wish about the contents of this page. They will be gladly answered.

BOYS' PAGE for FEBRUARY

Address your letters to THE EDITOR OF THE BOYS' PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

THE CARE OF A BICYCLE

MANY boys seem to believe that bicycling and dirt necessarily go together; consequently they neglect to give their wheels the attention that they need. Thus they violate the first principle in the care of machinery of every kind, which is to keep it free from all sorts of dirt that cause undue wear.

The first essential in keeping your wheel in the best condition is to see that dirt does not remain on it. Clean hubs and spokes, a clean chain and clean sprockets do much to lengthen the life of a bicycle, and also add materially to the pleasure of riding it.

Ten minutes with a soft cloth once a week is usually time enough to spend on the frame and handlebars. A long-handled brush, with bristles on the side as well as on the end, is a very handy tool with which to clean round the hubs and the crank hanger.

The chain requires a little more effort. You should give it a bath in kerosene three or four times a year, and oftener if necessary. A good way to grease the chain after you have cleaned it is to boil it in mutton tallow to which you have added a little powdered graphite. That will penetrate to every working surface, insure nearly perfect lubrication, and make the chain very quiet and easy running. Between cleanings, lubricate the chain weekly with stick graphite. A very good substitute in an emergency is a piece of white soap, but the use of it is not to be recommended as a regular practice.

LUBRICATION

Lubricating the rest of the mechanism is much simpler and is less often needed. Once a year you should pack the headpost and the crank hanger with a light cup grease or with vaseline. Treat the hub bearings and the coaster brake in the same way, but look at them more frequently. Twice during the riding season is often enough for the average rider.

Once a year take the bicycle all apart and thoroughly clean and lubricate it. While it is apart examine all of the balls, and if any are chipped or worn replace them with new ones. After you have reassembled the machine, carefully adjust the bearings. To adjust the front hub, tighten the cones on the axle until there is no lost motion or play, but do not get them so tight that the weight of the tire valve will not move the wheel freely. Make the test with the wheel in the forks and with the nuts tightened. If you make the test with the nuts loose, you run the risk of squeezing the cones in a little and making the wheel fit too closely when you tighten the nuts. Adjust the coaster-brake bearings in the same way, by the cone on the sprocket end of the hub.

Give particular care to the adjustment of the chain, the most important part of the driving mechanism. If you turn the chain round by the pedals, you will usually find that it is a little tighter in some places than in others. After you have discovered the tightest point, loosen the nuts on the rear axle and move the wheel backward or forward by the adjusting screws until there is only

Long-Handled Brush

about one inch of vertical play in the chain half-way between the sprockets. Then tighten the nuts on the axle, taking care to see that the tire has equal clearances on the two sides between the rear forks. If the chain is too tight it will crackle and run hard, and if too loose it may jump off the sprocket or catch on the crank.

Adjust the crank hanger by the method that you used with the wheel hubs. On most wheels there is a lock nut on the left side of the crank that can be loosened with a spanner wrench. Next under that is a washer, and under that is the cone. Make the adjustment with the cone, so that the crank will turn freely but with only the slightest evidence of play. As with the wheels, test the adjustment after you have tightened the lock nut and thereby prevented the cone from moving. At the top of the steering head you will find a cone and a lock nut that need the same kind of attention.

THE WHEELS

At least twice a year you should true the wheels; if you allow them to run in a warped condition for any length of time, they are harder to bring back to their correct shape. By resting the hand on the forks and holding a piece of chalk close to the rim while you rotate the wheel you can mark the extent to which the wheel is out of true. Then it is an easy matter to bring the rim back into line by loosening the spokes at one point and tightening them at another.

Repair Link

If you have no spoke wrench, you can do the work with a pair of pliers or a hand vise. Always keep the spokes tight; remember that one neglected, loose or broken spoke soon causes another. Try to keep all the spokes at an even tension, and you will have your reward in freedom from broken spokes and wobbly wheels.

The saddle of your bicycle should be at such a height that you can reach the pedals comfortably with the ball of the foot. To raise or lower the saddle, loosen the bolt at the top of the seat-mast tube. When the saddle is at the right position, tighten the bolt firmly so that the saddle will not turn when you are riding.

The handlebars are usually loosened by unscrewing the bolt at the top of the stem and then rapping the bolt down. That loosens a cone in the bottom of the stem, and allows you to raise or lower the bars. By removing one grip, you can take the bars from the stem and put them in the other side up—an adjustment that reverses the curve and raises the level of the grips considerably. When you have set them at the right height, tighten the bolt firmly so that the bars will not move when you ride.

When anything breaks, it is usually desirable to have the repair work done at a well-equipped shop. But if you are planning a long tour you should have the necessary tools to make chain and tire repairs on the road. For the chain you will need a ten-cent chain-repair link, and a sharp file with which to remove the heads of rivets. Better still is a chain tool, which punches out the rivets and saves you the necessity of filing off the heads.

If your bicycle has clincher tires, you will find it a very simple matter to repair punctures. Repairing single-tube tires is neither so simple nor so satisfactory. If you puncture a clincher tire, first remove one side from the rim and take out the tube. Then blow up the tube and run it through a pan of water until you find the leak by the bubbles. Then wipe the tube dry and roughen the part round the puncture with a piece of coarse sandpaper. Put on a thin even coat of cement over an area slightly larger than the patch. Roughen the patch, and coat one side of it with cement. Let that coat dry for a few minutes, then apply a

second coat to both tube and patch. Let the second coat dry at least five minutes, and longer if you are not in a hurry. Neither tube nor patch will feel sticky to the fingers, but when you put them together they will adhere very tenaciously. In fact, they will stick so readily that you must be sure to apply the patch evenly and smoothly, for you will have great difficulty in smoothing it out if it is wrinkled. To prevent the patch from adhering to the casing always rub a little tire chalk or talcum powder over the patch before you replace the tube. If there is a large cut in the casing, cement a piece of canvas on the inside to prevent the tube from blowing out.

MENDING TIRES

With a single-tube tire small punctures can be repaired with the fluid or with rubber bands. Tools for such repairs can be bought at any repair shop. There is one tool that resembles a small hypodermic needle or squirt gun by which a thick cement can be squirted through the hole into the inside of the tire. The cement sets and covers the hole on the inside. When you have charged the tool with cement and inserted the point in the hole, turn the wheel so that the hole is at the bottom with the tool pointing upward before you discharge the cement into the tire. That causes the cement to remain at the hole and harden over it instead of running away from it. For small pinholes that method will suffice, but for larger holes you will have to use rubber bands with a special inserting tool. The bands should be well coated with cement to insure their staying in place and to seal the spaces between them. That method of repairing is suitable for tack holes or small nail holes.

For larger nail holes you will need repair plugs. They look like rivets with large flat heads. The head goes on the inside of the tire and forms an inside patch over the hole; the shank fills the hole. First coat the plug with cement, then shove it through the hole headfirst. A pair of special plug pliers is very convenient for this work. Draw the stem of the plug back through the hole until the head is tight against the inside of the tire. The cement and the pressure of the air on the head will effectually seal the puncture and prevent the plug from blowing out. Trim off the outer end of the plug flush with the surface of the tire.

Before starting on a trip always examine your tool kit to see that everything is there and in condition to be used. Every tool bag should contain a small monkey wrench, a screw driver, pliers, a chain-repair link, a file or a chain tool, a pump and a tire-repair kit. The rest of the equipment needed will depend on the length of the trip. It is a very good plan to travel light and not be burdened with unnecessary weight. Besides examining the

tool kit, it is well to spend a few minutes in looking over the wheel and tires and in tightening any loose parts. A few minutes of careful inspection and preparation may save a delay of several hours on the road.

TO TEST YOUR SUPPLENESS

STRENGTH and endurance are not the only athletic qualities. Suppleness is quite as desirable. Supple joints move more easily than stiff ones, and so allow you, with a given amount of strength, to flex a limb against a greater resistance or to repeat a certain movement a greater number of times. The following tests are not very difficult, although they may seem so at first. If they do, that only shows that you need the work. So pull off your coat and set to.

Fold your arms loosely across your chest. Now lower yourself by bending your knees, and at the same time separate your legs so that your arms may pass between your knees. The object is to touch the floor with both elbows at once without losing your balance. This test calls the whole body into play. If you take off your shoes, you will find the stunt easier, especially if you have long legs.

Another exercise will test the pliability of your arms. Curl your left arm round behind you and push your hand up as far on your back as possible. As you do that, reach over your right shoulder with

your right hand and try to lock the long fingers of your hands. Some boys do this easily at the first trial, others find it a real task.

BELGIAN STAMPS IN AFRICA

BELGIUM has retaliated against Germany by certain postal measures that stamp collectors have long expected. Just as Germany overprinted German stamps for use in Belgium, as related on the Boys' Page many months ago, so

now Belgium has overprinted the stamps of a Belgian colony for use in captured German territory.

The beautiful current pictorial series of Congo Belge, or Belgian Congo, was chosen for surcharging by the Belgian military forces that operated successfully in conjunction with British and Portuguese troops in German East Africa, the last remaining Teutonic colony. Upon six denominations—five centimes green and black, ten centimes carmine and black, twenty-five centimes blue and black, forty centimes dark red and black, fifty centimes brown lake and black, and one franc olive bistre and black—the following was overprinted, in black letters, horizontally in four lines:

EST AFRICAINE ALLEMAND
OCCUPATION BELGE
DUITSCH OOST AFRIKA
BELGISCH DEZETTING

This same surcharge, which, it will be seen, is in both French and Flemish, appears vertically, reading upward, upon the two upright oblong stamps of the series—fifteen centimes blue, green and black, and five francs ochre and black. Another Belgian force operating in German East Africa also issued stamps for its own use. Those troops likewise used Belgian Congo pictorials, the five and ten centimes values of which they surcharged in violet letters, with the word RUANDA, which is the name of a district that borders on German East Africa.

"CHEWING A STRING"

"CHEWING a string together," unless the trick is known, is an extremely puzzling and mysterious thing, but once revealed is simple. Take a piece of string two or three feet long that is clean enough to be put into the mouth

and tie the ends together. Then fold it as shown in Fig. 1. Learn to fold it so quickly that the person who is watching you will not notice that the two loops are interlocked. Hold the string between the thumb and forefinger in such a way that you conceal the interlocking loops. (Fig. 2.) Cut the two strands a very short distance from the thumb; you will then hold between the thumb and forefinger what appears to be two pieces of string of equal length (Fig. 3), but what really is one long piece and one very short piece. Put the part that you hold into your mouth; remove the short piece with the tongue, and slip it under the tongue. On removing the longer string it will appear that you have mysteriously joined the two pieces in one.

KEEPING YOUR DOG WELL

A GOOD dog is worthy of the best of care even if he is not a pedigreed animal. But that does not mean coddling; a dog is naturally a hardy outdoor animal, and you should not weaken his constitution by confinement and overcare. Never keep him in all day; even "toy" dogs should spend a part of every day in vigorous outdoor exercise. If your pet has been allowed to become fat and lazy, you may have to use a little force to change his habits, but do not be too abrupt, and never be unkind.

Next to daily exercise, probably the most important thing is feeding. Although some of the prepared foods are good, many are so rich that they cause eczema. A miscellaneous diet from your own table, if you are careful in selecting it, will keep your dog in good health. A dog, like his master, needs a variety of food to rebuild tissues and furnish heat and energy. He should have meat, but most of it should be cooked; a vegetable stew,

with an extra amount of meat, plenty of rice and only a little potato, is excellent. Occasionally let him have a big raw bone with only a little meat on it. The gnawing is good for his teeth and the bone particles that he scrapes off supply a need of his body. Besides, wrestling with a big bone gratifies the primitive dog instinct. Do not give him white-flour bread or pastry, and use sweets very sparingly, if at all. Those articles bring on constipation—a condition that must be avoided.

Puppies need to be fed three or four times a day, but after they are a year old twice a day is enough. Ordinarily, a dog's evening meal should be the heavy one, but if you are training him as a watchdog, reverse that plan. Heavy meals make him sleepy, just as they do his master.

Your dog's kennel should be on a dry, sunny spot high enough from the ground to avoid even occasional dampness. As for bedding, either straw or sawdust is satisfactory. Do not use old bed-clothes; they are ideal quarters for parasites of all kinds. The kennel should be so constructed that you can clean it frequently—a detail that is as important as freedom from dampness.

The dog's susceptibility to skin-diseases makes it necessary to use mild soaps in bathing him. Carbol soap is a good flea destroyer, but dogs are too susceptible to carbolic poisoning for you to take the risk of using it. Besides, the acid makes the skin too dry. Use a mild toilet soap and wash the dog often. It is important to dry him thoroughly, and then to give him sufficient exercise to restore his normal temperature.

A RAIN GAUGE

TO make this simple apparatus, which serves the interesting purpose of measuring rainfall, you will need the following materials: a tin can; three or four strips of shingle about an inch wide; an aluminum or tin funnel with a top of the same diameter as the can; a glass test tube or a glass gauge tube with a tight cork for the bottom (it should hold about as much water as will make one inch in a pound can); a mustard or jam bottle or a jelly glass with a tin cover; a triangular wooden block about one inch thick and six inches on each side; a piece of oiled or paraffined paper or pasteboard, to fold and place in the bottom of the bottle for the glass tube to rest on; and some string to tie round the strips and the can.

The figure shows the rain gauge assembled. The reason for using the graduated tube rather than merely setting up a can and measuring the rain that it catches is, of course, that the smallness of the tube allows greater accuracy—especially when the rainfall is very slight.

In making the gauge, first fill the tube with water and empty it into the can; then measure with a ruler the height of the water in the can. That will give you the relation of tube to can, and will be the basis for graduating or measuring the tube. If the tube when full holds enough to make one inch in the can, it will mean an inch of rain when it is filled, half an inch when it is half full, and so on down to any fractional part of an inch.

Make the graduations on the tube by placing thin strips of gummed labels at the proper places, and by coating the paper with melted paraffin or varnish to prevent it from washing off. After you have marked the tube, cut out the bottom of the can and hammer down the rough edges. The can will then be open at both ends like a cylinder.

The bottle is to catch the overflow when there is a heavy rain, amounting to more than a tubeful. You can measure the overflow by pouring it into the tube and adding it to the original tubeful. In the tin cover of the bottle you must cut a hole a little larger than the tube. The funnel should not fit tight in the tube, or an error will result.

Tack the strips of shingle to the block with one tack each, so that you can easily move them aside to disconnect the apparatus and empty it after each rain. When connected as shown in the figure, the strips are tied tight to the can, and the whole apparatus is firm. To prevent rust, coat the can, funnel and cover with paint or paraffin. The block and the strips should also receive a coat of paint. The can and the funnel may be connected if desired, to prevent error from leakage due to jars.

Accuracy in results will depend upon the care with which the whole apparatus is made. There is, of course, a chance for originality in devising simpler and more accurate apparatus. When you have completed the rain gauge, fasten it to the top of a post, or on a roof in a place where there is nothing to protect it from winds. If possible, check your gauge on a standard official rain gauge, and correct any errors that you discover.

HOW TO USE THE MICROSCOPE

USING a microscope properly does not injure the eyes, as is proved by the fact that men who have spent years at microscopic work usually have better vision than other men. One of the most harmful things that the microscopist can do is to close or squint one eye while he uses the other. Not only does it hurt the eye that is closed, but it prevents good vision in the eye that is used. With a little persistent practice most persons can acquire the ability to keep both eyes open, and at the same time to let the mind's eye see only what is in the field of the microscope. At the start it will be found easier if a piece of black cloth is laid beside the instrument where the unused eye is directed; the field will then stand out clearly, unconfused by bright objects that the other eye sees. If with that aid the habit cannot be attained, there is no way but to wear a black patch over the unused eye.

Another strain, which even some advanced students unnecessarily impose upon their eyes, is that which comes from trying hard to see while they are focusing the instrument. When adjusting the focus so as to get the sharpest view of the object, the eye

"Fancy" Shoes Are Cruel

IN the name of "style" and "fashion" they twist the tender bones of little feet, and in time cause corns, bunions, flat-foot, callouses and ingrown nails.

Educators are kind. For they "let the feet grow as they should."

Protect the children from lifelong foot troubles by teaching them now to wear roomy, comfortable Educator shoes.

For MEN, WOMEN and CHILDREN

Get the children into Educators today, and it won't be long before you'll want Educators for yourself.

You can always be sure of the orthopaedically correct Educator shape by the mark EDUCATOR branded on the sole. Look for this.

Send today for free booklet on care of feet—"Bent Bones Make Frantic Feet."

CONTINUING THE BOYS' PAGE FOR FEBRUARY

should be relaxed and waiting for the movement of the sliding tube that is to bring the object into view and make it as clear as possible. The microscope should be made to do the work; that is what it is for. The time to begin using the focusing power of the eye is the moment when things become as clear as the instrument can make them.

Much—probably most—microscopic work is done on objects that have to be lighted from underneath, since for proper study they have to be made very thin and flat. The proper use of the mirror in reflecting light up through the object into the objective is important. In the daytime good results can be attained by utilizing the light from a bright white cloud. As such clouds are not always where they are wanted, and as blue sky gives a poor light, it is a good plan to make an artificial cloud by whitewashing boards made into a two- or three-foot square and placing them outside the window, rather near, and where the sun will strike them. They can be tilted until they catch the best light. Even without sunlight a reflector of that kind is better than blue sky. Except when using an expensive instrument with a substage condenser, a concave mirror is best for that sort of light; but it is necessary only for powers of more than one hundred diameters. Only a plane mirror usually comes with even the best of small compound microscopes, and for most objects it does very well for twenty to eighty diameters.

For artificial light an oil lamp, a flat gas flame or an Argand burner can be used. For powers under a hundred diameters and a plane mirror the light should be as close as possible—that is, within a few inches of the mirror. That is also the case when a substage condenser is used with a concave mirror. With a concave mirror used without a condenser, or a condenser used with a plane mirror, the light should be at some distance—from two to several feet; the larger the light the farther away. The very best light, especially for low-power work, is an inverted Welsbach burner with a frosted globe, or, better, one of opal glass. It is used as the lights mentioned above are used, only a little farther off in each case; but it cannot be used with the concave mirror and the substage condenser. That combination requires a small light.

Although it is of no use with the small two-dollar microscope, which has the eyepiece screwed in, a very quick and accurate method of centring the light and getting the right size stop or hole for the light to come through, in the larger instruments, is to lift out the eyepiece, and, while looking down the tube, to shift the mirror and regulate the opening until the central part of the back of the objective lens is evenly illuminated in a bright circle that takes up from one half to two thirds of the whole lens. At least the outer third of the lens should be dark.

When daylight, strong gaslight or close lamp-light is insufficient to illuminate properly opaque objects from above, recourse must be had to a magnifying glass, the larger the better, in case there is no direct sunlight. The light should be fairly close, small but bright, and by means of the magnifier should be focused from above to a bright spot on the object.

Very thin, colorless objects, such as many Protozoa, are often hard to see by light transmitted from the mirror; but they show up clearly when oblique light is used—light so oblique that it passes through the object from below, but does not enter the objective. The large microscopes permit the mirror to be swung out for that purpose. With one of the smaller French microscopes good results can be attained by removing the mirror from its position or by turning it so as to reflect no light to the object, and then, shading the object from the general light from above, by reflecting a very bright beam slantingly through it from below by means of the displaced mirror or another small piece. The object should appear bright against a black background. A concave mirror is best. A piece of broken automobile headlight reflector is excellent for that purpose, and also to glue to the back of the plane mirror.

Most transparent objects, especially thin ones, can be made more distinct by keeping undesirable rays of light from reaching them from the mirror. Large instruments have a regular series of different-sized holes for the light to go through, but a small hole or stop will serve the purpose. The image in a small microscope can be cleared wonderfully by gluing halfway between the mirror and the object a piece of cardboard with a large hole in it. Over it can be slipped other pieces, each blackened, and each having in it a hole of suitable size. It is well worth the trouble.

Another Test for the Supple Boy.—Hold a slender stick or broom handle horizontally in front of your thighs. The distance between your hands will depend on the movement of your legs in jumping. A few experiments will determine it. Hold the stick between your thumbs and finger tips; you will need all the room you can get, for the "stunt" is to jump the stick without losing either end. The best way to learn this trick is to practice with a rope. From day to day take up the slack in the rope. When you can jump it straight you will find the stick just as easy.

NYASALAND STAMPS

THE stamps that the Portuguese and Belgian forces surcharged for use in German East Africa have already been mentioned on the Boys' Page. The third of those invading armies, the British, has also issued occupation stamps for that region. The commanding officer of those troops from England asked the governor of Nyasaland Protectorate, which is a part of British Central Africa, for quantities of the halfpenny green and one-penny scarlet stamps bearing the portrait of King George. The government printers were directed to surcharge upon them the letters N. F. F., meaning Nyasaland Field Forces. But through an error one of the F's was omitted, and the stamps as issued bear only two letters. It is understood that the commanding officer later applied for higher denominations of this series for surcharging purposes. Of the halfpenny, ninety-six hundred were issued; and of the one-penny, twelve thousand. The appearance of the stamps was accompanied by a report that another British force operating in German East Africa had surcharged German fiscal stamps with "I. E. F.—East Africa," which, if it is true, indicates that troops from India have been engaged in expeditionary operations in Africa, as they were earlier in France.

The Economy Dish

Quaker Oats stands supreme among luxury foods for the value it gives for the money.

A half-cent dish supplies a half-day's energy.

And it costs no more in these high-price days than it cost before the war. Equal food value in general foods costs several times as much.

The Energy Dish

Quaker Oats stands supreme as an energy food. Oats have for ages been renowned for their vim-producing power.

It is the food for the active—for those who would "feel their oats." It is the food for brain workers, because of its phosphorus. It is the food for growth, as everybody knows.

The Luxury Dish

Quaker Oats stands supreme for its flavor. It is flaked from queen oats only—just the big, plump, luscious grains. We get but ten pounds from a bushel.

To millions of children in every clime it has made the oat dish delightful.

Quaker Oats

The Extra-Fine Vim-Food

If you think oat food desirable, serve this inviting form. It is flavory and fragrant. The flakes are large and white.

It so excels that, from all the world over, oat lovers send here to get it. Nowhere on

earth is another brand so popular as Quaker.

You can get it anywhere, without extra price, if you ask for Quaker Oats. And it makes the dish doubly delicious.

10c and 25c per package
Except in Far West and South

An Aluminum Cooker for \$1.00

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us our trademarks—the picture of the Quaker—cut from the fronts of five Quaker Oats packages, or an affidavit showing the purchase of five packages of Quaker Oats. Send \$1.00 with the trademarks or affidavit, and this ideal cooker will be sent to you by parcel post prepaid. We require the trademarks or affidavit as assurance that you are a user of Quaker Oats. The trademarks have no redemption value. This offer applies to United States and Canada. We supply only one cooker to a family.

GIRLS' PAGE for FEBRUARY

Address your letters to THE EDITOR OF THE GIRLS' PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

MAKING AND APPLYING DESIGN

WHEN you paint a picture or model a statue, you are producing a form of art the only purpose of which is to give pleasure to others—the pleasure of contemplating the beautiful. There are other purposes of art that are fully worthy—to make things that are not only beautiful but useful. The objects of everyday life may well be attractive as ugly. If you are interested in any of the handicrafts,—such as embroidery, wood carving and metal work,—if you know how to create design, and if you bring to your work good taste and good judgment, you can make pretty and useful things for your home or for your friends.

In this article The Companion will set forth principles of design that will help you to create and apply your own decorations. The twelve articles to follow will describe and discuss the decoration of various objects that you can make. The purpose is not so much that you shall copy those objects as that they shall help you to produce others of your own creation. Each article will have a timely appropriateness to the season in which it appears.

To many girls design is a closed book only because they do not know how to begin. They feel that if they have not a rich imagination they cannot invent a design. But a fertile imagination is not at all necessary, for nature supplies all the elements of a design that you need. All you have to do is to arrange those elements; the taste and judgment with which you arrange them will determine whether your design is good or bad.

CONVENTIONALIZING THE UNIT

Some designs, it is true, are based on geometric forms; but you will probably prefer to take the elements of your design entirely from nature—from the flowers of the field with which you are familiar, the wayside berries, the leaves and fruits of the trees in your garden, and the birds and butterflies that haunt them. To use those objects to the best advantage you must learn how to analyze them. As an example to study for a design in the early spring months, let us take the daffodil. It lends itself particularly well to study because it is so simple in structure.

Now, however faithfully you try to represent a natural thing, you fall far short of literal imitation because the means you have—lines, spaces, light, shade and color—are very limited when contrasted with the means that nature has at her command. Compare the most careful rendering of a flower or landscape with the real blossom or scene, and you will see that the imitation is so far below what nature has done that it becomes what we call a "convention"—that is, a symbolic or "decorative" presentation of the idea.

The early Egyptians took certain parts or characteristics of a flower, such as the lotus, and made them represent the subject—made them a type by which the plant would always be known. That their representations were so strongly suggestive of the real things is because they chose as the most important feature the plan upon which the flower was constructed, rather than the accidental development of peculiarities. In other words, what they symbolized by the conventions chosen was the structure. If we go beyond that, we become imitative or "naturalistic." To conventionalize a natural object, then, means to render it in such a way that we shall recognize the subject, but only as a type, not as a particular specimen.

In conventionalizing the daffodil, therefore, you must seek to give as far as possible the spirit or character of the flower. To learn what that character is you must analyze the plant. The accompanying illustration shows the process. First make a careful drawing of the form of the plant as naturalistic and imitative as possible. As you make that exact copy, various characteristics will draw themselves upon your attention—the willow leaves and the long, slender stems, the graceful curving character of the growth, and the fragile, delicate texture of the flower. When you have made that imitative likeness, you are ready to look for the suggestive elements from which to derive your conventional types.

When you look at the flower full view you find that it has almost a star form. The side view presents an attractive trumpet-like shape. Thus you study all the parts of the plant with the sole and distinct purpose of obtaining pleasing shapes that will adapt themselves to design. You examine, too, the organs of the plant,—the stamens, the pistil, the bulbs, the fibrous roots, and, if you have a magnifying glass, even the minute inner parts. You may get suggestions of beautiful shapes from any of them. Though, of course, you must not take such liberties with the botanical facts of nature as, for example, performing the miracle of making a drooping, heavy-headed flower stand erect, yet you may build on the basis of the real whatever your fancy can create, so long as you do not violate the fundamental structure of the plant. Thus it is hardly likely that you will find in any way of either the flower or a part of the flower perfect likeness between two sides or any literal repetition of forms. But in the mechanical methods by which designs are transferred—by stencil or etching or printing block or chisel—it is necessary to repeat the precise pattern. For that reason the liberty you take in rendering the form of the flower or leaf as absolutely symmetrical is liberty within the law, and not license.

ARRANGING THE DESIGN

When you have obtained as many attractive elements as you need you are ready to arrange them in a design. To do that intelligently and attractively you must, however, consider carefully the appropriateness of your design to its purpose, to

ANALYSIS OF THE DAFFODIL

the material in which or on which it is to be worked, and to the tools you will use in executing it. It is assumed, of course, that before selecting your plant at all you have considered the nature of the object that you wish to decorate. For example, you would hardly wish to use a pattern derived from the daffodil to decorate an apple bowl or a pillow that is to contain fir balsam.

You must consider appropriateness further, however. If your design is a "constructive" design, that is, something to be built or put together, it is to hold a lamp, or if it is a frame to inclose something, you should make sure that your arrangement will first of all give sufficient support, and, secondly, look well in its place. The truer a thing is made to the law of necessity the better it is. Everything that is a pretense is artistic. In considering the appropriateness of your design to the use that you intend to put it, you may find help in the following rules.

THE IMPORTANCE OF CONSISTENCY

Anything that interferes with the intended use of the object is wrong. Anything that interferes with your pleasure in it is wrong. For example, an object that is designed to be lifted must not be of such weight as to prevent you from easily lifting it. Again, a curtain that is intended to admit the light should not be covered with a design that shuts out light. Anything that is intended to lie horizontally, as a table cover or a rug, should not carry a design that would make it appear as if it had elevations. Anything that is intended to be vertical, like curtains, screens, and so forth, must by the lines and suggestions in the design indicate that that is its position. So, too, in wall paper we should not want diagonal stripes, for they would lessen our sense of security in the wall. On a ceiling we want nothing that threatens to drop on us. A chair, a couch, a pillow,—objects that we rest upon,—must be free from all protuberances, knots or anything that would appear to interfere with our comfort.

You must also consider the material that you are to use in the object that you are making, or on which you are to place your design, for you should never violate the rights of a substance to preserve its own character. If the design is to be carved in wood, or worked in metal, or stenciled or embroidered,—that is, a "surface" design, to

You would hardly expect to use the same design for a picture frame that you carve with a chisel, for a table cover that you embroider with a needle, and for a window curtain that you decorate with paint and brush. Every process of executing a design has its limitations; a design, therefore, should be appropriate to the process.

APPLYING THE DESIGN

When you have determined all those points to your satisfaction, you are ready actually to make your design. To a large extent, design is merely the orderly repetition of a unit. One of the simplest designs would be to repeat your element or unit at fixed intervals over the space that you wish to cover. That is an allover pattern. When you repeat the units at regular intervals in a line, it is a border pattern. If you decide that the element or unit that you have chosen is too simple as it stands, you can elaborate it before you proceed with your design. For example, if you have chosen the bud as your element, you may add one or two leaves; that combination of elements then becomes your unit. Or you may take two or three buds and combine them to form the unit. There are countless ways of repeating the unit. The essential is to repeat it in a regular and orderly manner. You may mark the space to be covered into squares or rectangular shapes, each of which shall contain the unit. You may divide your surface into diamond shapes, or again you may repeat the squares at alternate levels. You can get pleasant variation by reversing your unit in every other row of squares.

When you choose the elements that are to form your unit, you must think beyond that separate unit; you must think of all the units as they will ultimately appear in your design. A spot may seem properly placed in your single unit, but when your design is completed you may find that the spot comes so near the spots in the other units as entirely to destroy the effect of the pattern. Perhaps the best plan when you think you have an attractive unit is to sketch roughly several units as they will appear. Then if nothing objectionable obtrudes itself, you are ready to go ahead.

Sometimes what is called "stripping" appears without warning in an allover pattern, and the design that was intended to run vertically or to have no distinct tendency in line suddenly displays a vicious angular direction, and instead of leading the eye upward, forces it to follow a stronger call at forty-five degrees. That happens because some spot out of the vertical in each unit is more prominent than the spot that was intended to be the "guiding star," so to speak. The remedy is to reduce the force of the intruding member, and so allow the other to have its way. Even a simple pattern of dots will sometimes manifest the irritating disposition to "stripe."

The unit may of course be as elaborate as you wish; in fact, you may evolve it by combining several small units. If your unit is not complete in itself but contains elements that lap over into the adjoining units, you must be careful that all the parts that join match properly. In an allover pattern, too, you must plan your units in such a way that they come evenly to the edges and do not break in the middle of a figure. Practice is perhaps the best teacher. Study the wall papers in your house, or printed or woven stuffs, and learn how the design was built up. You will find that

even the most intricate patterns can be resolved to a more or less simple unit.

It is very important to study carefully the spacing of your design, for the attractiveness of the most beautiful shapes may be lost by either crowding them or scattering them too much. A too-full design upon a vase or a screen may have the same unpleasant effect that a room overloaded with furniture produces. On the other hand, if the decorations are meagre and scattered an impression of "skimpiness" is conveyed, and the result is even more unfortunate.

In the proper division of ornament and space the Japanese are our masters; it is rare that you find excess in their "filling" of a design. There is no better rule either in furnishing a room or in filling a design than that which defines it as complete when "nothing can be added without a sense of crowding, and nothing can be taken away without a sense of loss."

The consideration of spacing holds not alone within the confines of the actual surface occupied by the pattern but also in the intervals between any two separate parts of the design. If the length between the top border and the lower border of a design for a curtain is too great, it will swallow the effect of the decoration and the borders will count for little or nothing. If too strong a pattern be introduced into that space, the border is overpowered and again counts for nothing. Good judgment as to correct spacing will come with practice and experience.

HOW DOES THE PLANT GROW?

The manner in which the plant from which you got your elements grows will determine somewhat the selection of your unit and the manner of its repetition. A low-growing plant must not be extended to fill a high space; a tall plant, such as the bamboo, must not be dwarfed into a contracted space. A running or climbing vine, such as the morning-glory, can only be used properly as a border or on suggested supports.

It is of course perfectly proper to detach a single element of a plant, such as the blossom, and to strew it at regular intervals over a surface to produce an allover pattern. But if you do that, you must so highly conventionalize the blossom that it does not convey the idea of a flower separated, but merely a beautiful form distributed to enrich the material. In other words, the more your design departs from the manner of natural growth, the more highly conventionalized your elements must be.

You may sometimes wish to have recourse to design that is based on geometry. That formed the foundation of the type of ornament created by the Mohammedan peoples, whose religion forbids them to make anything in the likeness of life. One advantage of that style of design is that it can rarely be wrongly placed, for, as it bears no resemblance to real things, it can never offend by inappropriateness.

The only transgressions possible are in relation to scale; for example, ornamental forms may be made too large or too small for the object on which they are placed. It is always safe to use geometric forms—without the effect of perspective—for any design intended for a flat surface, such as the floor, a wall or the ceiling, or for anything that is broken up into folds.

A keen eye for detail and careful attention to the question of proportion are the chief requisites for success. A little practice in plant analysis will reveal to you the wonderful store of pleasing shapes that nature offers. A few experiments in arranging those shapes will show you that the task of creating a design is not such a difficult undertaking as you have supposed. The matter of

TWO DESIGNS BUILT FROM DIAMOND-SHAPED AND RECTANGULAR UNITS

adapting your design to the purposes for which you intend it is merely a matter of using common sense.

Stencil Designs for Curtains

(Number two in the series Making and Applying Design)

It is in the Girls' Page for March

A FRIVOLOUS PICTURE PARTY

IF in doubt how to entertain a few friends informally, try a frivolous picture party. It tests the memory in an interesting way and demands no drawing on the part of the guests. At a frivolous party no one must be expected to know by sight even such popular paintings as Baby Stuart or The Angelus. Use advertisements. To all frivolous persons—as well as to others—the advertisements in magazines are known to be alluring. Use the pictures from large advertising matter. Cut off all printing and the principal article pictured and then mount the remainder of the advertisements on sheets of pad paper and number them consecutively. It remains for the guests to prod their memories of fleeting advertising matter and tell what is missing from each picture. There must, of course, be a booby prize.

distinguish it from a "constructive" design,—you should first consider the material in which it is to be reproduced.

On a fine fabric you must put a design that is of a delicacy in keeping with its fibre; on a thick stuff, one of correspondingly heavier character; on a loosely-woven cloth, a pattern not destroyed by the openness of the meshes. And so on through all the varying combinations.

The tools with which the design is to be executed also influence the arrangements of your elements.

A Pleasant Healthful Habit

A daily ration of Grape-Nuts and cream is a splendid food for those who want vigor and energy.

Grape-Nuts

is a concentrated health-food made from choice whole wheat and malted barley. It retains the vital mineral elements of the grain so essential to thorough nourishment of body and brain, but lacking in many other cereal foods.

Every table should have its daily ration of Grape-Nuts.

Almost anything will do for that. As for the first prize, nothing is more appropriate than a box of candy.

A GIRL WHO STARTED A "NOTION" SHOP

[The first of The Companion articles on Earning Money at Home]

THE girl lived with her mother and her brother in a thickly settled suburban district. The brother, who was the family wage earner, supplied her with the absolute necessities, but his salary was small, and she had no way whatever of providing anything for herself. If she needed a few stamps or wanted a new collar, she was obliged to ask for the money. There came a time, at length, when she decided that something must be done to relieve the situation. But the problem was a hard one. It was impossible, since her mother needed her, to go away from home, and she had no special talent or training to turn to account.

One day she overheard two of her neighbors discussing the inconvenience of having to go all the way into the city to buy trifling household articles as they happened to be needed.

"Last week," one speaker said, "I had to put down my important sewing and travel into town for a spool of silk." The other said that she had often taken the trip for so small a purchase as a bottle of ink. It used up time and car fare, they complained, yet there seemed no way to avoid the nuisance when the need was urgent.

The talk gave the girl an idea. Why not open a little home "notion" shop for the benefit of the neighborhood? She considered the plan carefully. In her own home there was a room, seldom used, that would serve admirably for the purpose.

After an interview with her brother she set out for town, with five dollars, to lay in her stock. She

bought needles, thread and other sewing materials, pins, talcum powder, elastic—in short, a complete assortment of the little articles that mothers and housewives are continually "running out" of and needing on the instant. The room on the ground floor was cleared and fitted up; a little plain furnishing and simple decorating turned it into an attractive shop. A long table with a drop leaf served as counter, and a chest of drawers held that part of the stock not on display. Two or three interested children were pressed into service as heralds, and they spread the news so rapidly that before long numerous customers were finding their way to the "notion" shop.

The goods were priced, of course, above the original cost, but the difference fell far less heavily on the purchasers than the price of car fare and luncheon in town had formerly fallen. Before the end of the first week three dollars had been realized on the five-dollar investment and the whole eight dollars invested in new stock.

The young merchant kept the shop up to its possibilities by observing carefully what demand there might be for articles other than "notions." The stock came gradually to include small dress accessories, ready-made aprons, washable gloves, embroidery materials and household linen, and even infants' wearing apparel. A few arts-and-crafts articles also found their way into the shop.

By the end of six months the sales were clearing thirty-five dollars a month, and at the end of a year the business was fixed and flourishing. The girl herself felt independent, and consequently freer and happier. Although it has been several years now since she "started in trade," she is still running her little shop and finding the work both profitable and pleasant.

PREPAREDNESS

"WHAT kind of man are you going to marry?" asked earnest, dark-haired Margaret Ellis.

Her friend, Vivian, raised her golden head. "I want the man I marry to be entertaining, to be high in his profession, to have money, or the hope of getting it—the kind of man that everyone is anxious to know. That kind could make me happy. Just any man wouldn't do. I couldn't marry just any man."

Grandmother Ellis looked up from her crochet. A quizzical look crept into her gray eyes as they rested on Vivian's attractive face. Then she folded her capable hands in her lap and said:

"Can you cook, Vivian?"

"Why, yes, a little. I can make mayonnaise, cake, and—and fudge," she answered, looking puzzled over the seeming irrelevancy of the question.

"Can you sew?"

"No; but I can embroider."

"I see. Of course you can keep house?"

"No, Mrs. Ellis, I cannot. The maid does that at our house."

"I see, I see," mused grandmother. She gazed out of the window for a minute, and when she looked back her eyes were very kind.

"Yet, my dear, you expect to marry some one who has used his time well in making a successful man of himself. He must be so well-trained that he will make no mistakes that might cause you discomfort or unhappiness. He must stand the strain of the long days, and the responsibility, not only of his work, but of his own family—and then be entertaining. I wonder often whether women realize just what that means. You, on the contrary, know nothing of your business of being a wife. You enter on the biggest job in life without training. You will learn in time, perhaps; but at the expense of his comfort and of your own. The petted-doll way of home-making is marked with tears and regret. Do you think it is quite fair to ask so much and give so little?"

As Grandmother Ellis talked, a flush had risen to Vivian's face; but plenty of sense lay behind her beauty. She drew a long breath.

"Thank you, Mrs. Ellis," she said sincerely. "I have never thought the thing out before. You have given me something that I shall profit by."

Hudson Super-Six is Not a Brother of the Six

The Feature Which Won Its Supremacy Is Controlled By Hudson Patents

A Six now rules in Motordom—where the trend, not long ago, was toward added cylinders. A Six holds all the worth-while records. A Six outsells any other front-rank car. But it is the Super-Six, remember—with the Hudson invention which added 80 per cent to six-cylinder efficiency.

The Light-Six type, some years ago, attained the heights of popularity. It so excelled the previous types that it was, for some years, the reigning type.

But engineers knew that in the Six at its best fully half of the power was being lost in vibration. They knew that friction and wear, within the motor, limited its endurance.

Leading engineers, including the Hudson, started out to end these faults. For a time the best way apparent seemed the V-type motor. So in 1915—before the Super-Six was presented—the trend was to Eights and Twelves.

There can be no doubt that those types soon would have superseded Sixes. Maker after maker adopted them. The Super-Six is the only invention which turned the tide back to the Six.

An Almost Twice-Better Six

What changed the condition was the Super-Six invention, made by Hudson engineers.

They discovered the fault in the Six. Then they worked out the remedy. The result was to add 80 per cent to efficiency, with no added size or cylinders.

That vast step forward made the Super-Six supreme. Never had a motor shown such power for its size, never such flexibility, never such endurance. That fact is still true. And the evidence is, it is bound to long remain true.

But that is the Super-Six motor, invented and patented by Hudson.

Phaeton, 7-passenger, \$1650
Roadster, 2-passenger, 1650
Cabriolet, 3-passenger, 1950
Touring Sedan . . . 2175

(All Prices f. o. b. Detroit)

It Won All the Laurels

All the worth-while records have been won by the Super-Six. That is, speed records for stock cars. Records for quick acceleration. The hill-climbing records, including Pike's Peak.

Endurance records—most important of all—have been broken by enormous margins. The 24-hour record was broken by 52 per cent. The transcontinental record was twice broken in one continuous 7,000-mile round trip.

So the Super-Six excels, beyond possible question, in every quality you prize.

For men who want a great car, no car in the field today approaches the Hudson Super-Six.

Now 25,000 Owners

Now 25,000 fine-car owners are driving the Super-Six. Could we have supplied them, there would have been thousands more.

The Super-Six, in one year, has come to outsell every rival. That is, every car above \$1,200.

In that year, too, we have made Hudson bodies studies in beauty, luxury and comfort. So the Super-Six looks its supremacy.

The car is now equipped with a gasoline saver, also a development of Hudson.

If you want these advantages, and a type which can't be supplanted, your choice must be the Hudson Super-Six.

Let the Hudson dealer show you Super-Six performance.

FAMILY PAGE for FEBRUARY

Address your letters to THE EDITOR OF THE FAMILY PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

THE SELECTION AND CARE OF HARNESS

QUALITY of material and workmanship chiefly determines the value of a harness. The best harness leather is made from smooth-grained steer and heifer hides that are free from cuts and scars. After the hair has been removed, the hides are carefully tanned by subjecting them to a series of oak-bark baths of increasing strength. High-grade leather requires about a year for tanning; cheap leather is "chemically" tanned in a few weeks. It is easier to judge the quality of leather when it is in the "side" than after it has been made up into harness. The strength of a strap depends to a considerable degree upon the part of the hide from which it is taken and upon the way in which it is cut. Neck and belly pieces do not have the strength of pieces cut from the back and the side; and straps cut across the grain are weak. Because those things are hard to determine after leather is made into harness, the honesty of the manufacturer counts for much.

Skilled hand labor is an essential in the manufacture of the best-appearing and the highest-priced harness, but from the point of view of utility the harness sewed on the improved lock-stitch machines is satisfactory. At any rate, choose the plain stitching—the sort that is free from scrolls or other fancy designs. In making heavy work-horse harness a combination of hand and machine work is highly satisfactory. Handwork is used except for the traces, which are sewed with a machine that pulls all the stitches uniformly tight.

The style of harness that you choose will depend of course upon the use to which you intend to put it. All harness should be neat and appropriate in design. On the farm, most men prefer harness that is free or almost free from fancy brass mountings and gay-colored celluloid rings. During the busy season there is little time to spend in polishing brass, and it does not look well unless you keep it clean. Furthermore, the time that would have to be spent in cleaning brass can usually be better spent in grooming. In general, the same considerations hold true for buggy harness; rubber mountings of the best quality are preferable to the more gaudy metal mountings.

Be sure that your harness is heavy enough for the use to which you intend to put it; but if you would avoid needless expense and weight, do not have it too heavy in the bridle, bit and backband, which do not bear the heavy strain of the load.

FITTING THE HARNESS

Ill-fitting harness lessens both the quantity and the quality of the work that a horse can do. It may even be the means of converting an honest

free worker into an untrustworthy one or even into a balker. Proper attention to fitting harness is particularly important in the case of farm horses; the working season in the spring is so short that it is imperative to prevent all losses of time due to harness that does not fit. Even a novice can make his horse comfortable in harness if he will give careful attention to details.

A horse's disposition and the shape of his head are the two things that should govern the fitting of the bridle. Adjust the cheek pieces so that the bit will not be so low in the horse's mouth that it will bother him or permit him to get his tongue over it easily. On the other hand, it should not be so high as to raise the corners of his mouth and pinch his cheeks. The brow band must not pinch the thin skin at the base of the ears. Keep the blinkers in place and see that they do not fit too close in front.

The possibility of training and working some horses without blinds is not questioned, but many experienced farmers believe that the majority of horses work more comfortably and are less likely to "loaf on the job" when the harness includes blinds. The moderate use of side checkreins or plain bearing reins has in its favor the fact that it prevents the horse from getting his head down to eat grass and the bridle from being caught on the ends of the pole.

For heavy work, well-made leather collars give the longest service. No part of the harness deserves more careful fitting. A collar should so fit that when the horse holds his head in the position in which he keeps it when at work the collar, when pressed firmly back with the hands, will have an even contact against all parts of the shoulders and leave space enough at the windpipe for the flat of your hand. By carefully selecting one of the many different styles of collars, it is possible to fit almost any horse.

A short trial will show what adjustment of the hame tugs is necessary to bring the pressure at the proper points. A common mistake is to let them remain too low. In adjusting the hame straps, buckle them as tight as possible at the bottom. Failure to do that has spoiled many new collars. If you wrap a new collar overnight with wet gunny sacks before you use it, you will find that it will shape to the horse's neck very quickly. A considerable saving in collars will result from putting them on and taking them off over the head rather than by unbuckling them at the top, as many farmers do. Sweat pads are a necessary evil in

some seasons of the year when horses suffer a considerable loss of weight.

Breastplates are useful for light work. Adjust the shoulder strap so that the breastplate is low enough not to interfere with the windpipe, and high enough not to hinder movement. An extra heavy breastplate lined with sheepskin is useful as a substitute for the regular work collar when the neck or shoulders of the horse become galled.

The right adjustment of the other parts of the harness is simple enough: the saddle should fit the back and the backstrap should not be too short; the crupper should be of good size, smooth and well stuffed; and the breeching should be neither too low nor too tight.

In putting a horse to a vehicle, remember to adjust the lines before you fasten the traces. Observing the right order in "hitching up" has prevented many accidents.

CARE OF THE HARNESS

No one can expect to take care of harness properly without a suitable place in which to hang it. In damp stables leather moulds quickly. The presence of mould indicates that moisture is taking the place of the oil upon which depends the life of the harness. Ammonia from manure also causes leather to deteriorate; but in regularly cleaned, airy stables it is safe enough to hang the harness on a hook behind each horse, or by means of a rope and pulley to haul it up and out of the way on the post at the rear of the stall partition. If there are several horses in your stable, you should, of course, have a central room in which to store supplies and extra sets of harness, with a bench and materials for minor repairs in it. Valuable harness should be kept in tight cases in a room where there is some artificial heat.

At least twice during the year you should entirely take apart, clean and oil all work harness. The less water you use the better, but of course some harness is so dirty that mere sponging alone will not remove the dirt; you will have to soak it for fifteen minutes, then scrub it with soap and brush. Use warm, soft water; if the water is hard, add a handful or two of sal soda to the tubful.

After you have rinsed the harness, wipe it with a rag or chamols and hang it on a wooden horse to dry. Keep it in a warm place, and as soon as it is dry apply neat's-foot oil with a rag or a sponge. Several applications are desirable, and it will pay to rub the oil well into the leather with the hands. Neat's-foot oil is the best for the purpose; you can make it black by adding one tablespoonful of lampblack to a pint of oil. Under no circumstances is it advisable to use a drying oil, such as linseed oil. Low-grade vaseline is useful for smearing over harness that is to be stored for a considerable length of time. Harness that you are constantly using needs frequent sponging and treatment with some good dressing.

When you desire a brilliant black finish to the harness, use one of the standard harness compositions. They are similar to the best shoe pastes, and there is in fact no objection to using shoe polish except the extra expense. Apply the paste evenly with a dauber, then polish the harness with an ordinary blacking brush, and finally with a flannel rag.

For cleaning the metal mountings, the paste and the liquid metal polishes on the market are equally effective, but the paste is usually the more economical because it does not evaporate so quickly as the liquid. Clean the steel bits by washing them in soapy water, then smearing them over with a cake of soap and polishing them with silver sand. The soap helps to make the sand stick. The fingers are of most service in rubbing the sand on the bits; a pine stick can be used in parts too small for the fingers. When you have finished the sanding rinse the bit, dry it with a cloth, and burnish it with a small steel burnisher. Forged-steel bits are the strongest, and also the best looking if they are kept clean. Careful drying and wiping with an oily rag after they have been used will prevent them from rusting.

There is a satisfaction in using harness that you have kept in first-class condition, and there is also the knowledge that in caring for it properly you save both time and money.

A Heat Retainer.—The basis of it is a tin box. In the centre of it is placed a stout cup, for a mould, and then the rest of the box, except a space three quarters of an inch deep, at the top, is packed as tight as possible with hay. When the cup is removed the hollow that it filled is left. Newspapers are then folded to make a pad the size of the box, and the pad is stuffed with hay, pressed tight, until it is three quarters of an inch thick.

If an invalid needs a warm drink in the night, place the liquid, boiling hot, in a cup. When the cup has been covered with a metal top it can be set in

the hollow in the hay, the pad placed over it and the cover of the box shut down. Liquids so packed will keep hot for several hours.

THE PINK-PAPER NURSE

THE first paper nurse, who was pink, traveled three hundred miles in a letter to comfort a little girl who was ill in a big city hospital. The nurse was cut from a piece of heavy pink paper folded once—just as any paper doll is cut, except that the material below her feet was not cut off close, but was left in the shape of a wide strip for a pedestal. When an oblong piece was cut from the centre of this foundation, and when the two tags thus left were folded back, the nurse was able to stand up straight and firm.

A white paper cap and an apron gave the nurse a professional appearance, to which her turned-up mouth added a pleasing cheerfulness. Sometimes the two horizontal bits of the foundation paper were pinned to the bed, and sometimes the pink nurse stood on them on the table where the little patient could see her smile.

The first pink-paper nurse had these lines written on the pieces that were pinned to the bed:

If you will pin this to your spread,
I will stand beside your bed
And make you smile
A little while.

Or, stand me on your table,
I'll do the best I'm able
Your heart to cheer,
You child so dear!

Of course there is not much poetry in the little rime, but the paper nurse does the best she can to make up for any deficiency in that respect. Whenever little children are sick in bed, she will help to give them a cheerful hour.

Making Pillows.—When you are making pillows inclose the feathers in a sack of the required size made of mosquito netting. That makes it an easy matter to cleanse both feathers and outer tick. If the pillows are made in the old way, with the feathers loose in the tick, cleansing is a dreaded task and therefore too often postponed, whereas if the feathers are first inclosed in the net it takes but a moment to remove the feathers, and a few minutes to wash both contents and covering, after which the feathers, still in the net, can be dried quickly and thoroughly.

PROJECTING A STRAIGHT LINE AGAIN

IN the Family Page for May, 1915, The Companion described a method of producing a straight line through an obstacle that prevents sighting, such as is often encountered in running surveyors' lines through a region where outcropping rocks are numerous. A contributor who has overcome similar difficulties sends in a description of a method that is even simpler than the one there described.

Let A B indicate the fence already set. At exactly right angles to it measure off the lines A C and B D, and continue them until they extend beyond the rock or other obstacle, and are of exactly equal length; then sight along C D to E, any distance that may be convenient. With a steel square measure at exact right angles the lines E F and G H, equal in length to B D and A C. By connecting the points H and F, you will then have a line that is a projection of the line A B.

UNFAMILIAR ANNUALS WORTH KNOWING

TO sow seeds of half a dozen plants, none of which is familiar, is like exploring a new country. You may have read the descriptions in the catalogues, but they give you little real information. It is only as the stalks begin to lengthen and the leaves unfold that you begin to know the plants as they really are; and when the buds appear, sometimes in the most unexpected places, you are filled with curiosity to see what

kind of flowers will follow, just as in a foreign land you wonder what is round the next corner.

Perhaps you have never realized that among the easily grown annuals there are many charming flowers with which comparatively few amateurs are acquainted. There is clarkia, for example, which is sold on the street corners in Europe, but which is only occasionally seen in American gardens. Anyone can grow it almost anywhere. The flowers are double, large and showy, and very useful for cutting. If you sow the seeds out of doors in May the plants will be in full bloom by the middle of July.

Then there is the African daisy, rejoicing in the mouth-filling botanical name of *Dimorphotheca aurantiaca*, to which you may have to refer in the catalogues. It is a wonderfully fine, free-blooming flower, daisy-like in form and golden orange in color. Although introduced from South Africa only a few years ago, it has proved to be one of the best of annuals for American gardens. It likes a sunny situation, and starts easily from seed sown in the open ground in May. The flowers last a long time in water, but close at night.

No annuals are easier to grow than the annual mallows, listed as *lavatera*, but they are not at all well known. The pink flowers, which are like miniature hollyhocks, are dainty and pretty anywhere in the garden, and even the lustrous green foliage is ornamental. It is an excellent plant to grow in the bulb beds, for the blossoms come quickly and last until the end of the season. There is a white variety, *Lavatera alba*, but it is less pleasing than the pink kind.

Garden makers are beginning to get better acquainted with salpiglossis, although there are many to whom it has not yet been introduced. Once grown, however, it becomes a garden favorite, and growing it the first time is always a delightful experience, for neither the plant itself nor the bud gives any hint of the strange, gorgeous, funnel-shaped blossom that suddenly appears. There are different colors, but all are marked with

curious long veins of another color or shade. The salpiglossis is such an excellent cut flower that the florists are beginning to sell it. It is easy to grow, although if you wish to have early blooms you must start the seeds in boxes.

Several flowers have been called the poor man's orchid, among them the butterfly flower, catalogued as *schizanthus*. It is a fine garden annual, easy to grow from seed sown in the open ground when warm weather is established. The single flowers look like small orchids.

It is safe to say that not one in a hundred among American amateur gardeners is acquainted with the gay, golden-yellow flower known as *leptosyne*, but English gardeners know the plant and love it. The variety called *stillmani* has a special merit: it will bloom abundantly within five or six weeks after the seed is planted. For that reason it is excellent to use in filling spots left vacant by some gardening mischance. The plants grow a foot and a half tall, and the showy blossoms keep well when cut for the house. They somewhat resemble coreopsis.

Here, then, are half a dozen hardy annuals that will add to the charm of any garden, and yet are known to but few amateur gardeners. Growing them the first time is a delightful adventure.

SAVORY PUDDINGS

WHEN vegetables are scarce, especially when there is a dearth of potatoes, rice is often served with meat, but a savory pudding is so much more appetizing that the easily made kinds are winning their way to the table.

Savory Rice Pudding.—Cook one half pound of rice until it is tender, turn it into a bowl, and when it is cool stir in one dessert-spoonful of chopped parsley, two moderate-sized cooked onions and a piece of fresh butter the size of a filbert. Mix everything thoroughly with two beaten eggs. Turn the mixture into a buttered dish and bake it half an hour in a hot oven.

Onion Savory Pudding.—Steam good, sound onions, then chop them slightly and remove all hard pieces. Mix a few leaves of sage and some small pieces of butter with bread crumbs. Make a paste crust, as for apple dumplings, line the basin with the crust, fill it with the savory mixture and boil it for two hours. This is excellent when served with roast goose, rabbit or hare. Apple sauce should be the other accompaniment.

Cabbage and Rice.—In the water into which a small cabbage has been shredded cook two ounces of rice until it is tender. Let the cabbage and the rice boil gently together until both are done, then stir in a tablespoonful of butter and a tablespoonful of chopped fried onion. Add a teaspoonful of curry powder. Press the pudding into a mould and keep it in a hot oven until it is ready to serve. It is delicious with roast poultry, especially roast duck.

Oatmeal Savory Pudding.—Mix two ounces of fine Scotch oatmeal in one quarter pint of milk, add to it one pint of boiling milk, and stir the whole over the fire for ten minutes, then put in two ounces of sifted bread crumbs. Take the mixture from the fire and add one ounce of butter, an onion minced fine, two eggs and one teaspoonful of mixed powdered marjoram and sage. Butter a pudding pan, put the pudding into it and bake it for an hour in a moderate oven. Turn it out on a hot dish and serve it with any white meat.

Macaroni Savory Pudding.—Take one ounce of boiled macaroni, four ounces of bread crumbs, three eggs, one ounce of butter, one quarter pint of milk, one tablespoonful of chopped parsley, one teaspoonful of minced leeks, a teaspoonful of lemon thyme, marjoram, winter savory and sweet basil mixed. Boil the milk, pour it over the bread crumbs, and cover the whole with a plate. When it is cold add the herbs, the butter melted, the eggs well beaten, and the macaroni cut into small pieces. Mix everything well together, season with mace and spice powder. Pour the pudding into a buttered mould and steam it with a piece of paper over the top for about three quarters of an hour. Serve it with any white meat.

Neolin

Better than Leather

Neolin Soles Cut Colds and Shoe Bills Down

Over slush, over snow go hundreds of little footsteps. Into slush, into snow, patter hundreds of little feet—soaked little feet that stay at school all day in soggy shoes and carry sick little owners home when the night-time comes.

Is it any wonder that coughs and colds and croup come to little bodies through the doorway of leather soles?

Or that mothers are buying Neolin shoe-soles today—Neolin which is impervious to water as a leaf—Neolin which is called "A cold insurance without a premium"?

Neolin which wears better than good leather and often saves a shoe bill every time you buy it!

Neolin—which saves dollars in the floors it won't scratch, and the furniture it won't bruise!

Neolin whose flexibility is so foot-strengthening and whose looks are their own recommendation.

Dealers or shoe repairers have Neolin or can get it. Neolin comes for grown-ups and children—on new shoes or as soles for old shoes—and in one unmatched quality on any grade of shoe.

Beware the imitations. Mark that mark; stamp it on your memory: Neolin. Ask for Neolin, with the accent on the "O"—Neolin—

—the trade symbol for a changeless quality product of
The Goodyear Tire & Rubber Co.
Akron, Ohio

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

THE SPLEEN

THE spleen is a large gland that rests in the upper left-hand side of the abdominal cavity, between the stomach and the diaphragm. It is an organ of which we take no account unless it becomes diseased. Its functions are not clearly understood and, like the appendix, its removal does not necessarily disturb the health.

Sometimes the spleen, through accident or because other organs press upon it, drops from its proper place. Then it usually gives rise to feelings of weight and pressure, especially in nervous people. But sometimes the symptoms in this condition are so slight that it is discovered only by accident. In many of these cases a properly adjusted belt or bandage gives relief.

Most of the disorders of the spleen are caused by its enlargement, and it is the uncomfortable symptoms that the increase in size causes which drive people to seek relief. During the progress of any acute infectious disease, such as typhoid fever, pneumonia, scarlet fever or malaria, the spleen is often enlarged.

In splenic anemia a great enlargement of the spleen is accompanied by a condition of anemia and sometimes by hemorrhages from the stomach. It is a troublesome disease for physicians to cope with, because they can find no trouble in the body to account for the great enlargement of the spleen. It may go on for years, without giving much pain, but it causes an uncomfortable sense of dragging weight. Drugs do little good; the treatment consists in supporting the weight of the spleen by a belt and in keeping up the general health by means of fresh air, generous feeding and rest.

Splenectomy—or removal of the spleen—is sometimes performed. In old cases of enlarged spleen where adhesions have formed, the operation is often both difficult and dangerous, but in individuals of fair general health it is undoubtedly the best way to treat a seriously diseased spleen. It is the only thing to do in cases of abscess, rupture, or primary tuberculosis of the spleen, or when there is a movable spleen that gives constant discomfort to its owner.

POLLY'S GUEST

PUSHING the damp hair from her forehead, Mrs. Hosmer stared in astonishment at her caller.

"You look as if you were just starting for a garden party," she cried, "and it's only eleven o'clock in the morning!"

"Don't blame me—it's Polly," her caller returned gayly. "But if you'll lend me an apron, I'll help you pick over those currants."

Mrs. Hosmer went into the house, promptly re-appearing with the apron. "You needn't expect me to refuse an offer like that, with preserving to do and the thermometer at ninety," she declared. "Are your currants all done?"

"I suspect they're overdone, but I haven't investigated," Mrs. Stanford returned.

Mrs. Hosmer looked at her helplessly.

"I wish you'd explain!" she cried.

"I gave you the key. It's Polly. The child overheard the doctor say something foolish about my needing a vacation, and got worried. I explained that I couldn't possibly afford to go anywhere, and besides, I'd be so homesick that it would do me more harm than good."

"I wish I could take a vacation at home!" I said.

"I didn't half mean it, but Polly jumped at it, and the end of it all was that I'm doing it—for two weeks. I am sleeping in the guest room and wearing fresh dresses and having little spreads brought out to me on the piazza and reading books I haven't had time to read for years and doing fancy-work and calling on my friends at eleven in the morning. And I've no idea what I'm going to have for dinner. Polly is nothing if not adventurous. Anything's likely to happen."

"But the work! And seeing Polly do it! And your preserving!" Mrs. Hosmer gasped.

A shadow crossed Mrs. Stanford's face, followed by laughter.

"For three days I was nearly wild, especially when Polly and Maggie did the currants. Maggie is a good maid, but she cannot make jelly. And Polly boiled them too long; I had the clock before me. I nearly spoiled things that morning. I actually started for the kitchen; then something held me back, and I went to my room and had it out with myself. As if ten quarts of jelly compared for one moment with my little daughter's joy! If the currants worried me, what was that in comparison with her worry if I got overtired and spoiled all her dear plans? I put it down in dollars and cents—doctors' bills versus currant jelly; then I put down all the Polly of it that couldn't be reckoned in money terms."

"Well, I kept my hands off, and I've been paid a thousand times over by my little daughter's joy. Polly is working terribly hard over all sorts of things—some because she hasn't learned how to do them, and some sheer, frivolous, 'company' extras. But she is learning a lot, and so am I."

Mrs. Hosmer drew a long breath. "It's very nice that you can take it so," she said.

SAXON "SIX"

People Generally are Convinced of Saxon "Six" Superiority

Nor is this belief in Saxon "Six" superiority confined to one part of the country. You'll find it equally as strong in the West as in the East, in the city as in the country.

But what are the specific reasons that have led motor car buyers the country over to this same clear-cut conclusion?

Perhaps the biggest single factor in Saxon "Six" success is the Saxon "Six" motor.

It is understood, of course, that uniform torque—smooth power-flow—is the standard sought by all motor car makers.

With a "less-than-six-cylinder" motor there are naturally intervals between impulses or explosions. These spell

vibration and consequent wear on the motor and parts.

With a six-cylinder motor, however, one explosion merges smoothly into the next. And this vibrationless power-flow gives rise to several important advantages.

It practically eliminates wear on the motor and parts, gives longer life to the motor, enables higher maximum speed and lower minimum speed, and produces nearly absolute operative quietness.

And best of all it adds perceptibly to the performance of the car—in pick-up—in high-gear work and in pulling power.

Saxon "Six" is \$865; "Six" Sedan, \$1250; "Four" Roadster, \$495; f. o. b. Detroit. Canadian prices: "Six" Touring Car, \$1175; "Six" Sedan, \$1675; "Four" Roadster, \$665. Price of special export models, "Six," \$915; "Four," \$495; f. o. b. Detroit.

SAXON MOTOR CAR CORPORATION, DETROIT

Did You Ever Notice the Little "Heart" in a Peanut ?

The little bud which lies between the two halves of the peanut? Of course you've noticed it. But have you ever noticed that this little heart does not taste like the rest of the peanut? It is bitter. Taste three or four of them at one time and you'll see how bitter they are.

In making Beech-Nut Peanut Butter these little hearts are all carefully removed. We have a very wonderful way of doing this, which we will be glad to tell you all about if you will write us.

And the removal of these hearts is one reason why Beech-Nut Peanut Butter has such a delicious flavor.

HOW MANY WAYS DO YOU EAT PEANUT BUTTER?

Most boys and girls love Beech-Nut Peanut Butter spread on bread, crackers or toast. Maybe you have found some other new way to eat it. If so, write us a letter about it. We would like to hear from you.

If you have never tasted Beech-Nut Brand, ask your mother to get you a jar today.

1 Safety Razor Blade does the work of 4

When magnified, the cutting edge of a razor blade looks like a saw. After shaving, no matter how well you wipe the blade, moisture still clings between the microscopic teeth.

As a consequence, very tiny particles of rust form and the blade becomes dull and "pulls."

Put 3-in-One on your blade before and after shaving. Then rust can't possibly form. A little 3-in-One on your strip keeps it soft and makes the razor "cling" when stropping.

Try it and see. Your blades will last twice as long and shave cleaner. Send for our booklet "A Razor Saver" and

FREE generous sample of 3-in-One Oil.

TRADE MARK REG.

A Complete Line of Automobiles All New Values

From your point of view this announcement is most important.

For herein we set forth the achievement toward which this company has aimed for the last eight years.

This achievement in a word is the completion of our gigantic organization to a point where we could make and market a complete line of automobiles under one head.

One executive organization,
—one factory management,
—one purchasing unit,
—one sales expense,
—one group of dealers,
plan, produce and sell the entire line.

Buying power is concentrated. Costs are distributed over all these cars.

The savings are tremendous.

As a result we are producing cars of exceptional quality—and marketing them at unusually low prices.

Every car is built to a rigid standard of performance, comfort and appearance.

The new Light Four at \$665 is a striking example.

It has good style—built low with harmonious and full sweeping body lines. It is a beautiful car in every sense of the word.

The motor is powerful, quiet and of sturdy construction. The turning radius is short. The car has a quick acceleration and is built to tour safely and comfortably from the Atlantic to the Pacific.

And with all these good qualities it *rides beautifully*. The soft cushions, the long resilient cantilever rear springs, the large tires (31 x 4) and the proper balance in construction absorb all types of jolts—the choppy cobblestone, the cuppy macadam and the heavy ruts and thank-you-ma'ams of American highways.

Yet this is but one of the new Willys-Overland values.

Never before have the economies of vast production been available for buyers of every class of car.

And the Overland Policy of greater production, higher quality, lower price is exemplified in every model and type.

"If our little Ella May had lived, Miss Penny, —"

Mr. Langley checked himself. After all, Ella May could hardly have done anything in the case he was talking about. The clergyman frequently spoke of little Ella May in that manner, and his friends always agreed loyally that this or that would have been otherwise had she lived to grow up. At this time, when she had been dead for more than twenty years, nearly everyone in the two villages thought of her as a fair, blue-eyed child with long yellow curls and a sweet face. As a matter of fact, Ella May had died on the evening of her third day.

When strangers wondered that such a brilliant man as Russell Langley should have remained in this sleepy country village for twenty-five years, using up the principal of life, as it were, when at worst he should only have touched the income, his parishioners said that it was partly because of the loss of that only child, and partly because his wife was an invalid. Mr. Langley himself, however, would have demurred. He knew that he had been wanting in even a reasonable and proper ambition, and that he had wasted his talents. He considered himself as the laziest man in the county—and of late years he scarcely knew anyone outside its limits; but he loved his people and was humbly proud of their dependence upon him. And he sometimes said that he had one claim to grace: he had been privileged to serve Miss Penny for nearly a quarter of a century.

Miss Penny lived in the South Hollow district not far from the academy. She had driven over the two miles between her home and the parsonage, which, with the church and the post office, was in Farleigh proper, at least once a week for more than twoscore years; and neither she nor her pastor realized that she was to-day making virtually her last visit of appeal to him. It was only because she had come on a Saturday that her call seemed at all out of the ordinary. Her errand was obviously important.

Not that Miss Penny herself ever thought an errand to the parsonage unimportant. Excitable, enthusiastic, tender-hearted, she was always discovering crying wrongs and tragedies. It is true that in all the years she had been bringing them hither to be made right none had proved really a tragedy, and not half a dozen instances of real need, but her zeal had never waned. She went on discovering and reporting, recovering from one excitement to plunge into another; for she believed always that Mr. Langley made the crooked straight, and she never doubted that it had been quite as crooked as she had thought.

Miss Penny was now seventy years old, a little, thin, erect lady, with a large nose, and round, shortsighted eyes that peered out at you from behind large spectacles with thick, powerful lenses. She reminded the minister and the master of the academy of the birds that she fed at her window throughout the year. Her motions were quick and rather jerky; she had a way of turning her head quickly from side to side, and she walked with a spring that brought to mind the hopping of a robin. Her hair was gray, but her cheeks were rosy and showed scarcely a wrinkle. She dressed in rich black satin, with muslin collar and cuffs for mornings and real lace for afternoons.

When she entered the parsonage on that morning, she spent several moments in apologizing for coming on Saturday, and several more in trying to recall to Mr. Langley's memory a certain pine tree that stood on the highest point of the little common at the South Hollow. He seemed to recollect it dimly.

"But, Mr. Langley, you know it's the only pine on the common, and some people say it's primeval. Why, you must remember—the soldiers' monument! Oh, no, that was before your day, of course, for I was a girl—at least I was young! Well, for some reason—perhaps because it was the highest point, for it isn't in the middle of the common—the soldiers gathered round it just before they went off to the war; and so it seemed the place for the monument afterwards. But they didn't want to cut down the tree, because it had stood there since the time of Christopher Columbus—my father was one of those who protested."

"Ah! And so Farleigh got the monument and South Hollow kept the tree? Well, it was a fine thing to spare an old landmark like that. In itself it's a monument, and a link with the far-away past."

And Mr. Langley gazed dreamily out of the window. Then suddenly recollecting his visitor

DRAWN BY CHASE EMERSON

HE MADE HIS WAY FROM BRANCH TO BRANCH UNTIL HE WAS WITHIN REACH OF THE CAT

wood box in the study to overflowing; for as the minister almost lived in his study it was hard for Reuben to fill the wood box—which was almost the only chore he could find to do—without disturbing him.

Reuben was an orphan and homeless. His father, who had been the organist at the village church, had taken to drink after the death of his wife, and a few months later had lost his position. He had gone from bad to worse. For three years his little boy had cared for him as best he could, keeping house in a crude, faithful fashion, brushing his father's clothes, cleaning his shoes, trying to entice him to the organ in his sober moments, and searching for him and bringing him home at all hours of the night. But some six weeks before the present September morning his father had disappeared finally; all Reuben's searching had been unavailing. When news of the elder Cartwright's death was brought to Farleigh, Mr. Langley, in spite of the remonstrances of his wife, had taken the boy in temporarily.

Reuben had been thinking of his father this morning. The boy's experience had matured, not to say aged, him; and as he stood by the study desk after filling the wood box, he was wondering with troubled brow whether it was really his father that he missed, or some one to "do for." It almost seemed that he could forget and be happy here, if only he could be busy and useful. If only Mr. Langley kept a horse that he could take care of, or a cow that he could milk, or two or three cows; or if Mrs. Langley could only have been a cripple instead of an invalid! Then he could have taken her out in a wheel chair every day. He would have been only too glad to wheel her down to the South Hollow every night after school, and all the way to Wenham on Saturdays.

As he mused, Reuben's eyes rested unawares on the open Bible on the desk. There is something about your own name that draws your most absent gaze, and suddenly Reuben was roused from his reverie almost as if by a voice. His name stood out from the page as if written in huge capitals. He forgot everything else as he read the phrase that embodied it: "a portion for Reuben."

A portion for Reuben! It was in the Bible; so it must be true. He was still thinking of it a few minutes later when the minister's voice summoned him from the apple tree.

As Reuben sat in the phaëton beside Miss Penny, getting the fat pony over the ground much more quickly than she could have done, the words still ran through his head. As he listened to Miss Penny's conversation, which was a long monologue with many repetitions, he was also speculating on the probable nature of the "portion" that had been so mysteriously foretold. Before they reached the South Hollow the thought came to him that this chance to rescue the cat had something to do with it. Perhaps he would thereby get a reputation, so that whenever any other animal should be in trouble people would come straight to him. And then later he might help even men. If robbers should lock some good man like the President or the Governor into a tall tower, Reuben might somehow scale it, carrying with him a rope or a key. It was as it is in school when you have learned to do hard examples: your reward is that you can go on to those that are still harder.

They reached the common just before noon. Reuben removed his jacket, shoes and stockings and hastened with Miss Penny to the scene of action. Even in his blouse and overalls he was a handsome little fellow. He was tall for his thirteen years, and thin; his thick hair was of a very dark red; his very serious eyes were deep brown with long lashes and straight brows. His mouth was so firmly set, his gaze so direct and his expression so grave, that Miss Penny gave him her full confidence.

The tree was straight and very tall, but the diameter of its smooth shaft seemed small for its reputed age. The branches began indeed only at a considerable height, almost on a level with the tops of the deciduous trees about it. A handsome crown it had, however, although at the moment Miss Penny and Reuben had eyes only for the piteous white cat crouched in a cleft just below the tip. As they looked up she gave a faint little cry.

"O Reuben, what if she dies before you get there?" cried Miss Penny; and unconsciously her assurance that he would get there strengthened Reuben's self-confidence.

He wasted no time. With Miss Penny looking on, admiring, marveling—and fearing, he

and her errand, he turned to her and said, "Nothing has happened to it, Miss Penny?"

"Oh, no, not to the tree!" she replied with evident surprise; her words came so fast that they nearly tripped one another. "A cat couldn't hurt a tree, you know, and a poor, scrawny thing it is, too."

"A cat, Miss Penny?"

"The most harrowing thing I ever heard of! Who it belongs to I don't know. This is the third day, and I don't know what's to be done unless we cut down the tree. That seems a pity, but, Mr. Langley, we can't let the poor creature die before our very eyes."

Mr. Langley began to understand. "No, indeed, Miss Penny," he responded warmly. "Poor puss! In the topmost branches, I suppose?"

"The very tip!" she cried.

"Probably a dog chased her, and she went too far. Then she starts to come down the smooth trunk headfirst—is afraid and turns back. She's been there three days?"

"Yes, oh, yes, and—oh, she's white! That seems to make it worse—like a white horse!" He understood.

"And the tree, I suppose, only begins to

branch thirty or forty feet from the ground?" he asked, and her eyes grew rounder than ever.

"Why, Mr. Langley, how did you guess that?"

"Well, if it is primeval, it must be the single survivor of a grove of white pines, and, growing near together, they wouldn't branch out until they reached a height where they would get the sun."

Again his fine gray eyes grew dreamy. That seemed a good figure for a sermon—he wrote few new ones, but a fresh figure fitted well into an old one. Then his kind heart remembered the helpless animal, and for an instant the fire of youth glowed in his eyes. In its turn it died out. No, he was not sure that he could get even to the top of his own gatepost.

Then, after he had thought of Ella May, he remembered Reuben. Of course! He went to the door and called—softly because of his wife. A voice answered from the apple tree outside the window.

Reuben Cartwright had just settled himself in the tree with a view to pondering something that had just come to him. He had been secretly glad of Miss Penny's otherwise inopportune visit, for it had given him a chance to fill the

retreated a little to get a start, ran almost to the tree, and then, leaping up, caught the trunk seven or eight feet from the ground. From there he climbed—or "shinned"—steadily until he was halfway to the lowest branches. Pausing there, apparently of necessity, he clung with knees, feet and one hand. The other hand he stretched toward the cat above, while he called gently and persuasively.

The cat responded with a faint cry and made a movement toward him, head down. Then, in a very panic of fear, she shrank back.

Again Reuben climbed. But from that point the trunk was smoother; his progress became slow, and he slipped back continually. Miss Penny watched in terrified suspense. Presently, by a great effort, he gained half the remaining distance to the top—only to slip back until he was just below the place where he had first stopped.

Two small boys now appeared on the scene, and the janitor of the South Hollow school buildings lumbered heavily over to see what was going on. Reuben made a fresh start, managed to climb to a higher point than he had yet reached, but again slipped back. When he started upward again he went more deliberately. He slipped several times, but caught himself; at last he came to a stop just out of reach of the lowest branches. He grasped the trunk so tight with his knees, feet and arms that Miss Penny almost expected to hear it crack.

"Go it, Rube!" called the little boys. They did not know his name; the "Rube" referred merely to his overalls, his bare feet and his mop of red hair. The janitor remarked that if that young imp ever got to the academy there would be "more trouble along of putting things atop the flagpole than ever."

Three times Reuben tried to get beyond that highest point; he could not gain one inch. Clinging yet tighter with his feet, he prepared for what seemed a hazardous move—although he denied afterwards that there had been any danger in it. Letting go of the tree with his arms, he gave a sort of spring, and just caught the lowest branch.

The cat started violently. For a moment Reuben, hanging almost helplessly by his arms, struggled to pull himself up. Then by a quick move he somehow flung his feet over the limb, turned over easily, stood almost upright, and made his way from branch to branch until he was within reach of the cat. The animal backed away, struggled a moment and then dropped contentedly into his arms.

A curious sound went up from below; it was composed of the reluctant, gruff applause of the stout janitor, Miss Penny's high-pitched cry of relief and the enthusiastic cheers of the little boys.

Then the question arose among them how the boy was ever to get down with the cat in his arms? Miss Penny decided that they must get a sheet or tablecloth and that each must hold a corner so that Reuben could drop the cat into it. The little boys promptly refused to get the sheet lest they miss something meanwhile; so at last the janitor reluctantly offered to go.

"Tell him not to move till I get back," he begged Miss Penny.

But even as he spoke they saw that Reuben had his own plan for getting down. He had removed his cotton blouse and was making a bag of it by tying the sleeves together. Putting the cat into it, he drew the elastic tight and started down. Almost before they had time to draw breath his feet struck the ground and he was handing the imprisoned cat to Miss Penny with a flourish that won fresh admiration from the little boys and that was perhaps pardonable in the circumstances.

He was an odd-looking figure, certainly, as he stood there in his undershirt and overalls, shaking the mop of hair out of his shining brown eyes. Miss Penny hugged him to her heart, and then hurried him away amid the cheers and the jeers—the latter because of the embrace—of the little boys.

Late in the afternoon Miss Penny and Reuben sat by the kitchen fire, with the old white cat alternately lapping milk from a saucer and rubbing herself against their legs. Reuben had decreed that she be fed sparingly at first. He had sat opposite Miss Penny at dinner and had served her as if he had always been there; afterwards he had dried the dishes, fed the pony and cut and brought in the wood. And now he proceeded to decide upon the next move. Miss Penny, who feared that her Tiger when he returned to the house would be jealous of a newcomer, had asked Reuben whether he thought they could find another home for the stray cat.

"She's rather fierce-looking," he declared gravely. "I'm afraid no one would want her. Besides, I don't believe she'd stay anywhere else; she seems to have adopted you."

"O dear me!" cried Miss Penny. "I do love a cat that's affectionate like her. Tiger's so indifferent. Come, pussy, come up here."

The cat rubbed and purred at her feet without heeding the invitation. Reuben snapped his fingers close to her eyes and motioned to Miss Penny's lap, whereupon she jumped up and settled herself comfortably. Her fur showed dingy gray against the shining white apron. Miss Penny stroked her in apparent delight.

Then suddenly she clasped her hands. "What if Tiger should come in?" she exclaimed.

"You'll just have to learn him fair play," said Reuben calmly.

"Teach, Reuben," she corrected. "But I never could."

"I will if he comes before I go."

"O Reuben, I can't bear to have you go! Would Mr. Langley care if you stayed overnight?"

"He wouldn't care if I never went back. His wife doesn't like a boy round."

"Then you might stay a week if it weren't for the long walk to school?"

"I don't mind that—not if 'twas way over to Wenham. And I could take care of the pony and fetch your wood and drinking water, besides teaching Tiger to agree with Mrs. Tramp."

Miss Penny smiled, half reluctant already to consider letting him go at the end of the week. But again she clasped her hands suddenly.

"Oh, the birds, the birds!" she cried, and added, in answer to his look of amazement, "She—Mrs. Tramp—will catch the birds! They come every day to be fed. Tiger never touches them."

Then Reuben revealed something that he feared might damage the prospects of the tramp cat. "She won't," he cried, "because she's deaf! Feed her up well, and, not hearing 'em, there won't be a mite of danger."

"But, Reuben, what makes you say that?" she protested. "You didn't know this cat before, and I never heard of one's being deaf."

"White ones are likely to be," he said. "And didn't you notice how wide she opens her mouth and hardly makes any noise at all? And she didn't pay any attention when you called, but when I pointed out that you wanted her she jumped right up into your lap."

Somehow that remarkable penetration on Reuben's part seemed to settle the question in regard to both waifs. And when, nearly a year afterwards, Mr. Langley turned the tables and came to Miss Penny for help, Reuben was not only still there, but was the head of the household.

Of course the pastor had seen Miss Penny constantly in the meantime, but she had not needed him. He had really missed her demands upon his time and sympathy. Sometimes he declared that he begrudged Reuben that one office; for Reuben did not want it, as he himself did, to piece out. That boy was the sort to run round with his arms spread out, just gathering in opportunities to help others. That red-haired, solemn-eyed urchin, deserted by his father, alone in the world,

you say? I don't know any Bakers about here except Sam, and he never married."

"No, Miller—Rusty, they call her, on account of her red hair. The family, who have known better days, came here some four years ago. They live in a forlorn little house, and the father, who is well-meaning but shiftless, works irregularly at the straw shop at Wenham. The mother is a faded, lackadaisical woman who must have been pretty once, but the three children at home are as bright as any in the two villages. The older girl ran away three years or more ago. If this other one can get her education, she will, I feel sure, redeem the family."

Miss Penny drew a deep breath. She wished that the child wasn't a girl; she was rather afraid of girls.

"Let me tell you of my first introduction to Rusty," he said, smiling, with a far-away look in his eyes. "It must have been directly after they came here, for she was a tiny thing—I thought of her as a baby. As I was driving back from Wenham, I saw two girls running a race. A third child, left far behind, was making after them as fast as her short legs would carry her, waving her hands wildly and shouting at the top of her voice."

"I thought the little thing was crying because the big sister was running away from her; but when I drew nearer I saw that her little face was wreathed in smiles. She had

shouted herself hoarse cheering the race she had no part in, which left her alone on a lonely road."

"Bless her heart!" cried Miss Penny. "She must have a lovely disposition."

Mr. Langley smiled rather ruefully. "I'm afraid she hasn't. Poor child, it isn't her fault. Her surroundings have spoiled her—to a certain degree. She has a hot temper,—what the children call a red-haired temper,—but she's warm-hearted and generous and full of fun. She might be something of a trial to you just at first, Miss Penny, but if you'd take her in it would be the making of the girl."

Miss Penny stroked the cat in her lap. "If it weren't for Reuben, I'd do it," she said doubtfully, "but I don't know how he'd feel."

"Wasn't there some such difficulty at the time you took in puss, here, with respect to your other cat?" he inquired.

Miss Penny laughed, but regarded that case as rather different. However, she would consult Reuben and let Mr. Langley know.

To her surprise, Reuben agreed at once. And she never knew that his heart sank as he did so. It was not in the least that he disliked to welcome another into what had become his home. It was not that he knew by hearsay of Rusty Miller's temper. It was because of her red hair. Red-haired boys were bad enough, he said to himself, but he believed that he almost hated red-haired girls.

TO BE CONTINUED.

"PALS" OF THE SQUAD

By Walter A. Dyer

THERE is not a man on the dog squad of the New York police department who questions the extraordinary friendship of Pete and Vos.

The origin of their friendship is a matter of conjecture; but former Patrolman Dan Flynn, who was Tom Grant's predecessor in charge of the kennels, has an interesting theory.

He has reason to remember the arrival of Pete, for the dog, much irritated by recent experiences and objecting to being thrust into a wire-fronted pigeonhole in the Parkville stables, nipped Dan sharply on the left hand. Thereafter Dan observed his new charge with increased respect and absorbing interest.

a policeman, to lie still and watch when so commanded, to pursue and throw a fleeing criminal, to search round buildings at night, and to give notice by barking of the presence of persons lurking in the shadows.

Pete showed not the slightest inclination to do any of those things. He was distinctly an individualist, and his chief aim in life seemed to be to get out and start trouble on his own account. It was weeks before he could be allowed off a leash, and months before he seemed to master the fundamental idea of obedience. But Dan Flynn was patient beyond belief, and in the face of opposition, both personal and official, he became a stubborn maintainer of Pete's intrinsic value. And in the end his patience conquered the dog; when Pete at last began to learn he seemed to grasp the meaning of the whole system at once.

But to return to his friendship with Vos. Vos was the only long-haired dog on the squad and was among the second lot imported by Inspector Wakefield from Belgium. All the others were of the short-haired type of Belgian sheep dog, although they showed considerable variation, from little Marianne,—called Mary Ann by the squad,—with her wolf-like head and beady eyes, to big, faun-colored, bull-headed Togo, with his fifty-six pounds of solid bone and muscle.

Vos was a beautiful, glossy black creature, with a thick coat that gave him a deceptive appearance of soft gentleness. He was, to be sure, manageable and affectionate in disposition, but beneath the soft fur there was a dog militant, as Patrolman John Leahy can testify. One night, when in accordance with Sergt. Dorman's regular system for keeping the dogs in training it was John's turn to impersonate a burglar, Vos caught him skulking behind a house on Tug Bohlman's beat, and hurled himself at the suspect's chest to such good purpose that he knocked him sprawling into a cold frame. Leahy got a week's sick leave.

Dan Flynn will tell you that the dogs appeared to resent the advent of the quarrelsome Airedale, and with some reason, for the unregenerate Pete wanted to pick a fight with each one of the males, and was not overcautious toward those of the opposite sex. When Dan let the dogs out into the street for their brief exercise before dinner, he had to keep Pete constantly on his leash at a safe distance from the other dogs. Whereupon the men dubbed Pete the "teacher's pet."

"He was like a new bully come into the school," said Dan. "The only way he knew to pick an acquaintance was to pick a row, and the other scholars would have nothing to do with him. Inside him he was lonesome. I believe that. But he didn't know how to get on with the Belgians. And I believe, too, Vos understood that Pete was lonesome."

"Anyway, one afternoon when I took them out, Pete caught me nappin' and jerked the leash out of my hand. In a second he was mixin' it with Togo. I suppose he thought he might as well tackle the biggest first. In a couple of jumps I got my foot on his leash and hauled him off. It was all I could do to hold him. He had tasted dog and he wanted more. Togo didn't want to quit, either; but he knew me too well to come on, and after showing his teeth at Pete he went growlin' back into the stable.

"I never used a whip on any dog, but I

"VOS JUST WALKED UP AND TOUCHED NOSES WITH HIM AND THEN TROTTED OFF AGAIN"

without a penny or a prospect, forgot himself royally in looking out for his fellows.

Mr. Langley had not meant to appeal to Miss Penny. He had come to the South Hollow on this particular afternoon to call on Mrs. Mudge. He came reluctantly, for, although the family were in comfortable circumstances and Mrs. Mudge's brother, Watson Graham, was the wealthiest man in Wenham, he did not feel sure about the size of her heart or whether he ought to ask this particular service of her. He knew that he never could have sent little Ella May to her, and yet—the girl must go to school.

Just before he would have turned into the road leading out past the Mudge place, he saw Reuben entering a side street opposite, half supporting a disreputable and obviously intoxicated old man. The boy went unshrinkingly, piloting the man gently and steadily toward his home. Reuben was doing it for his father's sake, of course.

Perhaps it occurred to Mr. Langley that it was better for Reuben that his father had died. Perhaps he was reflecting how well the boy looked and what a good home he had found. In any event, he turned and made for Miss Penny's.

He smiled as he announced his errand.

"Miss Penny, it's I that have a cat up a tree now, and I'm asking you to rescue her. Only my cat is a little girl of thirteen, and her name is Rusty Miller."

All excitement, Miss Penny conducted him into the parlor.

"You see, Miss Penny," he explained, "I've got a little girl who lives way down at the end of the Farleigh line on the Wenham road that I want to get into the academy this year. I'm looking for some one who will give her a home in return for such help about the house as she can give outside school hours."

Miss Penny looked startled. "Baker, did

Pete, the experts declared, was a full-blooded Airedale terrier of the "outside" type. He bore only slight resemblance to the small, nervous, inbred Airedales that appear at the dog show at Madison Square Garden in February. He would not have stood the slightest chance with the judges, for he was too heavy, his coat was too long and too light-colored, his head was too broad and his muzzle not square enough, and his ears were not mates. But in a fight he could have beaten any two bench champions that were ever awarded the blue ribbon. He was rather the type that the English poachers and ratters developed to serve their needs and that may be found to-day in Australia or in British Columbia, herding sheep, hunting bears, and doing almost everything that a dog may be expected to do.

Still, Pete's ancestry was unknown. Sergt. Dorman found him one day in a motley group of mongrels gathered in a round-up of stray dogs in Manhattan.

"There's the makin' of a police dog," asserted Dorman, and by his eloquence he persuaded the inspector that it was so.

Subsequent events have proved the excellence of the sergeant's judgment, but at first Pete acted less like a police dog than like a caged hyena. He was the most completely untrained specimen of dogflesh ever seen in Flatbush, and if Dan Flynn had not naturally loved anything that could run on four legs and bark, there might have been mutiny at the Parkville station.

The New York police dogs are not so finely trained as those of Ghent and other European cities. Not so much is asked of them; but they are expected to stick to their official masters, to regard men in uniforms as friends, and all others as possible enemies, to answer at once to the police whistle or the rap of the night stick, to hurl themselves upon a man attacking

thought Pete had something comin' to him. I gave him a couple of swipes with the end of the leash, and he crouched down and cried. It wasn't so much that I hurt him, but he felt it wasn't fair to be dragged away from an honest scrap and then licked for it. I guess he felt like the whole world was against him.

"Then Vos come up, slow and quiet, without any of the fightin' look in his eye, and I watched to see what he would do. Pete jumped to his feet, ready for another round if he got the chance. But Vos didn't growl or circle round as if he wanted to start anything. He just came walkin' straight up to Pete. He took a big chance, too, but Vos was equal to that. Pete didn't do anything, either. I guess he was some surprised. Vos just walked up and touched noses with him and then trotted off again.

"I don't know what he

HE CAUGHT FORTY-TWO POUNDS OF FLYING DOG ON HIS LEFT SHOULDER

said to Pete, but it was something, and Pete understood it. He sort of strained after Vos, whistlin' in his throat."

According to Dan Flynn, that was the beginning of it. Six months later Pete had been pretty well broken in and Tom Grant was in charge of the kennels. By that time the hostility of the dogs toward Pete had mostly worn itself out, although Tom says that they never quite forgave him for his early lack of manners. Vos was the exception—he and Pete were unmistakably "pals," and Grant could give you any number of small instances to prove it.

But the real proof came on September 24, 1914, the night of the big adventure that will always have a chapter to itself in the annals of the dog squad.

Every one of the patrolmen on the squad boasts of the prowess of his particular dog, and, although most of the work is the quiet nightly scouting that has frightened most of the burglars and "holdup" men out of the 172d Precinct, each has a few treasured tales to relate that illustrate the courage and intelligence of his four-footed comrade. But they all give the laurel to Vos and Pete when it comes to upholding the honor of the squad.

When Pete was at last judged fit for duty he was turned over to Patrolman John Leahy. John did not mind. He was, in fact, rather proud of the distinction of being intrusted with the black sheep of the flock. But he certainly had his hands full.

Pete's besetting fault was not a lack of interest in his work but a tendency to forget his regular duty and to wander far afield in search of adventure. It was fortunate for John's dignity that those aberrations of Pete's occurred in the dead of night, when there was no one to see him scrambling over back fences on the trail of an exasperating Airedale so engrossed in his own personal scouting that he did not heed the recalling whistle.

Nevertheless, John stoutly maintained—and Tom Grant staunchly supported him in maintaining—that Pete was a first-rate police dog, and that he only needed a chance to prove it. Unfortunately, no such opportunity presented itself on John's beat; Pete's only exploit worthy of narration was treeing the terrified beau of a housemaid on Fourteenth Avenue.

When Pete's big chance came, he had been an

industrious and fairly well-disciplined guardian of the peace for several months. On the night of September 24 John Leahy saw him appear suddenly beneath a street light fifty yards ahead, shoot like a rocket across the road and disappear utterly in the shadows.

The dog responded neither to whistle nor to call, and there was no sight or sound of him to be discovered in the back yards that John investigated. In fact Pete never did return to post that night. The patrolman had not the slightest inkling of what had happened until he sheepishly returned to the station house in the morning without his dog. But there his humility changed promptly into boastful pride, and he proceeded to take to himself an amount of credit that was quite unwarranted in the circumstances.

The adventure took place on a thinly populated street in the southern part of the precinct on the post that adjoined John's. It was a lonely, extensive and altogether undesirable beat, and Tug Bohlman had grumbled when he had been assigned to it.

Tug Bohlman and Vos had been pounding along for half the night, doing their duty and wishing for daylight. As they passed through a cross street and neared the corner of the avenue, Tug heard a door open at some distance behind him; the sound of voices and of feet on the wooden steps came to his ears. Turning, he saw the figures of a man and a woman

pass through the gateway to the sidewalk and then suddenly disappear in the darkness, as the closing door shut off the stream of yellow light. He waited a moment until the couple appeared again beneath a street light, and then, satisfied that everything was all right, spoke to Vos and turned the corner into the avenue.

Tug had gone perhaps two blocks when Vos began to show excitement; he whined a little, and then ran to the rear, and returned only when Tug insisted. The policeman stopped and faced round. He had too much confidence in the intelligence of his comrade not to know that something was wrong.

"What's the trouble, Vos?" he asked.

Vos replied by dashing back toward the corner that they had turned and then running up to Bohlman again, with the evident purpose of urging him to follow. Tug shaded his eyes and peered down the avenue. The couple he had seen had not yet appeared at the corner.

The patrolman started back. As soon as the dog was sure that his master was following, he dashed out of sight round the corner, and almost immediately his barking unmistakably announced an important discovery. Bohlman quickened his pace, and as he reached the corner he heard the barking change to the snarl of attack, broken by one sharp yelp of pain.

There was evidently some quick action taking place in the darkest spot between the two street lights. At first the policeman could make out nothing except the swift movement of shadowy forms. He broke into a run, and was soon aware of five figures—two men on the ground, a man and a woman by the fence, and the darting, menacing form of Vos.

What happened just before Bohlman and Vos reached the place was never exactly learned. On the station blotter the names of the couple whom Tug had seen leaving the house are set down as Merton Hawkes and Dorothy Whipple. They had left a friend's house at a late hour and had started for Miss Whipple's home, when they had been suddenly attacked from behind.

The "holdup" men who had done the job were the first to be reported in the dog-patrolled precinct for over four months, and they

Tug and Vos, well knowing that the safest ground for them would be that which had just been examined by the patrol. That they had come on victims so soon was doubtless a matter of pure luck.

Hawkes was a small chap, and, although he had fought well, was soon overpowered, and one of the men had quickly put him out of action with a piece of lead pipe wrapped in burlap. The other man had anticipated the danger of feminine screams by gagging Miss Whipple. She gave rather more trouble than her escort, but the man had succeeded in keeping her hands from her hatpins and at last effectively bound her. The two foot-pads were just starting to go through the pockets of their respective victims when Vos had suddenly appeared like a black ball of fury.

The man who was at work on Hawkes had started up just in time to catch forty-two pounds of flying dog on his left shoulder. He went down in a swearing heap, and Vos turned his attention to the other man. The fellow had had a chance to prepare for the attack, and he received Vos with a well-placed kick that temporarily repulsed him and that caused the yelp of pain and surprise that Tug had heard. The man had his back against the fence, and Vos, finding it impossible to dislodge him by frontal attack, had settled down to a kind of active and vociferous investment.

Bohlman ran across the lawn on the opposite side of the street as quietly as possible and then bore down on the group. As he closed in he took a quick survey of the situation in the half light. He caught a fleeting glimpse of the white face and prostrate form of Hawkes. The man at the fence was a tall, wiry, villainous-looking fellow with a derby hat jammed over his eyes. The other, as he rose quickly to meet the new attack, appeared short, stocky and powerful.

The first man was apparently having his hands full with Vos, and so Bohlman turned his attention to the second. The policeman had no

HIS HARD LEATHER MUZZLE STRUCK THE FELLOW SQUARE IN THE FACE

time to rap or to whistle for help, for as he closed in he caught the gleam of a swiftly drawn revolver. Bohlman's night stick swished through the air and caught the man on the wrist of his gun hand, and the revolver clattered to the sidewalk.

But the ruffian was as quick as he was muscular. In his left hand he still held his bludgeon, and he swung it so swiftly that it caught Bohlman on the side of his head before he could parry the blow. The big policeman saw stars, but he gritted his teeth, received the second blow on his night stick, and countered with a sharp rap on his assailant's hard skull. Undaunted, the thug swung his bludgeon again, numbed Bohlman's forearm, and then dived and clinched him.

Tripping over the feet of the prostrate Hawkes, the two combatants fell struggling to the sidewalk. Both were a bit weak from the head blows they had received, but each was fighting desperately. The policeman had an

WRENCHING A PICKET FROM THE FENCE, HE BEGAN TO BEAT VOS OFF

there was a new note of desperation in his voice. He continued his threatening dashes, but the man dealt him blow after blow, and the force of his attacks appreciably diminished.

Out of the tail of his eye Bohlman, busily engaged in holding his man down and vainly seeking a throttle hold, saw the tall fellow working nearer. With two against him he knew that he was done for, and he thought bitterly of the regulation that provided for muzzling all police dogs on duty. If Vos had had his strong jaws free, there would have been a sure and speedy end to the fight.

Miss Whipple, with a courage born of fear, took a tentative step forward, as if to take part in the mêlée; but the tall man gave her a brutal shove and sent her crashing back against the fence. Then, with a quick rush, he planted a heavy foot under Vos's jaw and sent the dog sprawling into the gutter. With an oath he fell on Bohlman, who could only hunch up his shoulders and brace himself to meet the unfair assault.

But Vos was not done for yet. He gathered himself together, shot across his master, and threw his antagonist backward by the sheer force of his impetus. The thug threw out his arm in an effort to retain his balance, and caught Vos by the long hair of his neck. Cursing vehemently, he got a strangling hold on the dog's collar and groped for his weapon.

At the first foul blow Vos gave voice to such a despairing, almost human cry of anguish that unwonted tears started to the eyes of big Tug Bohlman, and he renewed his efforts with an energy that boded ill for his victim if only a few minutes more were granted him. Vos struggled heroically, but he was caught at a disadvantage, and murder was in the hand at his throat.

At that moment, from somewhere out of the shadows, there suddenly appeared, as if shot from a catapult, the bristling form of Pete the Airedale—a bolt of solid muscle and menace, with a snarl of rage in its throat that would have terrified a tiger. There was not an instant of hesitation or indecision in his action. Straight he plunged at the man bending over Vos. His hard leather muzzle

struck the fellow square in the face with a resounding thud; he was knocked sprawling, and lost his grip both on Vos's collar and on his own club.

Again and again as the man tried to rise the Airedale launched his forty-five pounds at his head. Then he attacked him with his forefeet, as if to tear out his eyes, until the man lay stunned and bleeding, no longer able to struggle or even to beg for mercy.

"Watch him, Vos!" cried Bohlman, panting hard and nearly exhausted. "Come here, Pete!"

The promptness with which Pete abandoned his joyous fighting and stepped to Bohlman's side would have amazed his detractors. The stocky man, feeling the policeman's power diminishing, had begun to struggle more violently; but Bohlman succeeded in getting his

Bohlman, confident of the genuineness of the fellow's surrender, rose to his knees and snapped handcuffs on his wrists. Then he leaned weakly against a tree and blew two long blasts on his whistle.

When at last Mayhew and his dog Scratch appeared on the run, the tall man had recovered his senses but was entirely subdued. Miss Whipple had fainted, Vos lay crying a little and trembling with pain and exhaustion, while Pete stood nuzzling him with every evidence of profound concern.

In view of the fact that both Mayhew and Bohlman had been eyewitnesses of that

exhibition of personal attachment, and in view of the interest that Pete unquestionably displayed in Vos's recovery from his injuries, it is not strange that the squad should not doubt the reality of the dogs' friendship. The theory has been advanced that Pete's sharp ears had caught the sound of conflict blocks away, and that his innate love of a fight had brought him to the scene; but you cannot tell that to Dan Flynn or to Tom Grant or to John Leahy or to Tug Bohlman or to Larry Mayhew. They are firm in their belief that Pete's senses had told him somehow that his friend was in trouble and had sent him speeding to his aid.

hill and be present at a survey of the division line, his message was coldly received. The young man knew nothing about the purpose of the survey, and could give little information. At last Orchard turned to his wife.

"I won't go," he said. "It's another one of Adam Brill's tricks. I won't go."

"But Mr. Oakford also wishes you to come," said Nathan, ignoring the remark about his father.

"Did John Oakford send that word to me?"

"Yes; he specially wishes you to come." "That puts a different light on it. Whatever John Oakford asks of me he can have and have it cheerfully. I'll go."

"I don't know what it means," Nathan said to Ralph, who walked down the path with him, "but you're to go along; and I'm to be there, too. Those are the orders. I don't know what it means," he said again as he mounted his horse, "but something tells me that there's going to be a happy ending of the day for all of us."

When Ralph went back to the house, his mother said to him:

"You'll go with father, won't you? I can't see the purpose of all this, but I'd like to have you with him. Somehow I feel that the end is coming to-day instead of to-morrow, and that it's going to be a happy one."

She stood on the porch steps and watched her husband and son as they crossed the flat, entered the lane and climbed the steep path up the hill. When she entered the house there were tears in her eyes; but her heart was light.

When Orchard and his son reached the stake-and-stones corner on the warranty line, they found Brill and Oakford already there; Nathan came soon. And then, up the path, picking his way among the stones, Old Tompkins hobbled

mark on the rock and held the signal pole on it as he had been directed; Oakford caught the red-and-white standard through the slits in his sight bars.

"Hits it exactly!" exclaimed the surveyor. "The bearing of this line on that day was north forty east. The case is proved."

Old Tompkins, hearing the familiar words, opened his toothless mouth and laughed immoderately.

"What'd I tell ye!" he cried. "Me and Clem knowed it all the time. The secret of the hull thing's in that there book that lay in the secret chist, and the magic words is what I told ye they was, Stanley: nawth fawty east."

He gave another convulsive chuckle, but no one paid much attention to him; the occasion was too momentous.

Brill pointed to the flag on the rock. "Is that where Owens ran the division line between us in '67, Stanley?" he inquired.

"That's where he ran it, sure," replied Orchard. "But what I want to know, Adam Brill, is what you're getting at?"

"Justice," replied Brill shortly. "Mr. Oakford, shall we go down the hill?"

Oakford pulled up his instrument and they all started down toward the rock ledge. Still Orchard was puzzled to guess what Brill had in mind. He seemed to be dominating the survey, but whether for good or ill he could not tell. Surely if anything sinister were planned John Oakford knew it, and if he knew it no such happiness would mark his countenance as marked it to-day.

From the ledge on, along the edge of the pond and down the hill below the dam, the young men, at Oakford's direction, set stout stakes at intervals to mark the line, already partly defined. But from the base of the hill across the flat a stone fence that Orchard had put up at odd times coincided so exactly with the line of survey that other markings were not necessary.

When they had all reached the corner at the public road, and were gathered there together, Brill turned and faced toward the hill down which they had come.

"Stanley," he said, "everything to the left of this line, pond, spring, brook, house, garden and flat, is yours; and everything to the right of the line is mine. I make this statement unconditionally, in the presence of these witnesses. To-morrow I shall give you a deed for any right, title or interest that I ever claimed or ever could claim, or my successors after me, in this nine acres. I have requested my lawyer to have judgment entered in your

favor to-morrow in the pending suit. Mr. Oakford, I believe the survey is completed; shall we go to my house?"

But Oakford did not reply. He was too busily occupied in gazing on the face of Stanley Orchard, who did not seem to comprehend at once the full meaning of his neighbor's declaration. Orchard turned his eyes from Brill's face and looked in succession on the faces of those round him.

"Adam," he said at last, "Adam, do you mean it?"

"I never in my life before meant anything so fully and completely," replied Brill earnestly.

The two boys were shaking hands vigorously, and as Oakford looked at them and realized what the occasion meant to them his eyes grew moist.

Then Brill gave his hand to Orchard, and Orchard grasped it warmly. Old Tompkins watched the scene with fascinated gaze. He leaned with both hands on his cane and stared. Once or twice he opened his mouth wide as if to speak, and then closed it again without uttering a word. At the end of three minutes Brill turned to him and handed him a piece of paper money with a yellow back.

"There is a renewal to-day," he said, "of a secret and sacred compact between me and Stanley Orchard, and this is for the part you played in it."

Old Tompkins took the money, astounded beyond the power of speech. He could do no more than mumble unintelligible thanks as he began to hobble away; but so completely upset was he that he started in the wrong direction, and had to turn round after he had gone a few steps and hobble back.

"Your proper direction," called Oakford after him, "is north forty east! That way lies the 'secret chist'!"

The old man looked back and put his hand

NORTH FORTY EAST

By Homer Greene
In Ten Chapters Chapter Ten

WHEN Nathan came downstairs the next morning, he learned that his father had already breakfasted and had started for Mooresville. The boy thought it strange that his father had said nothing to him about the contemplated journey. He did not dare to hope that his appeal for Orchard had in any respect changed the determination of a man like his father, and it was therefore with no light heart that he set out to visit familiar places and to renew old friendships. And yet again and again there came into his mind the memory of his father's affectionate good night.

The master of the house had indeed gone to Mooresville. He had taken the double survey and the strong, swift team of blacks. At nine o'clock he entered the office of his attorney. Mr. Brown was already at his desk.

"You're in town early to-day," said the lawyer.

"Yes. There's something I wanted to say to you about the Orchard case."

Brown pushed his papers away from him and leaned back in an attitude of expectancy.

"You remember," continued Brill, "that you said to me if I ran across Owens' old notebook I had better look it up or burn it up."

"Yes. Pretty good advice, too."

"Well, I ran across it. I have it here."

He took the book from his pocket as he spoke, opened it at the page on which the notes of survey were recorded and handed it to Brown. The lawyer took the book and read the page over carefully. When he had finished, he looked up at his visitor.

"You're lucky," he said, "to have this thing in your possession. I suppose you'll do what I told you to with it?"

"Well," replied Brill, "I've tried locking it up, and it won't stay locked."

"No?"

"And I've tried to burn it; it won't burn."

Brown looked blank. "I don't quite understand you," he said.

Brill laughed a little. "I don't blame you. But, with this book in my possession, do you think we'd better go on with the case?"

"Certainly! It's the possession of that book that makes your case absolutely sure. You're bound to win it."

"But I don't want to win it."

"What?"

"I want Orchard to win this suit."

Brown laid the book on the table.

"I don't see," he began as if puzzled, and then corrected himself. "Yes, I think I do see. A case of troubled conscience, eh? Well, we can discontinue the suit."

"I'd rather have Orchard win it in court."

"Very well; we can let judgment be entered for the defendant."

"That suits me. And, Mr. Brown, will you kindly make up your bill for services and send it to me with a statement of the costs?"

"Certainly."

"Then I guess that's all to-day. Good morning!"

Brill put the notebook back into his pocket, left the lawyer's office and strode down the street until he came to the room occupied by John Oakford. He had never before, even in the heyday of his youth, walked with a firmer or more elastic step.

Oakford greeted Brill with cool surprise.

"Mr. Oakford," said the visitor, "I want you to go out to my place to-day and do a little surveying for me."

"I can't. That suit of yours against Stanley Orchard may be called on at any time, and I'm subpoenaed on both sides."

"I've stopped that suit."

Oakford dropped his pen and stared at the man in astonishment.

"How have you stopped it?" he asked.

"I told Brown to let judgment be entered for the defendant when the case comes up, and to send the bill of costs to me."

thing that he had fought for and that he had so firmly in his grasp.

"Why did you do that?" he asked.

"I think Orchard is entitled to the property."

"You've always known that."

"I have Clem Owens' notes of survey in my possession."

"I'm not surprised. But they're not in Orchard's possession. That simply assures your case. Why this sudden change of purpose?"

Oakford scented danger, pitfalls, ambushes. He was not satisfied. Brill's face flushed, but he showed no other sign of anger, and when he spoke there was no resentment in his voice.

"Mr. Oakford, I do not blame you for questioning my motives; I deserve your incredulity. But I'm stopping this suit because something has occurred to change my whole attitude toward Stanley Orchard and his family."

Oakford saw now that the man was in earnest, and that he need have no further doubt of his good faith.

"I believe you," he said; "and I thank you. Have you told Orchard about this?"

"Not a word. I wanted you first to see the record and to make the survey."

He took the notebook from his pocket, opened it at the proper page and handed it to the surveyor.

"I want you to go up there," he added, when Oakford had read the memorandum, "and run the line down the hill just as Clem Owens ran it in 1867. I want you to mark the line in Stanley Orchard's presence and mine. Then I want a deed drawn releasing to him any and every right, title, claim or demand that I ever had or ever could have in that nine acres."

Oakford rose from his chair, reached across the table and seized the other man's hand. "That's a fine thing to do, Mr. Brill," he said. "This new survey isn't necessary, with the notebook in Orchard's possession, and with the deed you propose to give him; but if you want it made I'll make it. Make it! I'd go a thousand miles to make it! Come, let's see Jackson and get the deed started."

Oakford was radiant. "Where did you find the book?" he asked, as they swung along toward Jackson's office in courthouse square.

"Old Tompkins brought it to me."

"And where did Old Tompkins find it?"

"That's what I asked him, and he whispered to me confidentially that he had found it in the 'secret chist.'"

"The what?"

"The 'secret chist.'"

Oakford stopped, with a puzzled look on his face, and then began to laugh. He knew Old Tompkins. It was not much to laugh about; but he felt like laughing. Leaning against a tree he laughed until the tears rolled down his face.

Jackson was just starting for court when they reached his office. They stopped him long enough to tell him about the Orchard case, and about the deed that was to be drawn, and he, too, shook hands warmly with Brill.

"Such an outcome of the suit," he said, "does me a thousand times more good than if I had won it after a contest in the courts."

When Nathan Brill went over to Orchard's at one o'clock that afternoon to say that his father wished Stanley Orchard to go up on the

DRAWN BY S. J. ROSENMEYER

"STANLEY," HE SAID, "EVERYTHING TO THE LEFT OF THIS LINE... IS YOURS"

toward them. How he had learned that a survey was going on no one was able to explain. He seemed to have miraculous foresight in such things.

Oakford grasped Ralph's hand with a mighty grip, and between the two neighbors a formal greeting passed. Then the surveyor, standing by his set compass, addressed Orchard.

"Mr. Brill," he said, "has requested me to come to-day, and run out this division line just as Clem Owens ran it in October, 1867."

"I've no objection to that," replied Orchard, "provided you run it just as he did."

"We shall follow Mr. Owens' survey exactly."

"How are you going to do it? The deed ain't right."

"I have his old notebook."

Orchard stared at him incredulously.

"Where'd you get it?" he asked.

"Tompkins has kindly placed it in Mr. Brill's possession."

"Where'd Tompkins get it?"

"He found it," replied Oakford, restraining with tremendous effort a desire to laugh, "in the 'secret chist.'"

Old Tompkins bobbed his head smilingly in assent.

"This book," continued Oakford, glancing at the page, "says that the bearing of the line at the time of the survey was 'North 40 East, being 3 1/2 degrees from a right angle, exactly the amount of the present variation of the magnetic needle.' It was this coincidence, and Owens' failure to note it in the deed, that has led to all this misunderstanding and trouble. The sight bars of my compass are pointing now in exactly the same direction in which the sight bars of Owens' compass pointed on the day he started the permanent division line. Ralph, will you go ahead and find a cross cut in a rock on the ledge, and hold the flag on it?"

Ralph hurried down the hill, found the

to his mouth in the form of a trumpet, but what he said was lost in the noisy merriment of the joyous party.

While they were still standing there together, Brill said:

"I'm going to have a dinner party at my house at five o'clock. I left word with Martha before I came away. My guests are to be John Oakford, Mr. and Mrs. Orchard, Ralph and Ada Stanley, carry my compliments to your wife and daughter and ask them to come."

"That's good of you, Adam," Orchard replied hesitatingly, "and I appreciate it, but mother—well, you know she ain't been to a party in fifteen years."

"Nor have I given a party in fifteen years," was the quick retort; "so honors are even."

But Orchard still hesitated. He was thinking of his wife's scanty wardrobe.

"I don't believe," he faltered. "You know she ain't got —"

"Tell her to come just as she is," interrupted Brill, "without any flounces or furbelows. This is to be a family party, and no formality will be permitted. Nate," turning to his son, "you can do more with Mrs. Orchard in five minutes than any of the rest of us can in a year. You go tell her she's got to come. The double survey will call for her at half past four."

So Jane Orchard went to the dinner party. She had the seat of honor at one end of the big table. And she never looked more calm and sweet and womanly; she never appeared more gracious and tender-hearted than she did that night.

When the dessert was brought in, Brill rose slowly in his place.

"I think probably some explanation is due from me," he began, "because this, as you all know, is rather an unusual performance on my part."

He spoke with much hesitancy and seemed to find it difficult to choose his words; but the hard lines in his face had softened wonderfully, and the eyes that looked out from under his bushy brows were kind and earnest in their expression.

"I have come to the conclusion," he said, "that it is very foolish for neighbors to be at odds as Stanley Orchard and I have been for many years. To be fair with myself, I do not hold him altogether blameless, yet the fault has been chiefly mine. I do not care to speak to you of myself so severely as I have spoken to myself. It isn't worth while, because my whole attitude has been changed overnight. Nor is it worth while for me to tell you in detail what has changed that attitude. I will only say that I had some things put to me last evening by one who is dear to me, in a way that led me to regard my neighbors in a wholly new light. I learned some things last evening that I had not dreamed of before; but the knowledge of them places me under an obligation to Ralph Orchard, to Jane Orchard, and even to my old-time comrade and one-time enemy, Stanley, that a thousand dinner parties cannot repay."

He gathered courage, and his voice grew stronger as he went on:

"Last night, after that interview of which I have spoken, I remembered many things. I remembered that Stanley and I, in the old Civil-War days, tented together, and marched together, and fought together at Cold Harbor and Petersburg and Five Forks. It was at Five Forks that Stanley saved my life. I wonder, as I stand here, how it was ever possible for me to have hard feeling toward him. And as for his wife, I don't know that I ever before fully realized how much of a mother she has been to my motherless boy; but I realize it to-night, Mrs. Orchard, and I am not likely ever again to forget it. I can't speak of what Ralph has done for me. In the first place I have no right to, and in the second place my heart is too full to talk about it anyway. I simply want to add that I've begun a new life to-day, and it's been the happiest day, barring none, that I ever knew. I want many more of them; God knows I need them. And I can only have them by the help and friendship of every one of you."

His voice broke a little at the close, and when he sat down there were tears in his eyes and on his cheeks; but he was very happy. And from that night on he lived a changed life, a life that brought him not only the esteem and good will of all his friends and neighbors but the warm affection of many who had feared and hated him in the days gone by.

The time came when Stanley Orchard raised his dam and built his mill in accordance with his lifelong dream; and he lived in happy comfort and died in his white old age in the new-old house on the nine-acre plot that he had bought from Adam Brill in 1867.

THE END.

HE WENT UP THE "STEPS" OF THE STACK LIKE A CAT, AND REACHED THE CAPTIVE BOY

A QUESTION OF SPEED

By James William Jackson

"PILE this lot of planks fast, Tom! Mr. Gardham will be round pretty quick; and I'm afraid he has the idea that you're slow."

Tom Harcourt, who was rolling up his sleeves, flushed at the yardmaster's remark. A questioning look on his face led the yardmaster to tell him a little more. Mr. Gardham, the owner of the lumberyard where Tom worked, had asked why he was half an hour late the day before in delivering a load of lumber at Thompson's new house.

"I was blocked by a long freight at the crossing," Tom explained. "The locomotive stalled for fifteen minutes and —"

"The gates were up and the way clear when Mr. Gardham drove by," the yardmaster interrupted a little sharply. "Why did you go off and leave your team standing idle in the street instead of moving along? You knew it was a hurry order."

The busy yardmaster moved off without waiting for an answer. Tom drew a deep breath. It was discouraging to have the head of the firm question his efficiency, especially at that moment, for a well-built young teamster with first-class qualifications had only yesterday applied for a wagon. Tom feared that he was to be pushed down another peg in the industrial scale. He had been a clerk with good prospects in the office of the Valley Foundry Company until the company had gone out of business. Work had been scarce then and he had been glad to get a job driving a wagon.

Positions were still scarcer now; and with a thought of the people at home who were dependent upon him the young fellow worried over the apparent disfavor into which he had fallen. With all his heart he wished that circumstances had not played him such a trick the day before.

He had left the yard with a full half hour's time in which to make only a twenty-minute trip. Outside the gates he had turned up the grade that led round a street corner and thence to the railway crossing. He had had Bess, the most valuable horse in the yard, on the off side; and she had just recovered from a leg sprain. With all the solicitude of a fond master, Tom had taken special care of her and had watched for any signs of a relapse.

Near the corner he had suddenly spied in the roadway a heap of wood, evidently dropped from a house-wrecker's wagon. There was one piece from which big nails protruded, and a jagged piece of tin on a fragment of roofing timber made it even more dangerous. A carelessly driven horse or an automobile would have been sure to come to grief on that piece of wood unless some one had removed the obstruction.

Tom had driven to the top of the grade and, rounding the corner, had stopped his horses on level ground. There he had left his team, and running back had picked up the debris and dumped it into a convenient open lot.

When he had reached the railway track a few minutes later the gates were just going down. Then the passing freight locomotive had stalled and Tom had decided that luck was against him; but he had not known until now that the senior member of the firm had passed in his carriage and had seen the abandoned team standing idle.

"And excuses, I suppose, will sound weak!" Tom muttered to himself now, as he hurriedly piled the lumber. "I'll just have to sail in and make a new reputation for fast work."

There was much activity in the busy lumberyard. Wagoners threaded the stacks of

timber making up loads, a shifting engine was taking out and putting in cars on the sidings, a big creaking crane was unloading coal from a canal boat and sending it rattling down the chutes.

Caston, a yard worker, joined Tom on the pile. A few minutes later Mr. Gardham came down the yard with the superintendent. The senior member was accompanied by his small son, Benny.

While Mr. Gardham and the superintendent went some distance along the siding, the youngster stopped to watch Tom and his mate pile the planks. Later the boy walked over to the sand pit next to the lumber pile, and started to play in it.

The conference of Mr. Gardham and the superintendent beside the tracks led to some decision that made them need a messenger. Tom, trying to hurry his work along, happened to look that way, and saw the superintendent beckoning to him.

As Tom approached, the superintendent and the senior member were discussing the lumber piles. One pile in particular had met with Mr. Gardham's disapproval. It stood on the farther side of the sand pit and was made up of especially long planks. Only because the yard was so badly congested had lumber been piled there at all; for the driveway swept inward at that point, and so the stack had crowded perilously close to the railway siding.

"See that!" Mr. Gardham cried, with a frown.

The yard engine at the moment passed out along the siding, and the car that it was hauling was almost scratched by the projecting timbers.

However, it was not a high pile, and a large part of it was to go out of the yard immediately. The superintendent promised to give the matter his attention; then the two proceeded to discuss the general lack of room in the yard. Tom stood respectfully by until they should be ready to use him. Meanwhile he watched the engine. It disposed of the car it had taken out; then it backed up to a loaded car and, with loudly screeching wheels, began to push it to the switch.

Mr. Gardham remarked that it was time for him to take his son downtown to meet Mrs. Gardham. At the mention of Benny, Tom glanced toward the sand pit and discovered that the boy had left the fort he had been building in the sand and was gingerly climbing up the face of the lumber pile that his father and the superintendent had been discussing a moment before.

The incoming car of timber had by that time cleared the switch and was already heading down the side track toward the group. Tom caught his breath sharply.

"Look!" he cried, as he suddenly leaped away in the direction of young Benny.

The car was stacked high with new lumber, and its heavy cargo had made the retaining posts bulge out. Tom had seen at a glance that Benny Gardham would be crushed against the lumber pile.

Oblivious of the fact that the car was bearing swiftly down on him, the boy continued his interesting climb. The shrieking of wheels as they crunched over the switch points drowned Tom's warning shout. And there was no one near to pull him down. The engine men were not aware of the situation; and Caston, the yard worker, had gone into the driveway to help chain a big girder on one of the wagons.

Tom was nearer than anyone else to the child, but even he was two hundred yards away. He bounded along the track toward the lumber pile, and Mr. Gardham, calling in terror to his son, hurried after him as fast as he could.

"Come down, Benny, quick!" Tom shouted as he drew near the pile. "Come!"

The boy turned a questioning face toward Tom and then started to obey. But to Tom's dismay, he saw that the youngster's foot had wedged tightly between two planks!

Setting his teeth and clenching his fists, Tom increased his speed. He had left Benny's father and the superintendent far in the rear. The loaded car was shooting down the track now only a hundred feet away. Tom could see that its load would barely scrape by the lumber pile. Meanwhile Benny, with his fat little body humped out from the stack, was trying valiantly to free his foot.

The engineer of the locomotive was on the wrong side of the cab to see the boy's predicament.

Tom realized that everything depended upon himself.

When he reached the pile, the loaded car had cut the hundred feet of distance in two. Breathless, but with undiminished speed, he went up the "steps" of the stack like a cat, and reached the captive boy.

Holding on to the stack with one hand, Tom worked fast with the other. The planks seemed to grip the little foot like a vise. Beads of perspiration came out on Tom's face as the shadow of the oncoming, screeching timber car seemed about to fall upon him.

Once, twice, three times he tugged at the boy's shoe, although he was in momentary terror lest he pull the child down on the track in front of the train. The car was within twenty feet of them now; the engineer had at last seen the danger, but Tom knew that the train could not stop in time.

The bulking load seemed fairly to rush at the lumber pile; but at last Tom freed Benny's foot. "Climb!" he shouted; and he himself leaped a step higher. There was not time to go down, and the top of the pile was only a yard or so farther up. With a lightning snatch Tom grasped the back of the child's blouse and lifted the little fellow. For an instant the child's feet trod on empty space.

The car had already reached the far side of the lumber pile, and its brakes were snapping fire as they ground the wheels. A protruding plank, two inches thick, snapped like a match stem. With a sudden burst of strength, Tom lifted the boy and threw him up to the top of the stack.

The car was almost upon him. Tom instinctively shot out a hand to ward it off. That hand actually touched the car; at the same time his other hand let go its hold, and he went tumbling backward. As he landed in the sand pit a dozen feet below, the onrushing mass tore a plank out of the side of the pile and hurled it vengeance after him. It struck him a heavy, glancing blow on the knee, which caused a sharp pain.

A moment later, when he slowly picked himself up and emerged limping from his sand bath, he had the satisfaction of seeing the frightened Benny safe on top of the quivering pile.

Caston carried the child down. At the foot of the stack Mr. Gardham gathered his son into his trembling arms. The senior member then wrung Tom's hand and told him to come into the office to patch up his wounded knee.

"By the way," Mr. Gardham said on the way to the office, "Thompson — you know, the owner of the house — saw and told me what it was that delayed you with his load yesterday. As a lover of horses he forgives you; so do I."

That seemed to make Tom's knee less painful. Mr. Gardham probably did not realize that, for he took an emergency roll of bandage linen from the drawer of a desk near his own and set to work deftly to wrap Tom's black-and-blue knee. Meanwhile he talked with apparent irrelevance about the semi-confidential clerk who had last presided at that desk.

"He was a rapid worker," Mr. Gardham admitted; "but he was sometimes rapid when he ought to have been slow and careful. The man before him never made a mistake; but he could not rise to speed even in an emergency — like that you faced a few minutes ago, for example."

Tom blushed a little, and Mr. Gardham, tearing the end of the bandage into two strings, tied them neatly. Then he smiled at Tom.

"I've heard that you've had experience as a clerk," he said. "Perhaps you would like to give up your wagon to Brannigan and help out at this desk with my personal work? If you would, I feel sure you will combine the desired degrees of carefulness and speed."

A view of
MOUNT VERNON

TURNING is the hardest part of driving, and changing habits the hardest part of living.

Three Aons spent themselves to store with
Might
The Coal that keeps you warm for Half a
Night.

PATRIOTISM, in any high sense, depends not at all upon economics or geography. What child loves a mother for her wealth or for her beauty?

CIVILIZATION is surely advancing, although its progress may sometimes seem slow. African traders, who used to supply Uganda with rum, calico, brass wire and beads, are now doing a roaring trade in wrist watches.

THE hand grenades that figure in the trench fighting of northern France are not a new weapon. As long ago as the siege of Arles in 1536, the soldiers used hollow balls of iron filled with powder and provided with a fuse that they lighted before they threw the grenade. It was the use of that weapon that added "grenadier" to military nomenclature.

IN earlier wars disease was even more destructive than battles; but the progress of military sanitation has made even the British trenches in northern France free from disease than the homes of London. At least, the rate of illness there, counting even "colds" and influenza, is less than the rate in London, and the death rate from disease is only three a year to each thousand men.

IT is some time since The Companion has printed any conundrum in this column for its quick-witted readers. Let us supply the omission by offering the following problem of the two trains: A train traveling thirty miles an hour leaves New York at the same time that a train traveling twenty miles an hour leaves Albany. The distance between the two cities is 145 miles. Which of the two trains when they meet will be the nearer to New York?

LAST September we printed on this page a list of twenty-three books that, in the opinion of the librarian of the Chicago Public Library, "all boys should read." We also expressed a desire to hear from any of our young readers who had read all the books on the list. The response has been exceedingly gratifying. A good many young people, including, however, more girls than boys, have written us in regard to the books mentioned. Only two of those thus far heard from have read all of the twenty-three books, and both of them are girls—one in New York and one in New Jersey. The others had read all except one or two. Pyle's Men of Iron is the book with which most are unfamiliar—although probably many of them have made up the deficiency by this time.

THE ADMIRAL

EIGHTEEN years ago, when the late George Dewey came home from the Philippines, the country gave him such a reception as it never gave any other man except Gen. Grant. Congress voted him a medal of honor and a sword, and by special act made him admiral of the navy. The people, by popular subscription, gave him a house in Washington, and two great parades testified to the esteem in which the general public held the "hero of Manila Bay." Then, as so often happens in this easily moved and rather hysterical country, a reaction set in. Dewey was almost forgotten, and when people recalled his deeds they were disposed to minimize them. It was not such a wonderful thing that he had done, after all—pounding a few old Spanish hulks to pieces. It was not much of a fight, anyway. If he had had a first-class power to contend with—and so on.

Perhaps it needed the admiral's death to give us a truer perspective, and to show us that we were more nearly right in 1898, when

our hearts as well as our heads spoke. We know now that, although the Spanish fleet that Dewey engaged was inferior to his own, the total Spanish force at Manila was far greater than his, and that only poor tactics on the part of the Spanish commanders prevented the Americans from being greatly overmatched. Moreover, we now have sense enough to see that Dewey did what he set out to do; and that is all that can be asked of any man.

The admiral's death has naturally caused his long career to pass in review, and, looking at it now, we see that his destruction of the Spanish fleet was not a sudden, fortuitous meteor-flash of martial inspiration and opportunity, but the logical climax, the natural burgeoning forth of a life of careful preparation and arduous duty faithfully performed. The young lieutenant under Farragut at New Orleans in 1862 was the same man who gave Gridley the famous order in Manila Bay in 1898. Instead of saying, "He got his chance because he happened to be there," ask rather why he happened to be there, and you will have a good summary of his character.

Dewey's services to his country were by no means confined to the field of arms. He handled a delicate and difficult task in the Philippines with a tact and firmness that would have been a credit to the most skillful diplomat, and during his long presidency of the General Board of the Navy he accomplished things the value of which will be more and more appreciated as time goes on.

Sailors everywhere not only respected the admiral but loved him, for he was as kind as he was firm. Take it all in all, this country has not lost in many years a son who better typified its spirit or of whom it had more reason to be proud. Well may he rest in the consecrated soil of Arlington!

TO MAKE PUBLICATIONS SECTIONAL

THE "rider" that was attached to the Post Office appropriation bill provided that zone postal rates should be applied to second-class mail matter. By that provision, newspapers, weekly journals and magazines, all of which have hitherto been carried to all parts of the country at the uniform publishers' rate of one cent a pound, would thereafter be taxed according to the national character of their circulation. Thus, a periodical that went 300 miles from home would pay, not one cent a pound, but two cents; and one that went 1800 miles from home would pay, not one cent a pound, but six cents. For circulation in the radius between 600 and 1800 miles the rate would vary from three to five cents a pound. The "rider" was dropped in the House and, as we write, is not in the bill, but may be restored in the Senate.

If the provision should become law, and add its expense to the present high cost of paper, it would undoubtedly put out of business many magazines of national circulation, and it would greatly restrict the circulation of others. It is largely through the circulation of periodicals of national character that the people of the United States are enabled to maintain unity of outlook and are kept informed and enlightened about matters of national importance. Moreover, it is through such circulation that technical knowledge of a highly necessary kind is made available to people in remote parts of the country. Under the proposed postal rates, the country doctor would be deprived of the medical journal that he requires to keep him abreast of the newest methods and discoveries; the engineer in distant regions would no longer have access to the "Proceedings" of the national engineering societies; the farmer would be cut off from the best agricultural publications, and the minister would be deprived of his favorite religious journal.

It is improbable that the people of this

country, when they fully understand the meaning of the measure, will permit Congress to pass it. The interest in the matter is universal and national; and a bill designed to cripple the most important agents in making articulate the spirit of nationality will win little support.

THRIFT AND AVARICE

IT is sometimes difficult to distinguish between thrift and avarice, especially for those persons who are not very thoroughly acquainted with either. High authority tells us that the love of money is the root of all evil, and it is easy to trace the greatest evils, both physical and moral, to the lack of money, or to the excess of it, or to the undue, devouring, maddening desire for it. Certainly those who have the faculty of getting money, and still more those who have the faculty of keeping it, are obliged to do many things that minds of a different temper characterize as narrow and even sordid.

There are few persons so rich that they do not need to exercise care and forethought in their expenditure. Human needs, human desires, human sympathies, are so vast, occasions of outlay so beset all of us at every step, that, unless we are watchful, we quickly find great resources reduced to nothing, without our knowing how. The speed with which money departs is one of the first lessons of experience to man, woman and child; but we are slow to apply our own experience in our judgment of others.

Everyone should be taught from childhood to weigh the needs of expenditure. This I must have, this I can go without, this I greatly want, if other demands still more imperative are not balked by it. By buying this now I can avert the necessity of a double expenditure a year hence. On the other hand, if I refrain from a purchase tempting at the moment, I may be glad of my self-control, even within a week. Questions like these have to be settled by every human being. Can any training be more important than that which enables us to settle them?

Exactly the same disposition to weigh and to compare must be brought into giving, into charity, if giving is to be discreet and wise and not in the end injurious to giver and receiver both. None of us can help all those who appeal to our pity or to our hope. Needs must be nicely weighed and balanced against one another, and the lighter must be neglected and rejected. It is thus that very liberal givers are liable to be accused of avarice, and there is no giver so liberal that some one has not called him mean. There is an old saying that only the poor are generous; but that may be reversed with a good deal of justice, for it is too likely to be the unthinkingly generous who are poor.

If we want a useful test for the difficult distinction between avarice and thrift, we may say that thrift is more sparing with self than it is with others, whereas avarice pinches others sooner than itself, although it may pinch both.

A YEAR OF SEVEN ECLIPSES

THE present year is remarkable for having seven eclipses, four of the sun and three of the moon—the greatest number of lunar eclipses that can occur in one year. One of them, the first total eclipse of the moon since 1913, has already taken place; the next, which will be invisible in this country, will occur in July; and the third, which also will be total, and which all of us can see, will take place on the morning of December 28.

The last year in which seven eclipses took place was 1805, and there will be only two years in the next century and a half when as many eclipses will occur again. Not since 1787 have there been three lunar and four solar eclipses in one year, and few of us will be alive in 1982, when the sun, the moon and the earth will again be in precisely the same relation to one another.

None of the four solar eclipses that will occur this year are total, and only one of them can be seen at all in this country. That is the partial eclipse of June 19, which will be visible in the State of Washington and in northern Idaho, northwestern Montana, western Canada and Alaska.

Eclipses occur, of course, when the earth, moon and sun, or parts of them, come exactly into line with one another. When the moon comes between the sun and the earth we have an eclipse of the sun; when the earth comes between the sun and the moon, an eclipse of the moon. Sun and moon both appear to be moving in the same direction and in nearly the same orbit or path. If they moved in

exactly the same path, the moon would pass between the sun and the earth at every circuit, and there would be an eclipse of the sun at every new moon. But the paths are not precisely the same; the path of the moon is elliptical; sometimes the moon is above the orbit of the earth and sometimes below it. There are, however, two points in the orbit of the moon, called the nodes, where the moon crosses the path of the earth round the sun. If a new or a full moon occurs when the moon is at one of those points, the moon will be exactly in line with the centres of the earth and the sun. If the moon is new, its shadow falls on the earth and produces a solar eclipse; but if it is full, the moon itself is obscured by the shadow of the earth, and we have a lunar eclipse.

A total eclipse of the sun is not a rare event, for about ten occur every eighteen years; but since the average width of the shadow cast by the moon on the earth during an eclipse is less than one hundred miles, total eclipses are visible as total over only a very small part of the earth's surface. Thus, for more than five hundred years London never saw a total eclipse, and New York has not seen one in more than a century.

The intense interest that astronomers now have in the sun is largely owing to facts that they have learned by observations made during total eclipses. Studies of the corona, the chromosphere and the solar prominences, made during the brief periods of totality, have given them invaluable information.

SUBMARINES AGAIN

THE war has reached a point where neither party can expect a victory through field operations alone; if it is not to end in the drawn battle that President Wilson believes would be the most hopeful forerunner of a really permanent peace, one side or the other must be virtually starved out.

From the beginning the blockade of Germany has been an important part of the Entente plan of campaign, and it has been successful enough to reduce the Central Powers to a smaller food supply than they need and to less ammunition than they would like to have. The British and the French leaders believe that it has weakened them to such a point that they can be definitely beaten in the field—perhaps this summer.

At first Germany depended on its armies alone; unable to contest the mastery of the sea with Great Britain, it could not seriously interfere with British commerce by the recognized methods of blockade or cruiser warfare. Only after the first plans miscarried and Germany faced the prospect of a long and doubtful struggle, did Admiral Tirpitz begin the submarine campaign against merchant shipping, which now, after two years, has become the chief weapon of Germany in the struggle.

No one knows just how many submarines Germany has in service. They have been built very rapidly of late, and the newest ones are of a size and speed undreamed of when the war began. With those swift, silent serpents of the sea, the Germans hope to draw a circle of destruction round the British Isles that will in its way be as effective as the British blockade of the North Sea. If, by their "deep-sea" blockade, they can cut the shipments of food into England in half and the shipments of coal and iron into France also in half, it would be the most serious blow that Germany has yet struck against its enemies in the west. England would face a more dangerous situation than it has ever encountered in its history. The losses of British and French shipping are already alarming in gross amount. We do not know how far new building has gone to repair those losses, but at the present rate it can hardly keep up with them.

The British navy is undergoing a test of efficiency in a quite unexpected direction. Can it find a way to defeat the submarine attack on British shipping? It must if it is to keep the control of the seas that it has held for more than two centuries. Perhaps the war will be lost and won at sea, not by the mighty ships of the line, but in the daily and nightly warfare of destroyer and submarine.

There is, of course, the possibility that Germany will yet embroil itself with some of the neutral powers. It is hard to see how it can carry out the kind of campaign it threatens without violating again and again the rules that have heretofore governed the destruction of merchant ships at sea. But the submarine commanders have violated those rules more than once in the past, and no neutral has been provoked into doing more than making a formal protest. Germany, no doubt, counts on neutral forbearance in the future, but we

cannot believe that it would refrain from using the last shot in its locker against Great Britain, even if it knew that every ship it sank meant a fresh declaration of war from some neutral power. If Germany cannot starve England out, it is in sore danger of being starved out itself.

CURRENT EVENTS

CONGRESS.—On January 29 the House passed the coast defense bill, that appropriates \$51,000,000. —On January 26 the Senate passed the legislative, executive and judicial appropriation bill, after inserting a provision that places all postmasters on the civil-service list. —On the same day President Wilson vetoed the immigration bill, because of the literacy test that it contains. —The President's address on permanent peace guarantees was under discussion in the Senate, when Senator Borah introduced a resolution reaffirming the faith of the country in the Monroe Doctrine and in the historic policy of nonintervention in European affairs. —The Ways and Means Committee presented the new revenue bill to the House. It was sharply attacked by Republican speakers. —The press of routine appropriation legislation and the number of outside matters that have engaged the attention of both houses made it seem unlikely that the President's railway legislation or the water power bills would get consideration at this session of Congress.

THE PEACE MOVEMENT.

President Wilson's speech on peace guarantees continued to provoke discussion on both sides of the ocean. The Russian Foreign Office officially expressed the sympathy of Russia with the President's ideals, and the Socialist Deputies in the French Chamber expressed their agreement with the address and urged the government to strive for such a peace as it outlined. Premier Tisza of Hungary, and Mr. Bonar Law in the British Parliament, spoke in appreciation of the President's sentiments, but pointed out difficulties that surrounded the making of peace on such terms as he suggested.

"LEAK" INVESTIGATION.—The investigation proceeded in New York; it brought out formal denials of Mr. Lawson's testimony from persons he had mentioned during his examination, and showed that a telegram forecasting the peace note was sent out by a Washington brokerage firm of which Mr. Bolling, the President's brother-in-law, was a member.

SHIPPING BOARD.—Bernard N. Baker, recently appointed to the shipping board, has resigned because of disagreements with the administration over the plans for organizing the board.

JAPAN.—The Emperor dissolved Parliament on January 25; it is understood that he did so to save the Terauchi ministry from defeat. The party that wishes the government of the empire to be responsible to Parliament instead of to the Emperor is strong in the present chamber, and it is the hope of the other party that a new election would return a parliament of a different temper. During the crisis an attempt was made to assassinate Ozaki, the leader of the Constitutional party, who holds that the Terauchi ministry was forced upon the country by unconstitutional means.

RECENT DEATH.—On January 29, the Earl of Cromer, long the governor of Egypt, aged 75.

MEXICO.—The War Department made public the order recalling Gen. Pershing's troops from Mexico, and the column reached the border on February 2. It was reported that as it withdrew Villista forces occupied the region in which it had been operating. Mr. Henry P. Fletcher, ambassador-designate to Mexico, was ordered to his post on January 30. —The Constitutional Congress in session at Queretaro authorized Gen. Carranza to call a congressional election for February 25. The presidential election is expected to occur about a month later, and the Congress is to meet on April 15. —Our State Department has protested against certain provisions in the new

constitution, which limit the property rights of foreigners in Mexico and give the president authority to seize the property of foreigners without judicial recourse if he finds the laws infringed or evaded. —The enforcement of strict quarantine regulations at El Paso led to a lively riot on the international bridge, which the troops finally quelled.

REVOLUTION IN COSTA RICA.—Alfredo Gonzalez, the president of Costa Rica, has been deposed by a popular movement, and Señor Tinoco, the minister of war, is acting president. The president offended by scheming to bring about his reelection, contrary to the constitution. He has appealed to the United States to refuse recognition to President Tinoco.

THE EUROPEAN WAR

(From January 25 to January 31)

Germany has taken the step that was generally foreseen after the Kaiser's peace overtures failed. On January 31 all neutral nations received notice that sea traffic to Allied ports, whether neutral or not, was barred, and that submarines would sink all vessels found within a zone of twenty miles from the English and French coasts or in the greater part of the Mediterranean Sea. The note virtually withdrew all pledges concerning submarine warfare made to this government in April, 1916, and threatened a campaign that would strain the relations of all neutral powers with Germany. Germany hopes to force England and France to make peace through the utter destruction of their merchant shipping. Great Britain has of course made preparations to meet the peril, with what success time will tell.

There were reports of severe cold and heavy snowstorms from almost all parts of the field of war, but the rigors of the weather did not entirely put a stop to military activities.

In Roumania there was fighting in the Kasino Valley; the Russo-Roumanians claimed the advantage. Certainly the German line was nowhere pushed forward.

In Courland the Germans and Russians were engaged along the river Aa and on the frozen Tirul marsh, south of Riga. The Germans were generally on the offensive.

Verdun was again the scene of a determined assault. The Germans carried some French trenches on Hill No. 304, west of the Meuse; Paris insisted that the French recovered them. The French attacked at Les Eparges, southeast of Verdun, and the British attacked at various points along their line.

Paris said that the Allied forces were menacing Prilep, in Macedonia, an important town north of Monastir, and London heard of fresh gains against the Turks at Kut el Amara.

Gen. Haskins succeeded Gen. Smuts in command of the British forces in East Africa; Gen. Smuts is to represent South Africa at the imperial war council in London. The council will meet as soon as possible; it is the plan to have every British possession represented, and to define a policy for continuing the war and for negotiating the peace that is to follow that shall be agreed to by all the empire, not be imposed by Great Britain on the dependencies.

The auxiliary cruiser *Laurentic* was sunk by a mine off the Irish coast, and Berlin reported that a submarine had sunk an unnamed troopship in the Mediterranean. Several merchant ships also went down.

Copenhagen reported that a number of neutral seamen, including some Americans, who were brought into port by the German prize *Yarrowdale*, had been sent into Denmark by the Germans. Officially, the United States had received no reply to its inquiries concerning these men.

Another Entente conference was reported, this time from Petrograd; the matters under discussion were not made public.

The fifty-eighth birthday of the Kaiser was celebrated at the front on January 27. The Emperor, in returning his thanks, declared that the German people would force with the sword a peace suitable to their needs.

Three women, said to be "suffragettes," and the husband of one of them, a "conscientious objector" to military service, were arrested in Derby, England, charged with being involved in a plot to poison the British premier, Mr. Lloyd-George.

Paris reported that a letter found on a German prisoner spoke of the destruction by explosion of the arsenal at Dresden late in December, and added that nearly a thousand persons, mostly women and girls, were killed.

Flour Facts

Every particle of Pillsbury's Best flour is purified by being sifted through beautiful, white, silk bolting-cloth, costing \$5 per yard, so fine and closely woven as to make such a process seem almost impossible.

Grinding and sifting; regrinding and sifting again and again through finer and finer, soft, silk cloths insures the purity and uniformity of this purest flour.

Few people know of this wonderfully delicate process employed to avoid impurities in Pillsbury's Best flour.

This is a fact worth remembering—

Because
Pillsbury's
Best

Pillsbury Flour Mills Co., Minneapolis, Minn.

VERBIAGE

By Ralph Mortimer Jones

I ASKED a pretty Adjective
To go with me to town.
She said, "I really cannot, sir,
I'm promised to the Noun."

I saw them sitting side by side,
And neither one had stirred.
"What keeps you now?" I asked. They
said,
"We're waiting for the Verb."

But when the Verb came dashing up
There was no more delay;
He took them up into his cab
And whisked them both away!

So Adjectives are pretty Maids,
And Nouns are Lovers frantic,
And Verbs are "Cabbies" brisk and
bold.
Now isn't this romantic?

A BIT OF EXPERIENCE

HAD just passed my sixteenth birthday when I joined the church," a middle-aged business man said recently, "and I took the step as thoughtfully as could be expected of a boy of that age. I rather prided myself on the fact that I accepted Christ coolly and intelligently, without a particle of excitement to sway my choice. God did a great deal for me every day, and it was only honest and manly in me to acknowledge it. The kind of life God wanted me to live was the best kind of life, and I believed that by getting into closer touch with Him I should have help and guidance in living it. I had heard some church people say that they were 'great sinners,' but I did not feel that way about myself, although I knew I did and said a good many things that would not seem right to a holy God.

"After the Sunday that I was taken into the church I read a few verses from the Bible each night and morning, and prayed for the strength I needed to live a Christian life. My prayers weren't a mere form of words, either, for I varied them according to circumstances. If I had a school examination coming on, I asked God to help me prepare for it as I should, and if I had done something during the day that I felt was wrong, I mentioned it, and prayed God to forgive me and keep me from doing it again.

"After a year or so I began to have the disquieting suspicion that I was not 'making good' in my Christian life. I didn't do things to bring reproach on my profession, and I was regular in my prayers and my church attendance. But I seemed to be losing interest. When I entered college it wasn't easy to 'take a stand' in my new surroundings, and for some time I didn't let it be known that I was a church member.

"One afternoon the fellow I roomed with had a bad fall in the gymnasium. There was no infirmary then; so he was carried to our room, more dead than alive. The injury didn't prove very serious in the end, but the blood gushed out of his nose and mouth, and the physician we called wasn't the reassuring sort. I shall never forget the terror in my roommate's wide eyes as he put out his hand to me and whispered:

"Wilson, I—I wish you'd pray for me."
"We were alone, and I knelt down and said something aloud to God about helping my friend, and he seconded it with a hearty 'Amen.' I was surprised to see the change in him from that moment, but I was more surprised at the change in myself. That faltering prayer—not two minutes long—seemed to open to me the whole wide vista of intercession. I saw that my Christian faith had languished because I had shut it into myself and had never prayed enough for others. Every Christian ought to be sustained by the prayers of all other Christian people, and I had not borne my share. That was for me a real spiritual discovery, and I believe that the frightened request of my classmate saved me from losing my grip and sinking into apathy and indifference."

PATIENCE—AND KEEP THE FIRE BURNING

MRS. THOBURN, after a single glance at the face of the girl who knocked at her door, pushed her work aside.
"Am I interrupting?" the girl asked hesitatingly.
"I am sure that this time, right now, was meant for Jean Darrow, and for no one else," Mrs. Thoburn answered.

Jean drew a long breath and took the chair that Mrs. Thoburn pulled up for her, but she only perched nervously on its edge; her sensitive face was full of entreaty.

"I want to help so!" she said breathlessly. "I've always wanted to since I was a little girl. And when I was asked to come into the League I was nearly wild with delight. I couldn't sleep that night, I was so happy. And—I've failed. I've come to you myself before any report of my work could come to tell you." The girl choked and went on rapidly: "I can't get in touch, somehow. Those girls know so much about life; they are so capable and assured! They think I'm queer and prim and old-maidish. I can't keep their interest; I know it quite well. So I've come to give in my resignation."

Mrs. Thoburn looked out to the bit of sky between the towering roofs.

"Jean," she asked, "which of the workers here seems to you the most successful in understanding the lives and problems that seem to you just now shut away behind a great wall?"

"Oh—you?" Jean cried with a little gasp. "The way you talk to them and the way they listen! If I could only learn to do that!"

Mrs. Thoburn's eyes came back to the girl, a smile in their warm depths.

"When I was your age I wanted to 'help,' too. And finally my opportunity came. I was invited to go to a club a very charming girl had organized among a group of 'new Americans.' I did not know Miss Stanley myself, but a friend of mine knew her and recommended me. So I went. And to save my life I could not think of a word to say to any girl I met! I sat dumb and wretched, watching Miss Stanley and the others laugh and chatter—"

"You?" Jean exclaimed.

"Yes, I. And I went home and cried myself to sleep that night."

"But—I don't understand!" Jean cried.

"Well, I resolved that I would keep on trying

till I could talk with girls—that was all. It was 'Patience—and keep the fire burning,' no matter how often I failed. And I know a dozen other workers who have had the same experience."

"Oh!" Jean cried softly.
As the girl left the room Mrs. Thoburn turned back to her crowded desk. It had taken valuable time, but she counted it well invested.

LINCOLN'S LAST SPEECH

AS additional dispatches were received from the Union Army in the spring of 1865, the joyful excitement in Washington increased. Tuesday evening, April 11, the President's mansion, the executive departments and many of the business places and private residences were illuminated, bonfires were kindled and fireworks were set off in celebration of the great event. Mr. Francis F. Browne, in his *Everyday Life of Abraham Lincoln*, tells the story of that evening. A vast mass of citizens crowded about the White House, and Lincoln appeared at the East window and made his last speech to the people. It was rather long, and he had written it out on separate sheets for the occasion.

"We meet this evening, not in sorrow, but in gladness of heart," began the President. "No part of the honor or praise is mine. To Gen. Grant, his skillful officers and brave men, all belongs."

Mr. Brooks, who was in the White House during the delivery of this address, gives the following glimpses behind the scenes: "As Lincoln spoke, the multitude was as silent as if the courtyard had been deserted. Then, as his speech was written on loose sheets and the candles were placed too low, he took a light in his hand and went on reading. But he found difficulty in handling the manuscript and holding the candlestick; so a friend who stood behind the drapery of the window reached out and took the candle and held it until the end of the speech, and the President let the loose pages fall on the floor, one by one, as fast as he was through with them."

"Presently Tad Lincoln, having refreshed himself at the dinner table, came back in search of amusement and began to occupy himself by chasing the leaves about the floor as they fluttered from the speaker's hand. Growing impatient at his father's delay in dropping another page, Tad whispered, 'Come, give me another!'

"The President made a queer motion with his foot toward the boy, but otherwise showed no sign that he had heard. Without was a vast sea of upturned faces, each eye fixed on the President. Round the tall, white pillars of the portico flowed an undulating surface of human beings stirred by emotion and lighted by the fantastic colors of fireworks. At the window, his face irradiated with patriotic joy, was the beloved Lincoln, reading the speech that was to be his last to the people. Behind him the boy of the White House crept back and forth on his hands and knees, gathering up his father's carefully written pages and occasionally lifting up his eager face, waiting for more. When I recall that night, I wonder how much of a father's love and thought of his boy might have been mingled in Lincoln's last speech to the eager multitude."

RUTH TO THE RESCUE

AT the dining-room window of her father's house in the outskirts of Brighton, Illinois, one bright morning last winter stood Ruth Deatherage, thirteen years old. In her arms she held her little baby sister, fresh from her bath, while her mother gathered up the baby's discarded clothing.

Suddenly, with a startled exclamation, Ruth thrust the baby into the cushions of a large arm-chair and rushed out of the room. Mrs. Deatherage stepped to the window to see what it was that caused Ruth to put down the baby so hastily; usually the girl could hardly bear to have the child taken from her arms.

From the window Mrs. Deatherage looked out across the near pasture; and what she saw terrified her. An angry bull had attacked one of the farm hands named Richard Lyons, who, with rare presence of mind, had seized the infuriated animal by both horns. The bull, in his efforts to get free, was tossing his great head up and down, and each time he lifted Lyons clear of the ground.

Quickly turning to the telephone, Mrs. Deatherage summoned two of her nearest neighbors, for her husband was absent for the day in Chicago. When she turned to the window again, she was just in time to see Lyons' feet slip on the moist ground from which the angry bull had torn the sod.

At the same time she saw her daughter Ruth hastening to the rescue. Running from the house to the barn, with one jerk of the rope halter Ruth had freed her pony; then she leaped upon its bare back, and, lifting a pitchfork from a rack on the barn wall, she drove the pony at full speed to the pasture.

Round and round the bull she rode; then guiding the pony by a tug at its mane, she rode straight for the animal, balancing the pitchfork as a knight would balance a lance.

Six feet from the bull the pony's feet slipped, and it settled back on its haunches. At the same moment Ruth hurled the pitchfork with all her might directly into the bull's face.

One of the prongs of the pitchfork entered one of the bull's eyes. With a bellow of pain it drew back and retreated to a fence corner while Richard Lyons slowly rose from the ground badly shaken and bruised, but not seriously hurt. Just then several of the neighbors came running up. They were able to put a halter round the neck of the crestfallen bull and lead him away to the stable.

THE PLAGUES OF MESOPOTAMIA

QUITE apart from the unhappy results of battle and disease, campaigning in Mesopotamia, says Mr. Edward Candier, correspondent of a London paper, is sure to be uncomfortable and discouraging.

Mesopotamia in May rivals Egypt in the matter of plagues. There is no respite or truce, and the only thing you can count on is that the plague cycle is unbroken and continuous. The plagues of May are dust, heat and flies, and the greatest of these is flies. The multitude of flies that swarm in the tents, dugouts and trenches, unless seen, are unbelievable.

You cannot eat without swallowing them. You wave your spoon of porridge in the air to shake them off; you put your biscuit and bully beef in your pocket, and convey them surreptitiously in your closed fist to your mouth; but you swallow flies all the same. They settle in clouds on everything. As I write, I cannot see the end of my pen. I

overtook a squadron of cavalry the other day, and in that state of semicoma in which the heat wraps you I thought they were wearing chain armor. I had walked my horse beside them several minutes before I discovered that what looked like mail was a steel-blue mesh of flies.

It is a country of excess; nothing is ever moderate. There is something almost Biblical in the way the gods of this ancient land have conspired to punish us. There is malice in the sky and soil; malice of heat and drought, hunger and thirst and flies, damp and cold and mire, flood, hurricane and rain, fever and ague, and malice interwoven in the web of circumstance.

DISCRETION

"Yes, sir, I fell over the side of the ship, and a shark 'e came along and grabbed me by the leg."
"Good gracious! And what did you do?"
"Let 'im 'ave the leg, o' course. I never argues with sharks."
—W. Jenner in The Passing Show.

THE SEVENTH PIE

"PRETTY big order, Lem," remarked Uncle Si Bonney with interest, as the last whisk of the customer's skirts vanished through the grocery door. "I kind of guess Minnie Wimble must be expectin' Henry's folks Thanksgiving."

"Guess so," assented Lem. "Fur's that goes, though, Myron's keen for good things, not to mention havin' 'em accordin' to custom and tradition. He'd want everything same's it used to be at Gran'ma Fenderson's, seven pies and all, if there wasn't a soul to eat 'em except him and Minnie; and Minnie, she'd give him what he wanted if it was fried moon with star sauce."

Uncle Eli Emmons brought the forelegs of his tilted chair to the floor and sat up straight.

"I remember hev'n' Thanksgiving' dinner to Gran'ma Fenderson's onct," he announced. "Umpt! Thanksgiving ain't what it used to be. Minnie Wimble may want to give Myron the same he used to get at Gran'ma Fenderson's, but I don't believe she's up to it. Like's not she wouldn't know what was gran'ma's seven kinds of pie, to begin with."

"Oh, come now, Eli!" protested Uncle Si Bonney. "Mebbe women ain't stickin' so close over the cookstove's they used to, but when it comes to extr'y occasions, I guess their gran'ma's wouldn't hev to be ashamed of 'em; not of the dinner Susan's planin' for's a fair sample. Turkey to one end of the table, chicken and oyster pie tother, ham halfway down, and plenty of fixin's. Chestnut stuffin', too—m-m-m!"

"Umph!" snorted Uncle Eli suspiciously. "How about pies?"

"Mince, apple, pumpkin and custard," recited Uncle Si relishingly.

"Four!" said Uncle Eli scornfully. "There'd oughter be seven. And a cracker puddin'."

"No, there oughtn't," declared Uncle Si with spirit. "There wasn't any ice cream to Gran'ma Fenderson's. Ye don't need a puddin', and four kinds of pie is enough when ye have ice cream."

"I want cracker puddin'," declared Uncle Eli beligerently. "I shan't get it, nor ice cream neither; but I want it, anyhow. And I didn't say seven kinds of pie was needful, unless a person's bein' set up to equal Gran'ma Fenderson."

"Well, she always had seven," admitted Uncle Si. "Apple, pumpkin, custard, mince, cranberry—that's five—cocoanut—"

"Nobody in the Fenderson family ate cocoanut. 'Twas Marlborough," contradicted Uncle Eli.

"Marlborough! So 'twas—and pretty nigh the best of the seven," conceded Uncle Si.

"If you don't count cocoanut," observed Lem impartially, "you haven't made out seven."

"What?" snorted Uncle Eli. "Course we made seven! Do you s'pose I don't remember? There was mince, apple, pumpkin, cranberry, custard and Marlborough—that's only six," he admitted.

"Now what in tunket was that other pie?"

"Banbury," suggested Uncle Si hopefully, after a meditative pause.

"Banbury ain't pie; it's tarts," asserted Uncle Eli decisively.

"Sure it wa'n't cocoanut?"

"Sure. Old Cap'n Fenderson hated cocoanuts. Said they was stinky, gritty, sweet, messy things; no fit food for Christians."

"Huckleberry?" suggested Lem.

"Huckleberry!" Uncle Eli's scorn was scathing.

"Twa'n't huckleberry no more'n 'twas currant nor raspberry. 'Twas a partic'lar kind of pie. Let—me—think: mince, apple, custard, pumpkin, Marlborough; why, that's only five!"

"Lost a pie, Eli?" reproved Lem. "Gettin' kind of keerness, ain't ye?"

"Pumpkin, Marlborough, custard, mince, apple," repeated Uncle Eli in worried tones. "Where's that sixth pie gone to?"

"Cranberry, Eli, cranberry," Uncle Si reminded him soothingly.

"Cranberry," Uncle Eli echoed with relief.

"Well, we got back to six again; but there'd ought to be seven."

Mrs. Wimble dropped in again just then to add a jar of Canton ginger to her list. Preoccupied with his intense effort of memory, Uncle Eli did not notice her, but Uncle Si remarked casually:

"We was talkin' about Thanksgiving's like they used to be to Gran'ma Fenderson's, Minnie. S'pose you don't remember 'bout her seven kinds of pie?"

"Remember? No; but Myron's told me often enough," she replied. "Perfectly ridiculous, I call

it; but all the same I'm going to surprise him this year with the whole seven. I had quite a time getting hold of the right rule for old-fashioned green tomato pie, though."

"Green tomato?" shouted Uncle Eli explosively. "That's it! That's the seventh pie!"

Uncle Si chuckled wheezily. "Mebbe Minnie'll save ye out a piece for old time's sake, ef ye ask her pretty," he suggested. "Might even bake ye a saucer pie special. Womenfolks hev changed a mite, someways, but they haven't stopped pamperin' us menfolks in our appetites."

"You shall have a green tomato saucer pie, Uncle Eli," agreed Mrs. Wimble, "but I won't promise that it'll be as good as Gran'ma Fenderson's."

"Now, that's real kind of ye, Minnie," said Uncle Eli graciously; and as she departed he began counting over once more in a reminiscent murmur, while Uncle Si kept tally, finger by finger:

"Apple, mince, custard, cranberry, pumpkin, Marlborough, green tomato—seven pies!"

SANDIE AND LION

SANDIE is a pet crane that belongs to a farmer named Thurlow, who lives in North Dakota. The farmer caught Sandie before he was old enough to fly, and after a brisk chase, for the bird was already agile and quick on its legs.

Sandie's wings are clipped, and so he is permitted to wander at will about the farmyard. He finds his favorite food in a slough down in the pasture, and, when frogs and snails are scarce, he keeps the garden free of toads. But as small chickens are not safe in his vicinity, Sandie is kept shut up during the hatching season. In the winter he feeds on meat scraps, and mouses about in the barn and sheds.

Sandie is quite a vaudeville performer in his way, for he can swallow nails, spoons of thread, bits of tin, marbles and such indigestible material, which he afterwards regurgitates when they begin to trouble him. So, whenever the family has company, Sandie must be brought out for a sword-swallowing performance.

He is the terror of stray dogs, and thereby hangs a tale. One afternoon a man drove into the farmyard with a big dog—a cross between a mastiff and a Newfoundland—sitting proudly beside him in the car. Sandie, in his favorite pose, was standing on one foot, apparently fast asleep.

"Gr-r-r-r-r-r!" growled the dog, and he sprang from the automobile, bristling with pugnacity.

"Better call off your dog, Mr. Johnson!" cried Ray, the young son of the family. "Sandie'll maul him if he gets too near."

"Huh!" scoffed Mr. Johnson. "Better call off your bird, Ray. Lion will make a mouthful of him."

"Don't you believe it!" persisted Ray. "I've seen him make too many dogs run."

Lion sprang forward with a bound and a growl. Sandie partially opened one eye but did not move a feather except to settle his doubly curved neck a little more firmly on his shoulders. But when the dog was within a foot of him, without dropping his uplifted leg or flirting a folded wing Sandie made his counter-attack. His long neck uncurled and shot forward like a javelin, and his sharp beak buried itself in the dog's nose.

The ferocious Lion doubled up like a measuring worm, and with his tail between his legs and all four feet coming down together he bounded out of the yard and off down the road, yelping with pain at every step; whereupon Sandie closed his one eye and went back to sleep again.

Lion's memory of that one stab is ever fresh, and whenever Mr. Johnson turns into the Thurlow barnyard Lion leaps from the automobile and slinks off into the fields, where he remains until his master comes out of the yard again.

A LIVING COAL CHUTE

IT is an interesting sight to see vessels coaled in the harbor of Nagasaki, Japan. Big coal barges bear down upon a ship as it approaches the shore, says the *Washington Star*, and as soon as it comes to anchor a rough ladder is placed between the vessel and the foremost barge. On each rung a girl takes her place. To the sound of a monotonous chant, men in the barge quickly shovel the coal into shallow baskets that hold half a bushel each, and the women pass the baskets from hand to hand up the living ladder with marvelous celerity. Each girl as she seizes a basket swings it with one motion up in front of her and above her head, where the next girl catches it and passes it on.

Down a second ladder, likewise packed with girls, the empty baskets pass in similar manner back into the barge to be refilled. Barge after barge is emptied in this way. The monotonous chanting never ceases, and the living elevator goes on hour after hour, with its never-ending stream of baskets, until the last bunker is full, when the ladders disappear as if by magic, and the ship proceeds on her voyage.

JUST BOYS

THE trait in a mother that all boys most admire is that which prompts her to proceed with the packing of a lunch basket for a picnic, although anyone can see that the clouds are gathering for a storm.

There is one complaint that the neighbors of a family of boys never make, and that is that there is nothing going on in their neighborhood.

A boy likes best the game that involves the most hard work, and the work that requires the least exertion.

During a boy's career he encounters almost everything in the way of ailments except insomnia.

There is not much hope for the boy who pleases his mother to the extent of keeping a pair of white stockings clean all day.

If a boy had half the pride in the baby that his mother feels, he would shut it in the barn and charge three pins for admission.

THE NATURAL COMMENT

LONDON children certainly get some quaint views of life, says the *Bellman*. An instance of this recently occurred in an East-End Sunday school, where the teacher was talking to her class about Solomon and his wisdom.

"When the Queen of Sheba came and laid gold and jewels and costly spices before Solomon, what did he say?" she asked, presently.

One small girl, who had evidently had experience in such matters, promptly replied:

"'Ow much d'yer want for the lot?'"

THE CHILDREN'S PAGE

THE DAY OF WASHINGTON

BY JOHN MORRISON

When the Day of Washington
Brings its message clear and true,
Stop and think a moment, son,
What its meaning is to you.

Hear, O hear, the ringing call,
Sounding o'er the years between,
Bidding you to banish all
That is false and base and mean;

Bidding you to seize and hold
What is highest, what is best,
What is needed most to mould
Life to meet its sternest test;

Bidding you be ready, son,
With your hands and with your heart,
When the Land of Washington
Calls on you to play your part.

THE SCRAPBOOK FAIRY

BY ANTOINETTE DeC. PATTERSON

IN grandmother's picture scrapbook there had lived for, oh, so many years the dearest little fairy imaginable. Her full white dress was sprinkled with tiny rosebuds, not much bigger than the head of a pin, and a wealth of them crowned her dainty curls.

The two little girls, Bessie and Ada, always asked to see her whenever they visited grandmother, who would tell them wonderful stories about the fairy. She always ended by saying, "She's so full of mischief that it is a very good thing indeed that I have her safe in this book! Surely, the covers will keep her there!"

One Saturday, when Bessie and Ada arrived at their grandmother's, they found the house in a great state of excitement. The parrot had got out of his cage and gone up a tree; the white Angora kitten had rubbed against the newly painted cellar door, and was now a bright green; and last, but not least, the beautiful cake that was baking for the children had been entirely forgotten, after it was put into the oven, and had burned to a cinder.

But Bessie and Ada had been brought up to be useful children, and to help wherever they could. Ada, who was as active as any monkey, went up the tree and brought down Mr. Parrot, who was too frightened even to try to peck at her; and Bessie took hold of the kitten by its collar and neatly snipped off bunches of hair where the paint was thickest. Then they both told grandmother that they would much rather have the red-cheeked apples they could see on the sideboard than any cake that had ever been baked.

Grandmother smiled to see what capable and amiable little girls they were, although she kept repeating that she could not see how the parrot, the cat and the cake had all managed to make so much trouble at one time.

Luncheon was not quite ready; so Bessie picked up the old scrapbook, which that day was lying on the table, to look again at the fairy. The book opened almost of itself at the familiar page—but no fairy was to be found.

"Why, grandmother," cried Bessie, showing the empty page, "she's not here! What has become of her?"

Grandmother looked and looked, but sure enough there was no rose-garlanded little creature to be seen anywhere—only two spots of glue where she had once been.

"That book flew open this morning," said grandmother, "and the fairy has escaped! That accounts for all that has happened. We must find her and put her back again, or who knows what will happen next!"

The children at once began the search, and soon Bessie's bright eyes found the fairy—in the fireplace almost at the other end of the room, looking, grandmother declared, even more mischievous than ever.

"Now," said grandmother, as she brought out a bottle of fresh paste and fastened the fairy to the page again, "we will go to the dining room and enjoy our luncheon in peace!"

A SONG OF WINTER

BY MARY STARCK

Sing a song of winter,
When coldest weather comes;
Four and twenty snowbirds
Picking up the crumbs;
When the crumbs are eaten,
The birds fly to a tree;
Isn't that a pretty sight
For anyone to see?

Then one snowy morning
They find a sheaf of wheat
That some one who loves them
Hangs out for them to eat.
And do you know the reason
Why they are served that way?
It is meant for them to have
A valentine to-day.

ALTHOUGH The Youth's Companion will be a century old in ten years more, since the first number appeared in 1827, George Washington lived and died many years before it was established. Yet George Washington had a Youth's Companion of his own. It was not a paper or a magazine, however, but a little book. His schoolmaster gave it to him when he was about twelve years old. Books were rare in Virginia in those days, and he treasured that one all his life and studied it carefully, both in youth and in later years. The little book contained rules for conduct and manners, directions for writing letters and legal documents, all manner of problems in mathematics and methods of surveying land. It is easy to understand how useful the book was to a bright boy, eager to learn and to do things well.

We so commonly think of Washington in connection with Mount Vernon that we are likely to forget that his birth, the 185th anniversary of which we celebrate this month, did not occur at Mount Vernon, and that his earliest years were not passed there. He was born on his father's plantation at Wakefield, on the Potomac River, about fifty miles below Mount Vernon. The plantation had been in the family for many years, but three years after the birth of George the family left it, because it was unhealthy, and moved up the river to the plantation that was later known as Mount Vernon. There the family lived for the next five years, and then for three years—until the death of Augustine Washington, the father of George—in Stafford County, on the east bank of the Rappahannock, opposite Fredericksburg.

George was eleven years old when his father died, and for the next few years he lived a part of the time with his older brothers and a part of the time with his mother. His brother Lawrence inherited the large estate at Mount Vernon. About ten years later, when Lawrence and his daughter had died, the estate fell to George himself. Another brother, Augustine, inherited the plantation at Wakefield, and soon after his father's death George went back there to live for a time in the house where he was born. Not many years later that house burned, and the Wakefield plantation went to decay.

"George" was not a common name in the Washington family; it has been thought probable that George Washington was named for George II, who was on the throne of England when he was born, and who was the father of the king that he fought in the Revolution.

As a boy George Washington was large and strong for his years. In the sports and contests of the day, especially in running, jumping and wrestling, he rarely met his match among the boys of his age. He was rather more shy and serious than most of his companions, and was eager alike for study and for outdoor sports. His father had sent the older brothers to England for their education, and probably George would have gone there, too, had his father lived. As it was, he attended, until he was fifteen, such schools as there were in Virginia at that time—private schools taught by a man, often a clergyman.

George was very fond of horses and found much happiness in the thirty that were in the stables at Wakefield, when he went there to live with his brother, Augustine. On most of his early rides a faithful old negro named Peter was his companion. Another negro named Sampson, who had a wonderful control over horses and other animals, taught him much of the horsemanship of which he was a master all his life.

One morning when he was nearly twelve years old he took one of the best horses in the stables and rode away to a fox hunt without asking permission. He was so much younger than the other members of the hunting party that they laughed at him; but he stayed in the saddle through it all, and saw two foxes killed. About noon his horse went lame, and he had to dismount and lead the animal home. When he reached the stable he found the plantation overseer very angry and about to punish the negro who had allowed the horse to be taken away. He snatched the whip from the overseer's hand and stoutly insisted that if anyone was to be punished it should be he. That incident was only one of many that made the negroes on the plantation, old and young, devoted to him. He did not approve of the system of slavery, and in later years provided for the freedom of all the slaves on his great estate. One of the last acts of his life was to visit a servant who was sick.

The life of a Virginia plantation gave no end of opportunities for a boy to enjoy himself. He went hunting at daylight for wild ducks and geese. In April and May he caught shad in the Potomac, and he gathered crabs, oysters and clams from the waters of Popes Creek. On moonlight autumn nights he went coon hunting and joined in the corn-roast frolics at the cabins of the field slaves. He rowed and sailed much on the Potomac, which was the main highway for the visits back and forth

among the families of gentry whose big plantations bordered its banks.

It was the unfailing custom to go to church on Sunday. Many families came long distances and brought their luncheons, so that between the services there was a sort of picnic, very pleasant to the young people, in the oak grove near the church. The passing of many years did not weaken the churchgoing habit of that youthful period.

So George lived, a part of the time with one brother at Wakefield, a part with another at Mount Vernon, and a part with his mother on the shores of the Rappahannock. When he was fourteen years old he planned to go to sea—or, rather, his brothers planned for him. He had his chest packed and was actually on board a ship in the Potomac; but his mother prevailed on him to give up the plan. It was a great disappointment to him, for which his beloved horses and dogs hardly consoled him; but then, as all through his life, he faithfully kept his promise to his father that he would always be good to his mother.

It was his liking for surveying, first developed by study of the little handbook, the Youth's Companion, that led him to become a surveyor by profession. He was only sixteen years old when he set out to survey lands owned by his friend, Lord Fairfax, in the western part of Virginia. That work in the wilderness led him into experiences and adventures that had a great influence on his later life as a soldier, and consequently much influence on the whole course of American history.

In his boyhood George Washington showed the qualities that made him one of the greatest men of all time. Many boys of that period, living on large plantations where negroes did all the work, would have chosen a life of idle ease, or would have given their energies mainly to sport, instead of seeking employment as a surveyor; but he did not feel that it was beneath his station to work hard, far from the luxuries and comforts of a good home, and to earn wages like a day laborer. He was a wholesome and manly boy in all his relations—courtous, truthful, modest, brave in the face of dangers and difficulties, thoughtful of others, faithful to every trust in school or work or play, and earnest in his determination to master a quick temper that once in a while blazed forth.

Every American boy should read the life of George Washington—boyhood, manhood and all. It is one of the most interesting stories ever written; every page has things that are helpful and inspiring.

FRENCH BOY SCOUTS IN THE WAR

By the Rev. Henri Merle d'Aubigné, Scoutmaster

THE closing of shops and mills in Paris in consequence of the war has thrown out of work thousands of boys between thirteen and seventeen years of age. Those who are fortunate enough to be Boy Scouts have an advantage over the others; for they have learned to obey, and to use their hands, and so nearly all of them have found occupation as messengers or aids in municipal buildings, hospitals, soup kitchens and other public agencies.

Nearly all the boys in my troop have been and still are in the forts round the capital, where they are employed as orderlies of the officers, and thus share the soldiers' mess. The food suits their boyish appetites, and their mothers are greatly relieved, for it is hard to feed hungry boys with the ten cents a day that the government, in these war times, allows for children who are out of work. When the boy gives satisfaction, his chief soon arranges with the battalion tailor to fit him out with a uniform, which, in winter at least, has a decided advantage over the Scout's "shirt and shorts."

Although life in the forts is better than life in the streets, the fondest wish of our boys is to go to the front. A number of my Scouts have been there. Two little fellows went to Bray-sur-Somme, near Albert, which was so often mentioned in the papers at the beginning of the war. The boys had followed a detachment of colonial infantry, but on reaching Bray, which was on the firing line, they were immediately put into prison to keep them out of harm's way. They were alone in the prison the first day, and they spent most of the time in a plum tree just outside the window of the cart shed in which they had been incarcerated.

The next day they were joined by a number of German prisoners and some French soldiers who were about to be tried. One of the Frenchmen was a Scout from Clamart, near Paris, who had had a curious experience. He had left home with a regiment of the line, wearing a soldier's cap and jacket, had charged with the regiment, had gone too far, and had been taken prisoner by the Germans. During the night, however, he had managed to escape over a wall. The next day he again joined in a charge; but his rifle was broken by a splint from a shell, and he was obliged to go to the rear, where he was immediately collared by the army police and put into the guardhouse. Rather hard lines, he thought, to pass one night in a German prison and the next in a French prison.

He was in the prison at Bray for only one night, however. The next morning he and my two Scouts were given passports to go on foot to Amiens, about twenty miles away, and that they did.

In Amiens, with true Scout luck, they met a gentleman whose son was also a Scout, and after passing the night in his house they took the train without cost and arrived safely in Paris.

One of the favorite pursuits of my Scouts during the first months of the war was to "go to see the English," meaning the British soldiers who were near Paris. The men from across the Channel were always very kind to them. "Hello, Baden Powell Boy Scouts!" the Tommies would shout as the boys drew near. Some of them in their laborious French would tell my boys that they had sons of their own in Great Britain who also were Boy Scouts.

André Germis, one of my Scouts, very nearly came to grief one fine day. He and a friend had gone out on their bicycles to "see the English" on the road between Paris and Meaux. They met a patrol of German cavalry, whom they at first mistook for British because their helmets were covered with khaki. The Germans questioned them, but received no information from them. The soldiers confiscated their bicycles, and seemed to intend to keep the boys prisoners, although they allowed them to stroll about. The boys walked carelessly round a corner and then made the best of their heels until they reached the French outposts. There they reported to the lieutenant, who immediately sent them in a motor to headquarters, where they had the proud distinction of being the first to give information of the advance of the enemy!

They might easily have been shot, like the Boy Scout whose story is told in the following letter written by a German officer and found on a battlefield:

"A French boy belonging to one of their gymnastic societies, *éclaireurs* [Boy Scouts], who wear tricolored ribbons, has just been shot. He was a wretched little fool who had taken it into his head to be a hero. Our regiment was approaching a wood, when we caught

him and asked him whether there were any French in the neighborhood. He refused to give us any information. Fifty steps farther a volley was fired at us from a thicket. We asked the prisoner in French whether he had known that the enemy was in the forest, and he did not deny it. He walked steadily to a telegraph pole, leaned against it with the green leaves of a vine hanging over his head, and received the volley of the platoon with a smile. Foolish little braggart! What a pity to see courage so wasted!"

It seems to me that such "waste" is gain.

each received his *boule de son* ("lump of bran," soldiers' slang for bread) and his *gamelle* (wooden bowl), with plenty of meat and biscuit. Vegetables were scarce, and for drink they had *château la pompe* ("château pump," slang for water). At night they slept on straw in a barn, or when the regiment bivouacked the chief surgeon made a place for them in one of the wagons. Once, when the regiment had halted at midnight and was summoned to march at two in the morning, our three little fellows rubbed their eyes, but found it impossible to wake up. The

said René afterwards. "We would wonder, 'Will it be a red one? Will it be a green one?'" At Berzieux our three Boy Scouts were put on the train for home. Things were growing serious, and in fact the very next day after their departure one of the battalions of the 21st Colonial was nearly exterminated.

One of the Boy Scouts had eaten too many green plums, and the chief surgeon had advised them all to take the opportunity of riding on a train of wounded as far as St. Menehould. This they did regretfully. They reached their destination in the evening; the station was crowded with wounded, and the boys slept on the asphalt of the platform. The next morning was cold. Two of the Scouts had lost their socks, which a few days before they had confided to a requisitioned wagon. The wagon had gone astray and had never rejoined the column. To warm themselves the boys went through their gymnastic exercises, and then set to work carrying breakfast to the wounded.

The next evening they made themselves a little bedroom by tipping over two tables and filling them with straw, and slept comfortably. The following day they were transferred with the field hospital to the cavalry quarters, where they found three hundred Germans.

"If we had stayed there a little longer we should have learned to speak German," said one of them. "Many of the prisoners made us understand that they had boys at home."

Finally, on the third day, Saturday, September 19, a train set out crowded with wounded and prisoners. Our three Scouts squeezed themselves in. But the train was bound for the south, and at Troyes they had to get out and take a passenger train. The next morning they reached Paris, and had some trouble in entering the city without a pass. But the red cross on their arms saved them, and an hour later they reached their homes, proudly bearing the trophies they had picked up on the battlefields.

Thus ended the adventure of my three Boy Scouts. They were not hurt, and I think they did some good. Their cup of cold water had quenched the thirst of the wounded, and their bright faces and gay demeanor must have brought a ray of joy to those scenes of death. Veterans of the Colonial, German prisoners, French wounded, everyone they met, had treated them with touching friendship.

Since that adventure, René B— and Louis P— have been to the front again—Louis in the Argonne region, serving as cook's assistant, René near Arras as messenger of a field hospital. Both of them came back after a month, thin and worn. René especially had had a hard time; he had been carrying messages at night, to avoid the German shells.

Regulations forbidding civilians to go near the line of battle have now become much more strict, and our boys have had to find new channels for their energy. As trade gradually resumed, many have gone to work in the factories.

On the day of mobilization a soldier who was coming to join his regiment met a little boy, and patting him on the head, said to him, "My little fellow, I am going to fight so that you may never have to fight when you grow up." The words express the feeling of our people.

While the older boys are doing their duty against the enemy, there is a great work to be done among the younger ones, and we are thankful to have at hand that admirable educational instrument—the Boy Scout organization and method.

HIDE THE DICTIONARY

RUFUS CHOATE, the advocate, was a great classical scholar and well-read in literature; but he had also a love of dictionaries, and would study them for the purpose "of filling up and fertilizing his diction." These experiments led him into strange verbal adventures.

A good story is told by the Cornhill Magazine of one Mr. Justice Wilde, who, being dry, precise and formal in his methods, little appreciated the whirlwind eloquence of Choate. On one occasion, just before the opening of court, when Choate was to argue a case and they were waiting for him, a member of the bar asked the judge if he had heard that Mr. Worcester had just published a new edition of his dictionary with a great number of additional words in it.

"No," replied Mr. Justice Wilde. "I have not heard of it. But for goodness' sake don't tell Choate."

A TROOP OF BOY SCOUTS IN PARIS BEFORE THE WAR

Among my boys are two who had an unusual adventure. René B— and Bernard C— are cousins. One of them has lost his father, the other his mother, and they have been brought up by their grandfather, a small but strong and bright old man.

In 1914 René and his cousin were enrolled in my troop of Boy Scouts of the People's Hall (McAll Mission) of the Rue Nationale. When the shop in which they were employed closed its doors, these two cousins and their comrade, Louis P—, entered the service of the *Marsouins* (colonial infantry), who were stationed in one of the forts round Paris. One fine day word came to me that my three Boy Scouts had been seen marching with a regiment of colonial infantry, which was "going to the war!" Their parents, it appeared, had consented.

No word came from them for a considerable time, and we were all beginning to be uneasy, when one day in late September our three little fellows reappeared, bronzed as Moors and full of enthusiasm. They proudly bore two sacks full of the trophies of their adventures—a sword, a shovel, two Prussian helmets; and their pockets were stuffed with German cartridges.

They had come from St. Menehould and Ville-sur-Tourbe, in the very centre of the gigantic arc of a circle formed by the battlefields that stretch from the North Sea to the Swiss frontier.

They had set out with the equipment train in more or less contraband fashion; but the officers had grown very fond of them, and had watched over them with truly touching solicitude. At Melun, where the train halted, they were in full view of a detachment of the British army, who recognized the uniform of our little Parisians and began to shout, "Vive la France! Three cheers for the Boy Scouts, hip, hip, hip, hurrah!"

The next night the train passed through Troyes, and early the next morning the regiment was set down in the midst of a wide plain. It proceeded northward on foot, in pursuit of the Germans who were then in retreat after the Battle of the Marne. The three battalions had divided the Boy Scouts among them, each taking one. They marched with the soldiers, and at the halts

soldiers loaded them upon a baggage wagon, where they slept soundly through all the bumps and jostlings of the journey.

Arriving at the scene of the battles, they passed through villages deserted, with dead soldiers, mostly Germans, lying everywhere. Here an entire detachment had been surprised and mowed down; their stacks of muskets were still standing, with dead bodies lying near. Then it would be a farmyard where a deep trench had been dug; near by a French soldier lay dead among the bodies of eleven German soldiers, one of whom still held in one hand the photograph of a young woman, his wife or his betrothed, and in the other his watch. Surprised in the act of burying their dead, their comrades had fled without completing their task.

Arriving in the neighborhood of Ville-sur-Tourbe things began to grow warm. The Boy Scouts, having fortunately received lessons in first aid, were each provided with the arm band of the Red Cross and attached to an ambulance (field hospital). In a farm recently abandoned by the Germans there were some twenty French wounded who had been left behind by their captors, without food, and who wept for joy when they saw their brothers. They were parched with thirst, and our Boy Scouts at once set about bringing them water, and later hot coffee. Their bandages had not been changed for a week, and were stiff with clotted blood; so our little improvised orderlies next set about replacing them with clean ones. They were absorbed in this work, and when they suddenly looked up were amazed to find

that the detachment to which they belonged had gone on! In what direction? Who could tell?

They looked to the right, they looked to the left, they went down a road; not a person was in sight.

Finally, after much marching and counter-marching, they picked up traces of the detachment, and made the best use of their legs until they overtook their friends at Berzieux, about two miles from Ville-sur-Tourbe, and near the famous Forest of Argonne, which since that time has been the scene of many fierce battles.

Soon bombs began to fall not far from the marching column. "They made us think of the Fourteenth of July [the French Independence Day],"

LOUIS P—, WHO HAD SOME EXCITING EXPERIENCES AT THE FRONT. HE IS SHOWN HERE IN A UNIFORM OF THE COLONIAL INFANTRY, WHICH WAS GIVEN HIM WHEN HIS BOY SCOUT UNIFORM WORE OUT

In Thousands of Homes Most Dishes Pale Before Puffed Wheat and Rice

The Flaky Whole-Grain Bubbles

Did you ever try serving a Puffed Grain with any other cereal dainty? And let folks take their choice?

If you have, you know that the other cereal is always completely neglected.

Mix with any fruit

Nothing ever made from wheat, rice or corn can tempt folks away from Puffed Grains.

They seem like confections. The grains are puffed to eight times normal size. A fearful heat has given them an

almond, nut-like flavor. About as flimsy as snowflakes—thin, airy bubbles, ready to crush at a touch.

It is hard to believe that whole kernels of grain can be made as enticing as Puffed Grains.

Professor A. P. Anderson invented this process to make whole

Douse with melted butter for between-meal confections

grains wholly digestible. No form of cooking or toasting or baking had ever broken all of the food cells.

Use as garnish for ice cream

This process creates, inside of each grain, a hundred million steam explosions—one in every food cell. Thus every granule is made digestible, and every atom feeds.

The Quaker Oats Company
Sole Makers

They are shot from guns—these kernels of grain—after an hour of terrific heat. The grains come out puffed to eight times normal size—four times as porous as bread.

They taste like bubbled nuts.

Serve in the ways we picture. Not for breakfast only. For luncheon or supper serve in bowls of milk. Mix them in any fruit dish. Use like nut-meats in candy-making or as garnish for ice cream. Douse the grains with melted butter for the children to eat between meals. They are just as delightful as sweets or cookies, nuts or popcorn, and very much better for them.

For luncheons or suppers float in bowls of milk

Always remember that in Puffed Grains you get the whole wheat or rice kernel. You get the rich elements that flour foods lack, and that everybody needs. And every food cell is here fitted to feed. Every element becomes wholly available. One ounce of Puffed Wheat contributes more nutrition than ten ounces of many foods.

Serve with sugar and cream

Puffed Grains don't tax the stomach. You can serve them any hour. They are ideal foods for a brain-worker's lunch, or for a child at bedtime.

Keep a package of each of the three grains on hand, and serve them wherever folks like them.

Use like nut-meats in home candy-making

\$10 Extra

For new subscriptions sent us during the month of February, 1917, you will not only receive a **Premium** for every new subscription and a **Winner's Gift** for every multiple of five new subscriptions, but you will also receive a **Monthly Cash Bonus** as follows:

CLASS A BONUS

For an average of **Five** new subscriptions per week, totaling twenty in February, we will give a **Cash Bonus of \$10.00**

CLASS B BONUS

For an average of **Four** new subscriptions per week, totaling sixteen in February, we will give a **Cash Bonus of \$7.00**

CLASS C BONUS

For an average of **Three** new subscriptions per week, totaling twelve in February, we will give a **Cash Bonus of \$4.50**

CLASS D BONUS

For an average of **Two** new subscriptions per week, totaling eight in February, we will give a **Cash Bonus of \$2.50**

CLASS E BONUS

For an average of **One** new subscription per week, totaling four in February, we will give a **Cash Bonus of \$1.00**

The above Offer is to be repeated each month, January to June inclusive.

Double Bonus

If a subscriber wins **Three** or more **Monthly Bonuses** between January 1 and July 1, 1917 (in any one class or in several different classes), we will **double** his Bonus by sending him on July 16 an amount equal to all the **Monthly Bonus Money** he has earned between January 1 and July 1. Our Offer of a **Double Bonus** will thus enable any Companion subscriber to win as much as \$120.00 in Bonus Money, besides receiving a **Premium** for every new subscription and a **Winner's Gift** on every **fifth** subscription.

Note: (1) Bonus Offers are open to Companion subscribers only, not agents, and are subject to Conditions in October Premium List. (2) The mailing date of your new subscription orders determines the month in which they will be counted.

THE YOUTH'S COMPANION
BOSTON, MASS.

THE GLISTENING EYE

AN American who was recently permitted to observe the arrival of British wounded in England, examine the hospital ship on which they came, and later travel with some of them by hospital train, Miss Jane Anderson, found the experience of deep and moving interest. She has much to say of the complete and often novel and ingenious arrangements and devices for their care and comfort; but what most impressed her was the men themselves. No matter how wasted, crippled and suffering, if they could move a muscle or lift an eyelash, they arrived smiling. Always they made the least of their misfortunes, the most of the joy of returning home, and were touchingly grateful for everything done for them.

During her journey by hospital train she talked with some of the wounded. One of them, a young fellow of nineteen, wounded severely in the chest, told her his story. He had asked her, as she stood at the car window looking out on the fair and fertile English landscape, which he could not see from his low pillow, to tell him "how things looked out there"; and when she had complied, he was ready to converse in his turn.

He had participated in the storming of a line of German trenches. Just as he was throwing a bomb into one seemingly evacuated, to make sure no living defenders remained, he was hit, and sent rolling heels over head to the bottom among the slain. There he remained all night; a gruesome but all-too-common experience, to which, in his crude cockney lingo, he added a touch that seemed rather to belong to the inventive genius of Guy de Maupassant, or some other master of creepy and hair-raising literature, than to simple fact. Yet it was simple and natural enough.

"I was pretty sick," the boy told his listener. "I was lyin' down for a while. Then I was crawlin' round. I was lookin' for a 'elmet,'—the Tommy's favorite trophy from the field,—'but I wasn't hup to much gettin' round there in that dirty, black 'ole. 'And all of a sudden I see an eye watchin' me! Big as an arf a crown it was. Starin' bright it was. An' it kep' on watchin' me. Never see such an eye! It gimme the 'ump. An' I never shut—only when a star-lighter 'ud go hup. Then that eye'd go out. Go out it did. I'd take a look then, an' no eye. Harfter about two hours I couldn't stand it no longer. I crawled hover and 'ad a look on me own. Crawlin' hover heverythin', I was, sticks an' stones an' bodies . . ."

Light-headed with pain and exhaustion and the horror of his situation, the relief when the poor lad reached the horrible and mysterious thing at last and found it nothing supernatural was too much, and he burst into peals of hysteric laughter. For the dreadful eye was no eye at all, but the illuminated dial of a wrist watch on the cold wrist of a dead German officer. Shaken with hysteria, the young soldier could not stop laughing; alone, in the midst of horrors, he laughed and laughed, until the effort of crawling and his uncanny laughter brought on hemorrhage, and he lapsed into unconsciousness, thinking it was the end.

"Get me out all right? Rather! I opened me eyes and a nurse was arskin' arter me 'ealth. A bit of a cap she 'ad and red stripes. And pretty—my word!

"'It's Blighty for me,' I says to 'er."

And he was back in "Blighty,"—that extraordinary, absurd, affectionate new name for old England that her Tommies everywhere in France have bestowed on her,—one of those smiling wounded, whose smiles the American observer found so piteous and so brave.

BOILING THE POISON OUT OF MUSHROOMS

IN The Life of the Fly, J. H. Fabre, the famous French scientist, says some interesting things about poisonous mushrooms. In spite of his conclusions, however, it is still good advice to let any mushrooms that have questionable reputations severely alone. He writes:

During the thirty years and more that I have lived at Sérignan I have never heard of one case of mushroom poisoning, even the mildest, in the village, and yet there are plenty of mushrooms eaten here, especially in autumn. I inspect the baskets of the mushroom pickers, who are delighted at my inspection. I see things fit to make mycological experts stand aghast. I often find the purple boletus, which is classed among the dangerous varieties. I find the ringed agaric, which is stigmatized as fatally poisonous by Persoon, an expert on the subject. I find the Satanic boletus, that dangerous tempter; I find the belted milk mushroom and the smooth-headed amanita.

How, with such careless picking, are accidents avoided? In my village, and for a long way round, the rule is to blanch the mushrooms—that is to say, to bring them to a boil in water with a little salt in it. A few rinsings in cold water complete the treatment. They are then prepared in whatever manner one pleases. In this way, what might at first be dangerous becomes harmless, because the preliminary boiling and rinsing have removed the noxious elements.

My personal experience confirms the efficacy of this rustic method. At home we often make use of the ringed agaric, which is reputed extremely dangerous. I have sometimes used the mottled amanita, so ill-famed in the books, without disastrous results.

It results from these facts that a good preliminary boiling is the best safeguard against accidents arising from mushrooms. When it leaves the purgatory of the stewpan, the doubtful mushroom can be eaten without fear. The mushroom stands the ordeal exceedingly well. There is no loss of succulence, and hardly any of flavor. Moreover, they become more digestible.

THE DIFFICULTIES OF THE THRIFTY

MOTHER B—has brought up a large family on a small income and has, of necessity, been of a very frugal turn of mind. The children are married now, and Father and Mother B— are alone and in comfortable circumstances.

One day their son John called, and his mother showed him three big loaves of bread she had just baked. She complained that she had too much bread on hand, and would have to give him a loaf, and also one to her son Frank, since she and father could not possibly eat it all.

John asked, "Why do you bake so much, then?" And his mother indignantly answered, "Do you suppose I am going to heat that big oven for just one loaf of bread?"

BLUE STREAKS

\$3.00
each

Guaranteed

That bicycle you used to ride—is it rusty and dusty in your garret or woodshed? Bring it back again into service with **Good-year Blue Streak Tires**. Get it out! For **Blue Streaks** have met that bicycle tire bugaboo.

You may now buy really dependable tires—**Good-year Blue Streaks**, everywhere. Tires that let you forget that former high cost of bicycle upkeep.

Goodyear has done that for bicycle folk by making only one bicycle tire, and making that one tire really good. **Blue Streaks** hold fast to a high quality standard. And, they're packed with happy, healthy miles that make your heart glad.

Even with material prices as high as they are today, **Blue Streaks** cost only **\$3.00**.

*Blue Streaks are standard everywhere.

AKRON

"Criminal Negligence"

Skidded, fatally injuring a child, because he neglected to use Tire Chains

The conscience-stricken motorist knows only too well that he is directly responsible for the loss of the child's life. Failure to put on **Tire Chains** before driving over wet and greasy pavements was the actual and immediate cause of the accident and as such constituted "criminal negligence" on his part.

How strange it is that some men are never guided by the experience of others. They wait until the skidding of their own bare rubber tires results in death, injury or car-damage before they believe it necessary to equip all four tires with

Weed Anti-Skid Chains

The Only Dependable Safeguard Against Skidding

The **Public Ledger** of Philadelphia, Pa., said editorially, that the simple adjuration to "Use Tire Chains on Wet and Slippery Pavements" deserved to find its way into a law, and that that law should by all means be enforced.

Weed Chains do not injure tires because they constantly "creep" around so the cross chains do not come in contact with the tires at the same place at any two revolutions.

Stop at your dealer's for two pairs of **Weed Chains** and always put them on before driving over wet pavements and roads.

PENROD AND SAM

A New Book

By Booth Tarkington

EVERYONE fears that the time will come when Penrod will grow up. That dread time, however, is not yet. The new collection of Penrod stories, Penrod and Sam, continues the exciting early history of a "limited bachelor set," which consists of Messrs. Penrod Schofield and Samuel Williams, attended now and then by one Herman, colored.

Penrod here stages a "movie" show with indescribably funny results. The reader becomes acquainted, too, in these pages with a remarkable cat, "part panther or something," a cat which though wanted by the police was not found. There is also a severe outbreak of cavalry in the Schofield neighborhood, an outbreak that rivals the great war. A dramatic incident occurs to Herman, terrified at finding himself in "White Folk's House."

Get Your Copy Free

SPECIAL LIMITED OFFER

Send us before March 1 one new yearly subscription for The Companion and we will present you with a copy of Booth Tarkington's latest novel, Penrod and Sam, author's regular \$1.35 copyrighted edition, sending book to you postpaid.

NOTE: The book is given only to a present subscriber to pay him for securing a new subscription. Act promptly, as this offer is open only until March 1.

PERRY MASON COMPANY, BOSTON, MASS.

SURGICAL TREATMENT OF WILD ANIMALS IN CAPTIVITY

SURGICAL operations on captive wild animals are made necessary by accidents more frequently than by disease. Consequently no two of them are exactly alike, and the surgeon must be both versatile and resourceful. Operations may, however, be divided roughly into the following classes: the removal of excrescences, the treatment of penetrating wounds, the treatment of fractures, the treatment of incised wounds, and the treatment of abscesses. There are certain other operations so rare that they do not properly come under any of these heads.

Paring elephants' corns is the one operation that a veterinarian can count upon performing regularly. The hoof of an elephant consists of an elastic substance not unlike hard rubber. It wears away properly when the elephant is free, but becomes, when the elephant is a captive, abnormally thick and hard, and pains the elephant exactly as a corn pains a human being. And just as a human being wears off the heels of his shoes unevenly, so the elephant, in shuffling about its small inclosure, wears its hoof pads off on one side.

The veterinarian, therefore, must frequently cut away the excess of foot pad to relieve the pressure on the tender flesh beneath, and he must level the hoof so that the elephant can walk comfortably. Fortunately most elephants take kindly to this operation.

Tumors sometimes occur in wild animals. These must be cut out. The surgeon first injects cocaine into the healthy flesh round the diseased part to deaden the pain, and after he has removed the tumor he packs the wound with an antiseptic dressing.

Incised wounds are frequently caused by animals' picking up wire or nails in their feet. A buffalo bull at Bronx Park in New York thus injured himself, and his ankle became badly swollen. The beast was lassoed, thrown, tied by his three well feet, and while six men sat on the struggling brute, Dr. Blair opened the swollen ankle, drained out the pus, removed the troublesome nail, and packed the wound with antiseptic powder. In a week the wound had healed.

Broken legs are common among captive wild animals. Large animals thus injured must be killed at once, but the smaller ones can be saved. An Indian gazelle snapped one of its pipstern legs off short. The leg was put in splints and then in a plaster cast, and bound firmly to the body. For weeks the patient animal went on three legs, and even slept on the side of its body opposite the injured leg. To-day it is as active as ever and does not even limp. Equally fortunate was the outcome of an operation on a guan, a pheasant-like bird from South America. The bird stood patiently on one leg while its broken limb was set and bandaged with a gummy material.

Incised wounds usually result from fighting. An Altai wapiti doe had her belly ripped open by an angry buck and the intestines protruded through the wound. They were washed with antiseptics, and the wound closed with fourteen stitches an inch apart. Then the doe was tied so that she could not get her head to her side to disturb the bandages. She recovered perfectly.

The worst incised wounds that a veterinarian is called upon to treat are those which alligators get in fighting. On one occasion an alligator at Bronx Park had its belly ripped open from snout to tail. Mr. Ditmars, the curator of reptiles, took the beast in hand, washed the protruding organs, sewed the wound, and threw the alligator back into its pool. It recovered fully.

Handling an angry alligator, however, is no child's play. Before a painful operation can be performed the alligator's head must be covered with a cloth in order to blind it. A plank eighteen inches wide is then laid along its back, and the creature is lashed to it fore and aft, so that it cannot move. Then the plank is lifted and the reptile turned over on its back. After that the operation is easy.

Deep-sea fishes have so much air in their bladders that when put in shallow water they turn bottom side up. Before a deep-sea fish can be put on exhibition, therefore, it must be relieved of the superfluous air in its bladder. This is done by thrusting a long, hollow needle into the fish just beneath the pectoral fin. The instant the needle enters the fish's bladder the air whistles out like air escaping from a punctured bicycle tire. When the needle is withdrawn, the opening closes, and the fish is able to swim right side up again.

A cobra at the Bronx Park "Zoo" had been bitten in the jaw, and necrosis of the bone followed. The creature's head was held down firmly under a bamboo rod, and its jaws forced open, while Mr. Ditmars removed a portion of the bone and applied antiseptics. The necrosis continued, however, and it was necessary to remove the entire jawbone. An incision was made at the base of the head, the diseased bone was unhinged, liberated from the muscular tissue, and pulled back through the opening. Then the infected centre was cauterized and the incision closed with fine silk sutures. The operation was entirely successful and the snake, not at all disfigured, is on exhibition to-day.

Although not so difficult a task as that, the pulling of a monkey's tooth was perhaps more interesting. The animal in question is a chimpanzee that was very fond of Dr. Blair. When its cheek began to be painful in consequence of a decayed tooth, the animal readily submitted to the doctor's examination of its mouth.

A keeper held the ape in his arms. Dr. Blair quietly fixed his forceps on the ailing tooth, and before the chimpanzee knew what had happened the tooth was out. But the monkey, like a petulant child, resented the hurt. When it saw the blood on its tongue, it cried like a baby. Then it became angry and tried to bite Dr. Blair. And for a long time the monkey retained its resentment toward its former friend.

A CURE FOR CONCEIT

WHEN lecturing on one occasion in northern England," said Sir Ernest Shackleton, the famous explorer, "before it was time for the proceedings to begin, I took a peep through the curtain to see what kind of an audience I was likely to have. Things looked promising, and I said so.

"Yes," said the chairman, 'I think you are going to have as big an audience as the hand-bell ringers had last week.'

"That is the sort of thing I hear," added Sir Ernest, "and it keeps me modest."

Mitchell
SIXES

Extras You Want In a Car

Mitchell cars offer you hundreds of extras, paid for by factory efficiency. They include

31 Extra Features
24% Added Luxury
100% Over-Strength

Many of these things are found in no other car. Many, when found, cost a too-high price.

You Want Double Strength

In this year's Mitchells, for the first time, we announce 100 per cent over-strength. All important parts are twice as strong as need be.

To this end, many parts are oversize. Over 440 parts are built of toughened steel. Parts which meet a major strain are built of Chrome-Vanadium.

Gears are tested for 50,000 pounds per tooth. Bate cantilever springs have been so perfected that in two years not a single spring has broken.

The result means safety, low upkeep, endurance. And probably a lifetime car.

Unique Attractions

Mitchells have 31 extras which other cars omit. They are things you need and want. On this year's output we spend \$4,000,000 to include them.

And this year we add 24 per cent to the cost of finish, upholstery and trimming. That out of savings made in our new body plant. This brings Mitchells to the farthest limit in luxury and beauty.

These things are due to John W. Bate, the great efficiency expert. He has spent years in our plant to accomplish them. He has spent millions of dollars to build and equip it rightly. He has traveled the world to get other men's ideas.

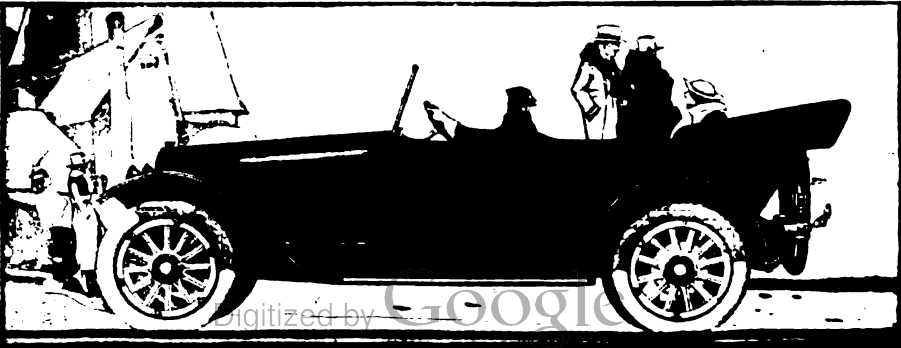

The result is by far the greatest value offered in any fine car. Here to get the highest standard in motor-dom at a modest price.

Also \$1150 Now

This year Mitchell Junior—simply a smaller Mitchell Six—offers you also an \$1150 car. As roomy and powerful as you need for five passengers—larger than most such cars. So you have your choice of a car for seven or five.

TWO SIZES	
\$1460	For 7-Passenger Six—48 h. p. 127-inch Wheelbase.
\$1150	For Mitchell Junior—40 h. p. 120-inch Wheelbase Six.

Ivers & Pond PIANOS

After supplying over 400 leading Educational Institutions and 60,000 homes it is something to be able to say of a piano that it is the most popular upright we have ever built. Such is the attractive style shown above. Musically, it leaves little to be desired. Its simple refined lines, suggestive of the Colonial period, one never tires of. In every sense it wears well. A catalogue, describing this and all our uprights, grands and players mailed (free) on request.

How to Buy

Wherever in the United States no dealer sells them we ship IVERS & POND pianos from the factory on approval. The piano must please or it returns at our expense for Railroad freights. Liberal allowance for old pianos in exchange. Attractive easy payment plans.

Fill Out and Send This Coupon to

IVERS & POND PIANO CO.
115 Boylston Street, Boston, Mass.

NATURE & SCIENCE

A MISNAMED CRUSTACEAN.—Everyone has seen the curious, little flat gray creatures that scurry out of sight when you lift a decayed log or a moss-covered stone in the woods or near the water. They are the Armadillidia, or isopods of the genus Oniscoides, commonly called the armadillo, sow bug and pill bug. They are really not bugs at all, but crustaceans or distant relatives of the crab, with gills provided with air tubes not unlike the air tubes through which insects breathe all over their body. A favorite food of frogs, toads and salamanders, the pill bug itself subsists largely on decaying vegetable matter, and some believe it to be a useful scavenger. According to the Zoological Society Bulletin, the name armadillo was given it because of its habit when disturbed of rolling itself up into a ball, as the mammal of South America does; but the crustacean is shrewder than the mammal, for, whereas the armadillo never uncoils when it is caught or frightened,—and therefore its shell often serves as its own roasting pan in the ovens of equatorial countries,—the pill bug, after rolling itself up once or twice and discovering that it is still in the presence of danger, will give up the useless stratagem and try to make off unnoticed.

SENTENCING THE HAWKS.—The Cooper's hawk and the sharp-shinned hawk, known also as hen hawks and chicken hawks, and certain of the owls, are responsible for most of the evil reputation that attaches to the hawk tribe in the minds of farmers and poultry owners. Those two species of hawks or falcons feed almost entirely on young birds. Nevertheless, ornithologists are not agreed as to the proper attitude that should be assumed toward them. Some maintain that they should be exterminated, but others believe that they help to maintain a proper balance in nature. In that connection, Mr. L. S. Crandall, assistant curator of birds at the New York Zoological Park, says that, although it is possible to agree with the sentiment that no form of life should be completely exhausted, it is not easy to believe that there is such a surplus of songbirds as to require that some of them be removed. Before the advent of man, the depredations of the natural enemies of bird life were of little consequence. But now, when the conditions are so adverse to the rapid increase of birds that it has become necessary to exert every effort to aid them, bird-killing hawks may be regarded as having outlived their usefulness. Sharp-shinned and Cooper's hawks are very abundant in the vicinity of the Zoological Park, and hardly a day passes that does not bring some evidence of their rapacity. A young Cooper's hawk was recently presented to the park, with a letter from the donor, Mr. J. F. Paull, of Wheeling, West Virginia. In the letter Mr. Paull says that, having captured the young bird, he placed it in a cage near its nest. "The first day the old birds brought a young chicken, a mouse, a catbird, a sparrow and a meadow lark, possibly more, which they ate. . . . The other hawk the next day brought another young chicken, a flicker and a ground squirrel." The efforts of those particular birds to remove the surplus among the songsters have been discouraged.

THE COOPER'S HAWK

OPEN THE WINDOWS.—The Department of Health of New York City has been making great efforts to bring home to the people of that city the benefits of fresh air and outdoor exercise in preserving health. Last fall it instituted "Walk-to-Work Day" and "Open-Window Week," which attracted a degree of publicity in the newspapers that has been of great service. One very striking example of the direct relation of fresh air to health, prepared by the department and published in many New York newspapers, is the accompanying diagram that shows the deaths from respiratory

diseases—pneumonia, bronchitis, colds and gripe—in New York City month by month throughout the year. Although it is probable that in a northern climate those diseases will always be more prevalent in winter than in summer, there is every reason to believe that the present high mortality in winter can be materially reduced by breathing more fresh air. The windows of living rooms should be open as much as possible even in mid-winter. By using screens of bolting cloth when the weather is cold or the wind high, it is possible to let in the fresh air and still keep out wind and dust.

HARNESSING A VOLCANO.—In Central Tuscany is a large electric power house that obtains its initial driving power from volcanic heat. In the neighborhood are many cracks in the ground from which powerful jets of very hot steam spout high into the air. Early experiments in using the steam for driving engines failed commercially, for the borax salts, sulphureted hydrogen and sulphuric acid in the steam made necessary frequent repairs, on account of their corrosive action. The difficulty has now been overcome by applying the steam, not directly in the engine, but to a boiler in place of fuel. So applied, it produces steam in the boiler at a pressure of two atmospheres, which is then passed through a superheater, and so to the steam turbine used for driving electric generators. Prince Ginori-Conti, who has financed the undertaking, has made three large installations on that system. One of three thousand kilowatt units has been at work since January, 1916, the second since April, and the third has just been started. So far, the first two groups have worked very successfully, and have been a great boon to the industries of Tuscany, which are under a great disadvantage owing to the scarcity and high price of coal. Since the region available extends for many square miles round Larderello, there is nothing to prevent the installations from being increased until they produce hundreds of thousands of horse power.

Equal to Every Requirement of the Home Sewing.

If You Will Need a New Sewing Machine Soon—

For more than a *third of a century* the New Companion Sewing Machine has been serving American homes—served so well, in fact, that thousands upon thousands have been sold. This machine is ideally equipped to meet every requirement of the home sewing. It has all the most modern attachments and improvements, including several new features to be had on no other machine, is furnished in five different styles (both Electric and Foot Treadle), is warranted for 25 years, and delivered freight paid to your nearest freight station. Moreover, because of our unique system of selling direct from the factory to you, we can sell you this high-grade sewing machine at a price you would ordinarily pay for a machine of inferior quality. This is all clearly explained in our free illustrated booklet.

Our "Get Acquainted" Offer

An Aluminum Egg Separator, a most useful addition to any kitchen equipment, will be presented to each person who writes for our free illustrated booklet within the next thirty days. As the purpose of this Offer is to place our booklet in the hands of interested persons, the Egg Separator will be sent only to bona fide inquirers, those who are really planning to purchase a sewing machine of some kind this spring.

Aluminum Egg Separator

To Get the Egg Separator write us as follows:

"I expect to purchase a new sewing machine soon and would be interested to know more about the New Companion. Please send me your descriptive booklet, also the Aluminum Egg Separator as per Offer. I understand that my acceptance of the Separator places me under no obligation to purchase the New Companion unless I so desire. Inclosed find five cents to pay postage, packing and handling charges on Egg Separator."

Write to-day. This Offer is limited to 30 days only

How Can I Earn Some Money?
What shall I do to earn the money so necessary to the welfare and happiness of my family? This is a question thousands of women are asking themselves every day. They need more money—to meet the increased cost of living—to pay off a mortgage or buy a home—to educate their children—to pay doctors' bills—there are many reasons why. Many of them have been helped in this problem and now have money to spend and permanent assured incomes by becoming our representatives and selling our

World's Star Hosiery and Klean-Knit Underwear
to their friends and neighbors. As we have shown them, we can show you a fine independent way to have more money to spend. **We Have Helped More Than 12,000** They are now enjoying large and prosperous businesses with constantly increasing sales. With our help their incomes are growing larger every day. You can do the same as they have done. Sell World's Star Hosiery and Klean-Knit Underwear in your home town. No previous experience is necessary. Our advertising makes sales easy—the quality holds the trade. Write today! We give you protected territory and prompt deliveries. We have been in business here for twenty-two years.

WASHINGTON'S MULES

FEW people know that George Washington, according to his own account, was the first American to try to raise mules. Soon after the Revolution, says Mr. Paul Leland Haworth in George Washington: Farmer, he asked our representative in Spain to ascertain whether it would be possible "to get permission to extract a Jack ass of the best breed." At that time the exportation of those animals from Spain was forbidden by law, but Señor Florida Blanca, the Spanish minister of state, brought the matter to the attention of the king, who, in a fit of generosity, sent to the American hero two jacks and two jennets. One of the jacks died on the way over; but the other animals, in charge of a Spanish caretaker, reached Boston, and Washington dispatched an overseer to escort them to Mount Vernon, where they arrived December 5, 1785. An interpreter, named Capt. Sullivan, was brought down from Alexandria, and through him the general propounded to the caretaker many grave inquiries regarding the care of the beasts, and set down the answers carefully in writing.

Royal Gift, as the ass was duly christened, probably by the negro groom, Peter, was a large animal. According to measurements taken on the porch at Mount Vernon, he was fifteen hands high, and his body and limbs were large in proportion to his height; his ears were fourteen inches long, and his vocal cords were powerful. He was, however, a sluggish beast, and the sea voyage had affected him so unfavorably that for some time he was of little use. In letters to Lafayette and others, Washington commented facetiously upon the beast's failure to appreciate "republican enjoyment." Ultimately, however, Royal Gift recovered his strength and ambition, and proved a valuable piece of property. He was presently sent on a tour of the South, and while in South Carolina was in the charge of Col. William Washington, a hero of the Cowpens and other battles. The profits from the tour amounted to \$678.64, yet Royal Gift seems to have experienced some rough usage on the way, for he arrived home lame and thin and in a generally debilitated condition. The general wrote to the colonel about it thus:

"From accounts which I have received from some gentlemen in Virginia, he was most abominably treated on the journey by the man to whom he was entrusted, for, instead of moving him slowly and steadily along as he ought, he was prancing (with the Jack) from one public meeting or place to another in a gate which could not but prove injurious to an animal who had hardly ever been out of a walk before—and afterward, I presume (in order to recover lost time), rushed him beyond what he was able to bear the remainder of the journey."

No doubt the beast aroused great curiosity along the way among people who had never before set eyes upon such a creature. We can well believe that the cry, "General Washington's jackass is coming!" was always sufficient to attract a gaping crowd. And many would be the sage comments upon the animal's voice and appearance.

In 1786 Lafayette sent Washington from the island of Malta another jack and two jennets, besides some Chinese pheasants and partridges. The animals landed at Baltimore in November and reached Mount Vernon in good condition later in the month. To Campion, the man who accompanied them, Washington gave "30 Louis d'ors for his trouble." The new jack, the Knight of Malta, was a smaller beast than Royal Gift, and his ears measured only twelve inches; but he was well-formed and had the ferocity of a tiger.

By crossing the two strains, Washington ultimately obtained a jack called Compound, who united in his person the size and strength of the Gift with the courage and activity of the Knight. The general also raised many mules, which he found to be good workers and more cheaply kept in condition than horses.

AN OLD-TIME TOOTHACHE

A RECENT visitor to the mountain regions of North Carolina and Tennessee reports a community where, when anyone has endured all he thinks it worth while to endure from an aching tooth too firm or too far back to be conveniently dealt with by the door-and-string method, he resorts to the only person in the neighborhood who combines the necessary strength, skill and experience—the blacksmith.

This is a variation on the custom of primitive times, before the day of dentists, when such offices were usually intrusted to the barber, the local healer and bonesetter, or the itinerant quack. None of these men, although they were perforce employed, was held in much esteem. Dentistry as an important and respected profession is recent indeed. Nevertheless, even in old times, the sufferer occasionally turned for aid to an individual of dignity and consideration. It was so with young Ann Milvord, a "comely and virtuous maiden," whose teeth gave her a great deal of trouble more than two centuries ago.

Toothache was common then as now,—probably more common then than now,—but there was something strange, sinister and suspicious about Ann's toothaches. They came only on Sundays! Sitting in a drafty pew in an unheated meetinghouse in the dead of winter until the minister reached thirtiethly had doubtless a good deal to do with what we should probably diagnose as severe neuralgia, but they did not call it neuralgia then. They called it "the devil's pranks with a poor, pious girl," and the parson was called upon to pray for her relief.

"She aaked so sorely at times as to weep and mone, it coming upon her of a sudden upon the Sabbath dureing the preaching, so that she was ashamed and distressed butt yett could not containe herself, for the paine ran about among her teeth and disported betweene her jaws as it were a live impe of the devill who sent it for her confusion and distraction. And that it did not afflict her except onely upon the Sabbath could not be understood except as a sure signe of whence it came. Her teeth and mouthe were looked to with most careful tendence between Sabbaths, and washed daily with a strong washe of herbs and rubbed with certaine rootes frayed to a fringed, but to no availle, and this for near upon two moneths. But upon the parson praying and exhorting that the devill depart and leave the girl untormented, sudaine he went and she aaked no more."

It may have been the "devil" that departed, or it may have been merely the cold weather; but Ann and her friends had no doubts upon the subject. They were sure it was the "devil."

Lewis-Built Homes Solve the Problem \$595

How can you build a home this year, in the face of rising costs? The extravagant waste—exorbitant prices—compounded profits—extra labor and tedious delays of the old-fashioned building method can be avoided! There's a newer, better, quicker method, already tried and approved by thousands of home builders.

Machine-Cut Houses By the Lewis Modern Method, you buy your house complete, with all lumber and millwork cut-to-fit by machinery; everything shipped together, direct from factory, at lowest, inside, wholesale price. You choose your home from 100 selected designs; you get the latest ideas in convenience; your Lewis-Built Home contains the finest grades of lumber.

Catalog Explains Modern Method of Home Building Shows 100 photos of modern Houses, Cottages, Bungalows; quotes full specifications and tells exactly what is included for the one price; shows full floor plans; offers money-back guarantee of satisfaction. No More After March 15

At These Special Terms

On March 15 will terminate one of the most popular book offers of the season. All orders for the book mailed at your post office after that date can be accepted only upon a new basis, requiring the payment of an extra amount in cash in addition to the new subscription.

When a Man's a Man

Harold Bell Wright's latest book, is a novel pure and simple. It combines the bigness and virility of The Winning of Barbara Worth with the sweetness and simplicity of The Shepherd of the Hills, two of Mr. Wright's former successes.

This is the seventh consecutive success of the author, and the best novel he has written. Best, because it is strongest in love, mystery, action, nature description, pathos and sentiment.

Your Copy Free If You Act Now

Send us one new yearly subscription for The Youth's Companion and we will present you with a copy of Harold Bell Wright's latest and best novel, When a Man's a Man, author's regular \$1.35 copyrighted edition, sending the book to you postpaid. Act promptly as this offer is good only until March 15. We do not offer the book for sale.

It is given only to a PRESENT subscriber to pay him for securing a new subscription.

PERRY MASON COMPANY, BOSTON, MASSACHUSETTS

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the date on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

THREE ESSENTIALS FOR CHILDREN

IN an earlier number we said that children, if they are to become strong men and women, must have proper food, proper air and proper rest. It would be a very good thing if all mothers could be trained to recognize the danger signs that show that there is a deficiency of any of the three. With respect to proper food, the digestive disturbances of young children are easily enough recognized. Sometimes the fault is with the kind of food, but more often it is with the quantity that is permitted. In these respects children differ just as adults do. It does not always follow that because one child thrives on unlimited quantities of a certain food it will suit the next child as well; stomachs vary in tolerance at every age. The good physician always stands ready to work with the mother in determining the proper quantity of food for a child to have.

In the case of ventilation more has to be left to the mother's discretion. The doctor may say, "Have plenty of fresh air," and the mother may honestly think she obeys; and yet the nursery may be an abomination of pink-ribbed stuffiness, and "colds" and coughs may be the constant portion of the family. With proper coverings, and screens to protect them from direct currents of air, children can sleep in the open air all night, and they will be all the better for it.

Still more must the question of rest be left to the mother. A child who wakes very early in the morning has used up an enormous amount of nervous vitality before bedtime comes round again. Nervous parents often have nervous children, and unless a strict régime can be established the inherited nerve fatigue will show itself early.

The signs of fatigue should be carefully observed. A child never says in words, "I feel absolutely exhausted," but he says it in excitement, in irritability of temper, in tired eyes, and especially in wakefulness. All children should be good sleepers; if they suffer from insomnia, something is wrong. Sometimes the trouble comes from too much romping and excitement just before bedtime. That is a great temptation to both parents and children, but it should be resisted. The feet of a wakeful child are often cold; that shows that its circulation is poor and that there is a tendency for the blood to go to the head. A warm bottle at the feet is serviceable in such a case.

TIME CLOCKS AND CONVERSATION

DOWN the road came a swirl of blue and white and a glint of copper-colored hair; blue and white and copper color flashed up the lane and through the hedge. Miss Lambert smiled to herself. It was Kathleen, with a new discovery in life. Kathleen had many ways of appearing, all of them her own, but only the most breathlessly exciting things of all came through the hedge.

"O Miss Frances!" Kathleen was on the steps now. "Miss Frances, you know that talk of Miss Hilyard's that I told you about—about how we could find out what we really were, pretty well, if we watched our own talk for a week—the amount of time we spent on different things—dress and gossip and boys and all that? 'Time Clocks and Conversation,' she called it."

Miss Frances nodded. "I remember. What kind of a person did you discover yourself to be?"

"Oh, me!" Kathleen blushed and then twinkled. "You see, I never succeeded in timing myself. I get so terribly interested in what we are talking about that I forget all about it till the very tip end, when everyone is going. And then it's too late. But I've been listening to other people. I've had first-rate chances at them—people who come in to see grandmother, when I have to be polite and give them tea and things, you know."

Miss Frances knew. There were not many things about Kathleen that Kathleen had not kept her fully posted about.

"Well, you know how 'tis. They forget all about you in a few minutes, and then you just have to sit. And I was being bored to death when I suddenly thought of Miss Hilyard. So I began to count. Old Mrs. Meeker was there, and how do you think she averaged up?"

Miss Frances, prudently keeping her eyes upon her knitting, declined to commit herself.

"Forty-nine minutes that woman talked gossip," the young voice declared, "sheer, clear, unadulterated gossip! Grandmother tried to shift her to the new library and half a dozen other things, but she didn't stay shifted two minutes. Just think—forty-nine minutes!"

"That isn't what you came to tell me, Kathleen," Miss Frances observed.

"Now, how did you know that?" Kathleen cried. "If I could only just surprise you once!" She drew a breath of disappointment, but she was too eager to tell her discovery to waste more than a breath. "But you're right; that wasn't my discovery. Well, Mrs. Meeker had hardly gone when Miss Allen came in. I always like Miss Allen, she tells such interesting things. When she went I glanced at the

clock without thinking and found that she had been there forty minutes, and everything she talked about was gossip, too; but—it was all so different! It was all lovely things about people. You felt as if the world was such a nice place to live in. And then—suddenly I made my discovery. Miss Hilyard was only half right after all; it isn't only what you talk about; the way you talk counts just as much!"

"Bravo, Kathleen!" Miss Frances responded.

MARINERS, ALL

NANTUCKET speech is a museum of nautical expressions. When a Nantucketer has luck, says the Boston Transcript, he is "running before the wind." To "scud" is to hasten, and one who becomes involved in his statements is "off his soundings." Anyone who is quite out of health is "keel-out." "I've been keel-out for a week with the gripe." Whaling terms come in here, too; for when a man says he is "Pretty nigh fin out," he means that he is "all in"—in reference to the fact that the dying whale rolls over on its side, showing a fin above water.

"Tending the kettle halyards" means, with women, doing housework. When a man gets excited in argument, he is told to "ease off." When your guest departs, you say, "Well, a fair wind to you." A man past threescore is "to the north'ard o' sixty." Every figure is derived from the sea.

When Obed Gardner, master mariner, wrote his will in 1841, he worded it as follows:

"Item. I have cruised with my wife, Huldry Jane, since 1811. We signed articles in town before the preacher on Independence Day. I want her and my son, Jotham, to be captain and mate in bringin' to port whatever I leave, and to see that every one of the crew gets the lay as writ down on this paper. I put mother in command. I know sheel be captain anyway, for six months after we started on our life cruise I found that I was mate and she was master. I don't mean that she ever mutilated, but I know that whenever we didn't agree she always manouvered to windward."

As for whaling, a Nantucket boy tied one end of his mother's darling cotton to a steel fork and tried to harpoon the family cat. As the animal sought to escape, his mother entered the room and picked up the ball. "Pay out, mother! Pay out!" screamed the boy. "There she sounds through the window!"

LIFE ON AN ANTARCTIC ISLAND

SHACKLETON'S men, marooned on Elephant Island, whose death from starvation was predicted if they were not presently rescued, do not appear to have been in real danger of any such fate. A letter from one of them, written at Punta Arenas, and published in the London Chronicle, describes their life on the island:

The day began with breakfast, which consisted mainly of penguin fried in blubber, with a drink of water. The morning's duties were clearing away snowdrifts and catching penguin. Lunch was served at one o'clock; it consisted of a biscuit and raw blubber. The afternoon was occupied with regular exercises over a track one hundred yards in length.

At five o'clock, when darkness fell, came dinner, consisting of penguin breast and beef tea. Lacking tobacco, the men smoked grass from the padding in their boots. Their pipes were carved from birds' bones and wood. The members of the party took turns in reading aloud from the only available books, namely, the Bible, an encyclopedia, Browning, Bacon's Essays and Carlyle's French Revolution. Saturday evening was always marked by a concert, the feature of which was banjo playing. A banjo was the only musical instrument in camp.

On one occasion there was a welcome addition to the diet; we found several undigested fish in the stomach of a seal, and greatly enjoyed them. They were the only fish we caught during our stay. In August there was a change in our diet, for we could gather limpets and use seaweed as a vegetable. We were in the midst of one of these seaweed and limpet lunches when the rescue boat was sighted. "When was the war over?" was the first question we asked.

ENLIST AT SUCH A TIME!

AMUSTERING officer, in the early days of the war, before England was aroused, says the Chicago News, met on the street of a coast village a strapping fellow about twenty-one years old. The officer hailed him.

"See 'ere, me lad," he said, "are you in good 'ealth?"

"I are," said the youth.

"Are you married?"

"I aren't."

"'Ave you anyone dependent on you?"

"I 'ave not."

"Then your King and country need you. Why don't you enlist?"

"What?" he said. "With this bloomin' war goin' on? You must think I am a silly fool!"

TOO COMMON TO BE WORTH MUCH

LITTLE red-headed Mike Casey got a job as office boy for the president of a large Western railway. After he had been upon the job several days, they gave him a form to fill out with his "Personal Record."

When young Mike came to a particular paragraph that said, "Have you any visible marks for identification in case of accident or death?" he rose from his chair and rushed over to a mirror near by, to give himself a general inspection. Then he returned to his task and wrote as his answer to this personal query, "Nothing except freckles."

A GENEROUS BENEDICT

AYOUNG mountaineer brought his sweetheart to the justice of the peace to get married. After the ceremony, the young man said:

"Well, judge, how much do I owe you?"

"The law allows me a dollar, but some give me a little more."

"So?" said the bridegroom, as he pulled out a quarter, two dimes and five pennies and dropped them into the astonished judge's hand. "Well, here's fifty cents; with what the law allows you that makes a dollar and a half, and you can consider yourself well paid for a half hour's work."

Buy it whole — so delicious your family will want it often

So popular are they for their flavor, that thousands of women buy "Swift's Premium" Hams whole.

They find that with a whole Premium ham they can give their families a greater variety of dishes than with any other meat—each dish so good that the family asks for it over and over again.

You would understand why the flavor of "Swift's Premium" Ham is so delicious if you could see the care and skill which is lavished on every detail of preparation. Experts select the very choicest hams. They are given a special cure which

takes longer, is more expensive and troublesomen than that ordinarily used, but which produces a far more delicious flavor. In the spicy, fragrant smoke of hickory wood, all the mellowness, all the savor is brought out. Even with all this care, only one ham out of five is considered so perfect as to be branded "Swift's Premium."

Get one of these hams today and see how much your family enjoys its flavor—how quickly it disappears once they taste it.

Here's the "Bike" To Bring You Joy And Profit, Boys!

FAST as a grey-hound! Comfortable, easy-running, dependable. Good to look at—but *better* to ride. That's a

Dayton Bicycle

And, best of all, a Dayton Bicycle can actually mean money in your pocket. This new booklet, written especially for boys will show you *how*.

FREE TO BOYS Here, boys, is a fascinating book that actually tells you 50 different ways in which you can make money with a Dayton Bicycle. You are ambitious. You want to be a good business man—and you're ready for good, live, money-making suggestions. Here they are. Write us today, asking for Booklet No. 12. It is free.

Dayton Bicycles have been made by this company for 22 years and are backed by a straightforward five-year guarantee. A Gold Medal at the Panama Pacific Exposition is just one evidence of the Dayton's unusual merit. Made in 7 models. Ride a Dayton *this* year—and you'll ride one *every* year. And remember! The booklet above is free to you. Write for Booklet No. 12 today.

HAS HUNDREDS OF USES

Libby's

own way to serve their most popular foods

Dishes you have always wanted for your family

You, as a housewife and mother, have your ideal of cooking. You want your dishes to be so appetizing they make your husband and children greedy!

For over fifty years, our ideals have been the same as yours. For over fifty years, our chefs have applied their marvelous skill to the problem of developing to the full, the natural flavor of each food we prepare.

Now, we want you to get an even greater benefit from these delicious flavors. So we are printing here, in your Companion, tested recipes which our chefs suggest for preparing our food. The same experience and skill which developed the original flavor will now help you make these foods into dishes your husband and children will want two and three times a week!

Begin this month to add our immaculate, white-tiled kitchens to your home. Some day perhaps you will join the thousands who come yearly to see for themselves how the Libby flavor is developed. For every food there is a department, and in every department a white-hatted chef, high in his profession, presides over white-uniformed assistants. He has made a life-study of the particular food which he is cooking. He has studied its flavor through every stage, until you place it on your table. Let him serve your husband and children!

Try these recipes! Let them help solve your daily problem of meal-planning—help you prepare the dishes you have always wanted for your family.

FOUR FREE BOOKLETS

On request, we shall gladly send you any of the following books. Send a postal for them today:

- (1) A Trip Through Libby's White Enamel Kitchens—fully illustrated.
- (2) How to Use Libby's Evaporated Milk.
- (3) Delicious Ways of Serving Asparagus.
- (4) How We Serve Hawaiian Pineapple.

LIBBY'S SPECIAL PINEAPPLE SALAD

Both beautiful to serve and wholesome. Arrange the slices of Libby's Sliced Hawaiian Pineapple in salad glasses. Put a small ball of cream cheese, well mixed and seasoned with paprika pepper, in the center; then garnish with slices of Libby's Stuffed Olives. Serve with a paprika dressing made from Libby's Olive Oil, flavored with lemon juice instead of vinegar.

ASPARAGUS SALAD—NEW YORK'S FAVORITE

A delicious salad is made from Libby's California Asparagus on lettuce hearts, garnished with Libby's Pimientos and served with a French dressing. This salad brings out especially well the full flavor of Libby's Asparagus. It is being served more and more by New York hostesses.

HAWAIIAN PINEAPPLE PIE

A new pie your entire family will enjoy! The rich pineapple filling and the creamy meringue make an irresistible combination.

For the filling, take one package of Libby's Grated Hawaiian Pineapple, two well-beaten yolks of eggs, two tablespoonfuls of cornstarch. Cook in a double boiler until thick. Bake your crust; then pour the filling in, then cover with a meringue. Brown lightly in the oven.

Portions of the fruit not used in any of these recipes should not be wasted, but should be served at other times in other recipes.

A FAMOUS SOUTHERN COMBINATION

A dessert which the wonderful cooks in the South have made famous. Make individual molds of hot boiled rice. Cover with a meringue made from one egg and one teaspoonful of powdered sugar, beaten to a stiff froth and flavored with lemon juice. Brown lightly in oven. Garnish generously with Libby's California Peaches. Easy to make, yet delicious.

Green Olives from Spain! The relish famous all over the world! We send our own men to Spain—import all of our olives direct. That is why we can secure for your table the finest flavored olives grown. Order Libby's Olives from your grocer. You will appreciate at once their noticeably finer flavor.

FRUIT COCKTAIL VANDERBILT

Originated by hotels, has been taken up by fashionable hostesses everywhere. This new fruit cocktail combines Libby's Hawaiian Pineapple, Libby's California Cherries, Libby's Peaches and Libby's Pears. Open the packages of fruit, cut to the size preferred, then chill. Fill dishes with chopped fruit; when time to serve, pour over dressing of mayonnaise, whipped cream, powdered sugar and a little lemon juice, beaten together.

Support your brush

Your brush can't do it all. You must support it in its fight for clean teeth. You must give it help in building for health and strength.

Bring Colgate's Ribbon Dental Cream to the aid of your tooth brush — and watch results. It tastes good and does good. Buy a tube today — or if you prefer, send 4¢ in stamps for a trial size.

TWO DOLLARS A YEAR · FIVE CENTS A COPY

AS Reuben came into the kitchen with some firewood, Rusty called rather fiercely to him from the pantry. The girl was preparing breakfast. She had quickly learned the ways of the household and did her work well. Until now she had done it cheerfully also; but this morning she neither sang nor whistled, but frowned and banged things round in the first fit of ill temper that she had had during the ten weeks she had been with Miss Penny. It had come upon her suddenly and unaccountably while she was fastening her red velvet collar before the mirror as she dressed.

Rusty was well named—or nicknamed. Her hair, long, thick and a little wavy, was of that tawny shade that is called red in hair, but that in fabric or drapery is properly described as golden brown. Her brows and lashes and even the freckles on her nose were of the same russet or rust color, and so were her eyes, except that they were brightened by streaks of green radiating from the pupils. Her skin was fair and fine and white, her lips unusually red and beautifully curved; but her mouth was large and her nose what is called a "pug." Apparently everyone shared her own opinion that she was utterly and hopelessly ugly.

Much of her violent temper was really owing to sensitiveness about her personal appearance; it had indeed increased greatly after she had entered the intermediate school and learned through the teasing of the little boys that to be red-haired is to be a butt for the jokes of your mates. In self-defense she had learned to ward off teasing and ridicule, first by pretending not to care, later and more successfully by making fun herself of her red hair and freckles. None the less she had only grown more sensitive as she grew older. This morning it was the unbecoming red velvet against her face that had brought on the fit of temper.

Rusty did not know that that was the cause of her ill humor. She had worn red ever since she could remember, and never dreamed that it made any difference in her appearance. She had a second cousin in New York City who was about her height and who apparently grew at about the same rate; and her discarded but little-worn clothes were regularly sent to Rusty. They were always of excellent material, and well and attractively made; but the cousin was a brunette, and the dresses and jackets were almost invariably red, and generally scarlet. No color suited Rusty less.

The girl admired and liked Reuben Cartwright with all her warm heart, but this morning she deliberately tried to quarrel with him.

"Reuben!" she shouted from the pantry, and then appeared on the threshold with flushed cheeks. "For goodness' sake, leave that wood box alone! You never let me get anywhere near the bottom of it! I always have to take wood off the very top, and I'm sick and tired of it. I'd just like to fling every stick in your arms through the window, glass and all."

Reuben gazed at her over the armful of wood, startled and amazed.

"I'll take it out, Rusty," he said. "I suppose it is drier underneath."

Her eyes fairly blazed. "You know that's not what I mean, Reuben Cartwright! It's only that you make me—sick, you're so everlastingly good! Why don't you be content with filling the wood box when it's empty?"

Reuben went out with the wood. When he returned with the spring water for breakfast,

In Ten Chapters

By Joslyn Gray

Chapter Two

Rusty's flash of temper had died down; but she was not yet out of the gloom.

"Honestly, Reuben, don't you get tired of being so good all the time?" she asked. "You are just like an old man. You don't seem to care about anything except doing things for other people before they even know they want 'em. Why don't you play sometimes? You're only fourteen. Why don't you hang round after school and cut up shines with the other boys?"

Reuben's face clouded.

"I don't seem to want to," he said. "Sometimes, Rusty, I wish I did. I haven't played—or anything—since my mother died, and—I guess I've forgotten how. I always had to look out for my father, you see, and do for him."

"Well, Reuben, you could do for people just as well if you were a little more lively. The boys would like you better, too. Of course the girls like you, because you're good-looking."

Reuben flushed. Rusty disappeared into the pantry, and returned with a basket of eggs.

"As for me, I'm going to have as good a time as ever I can," she went on, carefully dropping the eggs into the boiling water. "I don't want to be old and serious until the time comes when I must. I'd just love to go into society and wear pretty dresses and dance till three in the morning and be called vivacious."

Rusty's eyes shone now. Then they clouded again and her voice became yet gloomier.

"My goodness! What's the use of my talking that way! No one ever calls you vivacious unless you're pretty. And it would be jolly hanging round till three in the morning and

no one dancing with you because you were such a fright."

"O Rusty," the boy protested, "you're no such thing!"

But to Rusty his words carried no conviction. She took out the eggs, started to answer, but choked and fled upstairs. When she came down after breakfast was over, she had been crying, and was of course aware that she looked worse than ever.

Reuben went to school greatly distressed, but a glimpse of Rusty at recess in the midst of a group of girls reassured him. She was laughing and talking and they were hanging on her words; for in truth the girl was a general favorite. And when later she spoke to him jestingly of the incident that morning, saying that she had feared that if he piled the wood too high it would catch fire from her red hair, he supposed that that was the end of it.

His mind then turned to her criticism of himself. And the more he dwelt upon it the more keen and just it seemed to him. He was, he admitted, more like a grown man than a boy in his first year of the academy. He liked to take care of the pony and the cow, to work in the garden, to study and read, but he did not care much about playing with the other boys. The fellows liked him well enough, partly, he supposed, because he could play football better and run faster than most of them; but Rusty found him wanting.

There was just one young thing that he liked to do, and he wondered why he had not told her. He liked to run, to race when he was by himself; to have things whiz by him as they do when you ride a bicycle. My! But it would be fun to own a bicycle!

Old longings revived in him. He had begun to want a bicycle just before his mother had died. And suddenly, as those longings came back, a light flashed upon him. It was just after that time that he had—well, sort of given up being a boy. Perhaps a bicycle was what he needed now. It might be that if he had one he could recapture the lost youth that lay between his first dreams of owning a wheel and this afterthought, as it were. If so, it would be worth getting a bicycle if only to please Rusty.

He found that he could get a good secondhand wheel for fifteen dollars. He had eight dollars already, and it would take him until March to save the rest. However, as the roads would not be good before April he had plenty of time. He seemed to himself almost to grow young at the mere thought of riding a wheel.

He was to go to Wenham to make the purchase the first Saturday in March. He went to school Friday happy in the anticipation; but when he returned home at night he had forgotten his intended purchase. For just before the close of the session, Mr. Phillips, the head master, had made an announcement of great moment to Reuben's class. A certain Col. Wadsworth of New York City, who had been graduated with the first class—of three members—at the academy, wished to celebrate the fiftieth anniversary of that occasion, two years from the coming June, by awarding a prize to the member of the graduating class of that year who should have the highest record for those two years. The prize was in the form of a scholarship covering the full expense of a college course.

Reuben's heart beat high as he rushed home. He had already decided to work his way through college somehow, and here was a wonderful chance to work for it simply by doing what he liked best to do. He could not help knowing that he had no rival in the class.

Rusty might have been a rival, but she had no ambition for anything except society and fine clothes. And yet—perhaps she could be roused. As soon as he had finished his chores Reuben sought her out.

He found her in the kitchen paring potatoes. She wore a long, blue-checked gingham apron that entirely covered her red dress. Her eyes were very bright, her cheeks deeply flushed. In the soft light of the late afternoon her hair looked tawny like a lion's mane, instead of red. Reuben gazed at her in amazement. Rusty was almost pretty! It seemed to him that she was really pretty!

He realized that she was excited, and supposed that it was owing to the announcement of the prize. In truth, the girl was ready to burst into tears. Her feelings had been terribly wounded.

In a way she had brought it upon herself. When she entered the academy, she had gone on as at the grammar school, calling attention to her red hair and freckles, joking about them, and seemingly inviting others to do the same. Even the teachers had noticed how ready she was to laugh at her red hair; indeed, it was Mr. Phillips himself, whom Rusty adored next to Mr. Langley, who had hurt her feelings.

The English class were reading a passage in which reference was made to a monument in the New Forest marking the spot where a chance arrow had felled a king. Although the class had studied English history for nearly a year, no one could name the king. After prompting them in vain, Mr. Phillips turned to Rusty.

"You ought to know, Miss Miller," he

said, referring to her quick memory. But even as he spoke he saw the other meaning to his remark, and smiled in spite of himself. And when some one shouted "Rufus!" everyone laughed. Rusty laughed with the rest, and, although she paled, no one dreamed that she was suffering torture.

When Reuben spoke eagerly of the prize, she turned upon him fiercely.

"Oh, yes, it's fine for you, no doubt, Reuben, for you'll get it! No one else has any show."

"You might have if you liked, Rusty. Why don't you go in for it?" he urged.

"What would I care about it?" she demanded bitterly.

"I should think you'd want to go to college, but anyhow it would be fine to be at the head of the class, and you could be easily."

"Do you suppose Helen Martin will try?" she asked quietly.

Helen was the prettiest girl in South Hollow, —or in Farleigh either, for that matter,—but she was not much of a scholar.

"Oh, no, Rusty!" he answered, surprised.

"Or Margaret Hatch?"

"Why, I shouldn't suppose so, should you?"

Then Rusty burst forth. With blazing eyes and flaming cheeks she poured out a torrent of reproaches that quite overwhelmed the innocent Reuben.

"Oh, no," she cried, "of course you wouldn't expect Helen to, or Margaret, or Emma Fields! Oh, no! They don't need to be smart! Oh, no! They're pretty, and that's enough! You're like everyone else, Reuben Cartwright. You think just because I'm red-headed and ugly and

poor that I ought to be smarter in school than anyone else, and never dare to turn round or break a rule or have any fun. But I just won't stand it! I'm just exactly as human as if I were pretty, and I'm going to begin and be just as bad as I know how. And if I get expelled I'll go home, but I won't stay there! I'll run away as my sister Anna did!"

And Rusty, who never did anything by halves, swept the basin from her lap to the floor, where the potatoes and skins spread over the white boards that she had herself washed, and, burying her head in her arms upon the table, began to sob wildly.

Reuben stared at her until he felt about to choke; but Rusty continued to sob, and he could do nothing to help her. The window faced the west. A rich afterglow filled the kitchen with a soft golden light that fell on Rusty's bowed head. Her neck looked as white as marble. Little tendrils of hair curled about it, and her heavy braid hung halfway to the floor. Her hair did not seem at all red to Reuben now; it was like sweet fern in the fall with the sun shining on it. It seemed almost as if it had changed color. Oh, if only it had!

"Rusty," he said suddenly, "you're mistaken! Your hair's pretty. It's—beautiful!"

Rusty raised her head and confronted him. "Reuben Cartwright, how dare you!" she cried. "It's a lie!" And rushing from the room, she stamped heavily upstairs.

The next day she was penitent and subdued and very sweet. But she looked white and really worn; and now Reuben knew that it would all come back: she would have it all to

go through again—not once only, but again and again. And looking ahead in his old, wise manner, he saw that life would be very hard for a girl who suffered so keenly over what could not be helped.

At least, he supposed it could not be helped. And yet, her hair *had* looked pretty in the golden light, and even before that he had noticed how attractive she was in the checked apron with the little puckered frill standing up about her white throat.

As Reuben walked to Wenham that morning, in order to make his momentous purchase, his mind was constantly on Rusty. Suppose she should wear the gingham apron all the time? She would not, of course. Girls did not wear aprons to school any more than boys wore overalls. What did the other girls wear, then, that made them look attractive just as the checked apron had made Rusty seem pretty?

Helen Martin wore blue; he remembered hearing people say that such and such a ribbon or tie matched her blue eyes. Margaret Hatch wore brown, although, he believed, it was like her hair, and some of the boys thought she was prettier than Helen. It would of course be easier to match Rusty's hair, for it was hard to tell what color her eyes were.

Just then the minister came out of the parsonage on his way to the post office, and he fell in beside Reuben. They had not walked far, when they met Margaret in a brown knitted jacket and cap that were indeed just the color of her brown hair.

"Which do you think looks better," Reuben asked, just before they reached the post office,

"for a girl to wear a dress that matches the color of her hair or of her eyes?"

Mr. Langley's face was quite serious. "Which way was Margaret's just now?" he asked. "That seemed to me just right."

"Like her hair," said Reuben.

"I should certainly have them match her hair, then."

Reuben proceeded along the Wenham road, but when he reached the Miller house he hesitated, stopped, and finally went inside. He asked Rusty's mother in confidence for the address of the cousin in the city who sent Rusty the dresses.

That evening he told Miss Penny in private that he had given up the bicycle because he would rather have fifteen dollars' worth of something else. He never told her or anyone else what that something was. That night he wrote a letter:

Dear Mrs. Rachel Conant. As a friend of your cousin, Jane Miller, I know that you send her your daughter's dresses when she gets done with them. Her mother says you have never seen her, so you wouldn't be likely to know that she doesn't look very well in things that are another red altogether from her hair, and she has freckles also that match her hair. I don't know how much dresses cost, but I send a post-office order for fifteen dollars, and if that is enough will you please buy a new one for her just the color of this. [Here was pinned a bit of the tie of a russet shoe.] Please send it as you always do, as if it were one you were through with, and don't ever let her know I wrote to you. By the time this wears out, I shall probably send you more money.

I remain, madam, yours respectfully,
Reuben Cartwright.

TO BE CONTINUED.

WILL STOPPED ABRUPTLY IN THE ROAD: THEN HE GAVE A SHOUT AND JUMPED BACK

MAJOR BOHUN'S WORD By Archibald Rutledge

THE very first intimation Maj. Meriwether Bohun had that anything was wrong was the tremendous bound that his mare, Kitty, gave. Had he not been an expert horseman, the little thoroughbred's sudden dash would surely have unseated him; but he managed to keep his saddle and to pull in the mare.

"Whoa, girl!" he said gently, gathering in the lines with his left hand and patting his mount soothingly with his right. "What is it that scared you, little one? There's nothing on this old swamp road to frighten anyone, Kitty."

But there evidently was; for the mare was trembling and blowing her breath spasmodically through her wide, quivering nostrils. Maj. Bohun knew from those signs that Kitty's keen senses had detected some danger on that narrow, dark, lonely pathway.

It happened on the old road leading from Maj. Bohun's plantation in the Santee country to the neighboring plantation of Wedgewood, which, except for a few negro tenants, had long since been deserted. Moreover, it happened at night. The major was sure that his mare had scented danger of some kind. Her nervousness was increasing every moment; she kept fidgeting, and then began to give unmistakable signs of intending to bolt.

"One of the girth buckles may be jamming her," the major said to himself. "I'll get off a minute to feel if everything is all right."

He dismounted and led the frightened mare forward a few paces; then he stopped her and his hands began to fumble over the buckles of the girth. For the moment, he let the lines fall loose on the horse's neck. In that moment, whether the mare realized that her master was off his guard or whether some stray wind had wafted to her another scent of her peril, she whirled suddenly and, snorting loudly, galloped back down the black passage of the road along which she had come.

There the major was left standing, three miles from home and three miles from Wedgewood. He was on an elevated part of the road, on what had once been a causeway; and that particular point was near the heart of the

swamp that separated his own plantation from Wedgewood. Yet, strange as it may seem, Maj. Bohun's presence in such a place at such a time had come about in a perfectly natural way.

That afternoon he had promised to go over to Wedgewood to see a sick negro. The day had been hot; a thunderstorm had come up just as the major was about to start on his ride, and for more than an hour a wild tempest had shaken the tall magnolias and swayed the great live oaks that stood round the major's house. The sun was setting when at last the rain ceased.

With the major a promise was a promise. He had sent word to the negro that he was coming, and nothing would have kept him from fulfilling his obligation. The major was a proud man; yet his pride was productive of the highest virtues—generosity, courage, hospitality and gallant adherence to a fine code of honor. There was no man of his county who had suffered more or who complained less, who had had more cause for tears yet who had preserved more genuinely his light heart, his merry smile and his ringing laughter.

Behind his rambling old plantation house, many parts of which had acknowledged the triumph of time to the extent of leaning dejectedly, stood a little brick building. It had been a smokehouse, but the major had fitted it with benches and a fireplace. There the many negroes who came to see him could have a warm and sheltered waiting place. From there, as soon as the storm had abated, Major Bohun had called Will, his ancient negro servant. At the foot of the steps Will had stood, with his battered cap in his hand, and with the last fine drops of the heavy shower falling upon his gray head.

"Will," the major had said, "I want you to saddle Kitty

for me. It's stopped raining, and I'm going over to Wedgewood to see poor Joe Wilson."

Maj. Bohun made his tone final. He knew very well that Will would be sure to object to his plan. Long, faithful service had given the negro the privilege of advising his master on all matters.

"You gwine there to-night, Mas' Meriwether?" he had asked, with strong disapproval in his tone. "Dat road is so bery slippery after dis rain, sah, and Wedgewood is a long, lonely way off, sah."

Although the objection was dutifully made, the negro would really have been disappointed if the major had not kept to his word. It would have been the first time it had ever happened; and the dusky servitor was not at all beneath appreciating a delicate point of honor, and of considering it as his own as well as his master's.

"No; I must go, Will," the major had answered at once. "I shall be ready as soon as you get the horse here."

Down at the stable, while Will was adjusting the bridle and saddle on Kitty, he kept muttering proudly to himself, "'Cose he gwine! I done know he wouldn't bruk his wud! No, sah, not eben to a sick nigger! Bruk his wud?" he asked himself with scornful incredulity, to afford himself the satisfaction of stoutly denying such an absurdity. "Not him! Dat's about all we got left on dis ole place now; but we ain't gwine to lose dat! No, sah, not so long as me and Mas' Meriwether libes. You hear dat, Kitty?"

Meanwhile Maj. Bohun had been taking stock of what he could spare for the sick man at Wedgewood. The bundle that he finally tied up consisted of sundry little packages of groceries, the waistcoat of an old suit of evening clothes, a flaming red tie of antique design

and a woolen muffler. It was an odd assortment of gifts for an invalid; but the major did not trouble himself about that. The gifts would carry his affection; and that was the most that any gift could carry.

It was an hour later, when he was riding along the lonely swamp road, that something had frightened Kitty.

After his mount had galloped off in the darkness, Maj. Bohun stood doubtfully in the black gulch of the road. The package for the sick man he had stuffed into one of his greatcoat pockets, and he now put his hand on it reminiscently.

There was everything to take him back home, it seemed: this danger, whatever it was, should take him back; the fact that he was now on foot should make him turn rather than go on; it would take him more than an hour to walk to the negro cabin at Wedgewood, and he well knew how uncomfortable he would be when he arrived. But in spite of all that Maj. Bohun did not hesitate. His mind had made him pause, but his heart had had only a single purpose. He would go on.

All the dark and lonely way to Wedgewood the major puzzled over Kitty's fright. There were several things that might have caused it. Out of the lonely vastness of the monstrous swamp might have come a roaming black bear; it might have been a negro fugitive from one of the county chain gangs; it might have been a rattlesnake, the sinister and penetrating odor of which will make even the best horse unmanageable.

Before the major started forward he had listened intently for a sound that might betray the identity of the creature that had frightened his mare; but except for the lonely wind grieving through the towering pines the silence of the mouldering swamp was unbroken.

Once, indeed, he heard the far-off and melancholy note of a great horned owl; but it was so weird and remote that it seemed a tone of the deep woodland wilderness itself rather than the voice of a living creature.

"I don't know what it could have been; I give up," Maj. Bohun muttered to himself:

MAJ. BOHUN STOOD DOUBTFULLY IN THE BLACK GULCH OF THE ROAD

"but it certainly gave Kitty a bad scare. She'll go into the stable lot at home. I hope Will doesn't find her to-night; he would worry a good deal about me."

An hour's walk through the silent, cavernous woods brought the major to the borders of Wedgewood, and soon afterwards he came to Joe Wilson's cabin.

Matters were worse than Maj. Bohun had anticipated, and he was heartily glad that he had come. From the dim couch beside the dark fireplace where he lay, the sick negro looked up at him with grateful eyes.

"I knowed you would come, sah," he said, rousing himself to make the effort of speaking. He tried to sit up in the light of the smoking lamp, but he had not the strength.

The major busied himself to make Joe comfortable. The invalid was alone in the cabin, and was too weak to help himself; but Maj. Bohun knew what to do. First he conferred his gifts, and that lightened the negro's heart. Next he made the fire blaze brightly. He then unwrapped the groceries he had brought, and used the paper to stuff up a drafty crack above the negro's bed; then he put on a few old pans and began to cook some of the food. And all the while he kept talking cheerfully to the stricken man, whose only reply was a reiteration of the solemn statement:

"I sholy would 'a' died dis night, Mas' Meriwether, if you hadn't 'a' come."

When the sick man had had his supper, the major began to prepare to return; but there was such a dumb appeal in the negro's eyes that he speedily came to a different decision.

"Joe," he said, "I believe I'll just stay here for the night. Kitty got away from me, and I don't want to walk all the way home in the dark. I'll just sit in this chair by the fire. You go to sleep now, Joe, and I'll be right here when you wake."

The negro could not thank him, but he sighed with deep content and closed his eyes peacefully. The depth of his gratitude became articulate in his dreams; for once he cried out poignantly, as if in protest, "No! No! He done say he would come!" and then subsided into deep slumber.

When morning came, Maj. Bohun was still sitting beside Joe; and when the negro woke, refreshed and much better, he saw the old planter's kindly face.

Joe's fever was gone, and his brain, he said, was clear.

"You had a good night, Joe," said the major. "You are going to get well now. I'll send Will over with some things for you, this afternoon; and to-morrow I'll come again myself."

Into the radiant dawn of a golden September day the major stepped; and as he walked briskly down the plantation road, he squared his shoulders and hummed blithely an old love melody. He loved the woods; and this walk home through the dewy freshness and glimmering beauty filled him with pure joy. On all sides the marvelous beauty of the Southern forest withdrew into rarer beauty; the vistas, in ending, suggested a diviner loveliness beyond them.

It was, indeed, so beautiful that Maj. Bohun did not think of the sinister experience of the night before until he came almost to the place where Kitty had deserted him. Then he remembered; and he was not at all surprised to see the faithful Will coming down the narrow causeway to meet him.

"He's found Kitty with the saddle and bridle on her," said the major to himself, "and has come over to see what has happened to me."

But suddenly Will stopped abruptly in the road; then he gave a shout and jumped back. Maj. Bohun came up quickly; Will was calling to him to be careful, and was pointing to what lay on the causeway.

Spanning the road between him and the negro, Maj. Bohun saw the thing that had frightened Kitty. It was a monstrous reptile—a diamond-backed rattler of the swamp. Its massive body could not have been less than nine feet long.

It lay at a peculiar, awkward angle; but its broad, malignant, spade-shaped head was alertly raised, and its cold, yellow eyes glittered ominously. About the grim and terrible mouth there was an expression of savage cruelty. The lips were pallid, drawn, deadly; but the huge rattlesnake seemed to have control of the forward part of its body only. It could strike, but it could not coil. Its back had evidently been injured. Yet, partly because of that very injury, it was the most dangerous and formidable monster of the lonely Southern swamp.

The negro made a detour through the bushes, and now stood beside Maj. Bohun, who told him of Kitty's breaking away.

"And there's what scared her," he added, as they gazed at the hideous rattler; "no wonder she bolted from me."

"But dat snake ain't been lyin' here all night?" the negro asked, staring, fascinated, at the dread reptile in the roadway before them.

"I believe I know what happened," the major replied. "Kitty shied when we passed

the snake. She winded him, but she did not know where he was. Then, when she broke and galloped back, she ran over him and injured him. Yes, he has lain there all night. What a monster!"

It took the two men the better part of half an hour to cut long poles in the swamp and to kill the powerful rattlesnake. The major then counted the rattles; there were twenty-nine. He also saw where the mare's hoofs had crushed the back of the reptile.

"See here, Will," he said, pointing to the deep wound, "here's where Kitty scored. This

snake must have been maddened by such tramping," he went on, half to himself, "and would have been wild to strike after such an injury. Now if I hadn't gone on to Wedgewood," he mused aloud; "if I had turned back. The road is so narrow here, and it was so dark —"

Maj. Bohun cleared his throat slightly. The negro, whose eyes were wet, said hurriedly and in a tone of assumed assurance, "But you didn't been in no danger, sah, 'cause you had done promised Joe to come to see him. And we don't neber bruk dat Bohun wud, sah."

THE RIVER OF LIFE

By Dr. C.W. Saleeby

ALL life is lived in water. Where no water is, no life can be. The necessary machinery may have been already made, as in a completely dried seed, but that seed cannot actually live until water reaches it again. To live is to be wet; or, in the phrase of a French student, "Life is an aquatic phenomenon."

When the supply of water is withheld from living things, they may survive, but their life is slowed down, as it were. In the completely dried seed, life is arrested altogether, yet the creature is not dead. The French call that a case of *vie suspendue*—or, in our language, suspended animation. After astonishingly long periods, such seeds will germinate if they are watered.

The astronomer tells us that our planet is only one of many belonging to innumerable suns, and he wonders whether this little "lukewarm bullet" of ours, as Robert Louis Stevenson called it, is really unique in bearing a burden of life. There is one path that leads to the answer of his query. If he finds no evidence of water on other worlds, he cannot expect to find life there.

WATER ON MARS

THAT is why it is so important to decide whether the polar caps of the planet Mars really consist of water, as is apparently the case, or of solid carbonic acid, as some persons suppose. Prof. Percival Lowell and his assistants satisfied themselves that the light reflected to us from Mars must have passed through water vapor in the atmosphere of the planet. That does not prove Mars to be inhabited, but it makes Mars immeasurably more interesting to the student and lover of life, because he knows that where water is life may be.

As for the moon, we find no evidence there of water. The moon is small and perhaps was unable to hold to itself the water that may once have been there. Thus, it is possible that life once blossomed on the moon; but now our satellite can at best be no more than a whited sepulchre.

We know that the sun is so hot that the elements, oxygen and hydrogen, that go to make water, and that are certainly present there, cannot combine. The sun, the heat of which is the source of all the life we know, is therefore itself lifeless.

It is not enough to say that all life is lived in water. All life is lived in liquid water; the water must be wet. If it remained in a gaseous state, no life could exist in it.

LIFE LIVED IN RUNNING WATER

WE know that the water of the earth is continuously moving. "All the rivers run into the sea, and yet the sea is not filled." The sun lifts water into the air, whence it falls as rain and replenishes the streams. That is exactly what life requires. Stagnant or standing water will not avail it for long. The water of life must not only be wet, so to say, but it must ever flow. All life is lived in running liquid water. If the flow ceases, the life stagnates and shortly dies.

The rule is absolute. The driest seeds, or spores of microbes, or those most minute objects that no microscope can reveal and no filter retain, may survive, with all their

malignant possibilities, for months or even decades of years. But it is only when they get into a stream of water that they can really live and multiply.

Such a stream of water they find in any one of us whom they may attack in order to produce what we call mumps or scarlet fever or measles. For each of us, being alive, is a reservoir, or rather a running river, of water. Nearly three fourths of the weight and substance of each of us is merely water, and this water is

ever flowing through us. It is almost as if the living creature were like a turbine or mill wheel, which placed itself in the stream of water that ever circles through land and sea and sky under the compelling force of the sun.

In most plants the river of life runs upward. The tree stands in the rain, and its leaves are dripping wet, but it receives no moisture through them. Like our skin, they are waterproof from without inward, but they let water freely leave them from within outward. The tree receives the river of life solely through its roots. Thence, by wonderful processes, it is forced upward against the pull of the earth, and passes from the plant in the form of a vapor or gas by way of its leaves. That passing of water from the leaves is called transpiration. It is, in every essential respect, precisely the same as what in ourselves is called perspiration—the passing of water outward through the otherwise waterproof skin.

As the plant drinks by its roots, so we drink by the mouth. There is no such thing as a skin food, and there is no such thing as a skin drink. If there were, the consequences of washing would be alarming and inconvenient. The river of life, having entered through the mouth, flows through our bodies in the form of the blood, which carries water as well as food and air to all the thirsty tissues. Then, by the lungs and the kidneys and the skin, the river of life flows away from our bodies. If we would live, we must at all costs perpetually and abundantly renew it.

WATER AS A CLEANSER

THE expression of that imperative and continual necessity is what we call thirst. Few of us have experienced thirst in any grave degree, yet we know enough of it from experience to realize how insistent are its demands. Perhaps we do not clearly

know why we cannot simply supply ourselves with enough water and live our lives in that until further notice; but we know that for ourselves as for plants the water must necessarily be changed, or we shall perish. The water is not really a source of energy by its flow, as it is for the turbine or mill wheel, but flow it must, and we can discover at least one reason for that necessity.

The river of life ceaselessly cleanses the living being. As we live, we produce rubbish that would surely accumulate and kill us unless we disposed of it. The river of life carries some of that rubbish away. Many persons who are scrupulously clean as to their skin are careless about a more important matter of cleanliness; not until they greatly swell the stream of pure water that should flow through them can they recover from the gout or arthritis or other technically named complaint that cripples them.

There is thus a certain rightness in the view of those Orientals who think that, even for external washing, our method of getting into a bath, washing ourselves, and wallowing in the product, is not a cleanly proceeding; they believe that the only decent way to wash is in a running stream.

The surgeon, too, in his task of cleansing

the interior of the body, knows the value of irrigation with running water.

The physician also has lately learned sense in that respect. Fever, we used to say, is a disease, and therefore everything characteristic of it is bad and must be discouraged. Thirst, of course, is a mark of fever; therefore the patient must be deprived of water. Unthinkable hosts of ill persons have endured hours of miserable torture from that nonsense, and many have died. The thirst is a demand for the cleansing and cooling stream that we need above all in fever, when the body is burning fast and producing much rubbish, and when microbes are manufacturing their deadly poisons, which the river of life must dilute and drain away.

The biggest fraud there is, which the wise man called "a mocker" nearly three thousand years ago, ingeniously avails itself of this universal human need. At ordinary temperatures alcohol is liquid and wet and can persuade the simple that it will satisfy thirst. But alcohol is no more a drink than snuff or opium. Instead of satisfying thirst, alcohol is itself the thirstiest thing we know. The cleverest chemist cannot entirely rid alcohol of the last traces of water, to which it obstinately clings. When it enters the body, the first thing it must do is to satisfy its thirst at our expense. The body, of course, tries to expel it, like any other poison, but when the alcohol goes it takes much water with it, and leaves the body thirstier than ever.

ALCOHOL A HUMBUG

BUT observe the subtlety with which this "mock-er" defrauds us. The drinker is deceived into thinking that his craving is natural thirst, although as a matter of fact he desires what creates thirst instead of slaking it. If alcohol happened to be a dry powder instead of being a thirsty liquid, many of us would see more clearly than

we do what an artificial "need" and what an arrant humbug alcohol is.

No river contains water only. From the soil the river dissolves salts, and from the air it absorbs gases. It is those salts that accumulate in the oceans. The river of life is salty also. Pure water, distilled by the chemist, free of salts and gases alike, is a stale, flat beverage; the water that we enjoy has a sparkle and a flavor that come from its salts and gases. The doctor, anxious to replenish his patient's tissues, does not run pure water into them, but what he calls "normal saline," water that contains a small but definite proportion of common salt.

The puzzle of puzzles is that, although all life is lived in water, and therefore is athirst, all life is also afire. Water is the last thing we want, as a rule, to help combustion. Yet, although our bodies are mostly water, we continually burn sugar in them at a temperature far too low for the burning of sugar outside them.

"Setting the Thames on fire" would be a simple affair compared with the flame that ever glows within the running river of life. But fire means not only fuel but also air. Life is lived in wind and water. The river of life must flow, the breath of life must blow, in order that the fire of life may glow.

Nowadays, of course, we know too much chemistry to be satisfied with the old notions about "elements"; but if we accept what Aristotle thought, we see that the wonderful and holy mystery that we call life proceeds from the "four elements"—earth, air, fire and water—and in conjunction with them. It is interesting that Shakespeare makes one of his characters say as much.

WATER MUST BE PURE

LASTLY, the river of life must not be impure. To poison or pollute wells has always been regarded as the act of a savage. Water-borne disease has killed most or many of those who have gone before us. The first necessity of life is a never-failing supply of pure water. In war the problem is so difficult and so important that it has probably decided many campaigns. In peace the building of cities depends more upon the water supply than upon everything else.

Through every large city in the world there daily and nightly pours a colossal river of water, passing through and round the bodies of all the citizens. It necessarily is foul when it leaves; it must be pure when it enters. If either the inflow or the outflow be arrested, the city must perish of thirst or disease. These mighty assemblages of human beings depend upon the skill that diverts a mighty stream

of the water of the world through each of them, and on the care which, in spite of all difficulties and of all vicissitudes of climate

and of risk of contamination, keeps that stream pure. For a man, an army of men, or a city of men, the river of life must be clean.

THE TAMING OF THE SHAW

By Lulu Gracia Parker

He swore by all the ducks in the pond,
And all the leaves in the tree,
That he could do more work in a day
Than his wife could do in three.

"NO, sir!" said Cadmon Shaw emphatically. "We can't afford any labor-saving devices. The first Mrs. Shaw never had 'em, and there wasn't a better housekeeper in Teahi County."

The second Mrs. Shaw—this was the fourth honeymoon breakfast of the newly wedded pair—looked at her lord mildly over the coffee cups. Cadmon took a second helping of corn fritters and hoped that his wife was not going to prove unreasonable. Her cooking was good. But he reflected with some uneasiness that the first Mrs. Shaw would never have broached the subject of power machinery or water in the kitchen.

Cadmon knew well the neighbors' opinion on that matter; they had not been slow to declare that too much hard work had sent the first Mrs. Shaw to her grave.

"Salina was too meek," they said. "Oh, I guess he never beat her, but it was work, work, work, and pinch and save, and never go anywhere, or have decent clothes, and no company for fear they'd eat extra!"

The second Mrs. Shaw was not a Teahi woman. Cadmon had discovered that the spinsters and widows of Teahi County preferred

a very good meal. "It looks to me as if it would be a lot easier than housekeeping in this house."

And then Cadmon said it. "Shucks!" he exclaimed somewhat testily. "Housework ain't no job a-tall. It's just fiddling. If I had no more to do than a woman in the house, I'd think I was having a vacation. I bet"—he went on, warning to his subject—"that I could get more housework done in a day than any woman I ever knew could do in three."

Mrs. Shaw laughed good-naturedly, and passed him the pie. "If you can beat any woman in this neighborhood, I'll never say any more about labor-saving devices. You show me how to run the tractor and then we can trade work and see."

"Shucks!" said Cadmon, and thought that he would do no such thing.

The next afternoon Mrs. Shaw went out early, and again rode behind her lord on the running board of the tractor, and asked more questions about the machine's inner works.

"Now to-day let me try," she begged a few days later.

Cadmon disliked to do it; he had an uneasy feeling that the situation was getting beyond his control. But she was a comely woman and a very new wife—and she had brought out with her a large slice of very good ginger cake. So, although he had no mind to exchange work with her, or to be wheedled into wasting any money on power washers or other "falderals," he let her run the tractor for a few minutes.

And then the hired man quit. It was the day after Mrs. Shaw had driven across country to the home of Mr. Shaw's sister to return that lady's first call; but Mr. Shaw did not connect the two incidents.

"How lucky I know how to drive the tractor!" said Mrs. Shaw. "I can draw the harrows with it just as well as not. And you can drive the horses to the seeder as the man did. I'd just as soon as not. It's most like running an automobile."

"You see, it would be cheaper to get a woman to do the cooking and housework than to get another hired man," she went on. "Your sister was saying that she knew a woman that would like a spell of work. Why not hire her and let me help outdoors? I'd just as soon as not."

That argument seemed sound to Cadmon—especially since the season was getting late for seeding the wheat. And Mrs. Shaw had made no mention of exchanging work with him. So, after a futile attempt to get a new man by way of a neighbor's telephone,—he had always considered a telephone as an expensive and unnecessary luxury,—Cadmon allowed his wife to set out bright and early the next morning in quest of a housemaid; but Cadmon had made it very plain to Mrs. Shaw that the arrangement was only temporary, that a wife's place was in her own kitchen, and that "a hired girl would waste more than she would earn."

The first dinner of the new maid's serving was also her last in the house of Shaw. Mrs. Shaw had for some reason chosen to take her luncheon with her, so that she did not return from the lower meadow for dinner. The meal

HE STUMBLED DOWN THE SPRING-HOUSE STAIRS AND SPILLED A QUART OF GOOD CREAM

was late and of poor quality. The biscuits were burned, the potatoes were soggy, the coffee was weak.

Cadmon had discovered that the work that he had always relegated to the hired man was far warmer and harder than running a tractor; so he spent a part of the afternoon in taking the maid back to her former abode and in searching the neighborhood for a suitable man.

He could find none, and at last had to be content with bringing home the daughter of a neighbor. But she got only one meal, gave Mr. Shaw her opinion of his kitchen, and departed—after a little private conversation with Mrs. Shaw.

And then Mrs. Shaw made her proposal. Smilingly, and in perfect good nature as usual, she said:

"I can stand it to run the tractor all right. It doesn't tire me nearly so much as you'd think; this will be a good time for you to see whether you can do as much as any three women you know. That way, of course, you can run the seeder some, too."

In an unfortunate moment Cadmon agreed.

The next morning Mrs. Shaw got the breakfast, suggested what her husband should get for dinner, and then, putting some luncheon into a basket, cheerfully departed for the lower meadow.

Cadmon's plan was to set the dishes on the back of the table, to put the food in the cellar, and to do a man's size job until half past eleven; he intended to get dinner in half an hour and to wash the breakfast dishes while the meal was cooking.

But it took him longer to pare the potatoes than he had anticipated, and he began to wish that he liked to eat them in their jackets. He also remembered the protests that he had made when the first Mrs. Shaw had occasionally served them unpared.

Then he had to prime the hard-water pump, and before he thought to get more water he had used all that was in the house. Since the days of the first pioneer Shaws the rain water had been drawn from the cistern with a pail and a rope. There was a pole for sinking the bucket, but a few minutes before Cadmon discovered its usefulness he had cut it up for kindling. He made two trips to the cistern to get the water with which to prime the well. Before he had split the kindling he had spent five minutes hunting for an axe. The hatchet that both Mrs. Shaws had managed to do with was too dull for Cadmon.

The little boy from across the creek presently came over to tell Cadmon that it was churning day.

"Mrs. Shaw lets me ride with her," he said. "But she remembered that the cream is ripe, and she was afraid you might forget. I guess something's burning," he added helpfully.

It was the potatoes.

After a meal of half a pie and some cold meat, Cadmon hauled the old churn out of its corner. The butter was in no hurry about "coming," and Cadmon found just how heavy the old dasher was. He carried more water across the yard, stumbled up the buttery stairs and broke a butter jar, stumbled down the spring-house stairs and spilled a quart of good cream

worth thirty-five cents, chased the calves out of the garden, dug more potatoes, split more kindling, and wondered what to have for supper.

Then he noticed that the kitchen floor was in a terrible condition. Although he had never been overcautious about tracking in mud, Cadmon was a cleanly soul. Besides, he felt that if Mrs. Shaw should see that floor it would proclaim his defeat. With the best broom, an old shirt and a liberal amount of soap, he scrubbed the floor vigorously, and in so doing he learned why Mrs. Shaw had sighed for a new floor.

The little boy from across the creek looked into the kitchen twice during the afternoon.

"Golly!" he said. "You'll get splinters."

Cadmon already had got them.

"Ma used to, on our floor, awful," the boy added sympathetically; "but now she don't. We got hardwood floors."

On the second trip he said:

"The pigs are in your garden! I guess Mrs. Shaw didn't fix the fence very good. We tried one day, when we'd chased the pigs out four times, but we didn't have enough wire."

Cadmon dropped his work in the kitchen and went out to repair the garden fence.

"Did Mrs. Shaw tell you to come up here and tell me these things?" he asked the boy.

"Nope, she didn't; I remembered. She just wondered what you was going to have for supper."

Cadmon chased a hen half a mile or so, beheaded her and de-feathered her. Then he had to make another trip to the well to get water for scalding the hen.

While he was debating the best method of dismembering the creature, Stephen Blumbley, from across the road, looked in at the door. Stephen augmented the earnings from his small farm with the agency for Dolliver's labor-saving devices.

"Did you send for me?" he inquired.

Cadmon replied in the negative.

"I called on your wife a while ago," Mr. Blumbley began diffidently, "about Dolliver's washing machine and the power churn. I think she'd like them, all right. She seemed to think

STEPHEN BLUMBLEY LOOKED IN AT THE DOOR

she would. I'm selling them everywhere. You can attach them to your gas engine, you know, and there's some that even use the tractor. Mrs. Shaw said she'd speak to you. I wonder if she ever did?"

"Yes, she did," said Cadmon, and looked out toward the lower meadow. The tractor was down at the end of the field, standing still. And hurrying toward it across the field was Mrs. Shaw; she was coming from the direction of the Blumbley home.

While Cadmon looked she climbed up to the high seat, and the machine with its fantail of harrows began to move sedately along. Cadmon noticed that it would be her last round of the field. She would be coming in within half an hour!

"Is Mrs. Blumbley at home?" he asked eagerly.

"Why, yes—but—" Blumbley began in much bewilderment.

"If you get her over here to fix this hen, and get it on the stove so it'll taste right, and don't go blabbing to the whole neighborhood, I'll buy every blamed labor saver you've got in the catalogue. Are there plumbing things, like sinks, and faucets for hot and cold water—and hardwood floors—in it?"

Mr. Blumbley had to admit that there were not.

"Well, we'll get 'em," said Cadmon savagely, "every last one of 'em. Only you see that you don't go blabbing until it's done."

"I'm no blabber," said Blumbley. "But that reminds me. Your old hired man called up on our telephone. He wanted I should tell Mrs. Shaw that he don't like the cooking at that

DRAWINGS BY W. S. BROWN

THE BISCUITS WERE BURNED, THE POTATOES WERE SOGGY, THE COFFEE WAS WEAK

single blessedness to Shaw penuriousness. It was still his own secret that this was the second Mrs. Shaw's third matrimonial venture.

"That tractor machine you've got," said Mrs. Shaw, appearing to change the subject, "it works all right?"

Cadmon had bought it instead of a wedding present for his wife. He launched into praise of the new machine. He told her what speed he could make with it, and how much better ploughing he could do. Mrs. Shaw was an excellent listener; she drew him on. Cadmon cleared his plate and mopped up the gravy with a biscuit.

"I suppose"—Mrs. Shaw spoke with a tone of mild curiosity—"your father just had a walking plough. Wouldn't he have been glad to have such a labor-saving thing? He did just have a walking plough, didn't he?"

Cadmon looked sharply at his wife, but she was passing him the plate of cookies and her face showed no guile.

During the forenoon Mrs. Shaw washed the dishes, carried them into the buttery, which was up two steps from the kitchen, churned, using an old stone churn, carried the butter across the yard and down into the spring house, hunted eggs, dug potatoes, washed them, carried two pails of rain water and three pails of well water across the yard, pared the potatoes, split some kindling and baked a cake.

Late in the afternoon she changed her gingham apron for a white one, and went out across the fields to the big meadow where the new tractor was turning up a wide swath of turf. She climbed up behind Cadmon on the running board and traveled round the field, watching him steer, and asking him intelligent questions about the mechanism.

On her way back to the house she stopped in the implement shed and took careful note of the hay loader, the seed planter and the cultivators, which Cadmon considered as a necessary part of his equipment.

"I'd like to learn to run the tractor," she said at supper, as Cadmon was finishing

ON HER WAY BACK SHE STOPPED IN THE IMPLEMENT SHED

place she got him, and he don't want to stay a week like she said; he wants to come right back." Cadmon stared at his neighbor for a long minute. Then he gave a prolonged whistle.

"Shucks!" he said, with an involuntary chuckle. "That's pretty cute." And he swore by all the leaves in the tree, And all the pigs in the pen, That his wife could do more work in a day Than he could do in ten.

"We couldn't ride no hawses, but I 'low there ain't nothin' agin a white mule." "Peter!" exclaimed Ellis. "Just the thing." Peter was the white mule at the quarry. No one knew how old he was; he had hauled stone for fifteen years for Mr. Winfield, and was still capable of a good day's work, although he was seldom set to do it. He had always been good-tempered, and since reaching a sort of pensioned old age he had grown fat and lazy. The trip would do him good, and he could easily carry the camp outfit.

"We'll rig some sort of pack saddle," said Tom. "Now, let's consider what things we'll need to take with us."

The basis of their food on the trip would be corn bread and pork, and, since they could probably restock with those staples at any mountain cabin they happened to encounter, they took only ten pounds of pork and twenty pounds of corn meal. They should have to take coffee, sugar, rice, beans, salt and pepper; cooking utensils, some geological tools, a shovel and a hatchet; a shelter tent and blankets, for even summer nights are often chilly in the mountains. Then they set down on the list a

worse. After tramping for about three miles the boys left it, and followed a trail that led to the west, up the side of a long, timbered ridge.

Peter carried his load nobly, but the pack frequently shifted and things fell off; what with having to keep picking them up, and with having to stop every little while to readjust the load, the boys did not cover any great distance that afternoon. They did not care much, however; the main thing was to make a start.

When, toward sunset, they came to a little creek rushing down a valley among the pines, they halted and made camp. They relieved Peter of his load, and then Tom set up the tent and cut wood, and Ellis gathered a great heap of pine cones for kindling. The two boys made a good meal of fried ham and eggs, coffee and corn bread, which they had brought from home.

As dark came on, the fire of dry pine knots blazed up cheerfully. The boys were tired enough to settle down early. But the first night in camp is likely to be one of little sleep. Tired as they were, they lay awake for a long time. Something occasionally rushed through the bushes close by—probably a rabbit; and once, from far away in the hills, came a strange, ominous wild cry. Then, from the opposite direction, sounded the faint whistle of a locomotive—the last sound of civilization that they were to hear for many days. At last they fell asleep.

Tom woke just before sunrise. Grass and trees dripped with dew; there was a wonderful freshness in the air, and the east blazed crimson over the mountains.

"Shall we stop to-day and prospect for crystals, or travel farther on?" Ellis asked, as they prepared breakfast.

"No use doing anything here, I reckon," said Tom. "Too near the settlements. There are lots of mountaineers living hereabouts, and they've been all over this district. I think we ought to go for at least another solid day before we stop."

After breakfast, therefore, they repacked the outfit on Peter's back and set out again. The slopes were steep and choked with brambles, fallen timber and loose rock overgrown with small cacti, but Peter picked his way without a slip. Quail whirled up frequently and rabbits leaped through the undergrowth. Once Tom stopped and shot two young rabbits, which he added to Peter's load.

In the valleys the ground was choked with tangles of wild blackberry canes, laden with their last fruit. At first the boys kept stopping to eat the delicious berries; but after a while blackberries lost their charm through sheer overabundance.

All that day they tramped up and down the wooded ridges, heading always for the southwest. As they went on, the mountains grew perceptibly rougher and wilder; travel was hard, wearisome work, and only once that day did they make an interesting discovery.

They were traveling along a rich valley slope, wooded with large oaks and almost bare of undergrowth, when Tom suddenly dropped Peter's halter and darted aside for a few yards. He came back presently with something that resembled a parsnip, from which hung a cluster of green leaves.

"What's that?" asked Ellis in surprise. "Ginseng root," said Tom triumphantly. "I've been on the watch for some all day, but this is the first I've seen. It's worth from three to five dollars a pound anywhere."

"Gracious!" Ellis exclaimed. "Let's stop and look for more."

They searched diligently and found two more roots, but that was all. One of them, however, weighed nearly a pound.

"But a lot of that'll shrink out in drying," said Tom. "It's rather rare to find a root of that size, though. The ginseng hunters, or 'sang diggers,' as they call them here, go all over the hills every fall, and they get nearly all of it. They're mighty sharp-eyed. It takes a root three or four years to reach a pound in weight, and some one is pretty sure to find it before that time."

"Still we must keep a lookout for it henceforth. It might pay better than crystals," said Ellis.

Ginseng was the subject of their thought and talk for some time; but although they kept a sharp lookout, they failed to find any more of it that day.

They had mountain trout for supper. They were both dead weary, and that night nothing could have kept them awake; they rolled into their blankets at eight o'clock, and did not wake until after sunrise.

The next day was scorching hot. They had traveled almost far enough west, Tom thought, and so kept watch for a good place where they could make their headquarters camp.

At noon they ate a cold luncheon of blackberries and bread. It was too hot for coffee. After the meal they dozed for almost an hour in the shade.

Late in the afternoon they came to a small, shallow creek that flowed over clean gravel. Tom stopped to let Peter drink. As he stood there he suddenly uttered an exclamation, and bent quickly. Reaching into the shallow water, he brought up something that glittered like fire.

TO BE CONTINUED.

THE CRYSTAL HUNTERS

By Frank Lillie Pollock

In Eight Chapters Chapter One

"WAY over there, Ellis!" exclaimed Tom Winfield, pointing westward. "There's the place!" From the bare mountain ridge where the two boys stood they looked across an immense valley that was deeply timbered with oak and pine. Beyond the valley rose the mountains again, green and brown in the foreground, and shading off in the distance to blue.

Tennessee was on the other side of those mountains. They were the main range of the Great Smokies, the haunt of deer, bears and rattlesnakes. Few strangers ever came to those mountains, which were uninhabited except by scattered mountaineers.

"Everything's there," Tom went on. "All sorts of fish and game—and the finest pine and walnut on earth. There's mineral, too, and there's gold—I know there is. Why, a man in Yancey County found a nugget as big as his thumb! There's iron and coal and —"

"And rock crystal and garnets and jasper and chalcedony," interrupted his cousin, Ellis York, "and that's the main point with us."

"You're right, but I shouldn't mind collecting a nugget or two. Well, let's move; we must get down into the valley and find water before we camp."

Starting down the western side of the ridge, they followed a faint trail that zigzagged along the steep slope, through the dense undergrowth of sourwood and laurel. Tom went first, with a shotgun in one hand and Peter's halter in the other. Peter was a white mule, laden with an enormous mass of outfit, which included a shelter tent, provisions, cooking utensils and other necessities; but in spite of his heavy load Peter scrambled down the steep slope as actively as a goat. Ellis York brought up the rear; he carried a short-handled shovel.

The boys were on a jewel-hunting expedition in the mountains of western North Carolina. The rock crystal, amethyst and jasper that the mountain people in that region often pick up in the stream beds and take into town for sale make very beautiful jewelry; but the jewels that the boys were hunting were intended for a different purpose.

Tom Winfield was deeply interested in geology and mineralogy, and had already got together an almost complete collection of the mountain crystals. His father, who was a building contractor at Asheville, owned a large quarry near that city, and in the course of time Tom expected to enter the business with his father. To give himself the best possible preparation he was taking a scientific course at the North Carolina College, and was working during his summer vacation in his father's office.

Toward the middle of July, in 1914, Mr. Winfield had gone to Atlanta on an important business trip. On his return Tom met him at the station.

"How about the contract?" he demanded eagerly, as soon as he could draw his father out of the crowd.

"The contract" had been for some time the great subject of interest in the Winfield family. One of the big railway companies was preparing to erect a magnificent new terminal station, and Mr. Winfield hoped to supply the marble for the interior finish and decorations. With much foresight he had early that summer bought an option on a large quantity of fine-colored Tennessee marble at Knoxville. The price had been so advantageous that he had felt certain of being able to underbid any competitor and still make a splendid profit.

"The contract? Nailed down!" he replied to Tom's question. "They'll take our marble. That Knoxville option won't be enough. I'll have to buy more, and in fact I've closed a deal for some. It'll come higher, but still I ought to clear more than we generally do in two years. High time, too, for business has been poor for more than a year. But I think I've found a plum in it for you, too, Tom. Would four or five hundred dollars tempt you?"

"It would overwhelm me!" said Tom.

"Well, the railway people are planning to make a great relief map of their lines to show at the Panama-Pacific Exposition next year. It's to be on a big slab of Tennessee marble; the roads are to be shown by wires made of native gold, and all the cities and towns are to be marked by native gems—crystal, amethyst, and so on. The other minerals and woods of the mountains are to be worked in as well, and the whole thing is to be a great advertisement of the resources of their country."

"Now, they'll be in the market for those crystals, and they'll pay a good deal more than market prices for fine specimens, just for

the sake of the advertisement. It'll need three or four hundred stones, small and large, and they'll go as high as five hundred dollars for them. Now, you're an expert on crystals. Could you get them?"

"I'll break my neck trying!" said Tom promptly. "I'll talk to Ellis about it," he added.

"I expected you would. Well, you boys can divide the enterprise, and I'll let the railway

DRAWN BY H. C. EDWARDS

THEY LOADED UP BEFORE A GROWING ASSEMBLAGE OF NEGRO AND WHITE IDLERS AT THE STATION

know that you'll furnish the stones. Only you'll need to have them ready before the first of September, for it'll take some time to cut and polish them."

Bursting with delight, Tom hurried to find his cousin, Ellis York. Ellis had always lived in Michigan, but since he had been left an orphan, a year before, he had made his home with his uncle. He was a year younger than Tom and still in the preparatory school. The Northern boy and his Southern cousin had become close friends; and Tom would rather have given up the scheme than not to have had Ellis in it.

Ellis received the proposal with wild enthusiasm.

"Mighty generous of you to let me in on it," he exclaimed, "for it's really your own deal! But it'll be great fun—a crystal-buying expedition into the mountains."

"Not crystal buying, but crystal hunting," Tom explained. "This isn't a speculation; it's an expedition. We may be able to buy a few stones at the mountain cabins, but I propose that we chiefly hunt 'em for ourselves; it's much cheaper, and more fun."

"Dig 'em out of the rocks?"

"Mostly we'll find them in gravel banks and along stream beds. Once in a long time we might find one in the rock, but it's hard to get it out without smashing it. Father got me a list of what's wanted. We need ten large rock crystals for the big towns; about twenty good amethysts for the second-class places, and an assorted lot of about two hundred smaller stones. It'll take time and good luck to find all those. We ought to start at once."

"But how'll we travel?" Ellis asked. "It's too rough a country for riding, I suppose, and it'll be pretty tough to have all our grub and outfit to lug—beg pardon! I ought to say 'tote,' oughtn't I?"

"We-uns shorely do say 'tote,'" drawled Tom in an exaggerated imitation of the mountain dialect, which he could speak with fluency.

small camera, films, a book or two, an electric pocket lamp, a few simple medicines—in fact, there seemed no end to the things they should need for a month's camping. After they had compiled a long list, they had to go over it again and reduce it to fit Peter's carrying capacity.

It was not the season for hunting, but they might meet a bear or a wildcat. They took only one gun, however—Tom's doublebarrel, with fifty shells loaded with assorted sizes of shot, from Number 8 up to buck. And of course they included fishing lines and hooks in their outfit.

"I think we ought to go as far back as possible," said Tom, "if we want to find plenty of gems. All round the settlements they've been pretty well picked up, I reckon. We ought to head for the southwest of the state."

Prolonged study of the map showed that Dixon, on the Murphy branch of the railway, seemed the best starting place from which to strike into the mountains. On July 20 they shipped Peter and the camp kit by freight, and followed on the next passenger train.

Dixon, a tiny hamlet of a dozen houses, a store or two and a sawmill, lies deep in the mountains, in the far west of the state. It was already afternoon when the boys arrived, but as they were anxious to make a start that day they hastened to get the mule and the camp outfit from the freight shed. They loaded up before a growing assemblage of negro and white idlers at the station.

Three narrow, red-clay roads led out of the village. Loading Peter, they took the one that headed south and left the houses behind.

Within the first mile or two they passed several log cabins in the midst of ragged patches of corn; and they met two or three mountaineers on horseback, who gave the boys a grave "Howdy!" But presently all signs of civilization disappeared.

The road, which wound upward through a gap between two mountains, grew steadily

FACT AND COMMENT

WHEN you have courage to say, "I was to blame," you are not least among the heroes.

Pity without Relief
Is Mustard without Beef.

THERE is nothing mysterious about financial success. It is merely the legitimate result of accumulating something and putting the accumulation to work.

THE great war does not withhold its hand even from the child's seedcake. Caraway seed, which used to sell at from five to eight cents a pound, is now sixty-five cents, and hard to get, at that.

IT may be that the heart of New York City stands better revealed in the 1393 charitable organizations listed in a recent directory than in the roar of Wall Street at noon or the lights of Broadway at midnight. The list contains no fewer than thirty-eight agencies for war relief. Churches or fraternal bodies are not included.

IT is refreshing to know that a Brooklyn judge has recently upheld with vigor the right of a sailor in the uniform of the navy to go wherever any other persons may go. He imposed a fine of two hundred and fifty dollars on the proprietor of a moving-picture theatre for excluding one of the bluejackets, and remarked as he did so, "The uniform of a United States sailor must be respected."

IF the rest of the country would only adopt the Chicago plan of fighting the billboard nuisance, the roadsides and landscapes would be less often disfigured. The city council passed an order that forbade billboards on any residential street, unless a majority of the property owners on the street had given their consent. The matter was fought out until it reached the Supreme Court of the United States, which has now handed down a decision that upholds the ordinance.

QUIRK, Gammon & Snap, the famous law firm in Samuel Warren's novel, Ten Thousand a Year, is not often matched in real life, but two friends of The Companion had a narrow escape from starting a firm the title of which would have been quite as ludicrously apt. They intended to form a partnership in the business of the law, and had carried their preparations almost to the point of completion, when they suddenly realized one day that the firm name would be Rush & Doolittle! More fortunate were the two men who found that the title of their new firm was to be Young & Smart.

READERS of The Companion continue to write us of cows that sold for higher prices than those that we recently mentioned on this page. Friends in New York, Ohio and Indiana remind us of the famous sale of the Campbell herd of shorthorn cattle, held at New York Mills, in Oneida County, New York, in 1873. On that occasion, after other animals had been sold at prices ranging from \$1000 to \$35,000, the cow Eighth Duchess of Geneva went to R. Pavin Davies, an Englishman, for \$40,000. Eleven other cows brought an average price of \$21,709. In all, 109 animals brought a total of \$381,990.

THE Northern Forest Protective Association of Michigan has done something that similar organizations in other states might well do also. In the hunting camps throughout the upper peninsula it has placed emergency food boxes, made of metal and proof against the attacks of porcupines and mice. Each box contains hardtack, dried foods, including eggs, pea soup, beef cubes, sugar, dried milk, cooking and eating utensils, maps and directions

for getting out of the woods if the finder is lost. Those who resort to the boxes are warned to use the contents sparingly and only in case of need.

☪ ☪

THE PURPOSE OF GERMANY

THE break with Germany that President Wilson has so long and so patiently striven to avoid has come. As we go to press it is not certain that war with Germany will follow; it is, however, probable. Comment on the full significance of what has taken place must be reserved for a later issue; meanwhile, it is interesting to speculate about the purpose of the German government in provoking a rupture with this country.

There are two possible interpretations to be put upon the action that has compelled us to sever diplomatic relations with Germany. The first is that the German government sincerely believes that through ruthless submarine warfare it is possible to starve England before England through its control of the seas can starve Germany. If the German submarines can practically annihilate all shipping to and from England, Germany will win an unqualified victory within a few months. England will be compelled to accept whatever terms Germany dictates—and we must suppose that they would include the surrender of the British fleet. France and Russia will inevitably collapse with England; and Germany will be free, if it chooses, to send its enormously augmented fleet and its seasoned troops across the Atlantic to try to extort from America a settlement vast enough to compensate the German people for the tremendous financial cost of the war.

On the other hand,—and this is from all the evidence the more probable supposition,—the German government has embarked on the submarine adventure with no real hope of success, but with the object of saving itself in the eyes of the German people. If the German government knows that virtual starvation is imminent throughout the empire, that there is a scarcity of materials for munitions and for clothing, and that the British and French and Russians are planning offensives that promise to overwhelm the Teutonic resources, what is the most logical course, after the failure of peace overtures, for it to pursue? It has encouraged its people to believe that the submarines are invincible and can sweep British shipping from the sea. The German people, daily pulling their belts tighter, will not be satisfied unless the government uses its weapon. The government knows that the results that the people expect are not likely to be reached; but it must use the weapon in order to show the people that it has tried everything. It understands that the unrestricted use of the submarine is likely to bring the United States and probably other neutral nations into the war, and it is not unwilling that it should be so, for it sees in the addition of new enemies a possibility of saying to its people, "We are over-matched; we cannot fight the world. We must make peace." Convinced that the government has done all it could, the German people may be willing to accept a peace that was wholly unacceptable so long as the submarine weapon had not been tried, and may be willing to retain in power a government that surrendered only under the pressure of overwhelming force.

The German note is an indication that the end of the war is near.

☪ ☪

THE NEED OF BELGIUM

IT would be well for Belgium if the American people could realize what a relatively small contribution they have made to Belgian relief; for if they could once realize it, national pride and individual generosity would impel them to increase enormously the amount of their gifts.

The total amount that the American people have given to Belgian relief since the beginning of the war exceeds by not very much the sum that, in spite of all their war burdens, Great Britain and France together have contributed every month. The total gift of America in two years and a half has been little over \$10,000,000; each month for two years and a half Great Britain has given \$5,000,000, and France has given \$2,500,000.

Furthermore, the funds supplied by Great Britain and France have very largely been expended in the purchase of supplies in America. America has actually made more money out of Belgian relief than it has contributed to it.

Those are mortifying considerations. They may be worse than mortifying. Mr. Hoover, who is in charge of the work of Belgian relief, reports that the commission requires now from \$15,000,000 to \$17,000,000 a month. He says

that the food problem will get steadily worse from now until the end of the war. Three million people in Belgium to-day are destitute and entirely dependent upon the commission for food and other supplies; and the number of the destitute is increasing. It needs a million dollars a month to feed the school children, among whom there has been an alarming increase in tuberculosis. The agricultural products of Belgium and northern France have been greatly reduced owing to lack of fertilizers. Butter is \$1.50 a pound and meat is \$1.75 a pound. The average income of a Belgian family at present is about \$5 a week.

Mr. Hoover's message to the American people is that he must have \$150,000,000 during the coming year.

☪ ☪

REPETITION

REPETITION is the essence of life. By perpetual repetition from the cradle we gradually form solid habits, putting them on, one after another, as we put on garments, until we are fitly and decently clothed and armed to go forth into the world, where we make use of these acquired habits in every thought and action of our daily life. It is not enough to do a common act once, or a dozen times, or fifty times. We must repeat it indefinitely, until it is performed without effort, and in many cases without consciousness. Do you know which sleeve of your coat you put on first? If you do, you are wiser than most people.

Repetition, in French, means rehearsal. Is it not a charming suggestion? All our lives we are rehearsing without appreciating it, getting ready for some supreme moment. The quickness, the exactness and the perfection of our bearing in that supreme moment depend altogether upon the care and thought with which we have been trained, or have trained ourselves, to meet it. And the persons in whom long training has developed energy and vigor of action into an instinct resembling what is technically called "a reflex" meet great crises far better than those who argue and debate, even with a high quality of intellectual power.

To dwell on these eternal repetitions of life is of course unwise. In that aspect their monotony is likely to become intolerable. President Jefferson had an old friend who complained because he was so infinitely weary of putting on his shoes and stockings every morning. We all know what he meant. But normal minds are too busy to complain of trifles.

There are dangers also in repetition. If you make a mistake in adding a column of figures, or in practicing a musical exercise, you make it again and again. So, by repetition habits creep upon us unawares, and it takes sometimes a colossal effort to get rid of them.

No one needs more to study this business of repetition than mothers. In a sense it is their only business. And to remind and reprehend and reprove and remonstrate often get to be as tedious as the old man's stockings. Make an art of it. Try to vary your advice and explanations so as to make them new and interesting. It can be done, and you will enjoy it, and so will your children.

Perhaps the supreme art of motherhood is to carry repetition to its limit, with tactful and loving care, and then to recognize unerringly the exact point where the leading strings should be dropped and the native individuality of the child be allowed to form for itself new repetitions, new habits, new developments.

☪ ☪

CONGRESS

LESS than two weeks remain of the life of the Sixty-fourth Congress. It has accomplished a great, perhaps it is not too much to say an unprecedented, amount of work. As to the quality of the work, opinions differ, and only the future will determine which views are justified. But there are many people who have little respect for Congress as a whole, whether their own political party or the other side is in power, and who seldom miss an opportunity to express their disrespect. It is worth while now and then to seek for the truth about the matter.

Congress is of course a partisan body—too strongly partisan. Independence of thought and action is repressed by the caucus. Members often vote contrary to their personal convictions under penalty of losing their party standing and so of forfeiting support for measures in which they are interested. Again, members are afraid of their constituents, and for that reason vote for extravagant appropriations for local purposes. Moreover, they talk too much—generally without any hope of influencing votes, but merely for the sake of

impressing their constituents with a sense of their importance.

Nevertheless, there is much to be said in praise of the body as a whole and of its individual members. Congress is truly a representative body. How few Congressmen or Senators are not fairly representative of their constituents! They are not, perhaps, representative of the ablest and best of their constituents, or of the political opinions of those who criticize them, but they are representative of the average of the constituents. If in certain cases that is not true, the blame should rest upon the voters rather than upon the man whom they chose.

Congress is an industrious and painstaking body. Its daily sessions are long, and the majority of its members are faithful in their attendance and give careful and minute attention to the measures that come before them. No one would maintain that their action is always wise; but except as the caucus interferes it is conscientious. If the people generally knew how much labor is spent in preparing bills in committee, and how much time is given to discussing them after them in the appropriation bills, they would better appreciate our national legislature.

The real trouble with Congress, as with most national legislatures, is that it is overworked. Matters that in the aggregate consume a large part of its time and thought should by good rights be transferred to courts or to commissions. The attention of the two houses should not be diverted to the consideration of individual pensions, private claims and the thousand petty local questions that cumber its calendars. On January 24 a Senator introduced Senate bill No. 8002; and a Representative introduced House bill No. 26,495. That shows that there are sure to be a few thousand blunders, for no human mind could decide rightly more than a small part of so many measures. Congress could divest itself of much of that lumber if it chose, but it dislikes to surrender any of its functions.

☪ ☪

"PEACE WITHOUT VICTORY"

NO word of disagreement with the principles proclaimed by the President in his address to the Senate has come from any government. It is admitted universally that he has set forth an ideal condition of a world at peace, ruled by justice, in which national lawlessness is to be prohibited and, if it occurs, punished by a community of nations.

Because the aim is high and noble the President's utterance has been received not only by neutrals but by belligerents with more than politeness—with respect, applause and admiration. But all the countries at war make the reservation that the ideal cannot be realized until after the present war has come to an end. They do not admit that "peace without victory" is desirable for them or for the world.

To put the matter in concrete form, if peace should be made now on the basis of conditions as they are, would it not be regarded in the Entente countries as a victory for Germany? Would it not be a defeat for them if Belgium and Serbia and Montenegro should not be restored? On the other hand, would it not be a victory for them and a defeat for Germany if they were restored? Suppose, for example, that Serbia were permitted completely to recover its independence—that independence of which it was willing to surrender a substantial part at the demand of Austria in July, 1914; or suppose that Germany were required to evacuate all the territory, east and west, that it now occupies: would not those results be a victory for the Entente Allies? Would it not be a victory for Russia if Turkey were obliged to give up its fortifications at the Bosphorus and the Dardanelles and permit Russia free access to the Mediterranean, as the President vaguely suggested?

If the result is to be, not an agreed-upon sham, but a reality, no nation can succeed in any aggressive movement against any other; no nation can lose any cherished possession or right that it undertook to defend. Is that possible? If the phrase means anything, it means that no nation, great or small, shall obtain any substantial advantage or suffer any substantial loss as a result of the war.

There is another point that has hardly been touched upon in the discussion of the President's remarkable address. The treaty of peace, he says, must be between equals, if its results are to be lasting. When the conference is called, who are to be members of it? The "great powers," of course. But although their interests are the largest, they are no more important than the interests of the small countries are to them. Will either side be willing to admit on

equal terms delegates from Belgium and Serbia and Montenegro and Bulgaria and Roumania—and delegates from the newly created kingdom of Poland? And does anyone think that, if they are not represented, their interests are safe in the hands of the big brothers?

CURRENT EVENTS

CONGRESS.—The House passed the emergency revenue bill by a vote of 211 to 196 on February 1.—Congress passed the Burnett immigration bill over the President's veto. The vote in the House was 285 to 106; in the Senate, 62 to 19. The bill has been vetoed by three Presidents on account of the literacy clause it contains.—The naval committee of the House offered amendments to the naval appropriation bill, authorizing the President to commandeer shipyards, merchant shipping and munition factories, and appropriating \$150,000,000 to hurry the work on naval vessels in process of construction.—Both houses have passed the bill that establishes strict prohibition against liquor in Alaska.

THE BREAK WITH GERMANY.—Upon receiving the German note concerning the new rules that are to govern its submarine campaign against merchant vessels, President Wilson took counsel with his cabinet and with leading Senators as to the course he ought to pursue. On February 3 he appeared before Congress and read a brief message in which he declared that the new policy would violate the agreement that Germany had made with this country after the sinking of the Sussex. At that time the President warned the German government that, if it returned to the kind of warfare that was responsible for the destruction of the Sussex, the United States could no longer continue diplomatic relations with the government at Berlin. Accordingly, he announced that Ambassador von Bernstorff had been handed his passports and that Mr. Gerard, our ambassador at Berlin, had been recalled. Congress received the address with enthusiasm, and the newspapers of the country agreed that the step could not honorably have been avoided. The war and navy departments began immediate preparation for a possible call to war, and in several states the militia was ordered to be in readiness for duty. The nation took the situation calmly, but with every evidence that it was united in supporting the President. Many organizations composed of Americans of German birth or parentage affirmed their loyalty to the United States.

The action of the President was of course approved by public opinion in England, France and Italy, and to a notable extent in the South American republics, Spain and Holland. Not much comment from German sources was available. What we heard was calm in tone.

Government officials took charge of the German ships interned or laid up in American ports. The gunboat Geier, interned at Honolulu, was set on fire by her own men, and several ships in Manila Harbor were damaged and one in Charleston was sunk by their crews. The machinery of the German ships lying at New York, Boston and Seattle was also found to be broken, in obedience to orders from Germany.

The breaking of diplomatic relations does not necessarily mean war, but when it was learned that the American ship Housatonic was torpedoed by a submarine on February 3 there was fear that war might immediately follow. Later it appeared that the Housatonic was warned and her crew assisted to escape in safety. On February 5 the report came that the British steamer Evestone had been sunk and her small boats shelled, and that an American sailor named Wallace was killed. There is of course grave danger that some such occurrence will plunge the two nations into war.

On February 4 word came that the German government agreed to set at liberty the seventy-two American sailors brought into port by the prize ship Yarrowdale. That was contradicted later by a dispatch from Copenhagen, which added the sensational report that the German government was detaining Mr. Gerard, the American ambassador, until it was assured that Count von Bernstorff received proper treatment in this country. Such a course would be deliberately offensive to the United States.

Spain is to represent the United States at Berlin.

Mr. Bryan headed a movement in favor of keeping Germany and the United States from drifting into war. On February 5 he sent a wireless message to Germany, begging the government to refrain from overt acts that would arouse the war spirit in the United States.

RELATIONS WITH JAPAN.—The Japanese ambassador having protested in the name of his government against bills pending in the legislatures of Idaho and Oregon, intended to forbid Japanese to hold title to land in those states, the State Department asked the Senators from the two states to urge the members who introduced the bills to withdraw them, in order to avoid a serious diplomatic

controversy with Japan. The Senators did so, and the bills were accordingly withdrawn. Japan objected to the bills because they forbid Japanese privileges that other aliens may enjoy.

THE "LEAK" INVESTIGATION.—The committee learned from E. A. Roper, a telegrapher employed by the brokerage firm of F. A. Connolly & Co. of Washington, that he sent out a dispatch that was apparently based on advance knowledge of the President's peace note. He declared that the message was filed by a newspaper correspondent named J. F. Essary, and added that he gave his testimony in order to clear Mr. R. W. Bolling, the President's brother-in-law, who is a member of the Connolly firm.

MEXICO.—The column commanded by Gen. Pershing crossed the border on February 5. A large number of Mexican refugees accompanied the soldiers across the frontier. Several regiments of militia returned to their states on the approach of the regular troops.—Gen. Carranza announced that in the event of war between Germany and the United States Mexico would be strictly neutral.

THE LLOYD-GEORGE PLOT.—The persons accused of plotting against the life of the British premier were put on trial at Derby on February 3. The attorney-general declared that the plan was to shoot darts poisoned with strychnine and curare at Mr. Lloyd-George while he was playing golf at Walton Heath.

THE EUROPEAN WAR

(From February 1 to February 7)

The outstanding event of the week was the inauguration of the new rules governing the German submarine campaign and the consequent break between the governments of the United States and Germany. The other neutral powers are inclined to protest against the German policy, but none of them followed the

A French army dog, used to help the wounded and carry messages, wearing a gas mask

United States in breaking off relations with Berlin. Spain sent a strong protest to Berlin, and the government was said to be putting its army and navy in readiness. Brazil also protested, and public opinion in that country would probably support a more positive stand. Holland and Denmark are too much exposed to invasion from Germany to risk a breach with that country, and Norway and Sweden are unlikely to take definite steps at present. Switzerland, being comparatively unaffected by the situation, is still less likely to proceed to extremes, although it, too, has protested.

A number of merchant ships were sunk during the week,—fourteen in one day,—but on the whole the number was not very much greater than in several preceding weeks. The vessels destroyed by submarines since January 1 register nearly half a million tons.

Among the ships sunk were two steamers used in carrying relief cargoes to Belgium—the Lars Kruse and the Euphrates—and several neutral ships—Norwegian, Swedish, Danish and Spanish. On February 5 it was reported that the British steamer Evestone had been torpedoed and its small boats shelled as they were leaving the ship. On February 7 the Anchor liner California was torpedoed without warning and a number of lives were said to be lost. London declared that a Peruvian vessel was actually sunk within the territorial waters of Spain.

Chancellor von Bethmann Hollweg addressed the Reichstag in defense of the submarine policy now in force and declared that it would never be modified. After the break with the United States, however, the government at Berlin offered a few minor concessions to make the new rules temporarily more tolerable for Spain and Holland.

There was very little land fighting anywhere, so severe was the weather. A British attack cleared the Germans out of Grandcourt on the Ancre, and there were French raids in the region of the Somme. Berlin reported German attacks on the Russian lines near Riga. None of the fighting was of more than local importance. Along the Roumanian front there was almost complete quiet.

London announced that the British forces at Kut el Amara were active, and that they had captured Turkish defensive positions along a front of half a mile.

It was announced that the Montenegrin cabinet, which is with King Nicholas in France, had resigned because the King refused to give his assent to a plan for the union of his country with Serbia. According to the plan, the kings of Serbia and Montenegro were to abdicate, and Crown Prince Alexander of Serbia was to be king of the united country.

How Hudson Super-Six Saved the Six

A Review of the Crisis in Motordom

Only engineers knew it, but a year ago a crisis impended in Motordom. The light-weight Six—long the favorite type—was waning in popularity. The trend was towards Eights and Twelves. It seemed for a time that certain limitations would force the Six out of the field. Note how the Super-Six reversed that condition.

For years the Light Six was the leading type. Hudson was its foremost exponent.

It was so much smoother than former types that enthusiasts called it finality.

But it never fulfilled expectations. It nowhere near ended vibration. It won hardly a record. About every performance record that counted—save a few won by V-types—was still held by Fours.

Multi-Cylinders Came

At that juncture Hudson engineers—and numerous others—began to build V-type motors. That is, two Fours or two Sixes so set at angles as combat the Six limitations.

The trouble, remember, with all types yet developed, lay in excessive vibration. That caused friction and wear. It lessened power and endurance. The object of the new types—the Eights and Twelves—was to minimize that waste.

Numerous upper-grade cars adopted them. The Hudson shop had its V-types perfected. For a time it seemed that the fate of the Six was sealed.

Then Came the Super-Six

But early in 1915 Hudson engineers discovered the cause of motor vibration. And they set out to remedy it in a new, mathematical way.

In June they applied for a patent. In December the patent was granted. It gave Hudson control of a basic invention which solved the problems better than anyone had dreamed.

It added 80 per cent to the efficiency of the best Six ever built. That is, to its power and endurance. It gave the new Six—the Super-Six—a supremacy too great to be questioned.

The First Year's Result

The Hudson Super-Six has been on the market a year now. It has

won all worth-while records—that is, records made with a stock motor. In speed, power and endurance, in hill-climbing and quick acceleration, it has outperformed all other types. It won the chief record—the 24-hour record—by a margin of 52 per cent.

It twice broke all endurance records in a round trip from San Francisco to New York. It ran 7000 miles at over 80 miles an hour without showing any wear on the bearings.

It has gained the supreme place in Motordom. It has come to outsell any other front-rank car. It is now out-performing all rival cars for 25,000 owners.

Today every man who seeks the best in a fine car must choose the Hudson Super-Six.

Not Like Other Sixes

But don't confuse the Super-Six with Sixes of the old type. The Super-Six is a unique type—a basic invention, controlled by Hudson patents. It differs from other Sixes more than Eights or Twelves do.

Numerous makers abandoned the V-types because of the Super-Six. The added cylinders seemed useless additions when the Super-Six so excelled.

But no other Six is like the Super-Six. Our patents prevent approach.

A New Gasoline Saver

This year we add to the Super-Six another exclusive advantage. It is a gasoline saver, remarkably effective. At a nominal cost it can be added to any Hudson Super-Six.

And our latest bodies, in every style, are masterpiece productions. They are built to match the Super-Six supremacy.

THE OLD CAMP CHEST

By Martha Haskell Clark

ON the further edge of winter when the snow-drifts melt and run
 'Neath the level golden glancing of the February sun,
 Something beckons in the twilight, something
 whispers through the west,
 Till you steal amid the shadows to the old
 camp chest.
 There's a sound of lake waves laughing as you
 climb the attic stair,
 And a clenching at your heartstrings that has
 gripped you unaware.
 Oh, forgotten trails that tempt you, by the
 guarding padlock hid,
 How they hold you and enfold you as you raise
 the battered lid!

Pennyroyal, citronella, pungent perfumes subtly
 blent
 With the smoke of long-quenched camp fires,
 and the sun-warmed hemlock scent,
 All the sandalwood of Asia, oils of Araby the
 blest
 Cannot boast the haunting fragrance of the old
 camp chest.
 Rod and rifle, spur and stirrup, each can tell
 its well-known tale,
 Each can stab to fevered longing with its mes-
 sage of the trail,
 Till you lay them back in silence there with
 slow, reluctant hands
 To their sleeping in the keeping of the one that
 understands.

In that outer world of striving, faces come and
 faces go,
 But as sure as springtime sunlight falls on
 February snow,
 Nearer, clearer sound the voices that can time
 and change outlast,
 Of the tried and trusted comrades from the
 camp fires of the past.
 Hark! I hear them coming, coming down each
 hemlock-bordered trail
 To the wave-lapped attic shadows in the winter
 twilight pale;
 Jacques, Pierre, and old La Bombard, "Capit-
 an" and all the rest,
 Smile their greeting, dim and fleeting, by the
 old camp chest.

EFFICIENCY—FOR WHAT?

A YOUNG man of twenty-four stepped into a business office in a large city and walked up to a desk where an elderly man sat examining a bundle of papers.

"Look at that, father!" the young man said with a smile of pride. "I've made nearly one hundred on my efficiency chart! What do you think of that?"

The business man looked up at his son with a smile and a feeling of pride at his appearance, and then his eye fell on the list of questions put by the efficiency bureau that had interested the young man to compete with many others for first place.

1. Are you physically sound and free from all trace of disease?
2. Can you apply yourself to mental labor without great fatigue?
3. Are you an exact mathematician?
4. Do you have any bad habits?
5. Would you be willing to employ yourself in a business that required honesty, quickness of judgment, keen intellect?
6. Are you quick to see and take advantage of a business opportunity?
7. Are you in debt? If so, how did you become so?
8. Do you have extravagant habits of dress, amusements, or social life?
9. Can you secure good letters of recommendation from business men in the city who know you?
10. How much money have you ever earned, and how did you earn it?

The father read the list and then, without a word, reached for a sheet of paper and put down the following:

1. Are you a Christian? Would you follow the teachings of Jesus if to do so should result in the loss of money and position?
2. Do you have some great cause of humanity at heart, and are you ready to give your heart's enthusiasm for it?
3. Are you as active and as useful in some church as you are in your business of money-making?
4. Do you pray and read the Bible daily?
5. Are you planning to do a man's part by sharing in the burden of good citizenship?

The father handed those questions to his son. The son read them, and his face paled and grew red by turns. He faltered. His father was a distinguished and deeply consecrated man who had lived consistently the life outlined in the questions. The son respected him as he respected no other man.

"Father," he said finally, in a low voice, "that is real efficiency. I am going to try to live up to it; but right now I cannot answer those questions honestly and pass. It will take me a long time to qualify."

"It will take you all your life," his father said gravely.

AT AUNT MARY'S

DINNER was a very unhappy meal. Roy ate in morose silence. Judith was displeased over her work—Judith did not have "needle fingers." Even Peggy was absorbed. Over the three downcast young faces Uncle Terry looked anxious inquiry at Aunt Mary, but she could only shake her head. She did not know any more than he what was the matter. Perhaps if they had ever had children of their own!

In the kitchen after dinner Peggy told her that Roy was afraid he was going to lose the position he had hoped for, and that Judith could not get her skirt to hang right, and that she, Peggy, surely must learn to do something in a hurry to help out.

Aunt Mary comforted as best she could, but it was difficult for her to understand. She was sure that any firm must jump at the chance of getting a young man like Roy; and why did Judith worry over that skirt? Miss Butler could do it. And as for Peggy, why in the world should she want to do anything when she and Uncle Terry were so glad of the chance to have her with them. At that Peggy

came out of her abstraction and kissed her aunt impulsively. Then she ran upstairs to Judith.

Aunt Mary, left alone, had a sudden inspiration. She would make a strawberry shortcake for supper; that would cheer them up. They would not be expecting one so early.

It was slow work finding berries enough, and Aunt Mary's back ached with the long stooping, but her eyes were happy. Nothing that would "brighten up" the children could possibly be too hard. She hulled the berries excitedly, starting at every sound.

There was no doubt that it was a wonderful shortcake; Aunt Mary never had made a better one. She brought it in after everyone was seated and then waited eagerly; but suddenly a sharp ache came into her throat, for Roy and Judith did not notice at all, and Peggy only said:

"Why, I didn't know strawberries were ripe!"

Then Peggy happened to look at Aunt Mary, and in a flash she understood. *Dear Aunt Mary!* And what selfish beasts they all were! Peggy felt as if the shortcake would choke her; but she chattered and chattered, and made the others take two pieces each. The moment supper was over, she whirled the other two out to the piazza and told them what she thought of the whole three, herself included.

"When they'd give us everything in the world they have!" she cried. "When they'd keep us all our lives if we'd let them! And then we dump all our little troubles on them and spoil their happiness. How Aunt Mary worked over that shortcake because we used to love them, and how glum we were when we ought to have been full of excitement and thankfulness!"

Roy was already striding toward the kitchen.

"O Aunt Mary!" he cried. "Make me some fried injuns to-morrow morning?"

"No; waffles and honey!" Judith cried over his shoulder. "No one ever made waffles like yours."

Aunt Mary's face was alight with joy as she smiled at the eager look in their eyes.

AT GEN. WASHINGTON'S TABLE

AMONG the many entertaining pictures of life in colonial days that Mr. Charles H. Sher- rill has collected in his volume, *French Memories of Eighteenth Century America*, is an account of a dinner that George Washington gave while he was commander in chief of the American forces. The description is found in the writings of the engaging Marquis de Chastellux.

"On our return to camp we found a good dinner ready waiting and about twenty guests. The repast was in English fashion, composed of eight or ten large dishes both of butcher's meat and chicken, accompanied by vegetables of different sorts, and followed by a second course of pastries, comprising everything under the two denominations of 'pies and powdering.'

"After these two courses they removed the tablecloth and served apples and a quantity of nuts, which Gen. Washington generally ate for two hours, meanwhile proposing toasts and indulging in conversation. These nuts are small, dry, and covered with so hard a shell that only a hammer can break them; they are served half open, and are then picked out and eaten. About half past seven we arose from the table, and the servants at once came to take it down and shorten it, as it had been lengthened for dinner. I was astonished at this manoeuvre and asked the reason. They told me they were going to lay the cloth for supper."

"At the end of half an hour I retired to my room, thinking that the General might have something to do and was only remaining with the company out of regard for me, but half an hour later they came to announce that His Excellency awaited me for supper. I returned to the dining room protesting with all my might against this supper, but the General said that he was accustomed to take something in the evening, and that I need only sit down, eat some fruit and take part in the conversation."

This long stay at table, however, had a convincing apologist in the *Compte de Ségur*: "Temperance was one of Washington's virtues, and in prolonging his dinner he had but one object—that pleasure of conversation which distracted him from his worries and rested him from his labors. His table was set every day for thirty. Washington, animated by a singular and most disinterested love for his country, declined to receive that which they had assigned him as Commander-in-Chief. It was almost in spite of him that the government charged itself with paying his table expenses."

PHOTOGRAPHING A RHINOCEROS

WILLINGNESS to face danger calmly is necessary if a man is to achieve success in photographing African game. A recent contributor to the *American Museum Journal* shows the coolness and courage that he and his companion needed when they photographed a rhinoceros at close quarters. He says:

I was carrying a gun with only two shots, and Dugmore had nothing except the camera. As we topped a little knoll, we saw about one hundred yards ahead of us in the yellow grass the black outline of a rhinoceros's back. We approached to a point within eighty yards, where we had a good view of him, and from there Dugmore took a telephoto picture.

Although we were in plain sight of the beast, we moved toward him, and at about sixty yards Dugmore took another picture. Being sure of two pictures, he then changed his lens to one with a shorter focus. Meanwhile the rhinoceros gave no sign that he was aware of our presence. We walked to a spot about forty yards from him, where Dugmore focused the camera, while the rhinoceros deliberately lay down. That was a sure sign that he had not detected us, and we both gave a sigh of relief.

"Splendid!" whispered Dugmore. "Now we can walk up very close without his seeing us."

It was no place for an argument; and so, as he started forward I followed, with my finger on the trigger of the gun. As each cautious step brought us closer and closer—and my breath grew shorter and shorter—I wondered if Dugmore were ever going to stop! When he was a little more than twenty yards from the big rock-like mass, he stopped and began to focus his camera, while the rhinoceros's ears twitched nervously. My gun, which seemed to weigh forty or fifty pounds, came slowly to my shoulder. The next moment there was a short, a cloud of dust, and the huge beast was coming straight at us. I set my teeth, held the gun hard, and listened for the little *click* of the camera.

Dugmore let him get well on his feet and under

way; then a *click*! and a *bang*! in quick succession decided the battle in our favor. At fifteen yards the rhinoceros bit the dust, scrambled to his feet, wheeled and made off.

AN INDIAN MISCAL BAKE

EVERYONE knows the century plant, with its thick, sharp-pointed leaves, but few persons would ever imagine that it is good to eat. Yet the Indians who live in the mountains that surround our great southwestern desert know how to prepare a kind of candy out of mescal, as they call the plant.

A traveler who had the good fortune to go out with some of them on a mescal hunt gives the following account of his experience:

A four days' horseback ride across the mountains took me to the edge of the Colorado Desert, not far from the Mexican line, where I was to meet my friend and Antonio Cuevas, the Indian.

We made camp at a spring in a cañon that overlooked the desert, and set out to hunt up our mescal plants (a-moosh'), Antonio called them in his Indian language. On the way he pointed out many places where mescal bakes had taken place in past times, and by great luck we discovered also one of the tools with which in olden days the Indians used to cut the mescals for baking. It was hidden in a crevice of the rocks, where it had lain for many a long year—a pole about six feet long of the tough, heavy wood of the mountain mahogany, sharpened at one end to a chisel-shaped edge. Antonio called it a *peh-wee'*.

An hour's ride brought us to the mescal ground. It was early in April, the time when the plant sends

PHOTOGRAPH BY J. S. CHASE

CUTTING OUT A MISCAL PLANT WITH THE PEH-WEE'

up its tall flower stem. The mescal grows for years without attempting to flower,—merely a bunch of big, spiky leaves with tips as hard and sharp as a bayonet,—and when at last it blooms and bears its seed, that is the end; it dies. The part that the Indians used is the butt of the flower stalk, which is often several inches thick. We scrambled and searched over hillside after hillside, testing each likely-looking stalk; if it felt springy rather than limber, it was too old and would be bitter.

Every time we found a suitable plant Antonio chopped it out with an axe or with our *peh-wee'*, cut the top off, and trimmed the butt clear of leaves. When they were all ready Antonio dug a pit about two feet deep and three feet across, lined it with flat rocks, and round the margin built a rough curbing, on which he laid our mescal butts.

Next he built a big, loose pile of dry wood over the pit, using branches of the desert juniper and the sumac. Then he set the pile alight and allowed it to burn until only embers remained in the bottom of the pit. After pushing the charred lumps of mescal into the pit, and with them the hot rocks from round the edge, he shoveled earth on top and patted it down into a mound. That completed the work, and, leaving our buried mescal to cook slowly, we went back to camp.

The next day at four o'clock in the afternoon, thirty hours after we had buried the mescal, we opened the pit. The butts looked more like elephants' feet than anything else I can think of. We took one of them to the shade of a bush, cut away the blackened outer part, and found inside a mass of soft golden-brown stuff, somewhat stringy and very sweet, with a flavor that I thought at first was like baked apple. Then I thought it more like pine-apple, and at last I decided that it was not like anything except mescal; but it was undeniably good, and so rich that we could eat only a very little of it at a time.

A RECRUIT FOR SUFFRAGE

LOOKING askance at Mr. Hyne, Caleb Peaslee pursed his lips as if he were in doubt about speaking.

"Pamely Lothrell," he finally announced with the air of dropping a bomb, "has come out flat-footed, and she says she's goin' to vote!"

"Quit your foolin'," Mr. Hyne commanded. "I ain't feelin' like listenin' to it—my knee achin' the way it is with rheumatism."

"I ain't foolin'," protested Caleb. "You stretch your knee out there where the sun'll hit, and lemme tell you 'bout it."

So Mr. Hyne stretched his knee into the warm June sunshine and listened.

"I know's well's you do, Hyne," began Caleb defensively, "that the last pusson in the world that a body'd think of settin' herself up to vote would be Pamely, almost—she's always been such a quiet, hide-away kind of critter. But she's had a change of heart since day b'fore yest'day—she tells me."

"Day b'fore yest'day afternoon," Caleb continued, "Pamely was cookin' up some sort of a batch of victuals down in the kitchen. She'd jest looked into the oven and shet the door, and when she riz up there was a tramp, big as life and dirty as a pigpen, fillin' the doorway chock-full and leerin' at her dreadful discomfition."

"He didn't say nothin' for a minute or so—jest kep' on grinnin' at her kind of meachin' and ugly, and then let on that he wanted somethin' to eat

right off. 'And I guess you'd better hunt round,' he says, 'and see if you can't find a dollar 'r two that I can borrow a spell.'

"When Pamely riz up to her feet," Caleb went on, "and faced the tramp, it fetched her back right agin the stair door that leads up into the back hallway, and her hand tetchted the door knob. So quick as a flash she opened the door and dodged into the stairway and raced upstairs."

"She hadn't a'fore it come over her how helpless she was up there. Hollerin' wouldn't help her any, for Bartlett's folks was all away, and there wa'n't any other neighbors nearer'n a quarter of a mile."

"And while she stood there wonderin' what on earth she should do, all at once it come over her 'bout her victuals in the oven. There they was, with every damper in the stove wide open, prob'ly burnin', and that great tramposer down in her kitchen dominatin' round."

"I d'know why 'tis," Mr. Peaslee conjectured, "but meddlin' with a woman's bakin' is a good deal like troublin' an old bear with cubs. All at once Pamely made up her mind she was goin' to drive that tramp out of her kitchen, and she begun to hunt for somethin' she could throw at him, and the only namable thing she could lay her hands to was a settlin' of ducks' eggs that she'd been savin' for my wife. So she slid 'em into her apron, easy, and started."

"When she got to the foot of the stairs and swung the door open, there was the tramp jest bendin' over the table. He'd been into the pantry and got some victuals together, and was jest goin' to take a bite out of a doughnut when she hove the first egg. Not bein' used to throwin', she overwent him a mile, and the egg fetched up agin the clock right over his head with a bang fit to wake up a dead pusson. He whirled to see what it was, and jest then Pamely let fly another egg, and that fetched on his forehead, right at the roots of his hair, and filled his eyes full; and then Pamely charged him, whoopin' at the top of her voice."

"Cordin' to Pamely, the tramp, not bein' able to see anything, with his eyes full of ducks' egg, and not knowin' who nor how many might be after him, made a blunderin' drive for the door, while Pamely pelted him with eggs and screeched her lungs out. And lo and behold! when they fetched out into the road Salem Burnaby was drivin' by, and he took charge of the tramp and drove him off to the lockup."

"And I guess," concluded Caleb, "that the whole thing sort of went to Pamely's head. Anyway, she was over to our house that night tellin' 'bout it, and she let on that if a critter like that tramp was 'lowed to vote she was goin' to, too, bein' as she'd proved to be able to drive him, let 'lone always supportin' herself. And I ain't p'pared to contend," concluded Caleb, "that she ain't right."

GENERALS ON THE ROCK PILE

WHEN the late President Leconte of Haiti set about to reduce the size of his army a few years ago, many of the generals whom he mustered out of the service were put to breaking rock on the street. At one time, says the *National Geographic Magazine*, there were more officers than men in the Haitian army.

In former times the pay of a Haitian soldier was small at best, nothing at worst, and at all times insufficient to keep the warrior fed decently. The days for loading coffee on departing ships were great days in Haiti. They were days when the army got a square meal, thanks to the stevedore wages that the men were able to earn.

The army officers of Haiti were as fond of gold lace as a mountain girl of bright colors. Small wonder, then, that the regalia of a field marshal was everywhere in evidence. Times have changed, however, and now the American marine in quiet khaki takes the place of the Haitian fire eater in his resplendent costumes.

Feeding the Haitian armies in the days before the American "Big Brother" movement was not a difficult job. Garrison rations consisted of a sugarcane stalk two or three feet long, and whatever else the soldier could beg, borrow or steal!

UNDERGROUND EELS

SOME years ago, says a contributor to *Answers*, the Messrs. Boyd sank a small hole for water on their Australian farm, and struck a running stream at a depth of three feet. One evening a large eel came up in the bucket, and, a light having been obtained, the workmen watched the hole. Fish in considerable numbers were constantly darting across the open hole, and subsequently several hundred eels were caught.

It is a mystery where the fish came from and whither they were going; they seemed always to travel in the same direction.

Recently Mr. D. Minogue, the present owner of the farm, sank a well about a mile away and found the stream at eight feet. At nighttime, if you have a light, you can see the eels flashing by, still going with the stream in the direction of the coast. Some of the fish weigh as much as six pounds.

THE FIRST GAS BURNER

A WOMAN'S thimble, according to the *Popular Science Monthly*, suggested the first gas burner. William Murdoch, the inventor, first burned the gas as it came from the end of a pipe. One day he wished to stop the illumination quickly. Looking round for an extinguisher, he seized his wife's thimble and thrust it over the light, which immediately went out.

There was a strong odor of gas, however, and Murdoch, seeing that the end of the thimble was full of tiny holes, touched a light to it. Through all the holes jets of flame appeared, and the experimenter was surprised to find that the illumination from those tiny jets was greater than that given by the flare from the end of the pipe. Acting on the principle that this chance discovery revealed, Murdoch made what was known as the "cockspur burner."

A CONSERVATIVE ESTIMATE

THE following story is told by Bishop Welldon in his recently published *Recollections and Reflections*:

A governess once tried to give her pupils some idea of the relative size of certain distant countries by saying, "Cambodia is about as large as Siam." But when one of the little girls attempted to repeat the information in a written exercise, she put it thus: "My governess says that Cambodia is about as large as she is."

CHILDREN'S PAGE

Ray Coon Wanted a Bite, Too

WHEN RAY COON WENT COASTING

BY G. H. SMITH

ONE crisp winter morning Ray Coon took his new Christmas sled and went coasting on the long hill beyond the woods. He wore a fine new sweater that Mother Coon had knit him, a sweater that had the letter

Bunny Let Ray Have Two Bites

"R" on the breast to help keep him warm against the sharp winds. Twice he coasted down the hill and climbed slowly back to the top again.

"My!" said Ray Coon, stopping to take a long breath. "It did not seem so far as that when I was going down!"

Then he took another full breath of the cold air and exclaimed, "And I believe this makes me hungry, too!"

Just as he spoke he spied his good friend,

Ray Gave Them a Flying Start

Bunny Gray, sitting on a log beside the road, eating a big red apple.

"Good morning, Bunny!" called Ray Coon. "What a lucky boy you are to have a big red apple!"

"Good morning, Ray!" answered Bunny Gray. "I was just thinking what a lucky boy you are to have such a fine sled."

Then they both laughed heartily, for they were such good friends that each could always

Old Mr. Possum Plodded Along

count on a share of the other's good things. Bunny jumped up from the log and allowed Ray to take two bites of his big red apple. Then, when Bunny had finished what was left of it, Ray cried:

"All aboard! We'll be at the bottom in three winks!"

When Bunny was seated on the sled, Ray ran a few steps down the hill, hauling the

"How Still He Lies!" Said Bunny

TOPSY-TURVY

BY BLANCHE ELIZABETH WADE

If the air were full of fishes,
And the sea were full of birds,
And books were full of raindrops,
And clouds were full of words;
If fur grew on the tree trunks,
And the kittens' coats were bark,
And owls preferred the daylight,
And humming birds the dark;
If oysters lived in birds' nests,
And birds curled up in shells,
And bees were found in marshes,
And frogs in hives and cells;
If ferns grew in the tree tops,
And nuts grew underground,
And oranges were always square,
And handkerchiefs were round;
If the horse rode in our carriage,
And we ran on before,
And looked for crabs on housetops,
And chimneys on the shore;
If steamboats ran on railways,
And engines tried to float;
If a miller wore a harness,
And his horse a vest and coat;
If we ran to see the moon at noon,
And saw the sun at night;
I'm sure that something would be wrong,
And nothing very right!

sled, in order to give them a flying start. Then he leaped on behind Bunny. The road was smooth and the hill was steep. How they flew! The faster they went the sharper cut the wind, so that Bunny, who was in front, began to wish that he had buttoned his jacket before they started.

About halfway down the hill there was a sharp turn in the road. When they rounded the turn, going faster and faster, they saw a sight that made them both shout in sudden fear. It was old Mr. Possum plodding along the road just ahead. He was leaning on his cane, and over his shoulder he carried a stick with a bundle at the end of it. Probably he had been over to the village on a shopping trip and had come into the road by a path through the woods.

"Look out! Look out!" screamed Ray Coon and Bunny Gray together, at the top of their voices.

It would have done as much good to shout to a tree. Old Mr. Possum was too deaf to hear them; so he plodded on in the middle of the road. There was no time for Ray and Bunny to steer the sled to one side or even to throw themselves off. Before they could shout a second time, it happened,—*crash! crash!*—and there was poor old Mr. Possum lying flat in the snow, while Ray and Bunny went flying heels over head into a drift beside the road.

They clambered out of the drift and hurried back to where Mr. Possum lay. They themselves were not hurt a bit, but both of them were so frightened that their hearts went *thump! thump!*

"Oh, I hope we have not killed Mr. Possum!" moaned Ray Coon in a voice that was very trembly.

"How still he lies!" said Bunny Gray. "We must have hurt him terribly!"

While they stood there, eager to do something, but not knowing what to do, Mr. Blinky Owl came out from behind a tree and drew near.

"Hello, boys!" he called. "What's the matter here? The sun is so bright on this snow that I cannot see much."

"O Mr. Blinky Owl!" said Ray Coon. "We ran down poor Mr. Possum, and I'm afraid we have killed him!"

"You ran down Mr. Possum?" repeated Mr. Owl. "Well, well, that's too bad! Let me see! Let me see!"

He came poking along to where Mr. Possum lay, and looked hard at him from head to feet; then suddenly he sat down and put his ear to Mr. Possum's heart.

"It's just as I thought," he said, getting up. "Old Mr. Possum is not hurt at all. I've known him a long time, and he has a way of playing dead when anything exciting happens. See! You did not hit him at all! It was his cane that your sled hit, and when the cane snapped he tumbled down."

When Mr. Blinky Owl had spoken thus to Ray Coon and Bunny Gray, he put his bill close to Mr. Possum's ear and shouted, "Who! Who!" several times with all the strength of his voice.

Deaf as he was, Mr. Possum could not fail to hear that. He opened first one eye and then the other, and finally raised his head and peered round very carefully.

"Is that you, Mr. Blinky Owl?" he said at last. "What happened to me?"

Again Mr. Blinky Owl put his bill close to Mr. Possum's ear and shouted again as loudly as he could.

"The boys were coasting," he said. "The

Blinky Owl Listened at His Heart

Our Polly's pleading "Please!"
And Sally's sunny smile,

They open pantry doors,
Disclosing cakes and tarts;
They open happy stores
Of kindness in our hearts.

Oh, those are wondrous keys
For locks of every style.

And when some Doleful Thought
Stays lingering about,
Those keys fly like a shot
To lock the rascal out.

PUZZLES

1. CHARADE

My first is the name of the dining-room maid;
My second she puts on the table
Many seconds my sly whole would steal from
my first,
If only the rascal were able!

2. CONNECTED DIAMONDS

Upper Diamond—1. A letter. 2. Possesses. 3. Hurry. 4. Those who rule. 5. To guide. 6. To mistake. 7. A letter.
Left-Hand Diamond—1. A letter. 2. A stage. 3. To sew slightly. 4. A wild horse. 5. To be erect. 6. Conclusion. 7. A letter.
Lower Diamond—1. A letter. 2. Part of the verb "to be." 3. A deputy. 4. Treachery. 5. To follow. 6. Part of the foot. 7. A letter.
Right-Hand Diamond—1. A letter. 2. To be seated. 3. Dense. 4. A traveler. 5. Weary. 6. Part of the verb "to do." 7. A letter.
From 1 to 2, comfortable; from 2 to 3, an insect; from 3 to 4, a snare; from 4 to 1, cooking utensils.
From 2 to 1, cannon; from 3 to 2, a strong flavor; from 4 to 3, a portion; from 1 to 4, to snarl.

3. RIDDLE

When I come to make a call,
People let their eyelids fall,
Turn away without a word,
Make no speech nor sign at all.

When I leave, as quick as wink
Back they turn, and look and blink,
Stretch their eyes and stretch their arms—
Funny manners, don't you think?

sled hit your cane and you fell down. They are very sorry. They did not mean to do it."

"Oh, that's all right!" said Mr. Possum, getting to his feet in very sprightly fashion for an old fellow. "I thought it might be something worse, and so I kept quiet to see what would happen. I do not blame the boys. I know I was right in the middle of the road, anyway."

Then Ray Coon and Bunny Gray did what they could to help Mr. Possum. Ray picked up his stick with the little bundle at the end, and Bunny, after a long search, found his eyeglasses, which had fallen off into the snow.

"Please get on the sled, Mr. Possum," said Ray, shouting very loud. "We will haul you home."

"You are very kind," said Mr. Possum, "but you will not have to haul me far. It is downhill all the way and I shall be glad to try coasting again. It has been a long time since I was on a sled."

So all three seated themselves on Ray's sled. That did not leave any room to spare, and they had to hold on very tight when the sled flew down the steep hill. Mr. Possum seemed to enjoy it as much as the boys did, although the wind nearly blew his glasses off. When they reached the bottom of the hill, Mr. Possum jumped off the sled and shook hands with both the boys before he went into his house.

"Thank you, boys!" he said. "That makes me feel younger. I'll try to keep out of the road the next time you are coasting, but some-

4. QUEER A B C'S

The letters of the alphabet—how marvelous they be!
I wonder if you know them well. I'll quiz you. Let me see:
One letter's fond of summer days and long bright, sunny hours,
Of clover fields and glory bells and all the fragrant flowers.
Another letter you may eat, and here is one to drink;
And this one must be closely kin to shimmies, I think.
And here is one that is yourself, and one that is a cry;
And this one's used to number things, and here's a bird to fly.
This one can toss the largest ship, another's made of hair.
Here's one that is a part of you and glides you everywhere.
The only one that oxen know is here (they are not smart).
And of a house another one may be sometime a part.

How strange that little letters may become so many things!
Now hurry up and guess them ere the bell to dinner rings.

5. STAR

From 1 to 2 is of the people;
from 1 to 3 is above the fireplace;
from 1 to 4 is a city in New York;
from 1 to 5 is a political meeting;
from 1 to 6 is a cloak;
from 1 to 7 is a small tool;
from 2 to 3 to 4 to 5 to 6 to 7 is a small room.

6. GEOGRAPHICAL DELETIONS

I
Take a letter from a river in Europe, transport and find vapor of hot water.

II
Take a letter from a river in Europe, transport and find a vehicle.

III
Take a letter from a river in Europe, transport and find a blast of wind.

They Helped Old Mr. Possum

day I should like to go coasting with you perhaps to-morrow, if I am not too lame from my fall to-day."

"All right!" shouted Ray. "We'll call for you!"

While Ray and Bunny were climbing back up the hill, dragging the sled behind them, they agreed that Mr. Possum was a fine old fellow, and that perhaps once in a while some old fellows like to have a little sport as well as youngsters such as themselves.

"But wasn't it lucky," said Ray, "that you hit Mr. Possum's cane instead of one of his legs!"

A PERILOUS SWIM

WE had been traveling all day long across the flat wheat fields of Kansas, and when we began upon the night journey across the desert in the western part of the state the air brakes shrieked and finally the train came to a jolting stop with the sigh of escaping steam.

"It would be just my luck to have an accident," said the man who sat in the corner of the baggage car. "I'm gray-haired now from escaping sudden deaths; and ever since my first experience twenty years ago it seems as if fate has been juggling with my life."

"What was your first experience?" asked a well-tanned soldier from Fort Leavenworth who was going home on a furlough.

The older man at first gave no sign of having heard the question, but ran his fingers through his gray hair and looked thoughtfully

use. My feet wouldn't stay up, and I knew I must keep on swimming until I could swim no more.

"I tried to collect my scared senses so that I could make an intelligent fight for my life and overcome the frantic desire that seized me to make leap after leap at the edge that was so far beyond my reach. It was plain to me that no help could come before six o'clock, when the night watchman came on, and I knew I was not a good enough swimmer to last that long; already I was exhausted with the aching of my limbs.

"I began to wonder whether I could not drive a hole in the bottom of the tank in some way and thus let the water out. It was an insane idea, for there was nothing within my reach but a piece of lath about five feet long that kept getting in my way as I swam about but was no more use in making a hole in the wall of my prison than a slice of bread would have been.

"I looked up at the edge. At one spot there hung one sleeve of my coat. I reflected I should probably never wear it again. Then suddenly, as I strained my eyes upward, an idea seized me. I grasped the floating stick with an exclamation of joy!

"Projecting over the wall of the tank was the mouth of the supply pipe and the valve that they turned when they wished to fill the reservoir. If I could only turn that valve, the tank would fill and I could float up on the surface until I could reach the rim.

"I reached out with my stick and thrust it in the valve wheel. I tried to turn it. It would not budge! My heart sank, for I did not doubt that the faucet had been turned off with some force, and that, working in the water, no man had strength enough in his wrist to overcome the leverage in the five feet of stick. There was only one hope left.

"By putting the stick against the side of the supply pipe and thrusting the extreme end through the wheel of the faucet above I might pry it loose and turn on the stream. I expected the slender stick to break under the strain, but it was the only chance of saving my life. I brought all my force to bear; the stick cracked, something seemed

to give way, and I thought my only hope had gone. Then I heard the splash of the first slender trickle on the surface of the water!

"Pushing my stick up through the faucet wheel once more, I turned it still farther, and soon a heavy column of water was running into the tank.

"From that time on it became only a question of whether I could keep swimming until the tank had filled up enough for me to pull myself out. I was terribly exhausted, for I was only a fair swimmer. Every minute counted in the settlement of my fate, and it seemed to take hours of time for the surface to rise enough to be perceptible. Once when I became faint from the physical and mental strain my head went under and I swallowed much water in my fright. At times I was sure I could not last long enough.

"But the tank was filling up slowly and surely. Finally I reached toward the rim and felt my fingers hook themselves over the edge. I was too weak to pull myself up at first, but hung there and waited for the water to rise. At last I put a leg over the edge and drew myself out. I climbed down the ladder in a daze and fainted away on the roof. The night watchman found me there when he came up to see what was causing water to run down the sides of the building. You see, I had not thought to turn off the water, and my swimming pool had overflowed."

NOT THE RIGHT TICKETS

MRS. SMITH hired a Chinese servant, says the Los Angeles Times, and tried to teach him how to receive calling cards. She let herself out the front door, and when the new servant answered her ring she gave him her card.

The next day two ladies came to visit Mrs. Smith. When they presented their cards, the alert Chinaman hastily compared them with Mrs. Smith's card, and remarked as he closed the door:

"Tickets no good; you can't come in."

A Royal Living from a Little Land

IT is a mistaken idea that you *must* live in the country to have the finest, freshest lettuce, juicy tomatoes, tender sweet corn, choice peas and beans and other garden produce.

Whoever has enough ground in his back yard or in a nearby vacant space for a garden can live like a king. All you need is a very little land, the willingness to dig and potter around and the foresight to buy

FERRY'S SEEDS

Why Ferry's Seeds? Extra choice garden things are never accidental. Seeds descended for generations from plants noted for lusciousness and abundance will almost invariably produce luscious, abundant crops. Pedigree profits the planter. Unknown seeds are dear at any price.

Ferry's Seeds are pedigreed seeds. They come from families with known histories and each yearly crop of seeds is tested in the Ferry trial gardens to make sure that the family traits survive, that the strain is running pure and true to type.

Experienced gardeners everywhere know that Ferry's care in seed selection has made Ferry's Seeds most sure of success.

Write today for your free copy of Ferry's Seed Annual. You will value the selected receipts for best ways of cooking vegetables.

Ferry's Seeds are sold by dealers everywhere.

I EXPECTED THE SLENDER STICK TO BREAK UNDER THE STRAIN

out of the baggage door across the endless stretch of sun-heated barrens.

"I think it was in '80," he said. "It was rather a funny affair, as I think of it now, and it went to prove the old saying, 'Look before you leap.' As I say, it was a curious accident, and I guess you'll agree with me when I tell you.

"At the time I was an extra watchman of a factory just outside of Chicago, and I used to have to be on hand Sundays and holidays, and on days when they closed down either from lack of orders or because they were taking account of stock.

"The day I speak of was a scorcher,—nearly the hottest we had that summer,—and along in the afternoon I went up on the flat roof to see if I couldn't get a touch of the lazy breeze that floated in from the lake. I was nearly stifled, and I sat down in the shadow of the big, round wooden water tank that supplied the boilers. It was cooler there, and the sides of the tank felt good to my back. All of a sudden the idea of taking a plunge into the water came into my head, and I wondered why I hadn't thought of it before.

"I looked all round to be sure that no one could see me before I climbed the ladder that rested against the wall of the tank; at the topmost rung I sat down and pulled off my clothes. The water was clear as crystal, nearly eight feet deep. It looked very good to me.

"I turned my head down, took a fine dive into the tank and swam round the edge, beating the water the way I used to do when I was a boy.

"After a while I thought I would get out and take another dive. I looked up and saw that the smooth wall of the tank rose up more than four feet above the surface! I made two or three efforts to leap above the water and grasp the edge. Then I saw how hopeless it was. I was caught in a trap as neat as you ever saw!

"Turning over on my back, I tried to learn an accomplishment that I had never acquired and that would be most useful to me in keeping myself alive—I mean floating. It was no

THE FEATHERED DANDY

By Harriette Wilbur

SEVERAL August vacations spent in North Dakota gave me a close acquaintanceship with the dainty killdeer. He is a French dandy in feathers, with his dark, ash-gray broadcloth coat, white waistcoat and breeches, yellow hose, white collar, black "choke" tie, jaunty gray cap, and an ebony cane under each arm carried so that it just shows along the edge of his elbow. He is the dandy of all bird-dom, to my notion. The spruce policeman blue jay cannot equal him, or the dapper manikin cedar bird rival him; for killdeer, the dandy, has not only the costume but the air as well, which the rollicking blue jay and the dreamy cedar bird most certainly lack.

See killdeer tripping on light feet, darting first from one bog or stone to another, as if disdaining to soil his immaculate garb with the oozy soil where he must feed. A penniless dandy walking down a muddy street to seek his breakfast in some cheap restaurant would carry himself in just that way. Back in the fields his elegance is a trifle less noticeable perhaps, but since the sort of titbits he craves are found in slime and mud he must search for them there, in spite of his apparent dislike for anything unclean.

DRAWINGS BY WALT HARRIS

He is an epicure, too, and enjoys a good meal as well as the next bird. During the warmest part of the day, after feeding all the morning, he likes to take a siesta while digesting his breakfast and awaiting his supper of worms and bugs that come out in the cool of the evening. He stands on one leg in a patch of dry gravel or on a sun-warmed stone, near enough to the water so that when he opens a sleepy eye he can admire his own reflection in the mirror before him. At least, that is his favorite attitude on sunny afternoons. Perhaps in those daydreams he reflects on his own good looks and trusts to them for protection while he "snoozes."

I have admired the little killdeer at a distance every summer I have seen him. Still, his aloofness and his self-sufficiency rather kept me in awe of him, so to speak, and I never really felt that I knew him. Always seeing him with his society manners on, I wanted to know him more intimately by visiting him at home with his family. Last year, however, I made my North Dakota trip in May, and saw quite a different killdeer from the one that I had always observed in August.

Every time I went into the pasture I found solitary killdeers flitting about everywhere, with other thoughts under their big caps than food. It was springtime, and killdeer must prance up and down for sheer love of living, and for his exuberant delight in knowing that the mate he had chosen was quietly brooding her eggs somewhere not far away.

Whenever I approached a certain spot in the pasture where it bordered a wheatfield and ran down into a little boggy pond, I noticed that one of these little princes of dandies would suddenly appear from nowhere and fly round above me, calling out a shrill, incessant "Kill-dee, kill-dee, dee, dee, dee!"

"There must be a nest round here," I decided, after a few days of this commotion, and commenced searching for it.

Starting at the corner of the pasture, I went diagonally across it, from wheatfield to pond and back again, and all the while the anxious bird circled round above my head. I had made eighteen or twenty of these closely parallel lines, when all at once I flushed killdeer's wife herself from the ground. She joined her mate and circled about me, shrieking as plaintively as he; and had my conscience not been free of any intent to harm them, their alarm and grief would have caused me to abandon the search. Feeling that my curiosity could do them no real harm, I kept on with my plan.

Soon I had found the nest, or rather the nesting site—a mere hollow with a few sticks and pebbles roughly outlining a frame for the eggs. It was the eggs rather than the nest that attracted my attention; there were four of them, each as rich in color as springtime butter, and with their sharply pointed ends autographed all over with scrawls and blotches as of faded black ink.

As I stood looking at the eggs, the mother—or at least I chose to believe it was she—suddenly dropped down on the ground almost at my feet. For a moment I was deceived into thinking that she was really dying, but as soon as I stooped to pick her up she deftly eluded my hand with several wild hops that carried

her a considerable distance away from the nest.

Then I realized that I was being favored with a show of that deceit with which bird mothers often seek to protect their young; and to study this phase of killdeer tactics I obligingly followed her. The poor, lame, broken-winged creature promised capture if I would only pursue her, but she slyly kept just

out of my reach in spite of her lamentable condition. On and on she tumbled and tottered until I was some yards from the nest. Then, with a twitter of victory, which I could not begrudge her, she spread her wings and flew quickly away toward the pond. As for killdeer himself, he hovered above us all the way, crying his alarm and then his relief.

I retraced my steps as well as I could, but long before I found the nest again, the parents were back circling above me and calling piteously. To relieve their distress I went away, but every day thereafter I made a short call on Mrs. Killdeer.

She never grew accustomed to me, and would try to toll me away, or scold me away, all the while I lingered near the nest. I was anxious, however, to see a baby killdeer newly hatched, and did not let her anxiety prevent my daily visit; but to spare the mother any undue worry, I made a practice of standing afar off and studying the eggs through my opera glass.

One forenoon, when I made my usual call, the hatching was on. The little ones were already drying themselves in the sun, and to my astonishment were daintily pecking at their discarded shells, taking a cargo of grit aboard in preparation for the real feeding that they must soon have. The mother, too, who did not leave the vicinity of the nest for long, even to scold at me, helped the bantlings dispose of the empty shells by eating them herself.

That evening I heard killdeer cries from the wheatfield when I passed by, and found the old birds there in close attendance upon four little, striped, downy fluffs in black-billed gray caps much too big for them, and dark necklaces like their father's. But although the little fellows were almost lost in their great caps, which made them look as if they had been dressed in their father's cast-off headgear, and although that, with their stalk-thin little legs, gave them a top-heavy appearance and threatened to send them heels over head at every step, they were still able to run over the clods and dodge wheat stems at a good speed. I tried to catch one, and found that the day-old baby was as quick as a flash in dodging my hand.

They ran about like tiny chickens, peeping shrilly, and always with a question mark at the end of their "pee-esp," as if anxious to learn all there was to know about the big world where they found themselves. I was thankful that the family did not leave the neighborhood, and I enjoyed visiting them for many days. Such independent little mites as those young killdeer were—asking nothing from their parents except companionship, and quite equal to finding their own food!

Their efforts at learning to fly were a revelation. Ground dwellers though they were, and needing the power of flight as soon as any bird, they were fully ten days old before they could lift their bodies from the ground. From the first they realized the importance of their wings and trusted implicitly in them; for in

running, particularly to put distance between themselves and me, they would lift their tiny downy flappers and scud along headfirst over clods and tussocks. As the feathers began to come out, they would run more and more a-tiptoe, until before their wings were fully feathered they could skim along just over the ground, not more than two inches in the air. It was not until they were almost three weeks old that

they could really fly and could join their parents in those circling flights above my head.

THE SAME OLD LECTURES

ON a certain occasion Prof. Brander Matthews of Columbia University, speaking jokingly of his age, said that he trusted he was not yet so old that the students could play on him the trick he once saw tried on a senior professor in his own college days.

"Prof. Blank," he said, "was our most venerable instructor, and he could be just a little irritable at times. Once, noticing that a member of his class who sat right under his eye never took any notes or paid the slightest attention to his lectures, he stopped abruptly and demanded:

"See here, young man, what do you mean by coming into my classroom day after day and never taking notes?"

"I have my father's," was the student's complacent reply."

Much Depends on Every Goodyear Tire

Deep and lasting public confidence is the only business asset worth having; without it all other assets will vanish.

Perhaps the most valuable asset Goodyear had at the start of its career was a sure knowledge of this fact.

Certainly, such knowledge awoke the purpose that every Goodyear Tire built should be good enough and strong enough to uphold the structure of good-will Goodyear hoped to rear.

Just as certainly, it wields a similar influence in all our works today—in the selection of material, on the making of the product, in the amount of labor and thought given to the conduct of our business.

How far have we come, under the influence of this first and most precious Goodyear asset?

More Goodyear Tires are sold to the motorists of America today than any other brand. Leadership, in a market solicited by more than 200 makes of tires, is an accomplished fact.

Isn't the Company carrying the unconditional indorsement of a plurality of American motorists, a good Company for you to deal with?

Isn't the Tire carrying the responsibility of such indorsement a good Tire for you to own?

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

The Goodyear Tire & Rubber Company, Akron, Ohio

30 Days Trial

Select—from our big FREE catalog—the particular style of a "RANGER" bicycle you desire. They are pictured in natural colors with elaborate details of construction and equipment, in 44 styles, colors and sizes. We will send it from our Chicago Factory, freight charges paid by us to your town, for **Thirty Days Free Trial**. We pay return charges if you decide not to keep it. The trial is all at our expense.

We have placed a special deposit of **\$5,000.00** in the great **FIRST NATIONAL BANK** of Chicago, to guarantee to you the faithful performance of this 30 day trial agreement. We will send you a copy of the bank's agreement.

FACTORY PRICES When you buy from us, you profit by our **FACTORY-DIRECT-TO-RIDER** selling policy and the big savings possible by reason of our great annual output. The "Ranger" catalog illustrates the most complete line of bicycles in the world, at prices ranging from **\$15.75, \$16.95, \$17.75** up. Back of your purchase stands the oldest and most successful bicycle concern in the country.

PARTS AND REPAIRS for all kinds of bicycles are accurately pictured and described in the *sundry pages* of this catalog, as well as all the latest domestic and imported bicycle equipment and attachments: tires, lamps, horns, front and rear ready-to-use wheels, etc., etc. In fact, this "Ranger" bicycle catalog is the recognized Buying Guide for bicycles and bicycle supplies.

RIDER AGENTS WANTED Everywhere to ride and exhibit "Ranger" bicycles. Select the Motorbike, Superbe, Arch Frame, Racer, Coaster-Brake Special, Junior or other style desired and **make money** by taking orders while you ride and enjoy it.

SEND NO MONEY, but write today for the new 1917 catalog with prices so low they will astonish you, also full particulars of our new offer to send *all charges prepaid* the "Ranger" bicycle you select for **Thirty Days Free Trial**. You can't afford to buy a bicycle, tires or sundries without first learning what we can offer you. **Write now.**

CHANDLER SIX \$1395

COME IN! THIS WAY DOWN THE CHIMNEY, PLEASE

SANTA CLAUS is not the only person who customarily enters the house by way of the chimney. In the little town of Kamenskoje, way up in northeastern Siberia, on the Peshina Gulf, nearly everyone does it.

The house is shaped like a perpendicular X. Starting with a ground floor that is about twenty-five feet in diameter, the frame walls, constructed roughly of driftwood, lean inward for about twelve feet, then turn outward for another ten or twelve feet. They do not touch each other in the centre, but leave an opening of from three to five feet wide. That opening is the door, the window and the chimney, all in one. A pole rests against the outer side of the house high enough to reach the top of the structure. On the upper side of the pole, steps are carved in which to insert the toes when climbing. A similar pole, set upright in the centre of the house and up through the chimney, is also furnished with steps for ascent and descent.

The first effect of this arrangement is that visitors are recognized, not by their faces, but by their feet; because the feet are the first to appear. There is something about the shape of the shoes of Nicolai, or there is a peculiar covering round the insteps of Ivan, that makes it quite easy to know who is coming down the chimney, even though his voice is not heard or his face seen.

Another effect is more serious. The house is so constructed that the fireplace is directly underneath the chimney. Naturally, the smoke goes up to greet the newcomer, and soot covers every side of the chimney, ready to attach itself to him. But if the one who enters must endure the consequences of so strange an arrangement, so does he in turn react upon the chimney and the things that happen to be placed beneath. The pot is always hanging over the fire, full of melting snow or boiling water and fish or reindeer meat. The man up the chimney is dressed in heavy furs, the hairy side turned outward. As he comes in touch with pole and chimney, a gentle spray of hairs comes easily drifting down, accompanied by showers of soot that are brushed from the side of the chimney. Perhaps the pot below is closed, but usually it is open. Hence, the food is often adulterated with hairs and soot.

There is a good reason for the peculiar shape of the Kamenskoje house or yurt. During the worst of winter no door or window at the side of the yurt would avail. The snow piles up on every side as high as the house itself. Then the people can walk straight up to the chimney, and the dogs crowd round the opening in the top for warmth and to enjoy the rising odor of cooking fish and reindeer. Curiously the dogs peer in, watching the movements of the dwellers and barking every now and then in petition for a morsel from the boiling mess. Sometimes one dog pushes another down the chimney. If the cover of the pot is off, the reception proves rather too warm for the unfortunate victim. But Ivan is there to catch him by the neck and to take him up to the top of the house, where the snow will soon reduce the heat of his blisters. The episode had not spoiled the dinner.

In spite of the fire within, the house is not comfortably heated, because of the opening on top. Snow, too, comes easily drifting in. It is necessary, therefore, to have tents inside the house. They are made of heavy furs, and are placed on the wooden platform that surrounds the fire. In these *pologs* the dwellers find refuge when the smoke becomes too trying or the atmosphere too frigid. Inside the *polog* stands a wooden bowl of seal's oil with dried moss floating on its surface, to be lighted at the pleasure of the occupant.

IN ATTENDANCE ON ROYALTY

IN learning their business—otherwise so different one from the other—there is one hardship to which saleswomen in shops and ladies in waiting on royalty must equally inure themselves: long hours of standing. Fanny Burney, the famous author of *Evelina* and *Cecilia*, those fashionable best sellers of George III's day, has left unforgettable descriptions of her killing weariness when she was court reader to Queen Charlotte. The queen was good and kind-hearted, but the etiquette of courts was sacred in her eyes, and it never occurred to her to relax it. So her reader stood to read aloud to her, quite as a matter of course. Rigid, dutiful and courageous, the queen never spared herself in fulfilling the duties of her position, and she never spared others.

Even to-day, in a less formal era but a more formal court than that of England, matters are not so very different. Miss Ethel Howard, in her recent entertaining little book, *Potsdam Princes*, tells how, during her engagement there as governess, she ventured to speak to the German Empress, but not at all in the way of complaint, of the physical strain involved in remaining too long on the feet. She was, indeed, thinking perhaps first of the ladies of the court, since they must so often stand while royalty may sit; but also of the Empress herself, who must so frequently stand throughout long levees, functions, reviews and public ceremonies. But the sturdy Empress had no pity to waste on anyone, least of all on herself.

"It is hard at first," she admitted, "but now I am like a horse: I can rest standing."

Miss Howard is an Englishwoman, but no war-born bitterness mars her retrospective picture of the Empress. If she found her rather too inflexibly severe in her demands for the exact observance of petty etiquette, it is a matter on which she lays no emphasis; and she makes no other criticism. Within the family, the Empress, although she was no bad disciplinarian herself, yet according to the ways of mothers from time immemorial, often stood between her sons and their father's sterner punishments. She was a devoted mother, with many of the little tenderesses and bits of sentiment about her babies that all mothers will understand. Every time the lads' hair was cut some of the precious locks were saved—one for herself and a few to give away to very dear friends. Less usual than cherishing locks of hair—perhaps unique—was her habit of preserving the first teeth of her children. She had them set in rings, and among all the rings she owned those so oddly embellished were her favorites. The idea is not pleasing to all tastes; but the rings, Miss Howard declares, were pretty, for the baby teeth, so set, "looked like tiny pearls."

The rings were set with one tooth apiece from all the little princes, except the crown prince. His superior importance was recognized by a ring of extra elegance, set with three teeth.

THOUSANDS of men choose the Chandler because of its mechanical superiority, which to them is so obvious, while other thousands choose it for its beauty of design, its grace of line, its roominess and its comfort.

All who choose the Chandler have reason for pride in their possession. For this splendid car combines, in an unusual degree, good taste, style and dependability.

If one Chandler feature predominates over all others it is doubtless the exclusive Chandler motor, now commonly called "The Marvelous Motor," refined throughout four years of conscientious manufacture without radical or experimental changes, to a point approximating perfection.

How Radium is Used on Ingersoll Watches

HAVE you ever seen an Ingersoll "Radiolite"—the watch that tells time in the dark? Here is a picture of one

infinitesimal amount is needed. But this small amount of radium makes that other substance glow, just as the electricity makes the little wires of an electric lamp glow. And this "Radiolite" glow lasts for ten years—maybe much longer.

You see here also a picture of this wonderful "Radiolite" watch as it looks in the light. It tells time, of course, in the day, too! This watch costs \$2.00. The "Radiolite" Two-in-One, \$2.25, is to stand on the bureau or carry in the pocket; the Midget "Radiolite," for girls, is \$3.50; the "Radiolite" Strap Watch, to wear on the wrist, is \$4.00; and the Waterbury "Radiolite," a handsome model with jeweled works, for the older boys and their dads, is also \$4.00.

All these Ingersolls may be had in plain daylight dial also. And there are many other models. If the dealer is out of any particular model, it may be had on receipt of price by any of the Ingersoll offices named below.

How the Ingersoll "Radiolite" looks in the dark

The Regular Ingersoll "Radiolite," \$2.00

ROBT. H. INGERSOLL & BRO.
NEW YORK CHICAGO SAN FRANCISCO

What Do We Mean by "Safety-Sealed"?

Easy to Fill and Does it Well

New Parker Patented Clip held in place like a washer.

PARKER SAFETY-SEALED SELF-FILLER

No holes in the wall of a Parker, preventing any escape of ink to soil hands, spoil clothes or ruin dainty dresses or purses. Can be carried flat, upside down—any position—it cannot leak—it's **Safety-Sealed**.

In case of accident to self-filling mechanism it automatically changes to a **Safety-Sealed** non-self-filler.

Fills itself in two seconds—press the concealed **Safety-Sealed** button.

All sizes at nearest Parker dealer—\$2.50, \$3, \$4 and \$5.

PARKER PEN COMPANY, 80 Mill St., Janesville, Wis.
New York Retail Store, Woolworth Building.

Means—no holes cut in wall of barrel—no openings, levers or rings where ink can get out to ruin clothes or linen.

If You Need Bran

Don't eat clear bran. Make it part of a breakfast dainty. Then you'll enjoy it. In Pettijohn's the bran is hidden in luscious flakes of wheat.

Bran is a daily need with most folks, for its laxative effects. When you learn its results you will not go without it.

Get it in this ever-welcome dish.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran. Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe. Both sold in packages only.

(1493)

The Chinese Woolflower

Introduced by us three years ago is now acknowledged to be the greatest new garden annual. It is a success everywhere, plants growing 2 to 3 feet, a pyramid of color, its many branches bearing great balls of wool-like substance and most intense crimson scarlet. Flowers develop in June and none fade before frost, ever brilliant and showy beyond belief. Seed per pkt. 10 cts., 5 for 25 cts.

New **Marbled Pansies**. For immense size, wonderful colors and vigor they are marvels. Seed 10 cts. per pkt., 5 for 25 cts.

Everblooming **Sweet William**, a startling novelty, blooming in 60 days from seed, continuing all the season, and every season being hardy. Flowers large, colors exquisite—pkt. 10 cts.

These 3 great Novelties, with two more (5) for only 50 cts. See Catalog for colored plates, culture, etc.

Our Big Catalog of Flower and Veg. Seeds, Bulbs, Plants and rare new fruits free. We are the largest growers in the world of Gladioli, Cannas, Dahlias, Lilies, Iris, etc.

THE TRUTH ABOUT BARBARA FRITCHIE

ALTHOUGH it is known that the old lady waved the Stars and Stripes from her window when the Northern army marched through Frederick two days after Jackson's force had passed, Barbara Fritchie's heroism as immortalized by the misinformed Whittier has long since been proved to be a myth. Her action roused such enthusiasm among the dispirited Union troops that she came down to the porch and received an ovation from them. Gen. Reno asked for the flag she waved; but she gave him a larger one, which he carried off amidst the cheers of the soldiers, and which was wrapped round his dead body after the battle, two days later.

Mrs. Louise Closser Hale gives, in Harper's, the true story of Stonewall Jackson's march through Frederick, as she got it in conversation with the wife of an old shoemaker in that town. After some preliminary remarks the old lady said, "Daughter, run up and get that picture of Mrs. Quantrille. You know, ma'am, we always felt a battle ahead, and when orders came from Lee for Gen. Jackson—there didn't many call him Stonewall then—to march his troops through the town to seize Harper's Ferry, we felt something in our bones. He came by the way of that creek."

"Not past Mrs. Fritchie's house?"

"No'm, just this side of it. We were all on the stoop watchin' for Gen. Jackson, who, we had heard, always rode with a Bible under his arm. There was a good deal of delay along the road, because, you know, ma'am, they waited for the commissary. The Confederate band was playin' down at the drug store, and it was Hill, D. H. Hill,—there were two Hills in this corps,—who sent for the musicians to serenade Mrs. Quantrille and us girls. He had reined his horse alongside of us, and we were all cutting up.

"All this time Mrs. Quantrille had a little Union flag in her hands. It's the rule when an army comes through a town that only the flag of the army is shown, so I reckon hers was about the only one flying. Mrs. Fritchie was a very old lady, and was sick in bed that day."

"But didn't anybody protest about it?"

"Well, Mr. Hill said, 'Madam, you ought to take that flag of yours and make an apron of it,' but quick as a flash she came back, 'You ought to take yours, sir, and make breeches out of it.' They were terribly ragged, that corps.

"Then Hill rode on, and no sooner had he gone than one of the privates, gettin' into line, stabbed it with his bayonet, and used some language that wasn't very nice. Mrs. Quantrille was as perky as you please. She made a fuss about it, and said the man ought to be arrested for rudeness to a lady. So one of the officers rode on ahead and said he'd see to it. Southern gentlemen were very particular about language before a lady. I don't suppose anything was ever done, because there was a good deal to think about just before a battle.

"But Mrs. Quantrille said, 'Girls, have any of you got a flag?' We used to all carry Union flags in the bosom of our basques, and Mary went into the hall and took hers out. So by the time Gen. Jackson came along she was waving one again. He never said a word that I can remember, and we were all so excited bowin' to him that we had to laugh afterwards because we forgot to look for his Bible. Yessum, we did.

"It was the other Hill of Jackson's division—I always call him the Hill on the cream-colored horse—who brought up the rear. And he said to Mrs. Quantrille, 'You ought to be shot for wavin' that flag.' His pistol was out of its holster, but he didn't shoot her. And Mrs. Quantrille, who always had the last word, said, 'You'll be the one to be shot.' It seemed a kind of a prophecy, for he was killed. But then, a good many was. And after that another soldier, encouraged by what Hill said, I reckon, cut the second flag out of her hand and trampled on it. So if the poet had got it right, he'd have had two flags torn down."

THE "REGULAR" POINT OF VIEW

PROOF positive that each one of us is for himself the centre of the universe, that what "our folks" do is the proper thing, and all else mere eccentricity, is seldom lacking, but it comes out most engagingly in childhood.

"She can speak French most beautifully!" concluded Elsie's big sister, Sara, after having described at length to the family at the supper table the charms and accomplishments of a new friend, a girl who had lived several years abroad and had come recently to Sara's school.

"I know a girl," put in Elsie at this point, with an air of importance, "and she used to live in England. She's in my kindergarten, and she can speak English, I guess."

"Well, what of that?" demanded Sara. "So can you speak English."

"Oh, no, I can't; I don't know how! Why, of course I can't speak English," Elsie appealed from the laughing faces now turned toward her, "can I, mother?"

"Certainly you can speak English, child; it's what we all speak; we're speaking it now."

"What? Is it English we're talking right this minute? Is it *truly*, mother?"

"Of course, my dear! What language did you suppose it was that we talk?"

"Why, mother, I didn't suppose it was English, or any other language. I thought it was just regular talk, of course."

A HUMBLE WORKER

HE does not look like a very important part of a big automobile organization, this stooped, grizzled man, but the president of a great motor-car company, according to Popular Science Monthly, says that Magnet Bill saves his salary a dozen times over every day he works. Rain or shine, summer or winter, Magnet Bill may be seen walking slowly about the automobile plant, his eyes fixed on the ground.

He gets his nickname from the fact that his tools consist solely of a tin bucket and a big steel magnet, strapped to the end of a shovel handle. It is his duty to save automobile tires by removing from the roadway every nail and piece of metal that might cause a tire puncture. Thousands of cars are run over this roadway to the testing place, and without the precautions taken by Magnet Bill the cost for cut and punctured tires would amount to many thousands of dollars yearly.

A Bee-Line to Everyone

Straight as the bee flies and quick as though caught by lightning the voice in the telephone carries near and far over this Nation.

This marvelous instrument is the pre-eminent vehicle of speed and speech. Railroads cover the country, but your traveler often must alight with bag and baggage and change trains to get to a given point. Railroads reach cities, towns and villages. The telephone reaches the individual.

The telephone offers continuous passage for the voice and unbroken connections to the uttermost places because it is a united System co-ordinated to the single idea of serving the entire people of this country.

It has been a powerful factor, along with the transportation systems, in the magnificent achievements of the United States—helping to prepare the way where latent possibilities of mines, forests and farms were to be developed.

The continued growth of our national prosperity depends in a great measure upon the maintenance and continued growth of the utilities which furnish the means of intercourse and interchange. They are the indispensable servants of the individual, the community and the entire nation.

"Dad, Why Don't We Have Bicycles?"

"There's Bob and his father going for a spin on their new wheels. Just think how fine it would be if we had bicycles.

"You could ride yours to the office every day, and I could go to school on mine. I wouldn't mind running errands for mother if I had a bicycle. And on Sundays we could go for long rides in the country.

"Wouldn't it be swell, Dad? And it would be great exercise, too."

But Be Sure You Get a MIAMI-MADE Bicycle

No other bicycle on the market has combined in one bicycle all the special features you find in MIAMI-MADE Bicycles. Light, yet sturdy enough to withstand the hardest wear, easy riding, perfectly balanced, and with an equipment that is the best that money and experience can produce, a MIAMI-MADE is the only kind you want.

There Are Four Lines of MIAMI-MADE Bicycles

The Miami, the Hudson, the Flying Merkel and the Racycle. Each one has special distinctive features that you will like. If there is no dealer in your city, fill out the attached coupon and we will send you one of our beautiful catalogs free.

THE MIAMI CYCLE & MFG. COMPANY, 1015-1031 Grand Ave., Middletown, Ohio, U. S. A.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.50 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

HYGIENE OF THE EYES

ALL sensible persons desire to take good care of their eyes, but they do not always know just what are the dangers that threaten them. The eye is a most sympathetic organ, and it may suffer with almost every part of the body. Too often we forget that sympathetic quality and treat the eye as if it needed only local care. That kind of care is, of course, most essential, but we should never forget the relation of the eye to the rest of the organism.

How many persons, when they are thoroughly exhausted, take up a book as soon as they begin to rest! While the other parts of the body are recuperating, the eyes must work—like Cinderellas, they get no rest. It is an excellent rule to rest with closed eyes until extreme fatigue has passed, or at least to give the eyes a tonic by bathing them in cool water in which you have dissolved a little salt, or by cooling them with a few drops of the solution of boric acid administered with an eye dropper.

But fatigue is not the only condition of the body with which the eye sympathizes. The digestive system and the nervous system can both betray a condition of ill health through the state of the eyes. On the other hand, just the opposite of that may happen: the apparently innocent eyes may be the sole reason for a digestive or nervous upset. That is why it is so necessary to seek expert advice for slight and obscure deviations from health. Many a person has lost valuable time and done damage to his body by foolishly dosing himself with "something to strengthen the nerves" or to "improve the digestion" when all that he needed was a pair of glasses prescribed by an expert.

The summer vacation is often a disappointment to persons who are obliged to overuse their eyes throughout the working year, and who depend on their vacation for a chance to restore their strength. The reason is that they do not take the trouble to look after their eyes and give them a vacation, too. The glare from the water or from the hot sands, long dusty journeys, automobilism, bicycling against sun and wind, only give the eyes a change of work, not a rest. Every summer "comfort kit" should include dark glasses, some simple eye drops, and a dropper; and remember, if you can, not to read while you lie in a hammock.

THE CREAM

ANNETTE had held her own through the evening: she had laughed and talked and held her head high so that no one should guess. But up in her own room in the blessed darkness she had torn off her party gown and thrown herself on the bed and sobbed out her unhappiness. It had been clear in a score of ways—they did not like her nearly so much as when she first came. And she had wanted so to be liked, and at first everyone had been so nice. If she could only, only go back home to "daddy," who loved her! But her father would be away for two months yet, and she knew she could not leave Aunt Helen's. The weeks stretched before her, an eternity of misery. If she only knew what the trouble was! She could not ask the girls.

There was a knock on the door. Annette caught her breath—if it was one of her cousins! She could not see them just now.

But it was not—at least, not one of the girls. It was Aunt Helen's cousin Anne who was calling, "May an old lady come in a moment, little girl?"

Annette opened the door. She stood back so that the light should not fall upon her face, but Cousin Anne was not one who needed electric lights when it was a matter of understanding things. She gathered the little figure into her arms.

"I had a feeling that a certain little girl was lonesome to-night," she said. "Maybe I was wrong, but somehow I wanted to get hold of her."

Annette drew a sharp, quivering breath; then before she realized it she was telling it—all the hurt and the perplexity. It was strangely easy to tell Cousin Anne in the dark.

Cousin Anne, in the big chair now with Annette on the floor beside her, spoke slowly:

"I'm going to tell you something I've never told anyone before, little girl. It's something that happened to me when I was eighteen and went away on a visit. I did so want to be popular and admired! And I tried so hard! Yet, after a little, I found myself being left out."

"You, Cousin Anne!"

Cousin Anne smiled—Annette heard the smile in her voice.

"Yes, I. And I might have gone on forever, if I had not overheard some of the girls discussing me one day. 'Yes, she's bright enough—that isn't the trouble. She's too bright. If anything, she always wants to lick off all the cream.'"

"What did she mean, Cousin Anne?"

"I had to think it out myself, but I discovered presently. People's faces helped me to see. I found that I had got into the habit of capping everyone's story—telling how I had heard it with a better point, anticipating the climax, or guessing the

answer first. I was perpetually spoiling other people's talk. It was no wonder they didn't like to talk with me!"

"Why—I never thought," Annette stammered.

THE BED

IN the home of a Russian peasant Mr. Denis Garstin, the author of *Friendly Russia*, discovered the great bed.

The room, says Mr. Garstin, was small, scrupulously tidy and covered with ornaments. The walls were entirely hidden with ikons,—some thirty of them,—sacred pictures, cheap lithographs of the Czar, Czarina and their children, calendars decorated with saints and lovers, and crude photographs of their own family taken at a fair. But by far the most imposing article, dominating over all in the room and insisting on all observance, was the bed.

It was a massive creation in itself, made still more imposing by layer on layer of bedding and mattresses and pillows reaching high up the wall and covered with black and red embroidered counterpanes. It was a monument of Russian peasant respectability rather than a suggestion of any repose.

I was marveling at it when the *baba* returned, laden with thick potato pasties and wine and fruit. We sat down to eat, and my companion explained who we were and gave the messages. The old woman nearly embraced us in her effusive welcome. A boy was sent to call in the husband, who was out on the hillside gathering fagots. A little girl went toddling down the village to round up all the relatives she could find, and soon we were the centre of a crowd of rough peasants, who tried to cover their shyness by pressing us continually to eat.

The husband, a shock-headed old peasant, came last. His wife poured out all the news to him, referring every moment to us for confirmation of each detail, and whenever we said "Truly!" to her remarks he turned his hat round in his hands and said, "Thank God! But eat and drink some more."

"You have a very fine house," I said to him. He stared at me, puzzled by the unusual "you."

"Yes," he said finally, struggling into the plural, "we have. Tell Lukyan he must come to visit us with everyone. There is much room."

"But only one bed," I said.

Again I puzzled him. "Yes," he said, "there is a bed, of course."

My companion nudged me. "No one sleeps in a bed," he whispered.

The *baba*, glad of any reference to that piece of furniture, had stripped off the covering. "See," she said, "one, two, three, four—fifteen mattresses. That is enough for everyone, is it not?"

"They all sleep on the floor," said my companion. "My grandfather used to, too, when he was staying in the country."

THE BROCCOLI PLANT

IF the man who succeeds in growing two blades of grass where only one grew before is one of the greatest benefactors of mankind, what shall be said of him who is able to produce six or eight heads of the cabbage-like broccoli where only one grew previously, and, what is more, has made the plant a perennial?

That is what an English horticulturist recently achieved. A writer in Chambers's Journal tells of one of these new plants from which the grower cut fifteen fine heads six or seven inches in diameter.

The broccoli should be of inestimable value to the small gardener, especially if he happens to have an odd corner where he can let the plants grow undisturbed. Once they become established they assume the proportions of young bushes, and throw out their heads in all directions. They demand very little weeding; and as their roots thrust themselves deep into the soil, they are not appreciably affected by dry weather. In the spring, as soon as the shoots begin to run, the plant needs some thinning; but there is no waste, for the shoots when cooked form an appetizing dish of the flavor of asparagus.

The fact that to cut seventy-two massive heads from a dozen plants is no unusual achievement gives an idea of the prolific yield of this novelty among cabbages.

BOUND TO FIGHT, ANYHOW

EARLY last year, says a contributor to an English weekly, a grocer in a Scottish village decided that either he or his assistant must enlist. As he was single and his mother and sisters were well provided for from their interest in the shop, he thought it was his duty to go.

Mackay, the assistant, agreed promptly, and presently found himself in command of the business.

But a few months later the master was dumfounded to meet his late assistant, attired in khaki, "somewhere in France."

"Hi, mon," he said angrily, "what are ye doin' here? Did I no tell ye tae stay at hame in chairge o' ma shop?"

"So I thocht at the time, maister," replied Mackay, "bit I sune fun' oot it wisna only the shop I was in chairge o', but a' yer womanfolk. 'Man,' says I tae maself, 'gin ye've got to fecht, gang and fecht some one ye can hit!' So I jined."

THE LOGICAL REPLY

AT a fancy-dress ball for children, says an exchange, a policeman stationed at the door was instructed not to admit any adult.

An excited woman came running up to the door and demanded admission.

"I'm sorry, mum," replied the policeman, "but I can't let anyone in but children."

"But my child is dressed as a butterfly," exclaimed the woman, "and has forgotten her wings!"

"Can't help it," replied the policeman; "orders is orders. You'll have to let her go as a caterpillar."

THE EDUCATION OF FATHER

THE New York Post prints this letter that a father sent to his son at college:

"Dear Harold. Your brief letter came to-day. I am inclosing the check for the amount you requested. I have heard a great deal of the college faculty. I take it to be the faculty for spending money. Affectionately, Father."

It fits the pocket.

Pictures

Ditto, with Kodak Anastigmat lens, f.7.7, . . . 19.00

All Dealers.

EASTMAN KODAK CO., ROCHESTER, N. Y., *The Kodak City.*

SAXON "SIX"

There Is a Strong Public Belief In the Superiority of Saxon "Six"

At last it has dawned upon motor-car buyers in general that, strictly speaking, there is no rivalry between a car of less than six cylinders and Saxon "Six."

With less than six cylinders propelling the car, there are bound to be slight intervals between explosions.

With six cylinders, as in Saxon "Six," these intervals between impulses are eliminated and the power-stream produced is of practically perfect continuity.

Necessarily, then, in the "less than six," with fewer impulses at any given time, the force of each impulse must be more severe upon all moving parts.

In Saxon "Six," for instance, as compared with one of the best

known "less than six cylinder" cars of like price, there is nearly 98% more impulses per minute at 20 miles per hour.

And this super-smoothness of Saxon "Six" power-flow is clearly reflected in its abler performance.

In high-gear work, in pulling power, in flexibility, in acceleration, Saxon "Six" is matchless among cars of like price.

Saxon "Six" is \$865; "Six" Sedan, \$1250; "Four" Roadster, \$495; f. o. b. Detroit. Canadian prices: "Six" Touring Car, \$1175; "Six" Sedan, \$1675; "Four" Roadster, \$665. Price of special export models: "Six," \$915; "Four," \$495; f. o. b. Detroit.

SAXON MOTOR CAR CORPORATION, DETROIT

NATURE & SCIENCE

THE TELEPHONE IN THE FOREST.—The first extensive wireless telephone system in the world is now being installed in the national forests of southern California near the home of the inventor, Dr. H. Barringer Cox. According to the New York Times, Dr. Cox has invented a semi-portable telephone that resembles a pocket camera, makes use of the ordinary telephone equipment, and costs less than fifty dollars. The box has four posts, two for dry-battery cells and two for connection with the ground. The system of stations already in existence in southern California is said to enable an operator of the new telephone to establish instant communication from any point within a distance of one hundred and sixty miles. A system of communication that obviates the trouble and expense of installing wires in the national forests will be of immense value in the important work of protecting those reserves from fire. In the dry seasons hundreds of men are scattered throughout the national forests, constantly on the lookout for fires. A portable wireless telephone would furnish every forest ranger with the means of summoning help, even though he were in a region miles away from the nearest telephone wire. The possibilities of such an instrument for personal use are fascinating. Some day pocket telephones may be as cheap and as common as watches are to-day.

SHARK SUCKERS.—The aquarium of the New York Zoological Society has several specimens of the shark sucker (*Echeneis naucrates*), distributed among tanks that contain dog sharks, to which they can be seen clinging in characteristic fashion. When there are no fishes present to which they can cling, the shark suckers attach themselves by their head disks to the walls or glass fronts of the tank, or even turn over and attach themselves, head down, to the bottom of the tank. The appearance of the curious disk is well shown in the accompanying illustration from the Zoological Society Bulletin, which shows the shark sucker clinging to the glass front of its tank.

ATELLTALE STRONG BOX.—What is perhaps a clever solution of an old problem is the portable burglar-alarm safe described in a recent issue of the Scientific American. It is a strong box made of the finest steel, finished in imitation mahogany and fitted with a powerful lock and a complete electrically run interior burglar-alarm mechanism. The alarm system is so made that after it is set a gong will ring for an indefinite period if the box is moved or lifted. If the owner wishes to move the box he must first open it and turn off the switch in the alarm circuit. The apparatus cannot be reached from the outside. Only a particularly daring burglar would be likely to try to escape with a strong box containing a clanging gong the clamor of which he was powerless to control.

A USE FOR CHIPS.—The Forest Products Laboratory at Madison, Wisconsin, has given much time to the problem of disposing of the wood waste that accumulates at all woodworking shops, sometimes in enormous quantities. It has found a method of distilling valuable products from such material and of utilizing the residue profitably in manufacturing paper. A series of experiments with chips from stumps of Missouri yellow pine distilled with a petroleum solvent to extract the turpentine and resin shows that the pulpy residue makes a very good basis for paper. The Woodworker predicts that it may be possible eventually to adapt the process to chips from certain kinds of turning lathes and to all waste from woodworking machines that has sufficient length of fibre to justify converting it into pulp, whether it be hard wood or soft. Hitherto most wood waste has been burned or thrown away, because none of the methods of utilizing it have been profitable.

GUNFIRE AND RAINFALL.—As was reported in this column on October 12, 1916, meteorologists have stated repeatedly that gunfire has no effect upon the weather; nevertheless, many people still hold to the old belief that long-continued gunfire causes rain. Even here in America, where we are thousands of miles from the battlefields of Europe, several successive days of wet weather are sure to be ascribed to the effects of cannon fire in France. The following quotation throws an interesting light on the matter. It is taken from a translation of Plutarch's Lives, by John and William Langhorne, and occurs in the Life of Caius Marius, in which Plutarch comments on a battle fought against the "Teutones" in 102 B.C. "It is observed, indeed, that extraordinary rains generally fall after great battles; whether it be that some deity chooses to wash and purify the earth with water from above, or whether the blood and corruption, by the moist and heavy vapors they emit, thicken the air, which is likely to be altered by the smallest cause." Since the battles and the rainfalls here mentioned took place some fifteen hundred years before the use of explosives in artillery was invented, it is clear that the rainfalls could not have been caused by the artillery.

CONSERVATION OF ENERGY.—The Chicago, Milwaukee & St. Paul Railway in its newly electrified line over the Rockies not only utilizes the energy ordinarily lost in holding back trains, but on the numerous down grades actually generates power that can be used to help pull other trains up. It does it by applying the principle that a motor when reversed becomes a generator. The locomotives are so constructed that on reaching the top of a grade the engineer can brake his train down grade by reversing the motor, and so reserve the air brakes for an emergency. Reversing the motor in the locomotive transforms it at once into a dynamo that is run by the weight of the train as it descends the grade. Virtually the same amount of electricity is generated that the motor would consume in pulling the same load up grade. The current is fed into the overhead trolley wire and so is added to its store of energy.

WINTON SIX

Distinction in Your Own Car

If you give man his choice, he will reject the commonplace and select the distinctive every time. It's in the blood.

Coventry Patmore, who wrote wisely of human life, said long ago: "The communion of men upon earth abhors identity (similarity) more than nature does a vacuum. Nothing so shocks and repels the living soul as a row of exactly similar things, whether it consists of modern houses or of modern people, and nothing so delights and edifies as *distinction*."

And what more delightful possession can one have than a distinctively individual motor car—a car designed precisely to your personal taste, and embodying your own ideals of what a genuinely good car should be? You can make your wishes come true by ordering a Winton Six. Our artists are at your service, keen to create for your ownership an exceptional, distinctive, delightful private vehicle. Let us talk it over with you. Simply telephone or drop us a line today.

NEW COMPANION SEWING MACHINE

THIS high-grade machine is built for a lifetime of service, equipped with up-to-date attachments and accessories, is sold to Companion readers at a very low price, and delivered free at any railway freight station in the United States. Every purchaser allowed *Three Months' Free Trial*. Four different styles (both foot-treadle and electric machines) all equipped with the wonderful Automatic Tension Release, an exclusive New Companion invention. Send at once for Descriptive Booklet

PERRY MASON COMPANY, BOSTON, MASS.
Commonwealth Avenue and St. Paul Street

STOP THAT SQUEAK

with 3-in-One Oil. It will make door hinges work noiselessly. For longer wear and easier work use 3-in-One on your:

Sewing machine, typewriter, talking machine, ice cream freezer, bicycle, skates, music box, lawn mower, cream separators, clocks, locks, hinges, bolts, catches, pulleys, scales, scissors and everything else around your home that ever needs oiling.

3-in-One is a clear, light oil preparation that cuts out all dirt and never gums or cakes. It lubricates perfectly every action part and prevents wear. No grease; no acid. 3-in-One also cleans and polishes all wood and metal surfaces—absolutely prevents rust and tarnish, indoors and out.

FREE Write for generous free sample of 3-in-One, today. Give it a good hard test.

Sold everywhere in 3 size bottles: 10c (1 oz.), 25c (3 oz.), 50c (8 oz., 1 pint). Also in new patented Handy Oil Can containing 3 ozs. of oil, 25c.

DRAWN BY CHASE EMERSON

ONLY AFTER MISS PENNY AND REUBEN HAD EXCLAIMED AND ADMIRER HAD SHE BEEN FULLY ASSURED THAT HER EYES HAD NOT DECEIVED HER

THERE was a real sensation at the academy on the day when Rusty Miller appeared in a russet-colored serge dress that was exactly the shade of her hair and of one of the colors in her eyes. No one would have dreamed that any dress could have made such a difference in a girl. Perhaps even now you could not call Rusty pretty; but, as everyone felt and nearly everyone remarked, she certainly was a picture. It was pleasant to look at her, and rather hard to keep your eyes away from her.

Of course Rusty herself was not unaware of the transformation. When she had taken the dress out of its box the night before by lamplight, she had wondered somewhat at the change in color, and had noticed with some satisfaction the rolled-over white collar; but when she had put on the dress in the morning she had hardly been able to believe that it was her own reflection that she saw in the mirror. Only after Miss Penny and Reuben had exclaimed and admired had she been fully assured that her eyes had not deceived her. Rusty went to school with a song in her heart.

Yet she had never been less vain. In fact she was perhaps not vain at all. She was grateful and profoundly relieved. She had seen herself to be attractive; she would pass among others. She no longer felt impelled to glance into every mirror she encountered to view her own ugliness. From that day Rusty ceased to think so constantly of her personal appearance.

Her classmates and friends had always liked Rusty, but now they seemed to warm to her still more, and there was even a subtle difference in the attitude of the teachers toward her. It was as if they had felt that through an error in their vision they had slighted Rusty before.

Miss Penny indeed felt actually guilty. Although of course Reuben was always first in her heart, she had become warmly attached to Rusty; but she had thought the girl hopelessly plain. Now, with her

usual impulsiveness, she jumped to the conclusion that Rusty was beautiful, and she felt conscience-stricken that she had not discovered it before. She made what amends she could by buying some soft, fine white woolen stuff and having a dress made after the style of the new one for Rusty to wear to sociables and to church on fair Sundays. And she made up her mind that Rusty should not wear her scarlet spring jacket, although it was almost as good as new; she did not have to buy a new one, for a brown jacket came from the cousin before it was time to put one on. Indeed, the New York cousin seemed to have changed to other colors permanently; for thereafter nothing came to Rusty that was not brown, green or, occasionally, blue.

Reuben was almost as enthusiastic as Miss Penny. In any event he had never been so happy in his life. He was sorry about the bicycle only because he had perhaps lost his chance of renewing his boyhood; but he gave over the struggle now with a measure of relief. After all, if being older than other boys helped him to cure Rusty's misery, he was glad to be so.

On the second Sunday after Rusty had received the new dress Reuben was waiting in the yard beside the pony to take her home. He drove her over to her home every Sunday; but the previous week Rusty had chosen to visit one of the girls instead of going home.

When she at last appeared Reuben was amazed to see the old scarlet plaid dress hanging below her coat.

"Why, Rusty Miller, you've got on your old dress!" he cried.

Rusty colored. "I thought—it looks like rain," she said, as he helped her into the buggy.

"But that's no matter when you ride. And your mother hasn't seen you in it."

"I'll wear it next Sunday," Rusty declared. "Mother won't mind not seeing it right off."

Reuben got in and drove on. Neither spoke for some moments.

"You see, Reuben," Rusty at last said hesitatingly, "I wasn't sure—mother would be—pleased. I was afraid she might think—I was stuck-up, you know. Most of the time I'm there she complains that I don't come home oftener and stay longer, and that she never gets out—and yet you can't get her out, no matter how hard you try. And the boys are always all over me, and they're so sticky—I hate to get the new off the dress the very first thing. Honestly, Reuben, it's the only really pretty thing I ever remember having, and I want to make it last as long as I can."

Reuben understood. And yet on the day that he had stopped at the Millers' to ask for the address, Rusty's mother had inquired for her so wistfully that he had been much impressed. In spite of himself, his voice showed his disappointment.

"Well, do wear it next Sunday, anyhow, Rusty," he urged. "I'll take Frank and Freddy away with me the first thing. Your mother's so fond of you that it doesn't seem quite fair that she shouldn't see you in it until all the rest of us have grown used to it."

Three weeks earlier Rusty would have lost her temper. To-day she astonished Reuben by asking him to drive back to Miss Penny's.

"I can get into the dress in a jiffy," she said eagerly. "And I do want mother to see it while it's new. Poor mother, she never has anything pretty—or even new!"

Reuben turned about gladly; and the fat pony, evidently believing that he was returning to his supper, seemed to enter heartily into their plan; he sped over the road and tore into the yard in a way that startled Miss Penny.

Rusty was certainly quick, and she and Reuben were soon on their way again.

"When I get my education," Rusty declared, "I'll stay with mother all the time. Well, no, I don't suppose I can, only vacations; but I'll

move her into a good house and get her pretty things to wear and nice things to eat. But, O dear, that'll be a long time! For I had thought of trying for the scholarship and going to college if I could get it."

"O Rusty, that's great!"

"You ought not to think so, Reuben. You ought to go before me."

"But I can go anyhow. And I'd rather work my way through."

"Do you think by the time I'm through college that mother won't care about pretty things any more?" she asked anxiously.

"Of course she will."

"I don't know about that. She hasn't much interest in them even now. Well, here we are, and it's just beginning to sprinkle."

The little boys had colds, and Mrs. Miller would not let them go out with Reuben. He felt a little troubled at leaving them with their sister in her new dress; but when he came back for her at night, she made no comment. Indeed, she scarcely spoke after she entered the carriage. She sat back quietly, with her head against the hood of the carriage, and suddenly Reuben realized that she was crying—not, as was her wont, stormily, but softly.

"What is it, Rusty?" he asked gently.

"Oh, I'm all discouraged! Mother said that she knew I'd never be content at home again, and that maybe there wouldn't be any roof over our heads soon. She thinks father is going into consumption, and hates to have him work, and of course if he doesn't there isn't any money to live on. And, Reuben, she ought not to pity him so, for he pities himself, and is so ready not to work. Sometimes I really think he tries to cough. Anyhow, he never tries not to, and he needn't hold on to his side and shut his eyes afterwards. He never does that when he thinks there's no one round."

All that week Rusty was thoughtful and sober. On the following Sunday she went home directly after church, and

continued to do so for the rest of the school term. Miss Penny, not wishing her to miss her Sunday dinner, made her take a chicken and an apple pie with her; and presently the little old lady fell into the habit of sending a Sunday dinner to the Millers every Saturday night. Reuben labored with the little boys, who adored him and who proved apt pupils. As a reward for clean hands and faces for a fortnight, he taught them to swim. Then, too, their conscious and unconscious imitation of him improved their manners.

But Reuben's real task lay with Rusty's father. Had Seth Miller worked every day, he might have managed to keep his family in fair comfort. But if he worked one day, he usually rested the next; and after Miss Penny began to provide the Sunday dinner he gave up working on Saturday altogether. He had a cough, it is true,—no doubt the dust at the straw shop irritated his throat,—but he did not look consumptive. He was a silent man, but good-natured to a fault, and now and then, when roused, showed something of the charm that Rusty possessed.

Although slouchy and shambling, he always dressed neatly, even if some buttons were missing from his coat or waistcoat. But on the second Sunday after Rusty had begun to go home early he seemed to have taken especial pains to present a neat appearance. When Reuben came to take him to drive in the afternoon, Mr. Miller sat erect, with a keener look in his eyes than had appeared there in months—perhaps in years.

"My, but that was a good dinner!" he exclaimed presently.

They spoke of other things, but he reverted to the subject of the meal.

"That dinner sure tasted good! Rusty's learned a heap along of being with Miss Penny. You know, Reuben, it's all in the cooking. I haven't had any such meals as last Sunday's and to-day's since Frank was born."

It seemed hardly fair for him to blame his wife by implication, but Reuben said nothing.

"Funny how it makes a man feel like work," Miller went on. "Do you know, if it wa'n't Sunday, I swan, I believe I'd be off to work even down to that old straw shop. I tell you what I'd like to do: I'd like to go straight to a bench and do a little carpentering. I'd just admire to be a-standing this minute in a heap of shavings, turning a lathe, or making a neat corner, or planing a door. You know, Reuben, that's my trade. I always done carpenter work till we moved here; but I couldn't get any when we first come, and I just drifted out of it."

"You'd like to do it now?"

"There's nothing I'd like better," Miller responded eagerly. Then his voice dropped suddenly into its old tone of dejection. "The pity is, I ain't really strong enough. I never could do what you might call steady work again. Like as not my feeling so chipper just now's a bad sign. Jenny thinks I'm going into consumption; and I understand them that's the farthest gone in it have spells of thinking they're cured. By to-morrow like as not I won't be able to drag myself over to the shop."

Reuben pondered long over the problem that Seth Miller presented. The weeks passed and the close of school was at hand, and still he had not found the solution.

Meanwhile, Rusty had been faithful at home and happy at Miss Penny's. On the last Sunday of the school term, as Reuben drove her back to Miss Penny's, he noticed again that she was troubled about something.

"Just think, Reuben," she exclaimed, "mother has been expecting all along that I was coming home for all summer! She thought I just stayed at Miss Penny's to get my schooling. Of course I can't. Miss Penny needs me. She told me the other day she would pay me three dollars a week through the vacation. And even if it wasn't for the work, she says she shouldn't know how to do without me."

Reuben did not know how he should, either.

And yet—

"She's fond of me," Rusty pleaded.

"Yes, Rusty," he agreed. "But so is your mother—and your father."

Rusty sighed deeply. After a little a happy thought came to her.

"I'll tell you what I'll do," she declared.

"I was going to save my money in case Cousin Rachel should send red things again. But

never mind if she does. I'll just give mother every cent that I earn. That will be better than going home, won't it?"

Reuben was wise enough to know that the extra money would mean only one or two extra days of leisure for her father, but he could not speak of that.

"Your father always seems to feel first-rate on Sundays, and he thinks it's because you cook the dinner, Rusty," he said. "I thought that—perhaps, you know—if you should cook all his meals for a while, he might get all his strength back and work every day. And that would cheer your mother up."

"Oh, no, Reuben, father's always been that way—fussing about himself ever since I can remember. It isn't so much my cooking, either, as it is the things Miss Penny sends. Let him get as good himself and try mother on 'em."

They drove into the yard in the glow of a rosy sunset. The white house with its green shutters and with the lilacs at the door seemed home and haven to both. Reuben supposed that the matter was settled in Rusty's mind.

A busy week at school followed. On the last day Mr. Phillips spoke again to their class about the prize; he urged them to have it in mind during the summer, and to return in the fall ready, from the very first day, to put in good, honest work.

After school the master spoke to Reuben alone. He was warmly attached to the singular, quixotic boy; indeed, he had set his

very doleful. Laughing, Rusty ran ahead of him, mounted the doorstep, and with an elaborate bow, said:

"Little Nellie Cassidy
Earns fourteen pounds and more
Waiting on the quality,
And answering the door."

Well, I'll return to the 'quality' in September. So long, Sir Reuben!"

She fled upstairs to change her dress, and perhaps to hide the tears in her eyes.

"Well, what do you think of Miss Gilbert?" Rusty exclaimed at supper. "She thought she had me to-day, just because she's going away for all summer and knew I felt sorry. She thought she was going to make me promise,

TO BE CONTINUED.

THE TRAPPER TRAPPED

By E.E. Harriman

THE news that Johnny le Beau had sold more than two hundred muskrat skins set all his schoolmates in the Southside School wild. To boys in 1877 a dollar looked twice as big as the moon and seemed almost as hard to get. Therefore, a catch of two hundred skins, even at the low price paid for them at that time, seemed a fortune to them.

Within a week every boy who had the run of a marsh or a lake where muskrats were plentiful had a line of traps out. Some boys had fifty or sixty traps, and some had to be content with only a few. Elwood Harris was one of the latter. He had only twelve traps, and he had to do his trapping at odd times, when he could get an hour or two off from his duties at home.

His father owned a big marsh with a pond in one end. The pond covered several acres and was eight feet deep in the centre. How deep the mud was there no man knew. Near the edges the mud ran from one to three feet deep and made excellent soil for large crops of wild rice, on which the wild ducks fed every fall.

Early in September Elwood had built a small flat-bottomed boat with the idea of using it for duck shooting, and when the craze for trapping swept over the community he lost no time in putting his little craft to profitable use. In his boat he visited every muskrat house in the pond and set traps; then, walking along the shore, he hunted for runways. A long, narrow channel through the soft mud always led to a runway. In a few days he had all his traps placed.

He had good luck from the first, and as he hung the shingle stretchers up in rows in the barn he exulted over the array of fine dark pelts. The dark pelts brought more money than the light ones, and were usually much larger.

Elwood had to do his trap running early in the morning and late in the afternoon, and still find time to do the chores in his off hours from school. It was a two-mile walk to school, and the traps were half a mile from the house in the opposite direction; but he was strong and healthy, and the extra hours that he spent at the pond only added to his pleasure.

One morning he went to the pond and found it covered with a skim of ice that bothered him a great deal as he pushed and paddled his skiff from trap to trap. After making his round, he drew his boat well up into the bushes, turned it bottom up, so that in case of a storm it would not fill with snow and ice, and then trudged homeward. He had taken five rats that morning, and he proudly showed them to his father, who was at the well as he came up.

"Look out for the ice, Elwood," Mr. Harris said; "it's going to form every night now until it gets thick enough to hold through the day. Better not take any chances with the skiff; it's easy to upset when you're breaking your way through ice."

"All right, father, I'll wait a few days unless it thaws out again. It bothered me this morning, but I made the round and reset my traps all right."

That evening the ice was gone and Elwood had no trouble, but the next morning it was back again, worse than ever. He waited for two days and then tried to walk on it. It held

honest and true, to try my very best to get the scholarship for two years! Fancy that!"

"O Rusty, why didn't you, dear?" cried Miss Penny. "You mean to try, surely?"

"Oh, yes! But she meant every single day. I wouldn't for all the world pin myself down to that. I told her I'd promise by the year but not by the day. It would be perfectly deadly to be the tortoise. I'll be the hare, but I'll watch out."

However, as it happened, neither Miss Gilbert nor Miss Penny need have been troubled. A stimulus was to come that would make both Rusty and Reuben exert themselves even more than a promise would have done. When school opened in the fall they found they had a rival.

DRAWN BY W. F. STECHER

HIS HEAD SHOT OUT INTO THE AIR, AND HE TOOK GREAT GASPING BREATHS

heart on Reuben's winning the scholarship and so being sure of going through college.

"Now, see here, Cartwright," he said seriously, "you've got to do your best work for that scholarship. It would be distinctly wrong for you to do other than your level best, even though you preferred that it should go to some one else. How should you like some one to hold back so that you could get it?"

Reuben admitted that he should not like it.

"Very well, then it wouldn't be honorable for you to do so in favor of anyone else. Now, Reuben, I want you to promise me to try your best to win that prize—your very best. Will you give me your word?"

Reuben hesitated; but Mr. Phillips insisted. At last the boy raised his honest brown eyes to the master's. "They were full of regret, and so was his voice. 'I promise,' he said.

As he walked home afterwards he felt depressed. He tried to cheer himself by thinking that Rusty still had the better chance. If she would work steadily, she could outdistance him with little effort; but she would not. She was like quicksilver—she would make brilliant dashes, but steady work—

As he reached the gate, Rusty stood waiting for him, still in the white-dotted Swiss muslin that she had worn for the "last day"; the sun was on her bright hair; an eager look brightened her eyes, and yet there was a wistful drooping of her lips.

"It's all settled, Reuben," she said, speaking very fast. "I'm going home for all summer to cook for father and be company for mother, and you'll have to do the lamps!"

Reuben did not know whether he felt pleased or sorry at Rusty's decision; his face looked

his weight where the water was only six inches deep, but a yard farther out it broke under him.

Early the next morning he went again to the pond and tried the ice. It bore his weight. He worked his way out carefully to the first house and gained its solid footing with elation. With a few blows of his hatchet he broke a hole over his trap and pulled up a fine, dark muskrat. He had staked the trap below water, so that any muskrat caught would die quickly. Taking the dead animal by its flat black tail, he sent it sliding swiftly to the shore.

The next house was westward near the edge of the pond, and he made his way to it without mishap, although once or twice the ice cracked sharply. Here he had two traps, and he found a muskrat in each. Sending them skimming over the ice after the first one, he stopped to consider his course to the third house, which was much farther out in the pond than the others. The water was deep there, and Elwood decided that he would not visit it for the time being. First he would edge along among the wild-rice stalks that stuck up through the ice to two other houses that he could safely reach.

He walked gingerly along the edge to the first of the two houses. Here he found his trap snapped, but empty. After resetting it he went on to the other. That yielded him a muskrat, which he threw after the others. Now he had to decide how he should get to the house in deep water and the two beyond it near the farther shore.

After studying the situation for a minute he decided to go round the edge of the pond to the farther houses; then, if possible, he would pick out a place where the shallows approached the deep-water house, and try the ice there to see whether it would bear him.

He made a half circle and came up behind the two houses; taking from them the two muskrats they contained, he threw the animals across the ice to the spot where the others lay. Then he began to work his way slowly and carefully out toward the last house.

He knew that the water was deep all round that house, for he had made soundings with a pole from his boat. Some boulder or water-logged tree trunk must have furnished the base on which the muskrats had built their house.

Sliding his feet carefully over the ice, Elwood went on toward his goal. He had made half the distance and was already congratulating himself on making the hazardous passage without mishap, when, without the slightest warning, the ice broke beneath him. Amid loud noises of cracking, splintering ice he went out of sight below the surface.

He shot down feet first. His hands, which he held straight above his head, went under, and still his feet had touched nothing more resisting than soft, black mud. He had gone down in the deepest part of the pond!

With frantic kicks and strokes he swam up to the surface and blew the water from his nostrils. The wind felt icy cold on his wet face, and the shore where his muskrats were waiting him seemed very far away. He had come up straight into the hole that he had broken. When he caught the edge of the ice a piece broke off in his hand. Again and again he tried for a firm hold, and each time a fresh piece broke from the main part of the ice field.

He was a good swimmer, and he had no trouble in keeping afloat. Furiously beating the ice with his hands, he tried to break his way back to the nearest shore line; when he found that the ice was getting thicker, he floated his body up to the surface and tried to roll out at full length on the ice.

But although he worked with great care, the ice gave way and let him go under again. He must find some other way out. He began again to break his way to shore, but he soon realized that he should be frozen long before he could reach it.

He stopped for a moment to consider what to do, but as soon as he ceased his violent effort a gnawing chill went through his body. He had to work and work hard to keep his blood going, and while his brain was actively hunting for a way of escape he began breaking the ice again.

He thought of the hot breakfast that his

mother would have waiting for him, and a sudden fear came over him that he should never sit down with his parents again. It would do no good to shout for help; he was too far from the house, and no road ran near the pond. He had better save his breath; he should need it if he were to save himself from sinking into that slimy mud bottom.

"I won't give up!" he said to himself. "I'm going to get out of here in some way, if I have to turn muskrat and swim under the ice."

With the words came a new idea. Could he not break the ice if he swam close to shore and lifted from below, especially if he chose a point near one of the trap holes?

Paddling over to the side of his wide hole in the ice, he looked across to the small hole where he had picked up a trap when he first came down to the pond. It was not more than forty feet away and that summer he had easily swum sixty feet under water. Could he, when chilled, swim forty feet and still have enough strength left to lift against the ice? He saw the rice stalks sticking up and knew that they would

tell him when he had gone far enough, for they did not grow where the water was deep.

But before he resorted to that last expedient he resolved to test once more his scheme of rolling out upon the firm ice. Gently he swung his body up to the ice, and gently he rolled out on the edge of it. It held for an instant, and then he was under again; he came to the surface with his mind made up. He would waste no more time in useless and exhausting efforts.

He clung to the ice for a few moments, and then, drawing a full, deep breath, he faced squarely toward the hole near shore and dived under the ice. In total darkness—for the mud he had stirred up made it impossible for him to see an inch—he forged along, kicking with strong, regular thrusts.

He swam fiercely and did not check his headway until his hands struck the tangle of rice stalks. Then he knew that he had come far enough, and, letting his legs down, he tried to stand on his feet with his shoulders under the thin ice. As he strained against the ice, one of

his feet slipped, and he fell, driving his arms deep into the mud. For just one instant he felt like giving up the struggle and lying there.

Oh, for one lungful of air, one little breath, one second in which to rid his bursting lungs of the poison that oppressed them! Working himself into position with his stooped shoulders touching the ice, he planted his feet squarely under him, and worked them through the mud to a fairly solid foothold. Then he lifted with all his strength in a plunging upward thrust of his back that broke the ice into a thousand pieces.

His head shot out into the air, and he took great gasping breaths while the mud and water dripped from his hair. He attacked the ice furiously, crazily; beating, lifting, climbing on top of it, only to fall through it in a second, and again to climb up. He thrashed about in the water and mud and broken ice like some great animal that had suddenly gone mad.

But his madness had method in it. He knew that thus and thus only could he get the heat into his body that would keep him limber

enough to run the half mile between him and his home. So he kept on with his wild beating and smashing of ice until he had made a channel for himself clear to the shore and could walk upon the solid land once more.

He stopped only long enough to gather his muskrats into a sack that he had left on shore. Then, with water dripping from every inch of his body and "slushing" in his shoes, he started on a run for home. He kept his pace all the way up the long hill from the pond, across the south field and up the path from the road. With his clothes frozen solid on the outside and with cracks in his trousers behind the knees; where they had bent under his strides, he burst in on his mother and father.

In his warm room he took off the wet clothing, rubbed himself with a coarse towel, put on dry clothing and went downstairs again to drink a pint of "composition tea," which his mother had brewed for him. Then he ate his hot breakfast and started off at a jog trot to the school two miles away; and he never felt the worse for his experience.

YOUNG MEN IN THE GOVERNMENT SERVICE

By WILLIAM HOWARD TAFT, *Former President of the United States*

THE business of the national and state governments is the greatest business that we have in this country, and its scope and volume are continually increasing. Although the business of the national government is greater than that of any state, county or city government, it is of course very much less than the total of all the others. But when we learn, as we did from the report of the United States Civil Service Commission, that the number of officers and employees in the executive civil service on June 30, 1916, was 480,327, we can readily understand what a broad field is open for young men who wish to enter the government service.

Machine politics and the spoils system are as much an enemy of a proper and efficient government system of civil service as the boll weevil is of the cotton crop. The strength of those pernicious influences has not been destroyed. I think, however, that the evil has been more extensively mitigated in the national civil service system than in the systems of the states.

The difficulty in putting civil service reform into practice is the same that one meets in carrying out many other reforms. Getting the necessary legislation is only one step, and perhaps not the most important step. The law will not enforce itself. Moreover, no practical law can be drawn that will absolutely prevent the Executive from evading its purpose if he so desires.

PROGRESS OF THE MERIT SYSTEM

THE success of the civil service merit system depends on the manner in which it is enforced, and it will be successfully enforced only when public scrutiny of the service increases and when official conscience in respect to the law becomes keener. Under a party that remains in power for a number of successive terms, the merit system acquires a stronger hold than when there are frequent changes from one party to another in the executive administration; in that case there is greater temptation to seize patronage, by hook or crook, for party purposes.

Still, I think we should take courage from the history of the national civil service law. Defective as it is in many ways, the principle embodied in it has made great headway since the Civil Service Act of 1883. The positions then affected by that act numbered 13,789, whereas to-day there are 296,926 positions that are filled by the competitive method of appointment. This increase has come through executive orders of appointment, which have extended the system, and through the natural expansion of the service.

Civil service employees whose positions are not subject to competitive examination include presidential appointees,—of whom the greater part are postmasters of the first, second and third classes,—clerks in charge of contract postal stations, clerks in third- and fourth-class post offices, persons employed jointly by the railways and the railway mail service, mail messengers, star-route and steamboat and screen-wagon contractors, laborers and minor employees engaged in the Isthmian Canal work, employees of the Department of Commerce, mostly of the Census Bureau, and unclassified laborers.

The most important part of those exceptions are the appointees of the President. They are the local Federal officers distributed throughout the United States as postmasters, collectors of customs, collectors of internal revenue and public-land officers. The Senate must confirm their appointment. That takes them out of the merit and competitive system and leaves them

to be used by Senators and Congressmen in building up and preserving their political patronage and influence.

They are not appointments that the President should make. The positions should be filled by promotion from the classified service, or they should be done away with entirely and the present assistants be given charge of the work in their departments. In that way the service would be rendered more efficient and the salaries of the ten thousand well-paid positions would be saved to the Federal government. By that change, too, an effective instrument for maintaining political party machines at the expense of the government would be destroyed. I recommended the change in each of my four annual messages, but Congress did not pay the slightest attention to it. I do not despair, however, that ultimately the reform will come. A bill is now pending in Congress to bring all postmasters into the classified service.

Two changes are needed to promote efficiency in our civil service. At present, appropriations are made for the salaries of a certain number of clerks of each class; instead, a lump sum should be appropriated for the salaries of employees of each bureau. Under that system the chief of each bureau would be free to reclassify his clerks according to their merits.

The second change needed is a system of civil pensions to be paid out of a fund contributed partly by the government and partly by the employees themselves. By such a plan employees could be retired on a pension when they cease to be efficient. Under the present system they are retained until they die, and the average effectiveness of the employees is reduced. Promotion to the positions left vacant by those retirements should be made under a definite system of competitive examination, in which each contestant's efficiency rating should count heavily. That would stimulate the clerks to do better work, and would relieve somewhat the dead-leveling effect that a monotonous routine has upon them.

The history of the last generation has shown that, in spite of occasional revivals of the spoils spirit, the merit system has a momentum of its own that carries it ever deeper into the structure of the government. Its defects, therefore, ought not to deter those who have a taste for government service from entering it.

The variety of service that the government requires is great. The largest single branch is clerical. Stenographers and typewriters are next in number. The government also needs persons trained in all the mechanic arts and in all the scientific professions, including medicine, teaching, applied chemistry and physics, pharmacy, various kinds of engineering, surveying, topography, agriculture, horticulture, geology, entomology, botany, forestry, biology, statistical sociology and political economy, navigation and seamanship.

VALUE OF STENOGRAPHY

THOSE who seek to enter the government service because they are not fit for any particular business constitute the largest number of the applicants who are rejected. They seek the general clerical positions, and are merely looking for some work to sustain them until something better turns up. In examination they rarely get much more than the passing mark. But the applicant who has made himself an expert in his work can easily get an appointment. Since I have been at all familiar with the civil service of the national government, a

competent, rapid stenographer has had no trouble whatever in getting a good government position. The truth is that the Civil Service Commission cannot supply the needed number of expert stenographers.

If I were a young man with a college education, and if I had no leaning toward any particular profession, but did have a taste for government work, I would learn thoroughly stenography and typewriting. Then I would apply for a position in the civil service of the government, confident that I would be appointed to a good position.

CORTELYOU AND SHUSTER

THE routine work—taking routine letters from dictation, indexing and filing and copying routine matter—would be nothing more than an apprenticeship. It would familiarize me with governmental methods of doing business, and teach me a loyalty to the government.

If I had got full value from my college education and my special training in stenography, I should have acquired a fund of general information and an efficiency in my work that would make my superior anxious to give me a more important and responsible place. The fact that I had a general or college education might seem for the time to be an unnecessary adjunct, but as I gained the confidence of my chief it would make him more and more dependent upon me and my judgment. I do not mean to say that a college education is necessary. A high-school education, an alert mind and an appreciation of what is going on in the world about you will serve; but the wider your mental discipline and general education, the better.

Many men who have begun their careers in the manner I have described have achieved success. George B. Cortelyou began as a stenographer in the government post office; he worked his way up through the post office, became secretary to the President, then Secretary of Commerce and Labor, then Postmaster-General, and finally Secretary of the Treasury. W. Morgan Shuster, who entered the government service in Washington as a stenographer, was sent to Cuba when it was necessary to organize a government there; he became assistant collector of customs in Cuba, and was then sent to be collector of customs in the Philippines; he was subsequently appointed a member of the Philippine Commission and minister of education in that government.

A knowledge of stenography and typewriting is useful in any professional or governmental career. When the Pitman system was invented, my father, who was then a practicing lawyer, made himself familiar with it. He used it to great advantage in his practice and later, when he became a judge and a Cabinet officer. I have often regretted that I did not take time in my youth, or in my early professional life, to possess myself of that instrument for shortening work and for making valuable memoranda, which, because of the tedium of writing in longhand, you usually do not make at all.

Not all government positions concern merely routine matters and the discharge of monotonous duties. The Agricultural Department is devoted to research, to publishing information that will help the farmer, and to encouraging agriculture. Many of the positions offer an opportunity not only for investigating scientific discoveries but also for presenting them for practical use in simple, understandable language. That work needs a disciplined mind and a gift for lucid and forcible writing.

The Census Bureau, if properly manned, should include those who are trained in the science of economics, of sociology, of statistics and of ethnology, and in history and its philosophy.

I shall merely mention the technical knowledge that is needed in the customs department of the Treasury—the knowledge of manufacturing and of classifying all sorts of imports and exports; the technical knowledge of mechanical engineering and of shipbuilding and navigation needed in the Bureau of Navigation; the knowledge of seamanship required in the revenue marine, and the general mental training and education needed in performing the duties in the financial and monetary bureaus. Chemists, teachers, pharmacists, printers, press feeders, mechanical engineers, civil engineers, examiners in the Patent Office, engravers, fish culturists, experts in the Bureau of Standards, in the Coast and Geodetic Survey and in the Lighthouse Service, veterinarians and a host of other experts all form a part of the government.

Frank H. Hitchcock, a graduate of Harvard University, began in the Agricultural Department in a subordinate place, to fill which he was obliged to pass an examination in one of the branches of biological study. From that department he came by transfers into the Post Office Department, and was gradually promoted until he became Postmaster-General.

NOT WEALTH BUT HAPPINESS

I DO not wish, however, to indicate to young men that the civil service is an ordinary avenue to Cabinet positions; it is not. Indeed, the man who thinks of entering government service should realize that in the ordinary course of events it will impose certain limitations on his career. The limitations are not unlike those that usually accompany the life of the teacher or of the clergyman.

There is no opportunity to amass a large fortune. The man who enters the civil service, therefore, must realize that happiness does not come only with wealth. On the other hand, the government ought to give him, through the system of pensions and enforced insurance of which I have spoken, the calm security that comes with knowing that in his old age he will not be left in penury. I believe that that system of pensions will be adopted during the next generation, and that therefore its absence now ought not to turn aside anyone who is otherwise satisfied with the prospects that a career in the government civil service offers.

The man who enters certain departments of the government has opportunities for doing real benefit to mankind. The discovery of the transmission of the yellow-fever germ by mosquitoes and of a similar transmission of the malarial germ, made by Dr. Walter Reed and Dr. Lazear and Gen. Gorgas of the medical corps of the army; the successful investigations into the hookworm disease and its cure by an officer of the Public Health Service; the investigations into bubonic and pneumonic plague, into the cure of cholera by inoculation of lymph, into beriberi and amoebic dysentery by Dr. Strong and his assistants of the bureau of science of the Philippine government are only a few instances of the progress that has been made in the useful sciences.

I speak with considerable knowledge of what a career in the government civil service offers, for during the eleven years that I have spent in Washington in the government and the four years in the Philippines I have come into fairly close touch with the men and women who form the service. In the Philippines we had a good example of what proper service and

proper rewards in government work may be. We began to build our civil service there in discouraging circumstances. We had to take pretty much anyone whom we could get. Many of our staff had been volunteers in the army, and among them were adventurers, men with bad habits and men without principle; those we had to weed out in the course of an exigent period of government birth. Our civil servants had to learn the Spanish language; they had to become familiar with Philippine institutions and Philippine character. The government was on trial, and the men were under a just method of rewards and reductions and removals. At the close of the last administration we had gathered together in the Philippines as fine a body of civil servants as any European government engaged in colonial work could boast of. There was a fine spirit in our departments and bureaus; there was admirable teamwork, and a personal wish on the part of each employee to get effective results and so vindicate the existence of the government. It was inspiring to work in such an atmosphere.

In Washington, behind the President, behind the Cabinet officers, behind the chiefs of bureaus and in a measure independent of them all, is an entity, a governmental structure that does not change with each administration, but that remains with a continuity preserved since the days when Alexander Hamilton organized the departments under Washington's presidency. The chief clerks, the chiefs of divisions and the assistant chiefs of bureaus are generally permanent classified civil service employees. They have served for decades, they have become intimately familiar with the workings of

the government in their respective departments. The law, the regulations and their history they have at their fingers' ends. By habit of mind and natural loyalty they come to regard themselves as the government and to be jealous of any attempt that seems to deprive the government of its rights. They become most conservative and sometimes too rigid in enforcing the law. They are a little too partisan in rejecting claims made against the government by deserving claimants; but those are defects of their admirable qualities.

The President may leave the capital and go to the seashore, the Cabinet officers may spend their vacations miles away from Washington; but the Federal government lives, and its arteries and veins and nervous system continue to perform their functions.

The men and women in the government civil service lead a quiet, modest but pleasant life in Washington. They can give to their children the opportunities for education and self-cultivation that Washington offers in such abundance. They play their useful parts without the temptations of public acclamation or political ambition. They are content with knowing that they are doing their duty to a great government and doing it well. They are gratified from time to time by the complete dependence upon them that the political heads of their departments and bureaus must have in deciding important questions. Usually their careers are not brilliant, but I think that they are more likely than most other careers to bring a contented old age, cheered by the consciousness of having lived a useful life and of having well performed an important public duty.

have a young partner, and most certainly they ought to have the latest and best law books in their joint library. "And green carpet, it looks so well in an office," said the girl, "and very comfortable chairs. Comfortable chairs make such a pleasant impression. And you'll get a new desk, of course, Tom?"

"I am looking at catalogues," said Tom. "I intend to get my desk in New York."

The girl clasped her hands. "I am sorry only about one thing, Tom."

"You mean the stove?" cried Tom. "The offices are to be heated by steam."

In her enthusiasm over steam heat, the girl almost forgot that one thing about which she was sorry.

"Well," said Tom, in a glow, "you see that everything is right? Only I haven't got the partner yet."

"I am sorry for those two old lawyers," said the girl.

"Oh-h!" said Tom.

The truth is that no one in the whole world was sorer for the two old lawyers than Tom was himself. He had not expected the sorrow to grow; he had thought that he should get used to it; but he did not.

One day Mr. Higgleston called Tom into the little private back office, and, looking at him in that affectionate way of his, said, "Tom, I've been thinking over what you said to us, about your plan, you know, and I've come to the conclusion that you are right. You are almost always right, Tom. You need new, bright offices, and you'll get them uptown. You need an up-to-date library, and it isn't here." His voice sank, and he went on: "I know that there have been some things here, besides the dingy old office rooms, that must have been exceedingly trying to a high-spirited young man like yourself. You have shown yourself an able lawyer; you have talked in the courts like a lawyer of experience—everyone says so; and yet you have been treated like a boy."

Mr. Higgleston got down to the office, Mr. Murphree had a talk with Tom.

"So, Tom," he said, "you have fully decided to set up in new offices and with a new partner? That's right. Have you chosen your new partner yet?"

Although it was only nine o'clock, Tom looked nervously round before he answered that he had not—yet.

"Very good," said the tall old lawyer. He cleared his throat, assiduously read his memoranda, and then said, "I've been considering the matter from all points of view, and I say again that you are right. You have had just a little bit too much of other people's work here in these offices. I don't like to lay blame upon a man who is absent, but Mr. Higgleston is peculiar, and, although he means well, he has exacted too much of you when he let you write all his papers. Now, it's a good thing to send a boy into the courts, but it's another thing to make him write a lot of dull legal papers."

"I have always entertained kind feelings toward Mr. Higgleston, but he has no earthly use for me. Therefore, I am going to make this proposal to you: I will be your new partner. We'll have the finest suite of offices to be found in the town. You see, Tom, I'm not as young as I once was, though I'm not as old as Higgleston by any manner of means, and I need you for my court work."

The tall old lawyer patted Tom on the head. "You will think that matter over, Tom?" he said, with a little tremble in his voice that sounded as if after all he were perhaps as old as Mr. Higgleston.

"I'll think it over, Mr. Murphree," said Tom.

"And meanwhile, Tom," said Mr. Murphree, "you won't go running round town, looking for another young fellow like yourself? You won't find him; he doesn't exist. You need an older head to go with yours; young fellows require ballast. When you have thought the matter over, you will let me know?"

"I will let you know, Mr. Murphree," said Tom.

One day after that the two old lawyers and Tom were all busy over a special piece of work. It was interesting; and when they were through they shook hands all round by way of congratulating one another. Then it was that Mr. Murphree said, "Changes must come in the natural course of things, but, 'pon my soul, I wish that we three could stick together."

Then another day the three worked on another case with similar results and no argumentative discourse, and this time it was old Mr. Higgleston who said, "We've been together for a long time. If we ever separate, we'll miss the one that isn't with us."

Everyone knew that Tom was to move; indeed, as soon as he had rented his offices, almost everyone sought them out and, viewing them, declared that young Rooker surely had a clear head on his shoulders. When his mother saw them she felt sorer than ever for the two old lawyers left behind, and when the girl with the blue eyes saw them she would not even ask Tom the name of the new partner.

A few people standing outside the courthouse saw Tom on the day that he moved. He was carrying a pile of books that reached from his arm, held low, to his chin, held high. Old Mr. Murphree accompanied him. People said that the

tall old lawyer loved Tom so dearly that he could not even let the boy run away by himself; but they wondered a little at Mr. Murphree's happy expression.

The happy expression was only momentary, for a cloud came over his face. "Tom," said the old gentleman, "it seems kind of mean sneaking off like this from Mr. Higgleston, before he comes down to the office. I wish matters had been different, my boy, and that you hadn't objected to taking him along."

Tom's face remained happy. He was thinking of another voice that had said to him the night before, "I feel like pleading with you, Tom, in behalf of Murphree. He's old, and he leans upon you, and he loves you like a son. Perhaps, after we're up there a bit you'll find out that you can make room for him; it won't be for long. I'm afraid I won't be able to look Murphree in the eyes the next time we meet."

The broad-shouldered young fellow and the tall old gentleman walked up the steps leading to the finest suite of offices in the town, and with the toe of his boot Tom pushed the open door farther open. Mr. Murphree stepped in and surveyed the place. There were three desks, arranged as the three desks in the old building had been arranged; and there at the front desk was Mr. Higgleston, at work at nine o'clock for possibly the first time in his life.

Mr. Higgleston had looked up from his desk and was staring hard at Mr. Murphree. He, too, had wondered about the three desks.

The two old lawyers simultaneously grasped

TOM'S NEW PARTNER

By Louise R. Baker

IT is no wonder that Tom Rooker was proud of himself. He was making a real stir in the courthouse. There were men who said that he talked like an old lawyer. And Tom was only twenty-four!

Beyond the shadow of a doubt, the young fellow carried a clear head on his shoulders, and he was going to have a great many things his own way in the world of law. He was not exactly eloquent, but his arguments were forcible and to the point, and he could cite cases without end.

A number of other people were proud of him, too. His mother was tremendously proud of him, and there was a girl with the bluest eyes and the loveliest hair who was immeasurably proud of him; but the two people in the world who were the very proudest of Tom were the two old lawyers in whose office the boy had been drilled in the law. Each of the two old lawyers took to himself the credit of shaping Tom's legal mind and of placing him upon the highroad to success.

"I piled the work on him at a tremendous rate, surely," said Mr. Higgleston, the little old lawyer. "I wanted to see how much he could stand, and, by George! he stood it all. I allowed him to write my papers in his own way, and as a consequence he writes as fine a paper as a mature attorney—almost, I may say, as good a paper as I write myself."

"It has given me infinite pleasure," said Mr. Murphree, the tall old lawyer, smiling complacently, "to help bring before the public a boy like Tom Rooker. Yes, sir, I have permitted that young man to plead in the courts when I would have had another student still reading his Blackstone. I ran risks, no doubt of it, but I ran them with my eyes open."

The outside world, lawyers and everyone else, declared that Tom had done a wise thing when he offered himself as a student in the office of Mr. Higgleston and Mr. Murphree. "And though," people said, "Tom didn't go in with the understanding that he was to do all the work of the firm, by doing all the work he has mastered the law quicker than he otherwise could possibly have done."

As Tom thought over the favorable decisions that he had won, he told himself a great many flattering things. "Look here," he said, "you're a fool if you settle yourself in this musty old set of offices and continue to do all the work of the firm. You want to get up the ladder rapidly, that's what you want. You want to be up-to-date. You need a good library, and you've got to have it. You can go in with another young fellow, go halves with him in the expenses, move uptown into light offices, and the two of you push ahead. You can't possibly move along briskly with two very old gentlemen dragging you back."

After he had told himself all that, Tom

rumpled his yellow hair and felt miserable. In imagination the little old lawyer was looking up at him, smiling, with his hands on his shoulders; the little old lawyer had such very affectionate ways! And then the tall old lawyer was shaking him by the hand long and hard, and laughing in his pleasant manner. The tall old lawyer had love in his eyes, and Tom wished that he had not.

"Yes, it's hard to break any kind of ties," Tom growled, "but when it's got to be it's got to be, and I might as well tell them what I mean to do!"

They were astonished when Tom fully explained his intention to them; he told them everything except that the new partner was to be young. They had thought that he was well situated where he was. But after the boy had gone out of the office, with his hat tilted back, showing the yellow locks across his forehead, the two old gentlemen each seriously considered the matter, and each arrived at a similar conclusion; namely, that he could not possibly get along without the boy.

Tom's mother said that of course Tom was right; her boy knew his own business; but she added that she did feel sorry for the two old lawyers who had always been so kind to him.

The girl with the lovely hair showed her dimples and her blue eyes grew larger and brighter as Tom unfolded his plans. The plans seemed so gigantic, and it was such a little time ago that some people had taken Tom for "the office boy"! Certainly, she said, he ought to

He nodded toward the outer office. "I am sure that Murphree didn't mean anything by it; it is just his manner, and he's getting old. I understand exactly why you are going to leave, and I feel proud of you, Tom, that you told us in such a way that Murphree never guessed. I have known for a long time that the three of us couldn't remain much longer together. Now, though Murphree thinks a great deal of you,—loves you like a son, I may say,—he thinks literally nothing of me. Why, he has sent you off to the courthouse to plead a case that he couldn't plead himself, and then jumps on me for giving you papers to write, and declares that I must think you have the strength of a horse!"

"I have a little plan, too, Tom. It would take considerable time for you to find a partner willing to share the expenses of a first-class set of offices. I am ready to be that other partner, Tom. I am willing to go more than halves, Tom. We will go uptown together!"

He stood up and put his hands on Tom's shoulders; his weak little eyes peered hard into the young face. There was just a faint glimpse of fear and doubt in the eyes, but the wrinkled face was lighted by that smiling mouth.

Tom laughed bashfully.

"You want to think it over, Tom?"

Tom nodded, and then said briskly that he had business over at the courthouse.

Early the next morning, fully an hour before

"WE'VE BEEN TOGETHER FOR A LONG TIME. IF WE EVER SEPARATE, WE'LL MISS THE ONE THAT ISN'T WITH US"

DRAWN BY GEORGE ALFRED WILLIAMS

the situation—at least that part of it which meant that the three were to continue together. They rushed into each other's arms and almost sobbed, while Tom, standing off a little, still held the pile of law books that reached from his arm, held low, to his chin, held high.

"It certainly — would — take — a court of —

equity—to decide—which one was the new-partner," he said later to the girl with the blue eyes.

"Court of equity, indeed!" whispered the girl, whose dimples had not disappeared since Tom told her of his arrangement. "I am sure it would be a case for the Supreme Court of the United States!"

THE CRYSTAL HUNTERS

By Frank Lillie Pollock

In Eight Chapters

Chapter Two

"WHAT? A diamond?" shouted Ellis, as Tom held up the glittering stone. "Quartz crystal," replied Tom, "but as clear and brilliant a specimen as ever I saw. Look! It must be nearly an inch across. Very likely there are more here."

They hastily tied Peter to a tree, and began to search the wet gravel. Tom presently found another smaller crystal; but although they hunted for a whole hour, they failed to find any more. Their discovery greatly stimulated them, however, and they camped on the spot, with the intention of going over the stream thoroughly the next morning.

There were fish in the "branch," as Tom called the creek, and they had trout rolled in corn meal for supper and again for breakfast. As a matter of fact they were almost too impatient to eat in the morning. They had no sooner swallowed their breakfast than they rushed down to the stream.

Up and down the "branch" they worked, shoveling and raking over the gravel, but they turned up only two medium-sized quartz crystals and several pieces of agate. It was a disappointing yield, especially to Ellis, who was expecting a great haul.

At noon they stopped work only long enough to eat a cold luncheon, and then went back to their task; but they found nothing more until late in the afternoon, when Tom picked up a tiny stone that he believed to be a ruby. It was too small to be of much value, but he put it carefully away. A little later Ellis found a small, beautifully colored amethyst.

"What's the difference between quartz crystal and amethyst?" he asked, as they pawed over the gravel.

"Nothing except the color," returned Tom. "They're both six-sided crystals of quartz, but the colored stones have been stained by metallic oxides. Agate and jasper, of course, aren't real crystals at all, and rubies are in another class."

By the end of that day they had examined the creek pretty thoroughly for nearly a mile upstream and down, and so they moved camp about three miles farther on; but the new field did not yield them much. After a day of hard work they had collected only a few pieces of jasper and chalcedony, which would be of little use for the railway map.

Disappointed, they broke camp the next morning and struck off to the southwest again. Early in the afternoon they came unexpectedly upon a mountaineer's log cabin. The owner greeted them warmly. He gave them a fresh supply of corn bread, with a few eggs and sweet potatoes; but he would take no payment for them.

"We-uns don't run no store," he said. "You-all is shore welcome."

He had no crystals to sell, but he said that some weeks before he had sold a few in Dixon. Crystals were becoming scarce in that region, he thought.

The boys talked with him for an hour or so, and then started on. Travel was hard and slow that afternoon, for the mountain slope down which they were making their way was densely overgrown with scrub oak.

It had been a hot day, and a close, sultry night followed it. For the first time mosquitoes were troublesome in camp. Even early the next morning the air was close and stifling.

"Going to be a scorcher; sure to breed a thunderstorm before night," Tom said.

After loading the mule they started down the mountain side. In the valley a small stream flowed sluggishly through a belt of marsh. Finding no crystal-bearing gravel there, they began to work their way across another ridge.

There was not a breath of wind. The sky looked dark and murky, and in the middle of the afternoon white masses of cloud began to rise swiftly in the south.

"Thunder points!" Tom

exclaimed. "I was sure we'd get it. It's likely to be a stunner, and I'll admit right now I shouldn't mind finding some good shelter."

As they moved on they kept a sharp lookout for a place that would offer some protection from the storm. They cast frequent apprehensive glances upward at the rising thunderclouds, which were rapidly growing darker and denser.

"Look there! A house!" cried Ellis suddenly, as they topped a bare ridge.

More than a mile away, in a small clearing on the mountain side, stood a log cabin.

"We'll make for it!" cried Tom. "We ought to get there before the storm hits us."

A deep growl of thunder from the south warned them to hurry. Down the slope they ran, making straight for the hut and urging the white mule to his best speed, but they were still half a mile from the shelter when the sunlight was blotted out by the storm clouds. At the same time the thunder crashed sharply overhead, and sent rolling echoes through the hills.

"Hurry, or we'll never make it!" Ellis shouted.

The southern sky had turned a livid bronze. A vivid blaze seemed suddenly to touch the very mountain top above them, and the thunder crashed deafeningly. Tom felt the gun barrel tingle sharply in his hand. There was another terrific clap of thunder, and then the rain came, at first in big drops, and then in a deluge.

As they rushed blindly on, Tom saw the cabin loom dimly through the sheets of rain; it was not a hundred yards away. Its doors and windows stood wide and black, but no matter—it was shelter. Tearing their way through the jungle of blackberry bushes that surrounded the shack, and dragging the snorting and kicking Peter after them, the boys covered the remaining distance and plunged, mule and all, through the ruined doorway.

For a minute lumps of ice as large as marbles volleyed on the roof. The sky flamed with lightning; there was a splitting crash of thunder, and then the rain poured down like a cloudburst.

"Just—in—time!" panted Ellis, as he mopped his streaming face.

For ten or fifteen minutes the lightning and thunder flashed and roared. Then the storm seemed to move on to the north; the claps of thunder became less violent, but the rain continued to fall heavily.

The old cabin proved to be only a partial shelter. Rain came through the roof, at first in dribbles and then in streams; the boys had to move from place to place to keep dry.

The shack had evidently been deserted for years. Most of the chinking between the logs had fallen out; the stone chimney was crumbling. Outside, the blackberry bushes clustered up close to the house, and among them two or three half-dead peach trees struggled hard to preserve the memory of man.

"Looks as if it might rain all the rest of the day," remarked Ellis, peering disconsolately from the door.

"We're lucky to be in a half-dry camp for to-night, then."

A rain-swollen creek roared like a torrent from a ravine a few hundred yards away. When it became certain that they should have to stay in the cabin for the night, Ellis went down to the stream for a kettle of water. Then, since he was as wet as he could possibly be, he went out and gathered a panful of berries.

Tom had lighted a fire in the ruined fireplace, and the blaze made the old shanty look more cheerful in the gathering darkness. When they had tethered Peter in an open space outside they prepared supper. After the meal they sat for a long time chatting and listening to the steady patter of rain on the roof.

In the middle of the night Tom woke with a start from a sound sleep. He did not know what had disturbed him, but he saw his cousin, too, sitting up beside him.

"S-sh!" Ellis whispered. "Something's moving in the bushes outside!"

"Only Peter, I reckon," said Tom.

The rain had stopped, and faint moonlight shone through the doorway; in the stillness the boys heard something moving

DRAWN BY H. C. EDWARDS

A MOMENT LATER ELLIS BROKE OUT FROM THE SHRUBBERY; HIS FACE WAS CRIMSON WITH RUNNING AND EXCITEMENT

in the berry bushes. Leaping up noiselessly, Ellis seized the shotgun and tiptoed toward the door. Tom groped about in the "duffel," found the electric flash lamp and followed Ellis.

Ellis was creeping cautiously through the bushes. Tom had almost reached him, when with a frightened squeak a small black animal, which Tom recognized as a bear cub, bolted from under their feet into the cover. With a snarling grunt, a dusky black figure instantly reared upright among the bushes ten feet away.

"Don't shoot, Ellis!" cried Tom, remembering that the gun was loaded only with small shot for rabbits. He flashed the light on the animal's face. In the vivid glare they could see the little piggy eyes, and the teeth stained red with berries. The bear would probably have fled, but Ellis, out of sheer nervousness, pulled the trigger of the gun.

He had not taken aim, but some of the shot must have stung the bear, for, with a savage snarl, she plunged toward the boys. Ellis let off the other barrel wildly, dropped the gun and bolted for the cabin. Tom dived aside just in time to avoid the bear's rush, stumbled headlong into the bushes, scrambled to his feet again and ran blindly on. The next moment he saw something white ahead, and plunged into the little cleared space where Peter was prancing in terror at the end of his picket rope.

Before Tom could collect himself, the bear rushed out from the berry thickets and almost collided with the mule. Things happened then so quickly that Tom could not see which was the aggressor. He saw the lightning-like rip of the bear's claws across Peter's flank and heard the mule squeal. The next instant Peter kicked viciously. There was a dull thud, and the bear staggered back; but she instantly recovered herself and leaped forward again.

As she came on, Peter humped himself and lashed out with both heels. Over and over the bear went rolling; but she seemed to rebound like a rubber ball, and with a muffled roar of fury and a gleam of white teeth she returned to the charge.

"Hurrah! Go for her, Peter!" Tom shouted.

Peter had been a fighter in his youth, and needed no encouragement now; but the bear was a fighter, too, and she dodged the mule's hoofs with great nimbleness. Tom saw her swing her terrible paw, and thought that Peter was doomed. And indeed, if Peter had not wheeled, the blow probably would have killed him. As it was, he caught it on his shoulder, and blood showed black in the moonlight. Then he let go again with both heels.

The kick seemed to catch the bear fairly on the head. Over she went again, and this time did not spring up instantly. Peter would have rushed after her, but his rope brought him up short. The bear had had enough. Just as Ellis came hurrying back with the gun she got to her feet and plunged into the thickets.

"What's happened? Where's the bear?" cried Ellis.

"Knocked out! Peter did her up. Good old

Pete!" Tom exclaimed, and, full of pity and admiration, started toward the mule.

But Peter was wildly excited and would let no one come near him. He was bleeding in several places, but for the present the boys had to let his wounds alone. They went back to the cabin and relighted the fire.

"These midnight adventures are too much for an empty stomach," said Tom. "Grub's what we need."

So they made coffee and boiled four eggs; but even after that refreshment it was a long time before they could so much as try to go to sleep again.

The next morning Peter's excitement had subsided, and he let the boys examine his wounds. They consisted of half a dozen claw gashes, two or three of which were deep, but they had ceased to bleed and did not seem dangerous. The boys washed the wounds carefully and afterwards applied carbolated vaseline. They knew that in that pure air the wounds would heal promptly.

"Going to prospect for jewels round here?" Ellis asked, after breakfast.

"The creeks will all be swollen deep," said Tom. "I think most of the gravel will be covered with mud and water, and we'd only waste time. Suppose we strike out west again."

"Not till after dinner. Let's loaf this morning, and hit the trail in the afternoon."

In fact they both felt rather tired after the night's excitement, and so that morning they rested and slept. In the afternoon they loaded Peter and made another start toward the southwest. The creeks were already subsiding; after five miles of travel the boys found the streams again of normal size. Evidently the storm had affected only a narrow strip of the region. At four o'clock they camped beside a stream that promised to contain fish if not crystals.

Trout proved to be plentiful, and Ellis shot a rabbit and two gray squirrels, so that there was more variety than usual in their meal that night. Mindful of their late adventure, they loaded the gun with buckshot, and laid it handy by them before they crawled into the tent; but the night passed without any alarms.

The next morning they explored the creek bed, which contained at least plenty of gravel. Tom went upstream and his cousin went down. For nearly an hour Tom found nothing of value. Then he came upon a fine rock crystal, and soon afterwards he found a small purple amethyst.

Delighted with his find, he was intently searching among the pebbles, when he heard the sound of running feet. A moment later Ellis broke out from the shrubbery; his face was crimson with running and excitement; he carried his hat in one hand and held his other hand tight clenched.

"What is it?" Tom called in alarm.

"Gold!" shouted his cousin, racing up and waving his closed hand. "Look here! Gold!"

TO BE CONTINUED.

*Oh, many-weathered March!
A bitter while
He storms and roars; but
when a bluebird trills,
Disarmed, our tyrant smiles
a tender smile,
And makes his exit, crowned
with daffodils.*

FACT AND COMMENT

GRASP the nettle boldly; hard things are easier done than dreaded.

To find in Life a richer Zest
Like Good Things well, but Fine Things best.

DO not think that you can approach a man's heart by treading on his toes.

BEANS have been high for some time. Now catchup, the usual concomitant, has overtaken them. Hence the name.

IT is rare nowadays to find a vessel loaded with such a harmonious and altogether fitting cargo as that which the Sardinian recently took into Boston. It consisted of rum and tombstones.

THOSE who have been trying to sell the new half dollars at a premium received a sudden setback when the Treasury Department authorized the statement that 2,330,000 of the coins were struck off during the closing weeks of 1916.

IT was a characteristically French inspiration to have a *Salon des Poilus* in Paris. The exhibition contained more than three thousand poster designs that soldiers at the front submitted in competition for prizes. The highest award went to a drawing of a *poilu* sitting in a trench carving a figure of Victory.

THE campaign against the rats that infest the wharves and wholesale districts of our large coast cities deserves the support of all good citizens. Some of the newspapers seem disposed to make a joke of it, but there is nothing funny in the enormous waste of food, the loss by fire or the menace of bubonic plague that the rats are responsible for.

WHAT name shall be given to the islands hitherto known as the Danish West Indies? The old name is, of course, no longer fitting, since the islands now belong to the United States. As they have already been, at one time or another, the Spanish, the French, the Dutch, the English and the Danish West Indies, according to ownership, the obvious title now would be the American West Indies; but a member of Congress has introduced a resolution that they be called the Dewey Islands. Others have suggested that they be called the Columbian Islands, and still others that they be named in honor of Monroe or Seward.

COSTA RICA has had the unique distinction among Central American republics of going more than thirty years without a revolution. The recent overturn breaks the spell, but not, it is to be hoped, with the result that followed the rising against Diaz in Mexico. The revolution in Costa Rica was bloodless, and order seems to have been preserved. The country is somewhat smaller than Maine and rather less densely populated. Just about one half of its foreign trade is with this country, which takes almost all of its bananas. Nearly all of its coffee, on the other hand, goes to Great Britain. Those two products constitute the bulk of its exports.

THE editors of The Companion are happy to acknowledge the receipt of an invitation from the town officials, the trustees of Cushing Academy and the directors of the Watatic Club of Ashburnham, Massachusetts, to be present in the year 2015 at the opening of the corner-stone box, and there to meet the President of the United States and the chief officials of Massachusetts. Having no previous engagement, and being interested in the fact that the corner stone contains a copy of The Companion, we have accepted the invitation. When the time comes, our "memory tickler" filing system will remind us automatically of the affair, and we

shall go. It is a pleasure to see the permanence of The Companion and our own expectation of literary life so gracefully recognized.

BREAKING WITH GERMANY

EVENTS follow one another so rapidly in these times that what was news yesterday is history to-day, and we must be ready at all times to expect a kaleidoscopic change in the situation. By the time this issue of The Companion is in the hands of its readers almost anything may have happened in international relations, but at the moment of writing we know only the portentous preliminaries of events that may determine the future.

Germany and its allies announce that they have closed every approach to the British Isles and to France. Any ship of any nation found within that arbitrarily prohibited area will be sunk, although one American ship a week was to have been permitted to sail between New York and Falmouth—under conditions that it would have been humiliating for this country to accept. The President resented the change of policy and the increased hardships that it inflicts upon this nation, and showed his resentment and that of the American people by severing diplomatic relations with Germany.

What will result? There may be instances in history wherein such a breach of relations was not followed by war; but if so, they are very few. In the present situation there will be no declaration of war by the United States unless and until the new German policy results in the destruction of American lives or in other encroachment upon our rights; but inasmuch as Germany cannot enforce that policy without the gravest risk of committing some such offense, we can hardly hope that peace can long be preserved. Although it was suggested that we appeal to Germany to modify its resolution in view of the fact that failure to modify it would probably add another country to the list of its enemies, Germany anticipated the suggestion and repelled it.

Outside the territory of the Teutonic Powers the action of the President has been received with approval, not merely in the communities of the Entente Allies but in all the countries of Latin America. Here at home the expressions of relief have been almost as significant as the expressions of approval. It is true that the American people have felt some annoyance owing to the action of Great Britain in supervising and restricting trade on the Atlantic, but it has been as nothing compared with their indignation at the German methods of warfare: the violation and ravaging of Belgium, the sinking of the Lusitania and other passenger ships, the war against women and children in the Zeppelin raids, and the enslavement of Belgians.

There is, of course, a small minority that will hold itself in opposition, but as we write it has scarcely made itself heard. From the St. Croix to the Rio Grande, from Seattle to Tampa, the President's dismissal of Count von Bernstorff was approved. Governors, legislatures, chambers of commerce and private citizens have telegraphed their approbation to Washington. Men of German and Austrian birth have hastened to assure their neighbors that in this crisis they support their adopted country.

So stands the situation at the moment of writing. A wave of patriotism has swept and is still sweeping the land. We hate war; we hope it will not be necessary for us to wage it. But if we must defend our honor and dignity and maintain our rights, we are ready to make all necessary sacrifices.

PET ECONOMIES

THE person who always has to enforce petty economies has no pet economies to practice. To him all economies are necessary and hateful. Only the well-to-do can afford the luxury of a pet economy. Under that term are not to be included hoarding bits of string, tearing off and keeping the unused portions of sheets of note paper, or picking up pins in the street. These are not pet economies; they are manias of a mild type.

The consistent practice of a pet economy produces a sense of satisfaction quite out of proportion to the importance of the saving effected. If you run an automobile, you may like to clean it and tinker with it yourself instead of sending it to a garage. You may even be one of those who will not intrust the care of the furnace fire to the chore man, because you know that you can run your furnace on less coal than anyone else, and although not a miserly person you hate to pay money out unnecessarily for coal. You do not summon the carpenter to patch

up the back porch, because you look forward to doing that job yourself on your next holiday.

Things that you enjoy doing, or that you flatter yourself you have a knack for, you are likely to do with your own hands instead of hiring some one else to do them. Pet economies are akin to hobbies; sometimes they coincide with hobbies. They are useful little possessions, and only the competent kind of man is able to exhibit them.

RELIGIOUS "RAGTIME"

THE art that is modern above all others, that in one form or another makes to-day the most universal appeal, is music. No other art has so rapidly and so wonderfully improved its mechanical agencies, and that improvement, like so many of our industrial marvels, is the direct result of a vast popular demand. Perhaps only a cultivated few enjoy the symphony, or even the opera of Wagner; but hundreds of thousands, of all occupations and all grades of intelligence, respond to the taking airs of the light opera, of the popular song, of giddy dance music, of patriotic melody. The right music at the right time will spur the souls of men and women like nothing else, will whip care out of them, breed laughter or tears, make them for an hour or a moment think they are in heaven.

Perhaps we do not enough study the meaning and the working of this vast spiritual force. The ancients, with their exquisite tact in such things, prohibited certain scales, certain modes, in public music, believing that they tended to weaken and debauch the soul. Nothing so radical as that has occurred to our lawmakers.

In regard to church music, however, the point may be worth considering. With the desire to lighten and enliven church services, with the deeper feeling that music is an agency that is being daily misused with enormous effect in the worship of the Devil, there has grown up a somewhat thoughtless disposition to discover and make use of melodies that, to say the least of them, would not have been approved a hundred years ago. In view of that tendency it is interesting to read what the poet Cowper has to say on the influence of music: "I believe that wine itself, though a man be guilty of habitual intoxication, does not more debauch and befoul the natural understanding than music—always music, music in season and out of season—weakens and destroys the spiritual discernment. If it is not used with an unfeigned reference to the worship of God, and with a design to assist the soul in the performance of it, it degenerates into a sensual delight."

To our ears, that sounds strange and extravagant enough; but it may be worth thinking over. Unfortunately, the control and direction of our church music is too often in the hands of those who are much more interested in music than they are in the church. Where that is the case, it would be well for the more clerical authorities to see to it that the modern and the gay and the merely stimulating do not too largely drive out the decorous, the solemn, and even the austere.

RESTRICTING IMMIGRATION

HENCEFORTH it is going to be much harder for aliens to get into the United States than it has been in the past. A measure that has been before Congress for many years, and that had been previously passed three times by both branches, only to be defeated by veto of the Executive, has now been passed the fourth time, has again been vetoed, and has been successfully passed over the veto.

In the early days America welcomed every newcomer. It opened the way to success for men who had no chance to rise in their native land, and Americans took pleasure in helping them to rise here. This was the place where land could be had for nothing and where wealth could be drawn from the soil with a minimum of labor. It was the land of political opportunity, of freedom from the disadvantages of caste, of relief from political oppression. It is not necessary to tell the story of the change that has taken place in American sentiment, or to name the causes that have gradually but surely made immigrants less welcome and unrestricted immigration a menace to our peace and well-being. The recent act of Congress points to some of the causes by naming the classes of immigrants that are henceforth to be met at the gate with "You shall not enter."

The act is not in all its details a new law, but it is more definite and thoroughgoing than any previous enactment in forbidding the entrance of criminals, of the physically or mentally defective, of polygamists, of paupers, vagrants and persons afflicted with loathsome

or contagious diseases; in excluding Chinese, Japanese and Hindu coolies,—although without mentioning any of them by their race names,—and in the carefully studied phrases by which it bars anarchists and others who hold lawless opinions. It is also especially firm in its strict provisions against importing laborers of any race or country under contract or promise of employment.

To the provisions that have just been named there was little opposition. What led President Wilson to veto the bill, and Presidents Cleveland and Taft to veto similar bills, is the clause known as the "literacy test." In broad terms that clause requires that every person sixteen years of age who wishes to enter the country must satisfy the inspectors that he can read in some language. The provision has been the subject of heated and angry controversy. Its purpose is to keep out undesirable aliens, especially anarchists. Those who oppose it say that it is not a fair test, for the reason that anarchists are not more illiterate than other persons. Its advocates say that it is a fair test, although not perfect, because it will exclude some anarchists and shut out very few other persons who are desirable as citizens.

Since the long controversy is now over, we shall soon see how the new law works. It is probable that, whatever else it does, it will restrict immigration—a result that nearly everyone regards as imperative. The old ideas have passed away. Americans no longer believe that men and women from whatever part of the world you please can of right come and dwell here, and that they have a just grievance if they are refused admission. The old saying that America is a refuge for the oppressed of all nations is a figure of speech. It was only partly true in days that differed greatly from present times and that are now long past; and it never had any official force.

THE WAR IN 1917

AS the fourth campaign of the great war begins, the eyes of the world are fixed less upon the armies in the field and the great battle fleets of England and Germany than upon the little craft, submarine and destroyer, that are fighting out the last battle of Germany for a place on the sea and in the sun. On the Kaiser's desperate effort to break the British blockade and to destroy the British mercantile fleet victory in the war seems now to depend.

But meanwhile the armies will not be idle. We may take it for granted that France and England will make the great effort in the west. Whether when spring unlocks the trenches they will resume their hammering at the salient on the Somme, or whether the offensive will begin at a new point, is not certain. There is some reason to believe that there will be two offensives instead of a joint attack. The French are already showing signs of activity round Verdun. If they could break the German line in that strategic region they would get the maximum of profit, and might at a blow regain much of Alsace-Lorraine, and oblige the enemy to evacuate France entirely. The British, prepared for battle as never before, will make a determined drive somewhere along their front.

The Germans may try to anticipate their enemies in the west, as they did last year at Verdun, but their chief offensive is much more likely to be directed against Russia, both because Hindenburg believes that that is the true field for German ambition and because Russia is less able to withstand an assault than its allies are. There are internal dissensions in Russia, and one party, that of the bureaucracy, has little stomach for more fighting. Besides that, Russia still finds it difficult to arm and equip its armies. Man power it has in abundance; supplies it finds hard to come by.

There is some likelihood, too, of an Allied movement northward from Saloniki, especially if events tame the King of Greece or remove him from the scene. So long as he remains in authority the Macedonian campaign must lag; whatever promises he makes to the Entente he makes under duress, and he would break them if he thought it safe to do so.

In other circumstances cutting the communications between the Central Powers would be an obvious and a hopeful enterprise to undertake. But diplomatic and military blunders have frittered away the opportunities of the Allies in the Balkans. After the Gallipoli fiasco and the collapse of Roumania, their operations there are likely to be diversions merely. Their best chances and their real strength are in the west.

It is by no means unlikely that events will force the United States also to take its place

among the belligerents; but of course we should be in no condition to take any real part in the land fighting for at least a year. Our navy might well enough find employment in pursuing submarines, although it would be our smaller craft and perhaps chiefly our improvised destroyers that would be useful in that service.

CURRENT EVENTS

CONGRESS.—On February 7 the Senate, by a vote of 78 to 5, formally indorsed the action of the President in severing diplomatic relations with Germany. The dissenting Senators were Gronna of North Dakota, Kirby of Arkansas, La Follette of Wisconsin, Vardaman of Mississippi and Works of California. — Both branches gave much time to emergency measures necessitated by the strained international relations, besides working on the general business that crowds the closing weeks of the session. The emergency measures included espionage and conspiracy bills and amendments to the shipping laws. The Senate Democratic caucus approved the bill that the House had passed to provide about \$350,000,000 additional revenue to meet the anticipated Treasury deficit. The bill aims to raise \$248,000,000 through additional taxes on inheritances and "excess profits," and provides for a bond issue of \$100,000,000 to pay for the Danish West Indies and the Alaskan railway. It was expected that the army appropriation bill, which carries about \$300,000,000, would pass promptly. The water power, corrupt practices and public building measures appear to be effectually blocked for the present session. — On February 14 Congress met in joint session to count the electoral vote for President and Vice President. — The House refused to agree to the Senate plan to put all postmasters under civil service rules. — The Senate refused, by a vote of 48 to 19, to go into executive session

Belgian relief workers that they must retire from the occupied portions of France and Belgium, except that Minister Whitlock, with a few helpers, might remain in Brussels. That so limited the American supervision of the work that the relief committee, after consultation with Ambassador Page in London, decided that all Americans should withdraw from participation in the relief work in the occupied districts.

CUBA.—The contested presidential election in Cuba has caused so much unrest, even reaching the incipient stage of revolution, that Secretary Lansing on February 12 sent a note to the Cubans in which he begged them to await the outcome of the second election to be held in certain districts and to abide by the decisions of their courts.

MEXICO.—On February 5 the new constitution, drawn up by the convention of Carranza supporters assembled at Queretaro, was promulgated at Mexico City. Many of its provisions cannot go into effect until laws are enacted, but without further legislation there will be an election of President and members of the Congress on March 11. The members of the Congress will take office on April 15, and the President on May 1. Carranza has named Ignacio Bonillas, a member of the joint border commission, as ambassador to the United States.

THE EUROPEAN WAR

(From February 8 to February 14)

The main interest of the week centred in the submarine warfare so vigorously renewed by Germany in British waters. During the first half of February the total number of merchant vessels that the submarines sank reached about a hundred, with a tonnage of about 200,000. More than a third of the vessels were under neutral flags. The only American ship was the Housatonic, and that vessel, which

TEN ACRES OF SHELLS STORED IN A BRITISH MUNITIONS FACTORY

to consider the promotion of Dr. Grayson to the rank of rear admiral. — On February 13 the House, by a vote of 353 to 23, passed the naval bill, which carries appropriations of \$368,000,000.

THE BREAK WITH GERMANY.—The ten days that followed the formal break of diplomatic relations with Germany was a period of high tension at Washington and in the country at large. No one could know what hour might bring the news of the overt act—the sinking of an American ship or the killing of American citizens—that all felt would make war inevitable. With each day that passed, however, the hope grew that war might honorably be avoided—a hope based in large part on the persistent rumors that Germany was anxious to prevent a more acute crisis, and on the conviction that President Wilson would take no further step without proof that Germany had actually destroyed American lives or shipping in its submarine campaign.

There was relief from the disquieting rumors about the detention of Ambassador Gerard in Berlin, when authentic news came on February 12 that the ambassador and his staff, with about 120 other Americans, had arrived in Berne on the preceding day. A special train of ten coaches brought the party from Berlin to Zurich. Count von Bernstorff and his staff left Washington on February 14, to sail on that day from New York on the steamship Frederik VIII for Norway.

On February 11 the Swiss minister, on behalf of the German government, intimated that Germany would be willing to negotiate with the United States, provided the negotiations did not interfere with the blockade of England. Secretary Lansing replied that the United States could enter no negotiations with Germany unless it withdrew its submarine proclamation of January 31 and renewed its assurances of last spring. Later, Berlin denied that it had authorized the offer to parley.

On February 12 word came that the American sailors who were brought into port by the prize ship Yarrowdale had not been set at liberty, as earlier reported, but were held as prisoners pending assurance of the freedom of the crews of the interned German ships in American ports. It was obvious that Berlin had heard wholly misleading reports of the American attitude toward the German sailors here. Secretary Lansing on February 13 asked Berlin for further information about the detained American sailors.

On February 12 Germany told the American

was carrying contraband, was warned and the crew were assisted to get away safely. The largest vessel sunk was the White Star liner *Afric* of 12,000 tons. An Austrian submarine sank the American schooner *Lyman M. Law* off Sardinia.

It was too early to call the more relentless campaign a failure, but it was apparent by mid-February that the campaign was not accomplishing the results that the Germans had counted on. They had expressed confidence that they could destroy a million tons, perhaps twice that amount, a month, and thereby reduce England to starvation. The opening weeks of the new warfare showed a destruction at the rate of less than half a million tons a month—and the rate of destruction was appreciably decreasing at the end of the period under review. The British government, true to its policy, gave no information in regard to its protective measures or the number of submarines destroyed.

It was known that the number of merchant vessels that reached British ports safely during the first half of February was about a hundred daily, or as many arrivals each day as the total number of vessels sunk in the two weeks. In all, England and its allies have at this time about 20,000,000 tons of merchant shipping; and British shipyards, even under the war conditions that necessitate much naval work, are said to be turning out 2,000,000 tons of merchant shipping a year, perhaps more. These figures, it will be observed, take no account of the neutral shipping that is so largely employed in British commerce.

The other neutral nations made vigorous protest to Germany, but they declined to follow the example of the United States and sever diplomatic relations. The protest of China was especially vigorous, and it seemed likely that its note was a prelude to a declaration of war. The attitude of Holland was doubtless influenced by the concentration of a large German force on the Dutch border.

The week brought no fighting that made material changes in the situation. On the western front the British continued their operations with Bapaume as their objective. A raid in the Ancre region on February 11 resulted in 215 German prisoners. There were artillery duels at several points on the French front, and numerous airplane raids behind both the French and German lines. In the Görz section of the Austro-Italian zone the Austrians were on the aggressive. They reported that in an attack on the Italian trenches on February 11 they captured 665 prisoners.

Mitchell Junior—a 40 h. p. Six 120-inch Wheelbase

\$1460 F. o. b. Racine

7-Passenger—48 Horsepower 127-inch Wheelbase

Mitchell
SIXES

The \$1150 Model

Another John W. Bate Value

This year Mitchell Junior—with 120-inch wheelbase—shows another result of factory efficiency. Its size, its power, its beauty and equipment offer amazing value.

Its very purpose is to serve efficiency. It is for men who want a 5-passenger car with

ample room and power. But who don't want to pay for 7-passenger room and power.

It is for men who want, in a smaller Six, all the Mitchell extra values. But note that it has 40-horsepower. And from hub to hub it measures 120 inches.

Both 100% Over-Strength

Both sizes in Mitchells are built to the standard of 100 per cent over-strength. That's twice our former standard. Both are built for lifetime cars—for at least 200,000 miles.

Over 440 parts are built

of toughened steel. The safety parts are all oversize. We use a wealth of Chrome-Vanadium. We test our gears for 50,000 pounds per tooth.

You will find no other car under \$2000 built anywhere near like the Mitchells.

\$4,000,000 in Extras

The Mitchells have extras which, on this year's output, cost about \$4,000,000.

There are 31 distinct features—like a power tire pump—which nearly all cars omit.

We have this year added 24 per cent to the cost of

finish, upholstery and trimming. This comes from savings in our new body plant, which saves us hundreds of thousands of dollars.

See these extras. You are bound to want them in the car you buy to keep.

Marvels of Efficiency

The Mitchells show you what factory efficiency can accomplish in motor car building. They are built by John W. Bate, the great efficiency engineer. They are built in a factory which he erected and equipped

—a 45-acre plant. All the extra values are due to his savings. He has cut our factory cost in two. You will not find like values in any other fine car. Let your Mitchell dealer prove that.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

"AND THEN?"

By Robert Underwood Johnson

THIS time for a story, as one may know From Robbity-Bobbity's evening glow, His rounder eyes and his open mouth, As he begs, "Now, Bonapapa, 'Once on a time.'"

So off goes our ship for the golden South, For parrots and fruits of a tropic clime, For wrecks and treasure and tattooed men. And at each adventure he cries, "And then?"

For a breathless tale you must tell to him, Robbity-Bobbity, six and slim. And if for a second you happen to pause For a missing word or some other cause, Or hushing your voice to a whisper of awe, At a thrilling moment venture to stop,— The hunter in reach of the grizzly's claw, Or Jack at the beanstalk's very top, Or the knight at the mouth of the dragon's den,— He will eagerly urge you on, "And then?"

When I tell how the night wind gave alarm And scared the thief of the Golden Arm, Or how Brer Rabbit his wit would match With Brer Fox in the briar patch, Or how the monkeys got over the stream, Or the Crabs gave a dance (they were so delighted That Ma had escaped through the crab-net seam).—

When the Catfish came who wasn't invited,— He will cock his head like a Jenny Wren And shake his curls, and plead, "And then?"

Oh, Robbity-Bobbity looks so wise From the deep, dark pools of his sunlit eyes As he asks the wherefore of everything: "Why grass is green?" "Why sparrows sing?" "Why do the squirrels climb the tree?" "Why does the food make little boys strong?" "What was there there before the sea?" But this is his puzzle the whole day long: "What's after the counting? You count again Millions and millions more? And then?"

He's a philosopher, Robbity-B—, His fancy goes farther than sages see— A sequel to every story's end, A journey beyond the road's last bend. Let bookmen chatter and try to prove There isn't a future life or place: Their logical ignorance never could move The faith from this boy's transfigured face. Tell him that Death is the last we ken, He would challenge their doubt with his wise, "And then?"

LIFE'S PREPAYMENT SCHEME

THE prepayment or pay-as-you-enter scheme of the street-car companies has every appearance of being a modern invention, but in reality it is as old as the world. Ever since the beginning life has been on a pay-as-you-enter basis.

The fact is, we get out of this world just what we pay for—no more, no less.

That fundamental law was at the bottom of Christ's parable of the man who was sent away from the wedding feast because he was not wearing a wedding garment. When you first read the parable that may seem like ruthless severity in the cause of convention, but on second thought you see that it is a law of life, and, after all, the kindest solution of the difficulty. The man could not enjoy the occasion, because he was not in the party spirit.

That man's mistake is the mistake that countless thousands make to-day in trying to cheat the world into giving them something for nothing. In the last analysis they are cheating, not the world, but themselves. Too many of us are looking for the rewards before we have trained ourselves to appreciate them.

The Jews wanted to march straight from Egypt to Canaan. But God knew better, and He sent them by a roundabout way that was full of hardships. It took them forty years to cover it, although the distance was no greater than that between New York City and Buffalo! In that forty years God transformed a mob into an army, and so cultivated the gifts of restraint and faith in the people that when they gained the luxuries of Canaan they could withstand its temptations. They wanted the wedding feast without the wedding garment, symbolic of the preparation in character. God's prepayment system was wiser for them.

We are all eager to march in a bee line from Egypt to Canaan, and, if a merciful God does not restrain us, we arrive before we are ready, and make fools of ourselves or something worse. That is the pathetic paradox of money without culture. That is why we find diamonds on dirty fingers and mud ideals in marble palaces. Dante gave the hottest circle in purgatory to those who had refused a great opportunity. But there is a still hotter circle for those who, as the old Greek proverb puts it, have been "opened and found empty." An English ecclesiastic knew the meaning of that, when on his deathbed he said bitterly, "I have held a great post, and I have not been equal to it." And the misery of it was that no one could contradict him.

No, nothing in this world can be seized with ruthless and violent hands. You must pay as you enter in this market place of life. You must wear the wedding garment of character before you can sit down at the feast. If you sneak in by the back door, you will find yourself at a table groaning with bounties that you cannot eat, because you are out of place. It is a wise old world, after all. Sometimes we think that we are fooling it, but the last laugh is always with the universe. It is not the world that we try to deceive, but ourselves. And the Nemesis of that is always disillusionment.

CUTWORMS

THERE was a glint of sunny hair above the hedge and a gay girlish voice came over, heralding the bright face that, a moment later, was visible at the gateway.

"Good morning, Miss Lucretia! I've dropped in to call on your garden. Did you ever know a lovelier—O Miss Lucretia, your pansies!"

The gay voice changed to dismay. Where yesterday had been a carpet of purple and gold there were now only a few green plants; the rest was a tangle of wilted leaves and stalks.

"Cutworms," Miss Lucretia said briefly. "They did all that last night. Of all mean, pesky, under-handed things commend me to a cutworm."

"But isn't there anything you can do?" Beatrice cried. There were actually tears in her eyes—half

for the poor pansies and half for the disappointment of Miss Lucretia, who loved them so.

"I can clean up the mess," Miss Lucretia retorted grimly. "There isn't anything else that I know of."

"I'll help," the girl said soberly.

But Miss Lucretia declined. "No, I'd rather do it myself. I'm not polite enough for company this morning. It's reminded me of something that I can't get out of my head. Beatrice, there are things meaner than these little green beasts, and they are human cutworms."

"Human cutworms!" Beatrice echoed.

Miss Lucretia nodded. "That's what I said, and that's what I meant. You watch out for 'em. There, run along, child—take a handful of the clove pinks as you go."

The girl picked the clove pinks absently. Human cutworms! But she knew that it was quite useless to ask for an explanation when Miss Lucretia did not feel like talking. She went out of the garden and down to the street with her forehead puckered over the puzzle. At the next corner Flo Westbrook met her. Flo's eyes were wide and excited.

"Beatrice, what do you think?" she cried. "You know that new girl in church who acts so stiff and hold-offish? Persis Ray says she used to work at Holland's, and something queer happened and she was dismissed, and she says everyone says that she stole some money there. I don't doubt that it's true. I always thought there was something queer about her. She needn't think she can get in our crowd if she's anything like that. Beatrice, what's the matter with you? You look as if you'd seen a ghost."

"No; only a cutworm!" Beatrice replied.

A CORRESPONDENT'S JOURNEY

A JOURNEY almost as thrilling as the fictitious trip that Phileas Fogg made in *Around the World in Eighty Days*, was undertaken in 1886 by Frederic Villiers, a correspondent of the *London Graphic*. He was in Serbia at the close of the Serbo-Bulgarian war when his paper hurriedly ordered him to Mandalay in Burma.

He left Belgrade for Vienna, says Mr. F. L. Bulhard in *Famous War Correspondents*. There he caught the Venice express, and at Venice he boarded a liner for Alexandria. At Alexandria he took the train for Suez, and there he found a Bombay steamship ready to start.

Villiers had hoped to catch Lord Dufferin, Viceroy of India, who was officially to take over the Burmese territory recently annexed, but at Suez he learned that the viceroy would start four days before he could reach India. He went on, however, and at Aden heard that Lord Dufferin had been delayed by illness and would not start for Burma at the time first appointed.

When his ship arrived at Bombay, Villiers learned that he might catch a train that would arrive at Calcutta on the very morning of the departure of the viceroy for Rangoon. He slid down the mail chute with the letters, and went ashore on the mail tender. At the railway station he sent a telegram notifying the viceroy's secretary of his wish to go on with Lord Dufferin's party, and then just caught the express for Calcutta. At Calcutta a Sikh in the livery of the viceroy's establishment handed him a sealed letter. It said that His Excellency was sorry to be unable to take Mr. Villiers with his party, but that "if Mr. Villiers traveled to Rangoon by mail steamer, His Excellency, when he arrived at that port, would do all he could to assist him."

Within the hour Villiers with his kit was on the train for Diamond Harbor, where he would meet the little mail steamer for Rangoon. To get aboard, he had to go out in a rowboat and catch a rope thrown to him from the moving steamer.

As the ship crossed the Bay of Bengal a tremendous hurricane swept down upon her, and it was touch and go whether or not she would founder. But the same storm also delayed Lord Dufferin's ship, and Villiers landed at Rangoon shortly after the viceroy. He had a half hour with the viceroy, who gave him permission to sail with one of the advance guard ships that were to take the party up the Irrawaddy to Mandalay.

All went well, until on the afternoon of the second day the steamship suddenly stuck in mid-stream. The engines were reversed, but the paddles only churned the water to no purpose. The boat was firmly embedded in a sand bank. Half-dazed, Villiers watched the two other steamers pass him and disappear round a bend in the river. With the goal almost in sight, it seemed that he was to lose, after all!

But the captain came to the rescue with the information that all ships on the river anchored at sundown, and the offer of a small boat, with a crew that would row all night if the rupees were numerous enough and the correspondent were firm enough. The boat was launched and Villiers clambered in, but the water at once began to pour through the bottom. Bailing was of no avail, and the crew only got the leaky craft back to the steamer just as water was actually oozing over the gunwale.

The captain then offered Villiers his gig, and the artist pushed off once more. He reached the viceroy's ship at dawn, with the muzzle of his revolver nestling against the neck of the sleepy Burman who acted as pilot.

Lord Dufferin took Villiers along as his guest as far as Mandalay. When the correspondent reached the capital of King Theebaw he had journeyed twelve thousand miles. The next morning came the great ceremony at the palace.

BRAVE CANADIANS

DURING the Battle of Ypres, when a gas attack had emptied the French trenches for almost a mile, the Canadians stretched their line to twice its length and occupied the position that the French had lost. All night they held, says Every Week, and all the next day and all the next night. Beating off attacks, and counter-attacking, losing the woods on their left and gaining them again, being forced out of the little town of Saint-Julien, rallying and driving the Germans before them, without artillery or infantry support, for two nights and a day they held on, and saved the Allied line.

Behind the town of Saint-Julien, far enough back to be well protected, the Canadians had a hospital filled with convalescents. They were lying, bandaged and nursed, but in good spirits and well along toward recovery, when suddenly the news came that the gas attack had been made and that the French had been forced to give ground.

With feverish haste the nurses and doctors made preparations to move their patients back to safety. When they came to get their men, however, every

bed except three was empty, and in those three beds were three men complaining bitterly—men who could not get up and walk because they had lost one or both feet. The others were gone—not back, but forward—hotfoot to the trenches. Most of them died, but they had their share in holding the line those two nights and a day.

OUT OF THE FRYING PAN

"An 'I'm the feller what used to object to takin' out 'er ladyship's blinkin' lap dog when I was in service at 'ome.'"

UNCLE JACOB'S BOSS

"SPEAKING of independent folks," said Amos Gray, "there was old Uncle Jacob Dill, that I lived with a spell when I was a boy. He and his wife were along in years, and their daughter and her husband had taken the farm and agreed to provide for the old couple as long as they lived. Uncle Jacob was independently well off, but he would have been independent anyway. He used to make his brags that he was his own boss."

"One winter afternoon Lyman Tersey, the son-in-law, came home from the store without remembering one of his errands: to get a plug of tobacco for Uncle Jacob. Maybe it would have been more on his mind if he had used the weed himself. But he didn't. He always said that tobacco was injurious to the health, though he knew better than to object to Uncle Jacob's using it. In fact he wanted to go back to the store, because the old gentleman was all out. But it was a three-mile trip, and Uncle Jacob wouldn't hear to it."

"But all the afternoon he kept growing more and more fidgety, and by night he was about the crabbedest man I ever saw. At supper he only just picked at his victuals, and when it was over he asked Aunt Hitty for her shears."

"Then he lit the lantern and went out into the woodshed; and woman's curiosity, in the shape of Aunt Hitty, tiptoed out after him."

"Pretty soon she came back, half laughing but still looking kind of sorry. 'I been watching father through a crack in the door,' says she, 'and what do you suppose he is up to? Well,' says she, 'he's gone and cut the lining out of the pocket where he always carries his tobacco; and now he is settling there on the sawhorse—a chewing of it. I don't believe he's getting much satisfaction, though,' says she."

"By and by the old gentleman came back and went and looked out of the window. 'I've half a mind to step over to Ramsey's a minute,' says he."

"'Why, father, you can't go out such a night as this,' said his daughter, Lucy Ann; for it was a good half mile to our neighbor Ramsey's, and it was coming on to snow."

"'I'd like to know why I can't,' says Uncle Jacob. 'Don't you go to giving orders to me!' says he, and he bundled right up and started."

"We knew he'd gone to borrow tobacco; but Lucy Ann allowed he might not get it, for Ramsey had spells of leaving off. Time passed, and Uncle Jacob didn't come back, and we got downright scared."

"Finally Lyman put the horse into the pump and started after him, taking me along to hold the lantern. We found that he had been to Ramsey's but didn't get what he was after; and we kept on without seeing hide or hair of him till we got clear to Mellen's store. There we found him, just paying for his plug of tobacco."

"By that time it was snowing and drifting like great guns. 'Now, father,' says Lyman, as cheerful as he could, 'just hop into the pump, and we'll see about getting home.'"

"'You just tend to whatever business brought you here,' says the old man, 'and I'll look out for myself. At that he started off on foot, and we had nothing to do but follow.'"

"So we went along in a kind of procession: old gentleman ahead, staggering through the drifts; Lyman and I bringing up the rear in the pump; and Lyman pleading every few minutes. 'Now, father, it does almost seem if you had better get in and ride.'"

"We got home at last, and after unharnessing we went in and sat down by the fireplace to thaw out. No one seemed called on to talk; but finally Uncle Jacob took out his plug of tobacco, and I noticed that he hadn't bit anything off from it. First thing we knew, he had given it a toss into the fire. Then he got up and wound the clock and went to bed."

"Well, the old gentleman never once touched the weed again. 'I've quit tobacco,' he would tell people. 'I didn't leave off 'count of any of Lyman's opinions. But when I got an inkling that it was setting up to be my boss, thinks I, it's time for us to part company.'"

NOT REAL

THAT strange gray ghost from a past era, the ex-Empress Eugénie, now ninety years of age, watches with burning interest the life-and-death struggle, renewed after nearly half a century, between Germany, which crushed her power and prestige, and France, which cast her out. The young republic, which shook itself free of her along with all the other tarnished debris of the glittering Second Empire, exiled her for many years; but it has forgiven her now, in her old age. She may go

and come as she will between France, her old home, and England, her adopted one; and she gives much of her income as well as the use of her beautiful estate to the allied defenders of France, whether French or British. So great have been the changes, so dark the misfortunes, of her tragic career that of all old, living women few seem as old—as almost impossibly old—as she.

Yet, even now, every little while the world gets some new glimpse of her in the brilliant heyday of her youth. In the recent biography of Disraeli there is a letter in which the English statesman tells of the first visit of the French emperor and empress to London in 1855. They quite captivated Queen Victoria, but Disraeli did not like them. "I was greatly disappointed with the empress," he wrote. "For me she had no charm. She has Chinese eyes and a perpetual smile or simper, which I detest. I understand she is very natural,—too natural for a sovereign,—and that Napoleon looks sometimes as if he would be pleased with more reserve and dignity. She was always playing with the royal children, who doted on her, and was sometimes found sitting on the edge of a table. The courtiers were horrified."

Disraeli would have found few to agree with his low estimate of Eugénie's beauty and attractions, even among those who disapproved of her occasionally unroyal ways. One of the most insistent complaints against her was of the extravagant variety of costumes in which she displayed her loveliness. In dress, as in manners, her taste for what was becoming was sometimes questioned. Her friend, the sharp-tongued Princess Metternich, wife of the Austrian ambassador, once said of her the most cutting thing of all. The fashion for Balmoral petticoats had just come in, and ladies were wearing their overdresses looped high above gay-striped underskirts, with a pretty but peasant-like effect. Eugénie desired such a dress; some of the court ladies remonstrated, but Princess Metternich advised her to order it made.

"Would you give the same advice to your own empress?" some one asked shrewdly.

"Oh, no," admitted the princess readily, "but the Empress Elizabeth is a *real* empress!"

That the beautiful Eugénie never was, nor could be; for the empire of which she was the shining ornament was not real, either, but only a tawdry, passing episode in the splendid history of France.

WHAT THE PEON LIKES

A WASHINGTON correspondent writing about the national foods of Mexico, to which our soldier boys must have been introduced while they were on the border,—*tortillas*, *frijoles* and *chile con carne*, for example,—continues:

The peon of southern Mexico has various appetizers that are unknown to the peons of the north. One of the queerest is "water wheat," which is not exactly what its name suggests, but the eggs of a kind of fly. The native Mexican eats his "water wheat" with the same epicurean relish that the Chinese mandarin eats his expensive bird's nest, the Central African his raw hippopotamus, the Canton merchant his stall-fed dog, and the West Indian his palm worms stewed in fat.

The "water-wheat" fields are ponds in which the peon places bundles of reeds a few feet apart, so that their tops are just above the surface. On these reeds, or rushes, the insects deposit their eggs in incredible numbers. The peon then removes the rushes and shakes off the crop.

The Mexicans make the eggs, which resemble fine fish roe, into small cakes and sell them in the markets. The purchasers eat them either as we eat cheese or mixed with corn meal and the eggs of fowls. The peons also eat the insects, which are about the size of our house flies. Their method of preparing them is to pound a quantity of the flies into a paste and boil them with corn husks.

"DE PROFUNDIS"

AT the first training camp at Plattsburg last summer an undersized "rookie" was one day struggling along through mud that threatened to engulf him and his pack. The company were singing, and when they came to the chorus he joined in with growls and grumbles that seemed to come from well down toward his belt. Beyond doubt, melody was not his forte. A big, hulking sergeant came along.

"What's the matter? What are you howling about?"

"I'm singing bass," explained the "rookie."

"Don't do it, my boy," said the sergeant; "you're too deep down already. You come up to the surface and get the air."

THE PASSION FOR LEARNING

"YOU mustn't go near the open windows, dear," said a mother during house cleaning time to her three-year-old daughter. "If you should fall out on the ground, you would surely break your neck."

Betty followed her mother upstairs and played happily with her doll for an hour. Suddenly her mother missed her from the bed and, noticing that the door was closed, thought she was hiding somewhere in the room. After a playful search of a minute or two she heard a pattering of small feet in the hall, and hastened to open the door.

"It didn't break my neck, mother," remarked the child as she resumed her play with the doll.

CHILDREN'S PAGE

THE KATY THAT DID

BY ABIGAIL BURTON

THERE was once a time when there weren't any katydids. There were katies, dear, yes! Ever so many. But every single katy was a *didn't*! Do you know what it was that they didn't?

They had hopping parties, of course, and swinging bees and tree-climbing contests. And the papa katies went to the club, while the mamma katies had afternoon honey in one another's homes; they brought their sewing and talked about the children, quite like all the other insect families. And their only *didn't* was—they didn't sing!

You've no idea what a difference it made. Why, the woods seemed just as still! There were bees humming in the sunlight, and flies buzzing and crickets chirping. But they weren't noisy, you know, compared with katies that do. They made just nice, sociable sounds, to say that the wood was beautiful and wasn't it lovely to be alive!

Oh, all the other wood people had voices, some for the daytime and some for the night! They trilled and piped and fluted, and sang solos and choruses—all but the katydids. But the katydids were busy with their hunting and their housekeeping. So they did not mind not being musical. And the only times that they did care was when they saw a party of wood people on their way to singing school.

The wood was a wonderful place. There were trees and bushes and flowers and grass. And every tree and bush and flower and blade of grass had the finest juices for eating and the cosiest nooks for sleeping. No wonder that the wood people were happy!

The trees and the bushes were all glowing with red and gold that day. And the flowers were gold and purple. Golden leaves covered the ground. Even the brook that ran through the wood was dotted with tiny gold ships that had once been leaves.

All the wood people were busy spinning warm wraps and making their houses snug for the winter. On every side you could hear the whir of spinning wheels and the sound of hammering.

They were so busy that no one saw the hunter. No one paid any attention when he stopped to light his pipe. No one noticed the lighted match that he flung away.

The match fell on a leaf. The flame burned to the end of the match, then it set fire to the leaf.

Now, the leaf lay by a heap of grass, and

the grass lay next some sticks, and the sticks lay beside some dry bushes, and the dry bushes lay beneath some dead trees. If the flame burned the leaf, the leaf would light the grass, and the grass would light the sticks, and the sticks would light the dry bushes, and the dry bushes would light the dead trees, and the dead trees would set the whole forest afire, and all the wood people would die!

And no one of all the busy wood people saw the burning leaf. Did I say no one? Ah, but one little katy did!

Such a weak little katy! And such a timid little katy! The other katydids were always laughing because she was afraid to hop very far or to climb very high. She was dreadfully afraid now. Why, her heart knocked so hard that it nearly knocked her over! But there was no one else. So—

The little katy hopped upon the burning leaf and caught it by the stem. She spread her wings and whizzed into the air. Straight over the brook she flew and dropped the burning leaf into the water!

There were plenty of wood people who saw that, I can tell you! They came crowding out of their houses, crying all together:

"Did you see the fire fall into the water? Who found it? Who caught it? Who put it out?"

My, how the katydids swelled with pride! Their own little katy had saved the forest. Such a fine little katy! And such a brave little katy! All the forest should know. Old and young, they found their voices at last. And they shouted over and over again:

"Katy did! Katy did! Katy did!"

And that is how there came to be katydids!

THE STONES ON THE ROOF

BY S. O. VERNON

MARJORIE and Robert had their lessons for the morrow, and it was still half an hour before bedtime. Marjorie crept up behind her father, who was sitting before the open fire, and whispered something into his ear. Father laid down his newspaper.

"What kind of a story?" he asked, with a smile.

"Oh, a story of the time when you went to school and had to study, as Bob and I do," answered Marjorie.

"That was a long time ago," said father.

"But lots of things happened then, didn't they?" persisted Marjorie.

Father admitted with a laugh that many things happened in those days, and that probably a story was hidden somewhere among them.

"Did I ever tell you about the magic-lantern exhibition in our schoolhouse?" he asked.

"No; please tell us about it," said both Marjorie and Robert at the same time, and Robert added, "What is a magic lantern, anyway?"

"Well, it is not so exciting as a movie show," said father, "but it was the best we had when I was a boy. It was a simple affair. Perhaps you have heard of it as a stereopticon. A young man in our town had one, and arranged to give an entertainment at the schoolhouse on the North Road one Saturday night late in the fall. My brother George and I hatched a foolish plan to add something to the programme.

"Beside the schoolhouse stood a great willow tree with branches that stretched out over the roof. It was our plan to climb up in the tree

and drop a lot of stones on the roof of the schoolhouse. It sounds silly and it was just as silly as it sounds, but as we talked over the thing it seemed to us that it would be great sport. We did not intend to disturb the entertainment itself. We were not so bad as that; our plan was to drop the stones just as the entertainment closed, and thus give everyone a good scare. Then we were going to slip out of the tree and run home.

"George and I filled a basket with stones—most of them about the size of a hen's egg, with two or three as large as our heads—and hid it behind the schoolhouse Saturday afternoon. When evening came and the little red schoolhouse was filled with the people of the neighborhood, we tied a rope to the basket, climbed up into the big willow and drew the basket up after us. Then we made our way carefully out

GOING ON A JOURNEY

BY VIRGINIA BOWDOIN

DRAWN BY F. LILEY-YOUNG

III

*Oh, some would take an airship
Without a bit of fuss,
And fly off into cloudland,
Above the rest of us;
But some prefer a taxi,
And some an omnibus.*

IV

*Our Teddy takes a basket
And borrows mother's broom;
Then what a wondrous journey
He has around the room—
To Cuttyhunk, and Pieland,
And Ritsyratsyboom!*

I

*Oh, some would ride a pony,
And drive with spur and rein
Along the dusty highway,
Or o'er the grassy plain;
And some prefer a carriage,
And some prefer the train.*

II

*Oh, some would sail the ocean,
And seek a land afar—
The sunny shore of Cyprus,
Or maybe Zanzibar;
But some prefer the trolley,
And some a motor car.*

on one of the main branches that extended over the roof, and settled down to wait our time.

"But of course something had to go wrong. George and I were trying to tie the basket below the limb in such a way that both of us could easily reach it, when the rope slipped, the basket tipped over, and in an instant all the stones went crashing and banging to the roof, six or seven feet below us, and rolling from there to the ground. What a racket they made!

"But while the stones were clattering off the roof, something worse happened. George had reached out quickly when the basket tipped. He lost his balance, swung an instant to and fro and then went sprawling to the roof. The fall was not far enough to hurt him, but he had to cling tight to the ridgepole to keep from rolling over the eaves to the ground after the stones.

"You may be sure I was well frightened; but when George called up to me that he was not hurt and that I had better get out of the

tree and run for home, I tried to follow his advice, although I did not want to leave him there. I hesitated an instant too long, for half a hundred persons were rushing through the schoolhouse door by that time, and we were trapped—George on the roof and I in the tree.

"It was light enough for everyone to see us, and there was no escape. When we were both on the ground at last we expected to be punished well, for we knew that we deserved punishment; but my father, who was in the crowd, simply marched us into the schoolhouse and made us take seats facing the audience. There we had to sit all through the entertainment, feeling very much ashamed and wondering all the time what was to happen to us when we got home."

"And did your father punish you when you got home?" asked Robert, as his father paused.

"Do you think we deserved punishment for the silly joke we tried to play?" asked father.

Robert thought a moment. "It seems to me that you did," he said at last.

"Well, that's what my father thought," said father, laughing, "and he was usually right. And now it is time for you to go to bed."

GAMES OF OTHER DAYS AND LANDS

BY HARRIET O'BRIEN

II. CHINESE KITEFLYING

THE kite is one of the oldest toys in the world. It appears to have had its origin in China, where for thousands of years kiteflying has been the favorite amusement not only of the children, but of grown persons, too. In Japan, Burma, the Malay Peninsula and other Eastern lands, kiteflying has long been as popular with all classes and ages as it is in China. From the Far East the kite long ago made its way to all other parts of the world.

The drawing shows a Chinese boy flying a kite made in the shape of a fish. The young people of the Far East would consider it as very poor sport to fly kites as plain and simple as those which American boys fly. Their kites are of many shapes and sizes. Most of them represent a bird, or a fish, or a dragon, or some other curious imaginary monster. The framework is commonly made of bamboo, and the covering is colored paper, or, in case of the best ones, silk. Often the kites have tails of great length.

The grown-up people have kiteflying festivals in which all the people of the village join. On such occasions some of the kites are of great size and of most elaborate design. At night they are sent up with long strings of lanterns tied to them. Nor are the people content with kiteflying simply as a pastime. They have contests that rouse great interest—contests in which one person tries to keep his kite in the air longer than his rival can, or contests in which one person tries to make his kite bring down or destroy the kite of the other.

In our times the kite has become a very useful tool of science. Men use it to study the conditions that prevail in the air far above the earth; thus it helps them to forecast the weather. It also helps them in building airships, in taking pictures, in signaling, and in life saving on the coast. The Chinese have long used kites to tow boats, and to drop their fishhooks well out to sea while they themselves stand on the shore.

DRAWN BY CORNELIA MORRISON

THE RAINY DAY

BY ETHEL M. KELLEY

I want the sun to shine again,
I want the rain to stop.
It marches like the feet of men—
Drop-drop, drop-drop, drop-drop!

I do not like the rain a bit,
I do not like the mud.
The cows all turn their backs to it,
And sadly chew their cud.

I press my nose against the pane
Until my nose is flat,
But all I see is just the rain—
Pat-pat, pat-pat, pat-pat!

I want the children out again,
I want the weather fine.
I don't know how to wait till then—
I want the sun to shine.

TERMS

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States; \$2.50 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

AURICULAR FIBRILLATION

IN the past few years physicians who have been studying diseases of the heart have discovered many new conditions, or rather they have found that what the medical profession formerly regarded as a single affection is really a group of different diseases with one or more symptoms in common. For example, physicians used to consider irregularity of the pulse as a disease in itself. Now they recognize it as a symptom of many different diseases of the heart.

Among those maladies is the distressing condition called auricular fibrillation. In that disease the muscular wall of the auricles of the heart does not contract as a whole, but its individual fibres contract separately without any reference to each other. The result is confusion and loss of rhythm, just as when a company of soldiers suddenly break step in crossing a bridge and the steady tramp, tramp, changes to a confused patter of feet. In auricular fibrillation the muscle of the ventricles that pump the blood into the arteries and that cause the pulse contracts as a whole but irregularly, because of the tremor in the auricles.

The disease occurs in consequence of degeneration of the heart, hardening of the arteries, Bright's disease, rheumatism or valvular disease of the heart. It may occur at any age, but is more common after sixty than before, and attacks men oftener than women. The most obvious symptom is extreme irregularity, usually associated with rapidity of the pulse; at the same time the patient usually suffers from shortness of breath, prostration, sometimes cough, and often a feeling of distress in the region of the heart.

Auricular fibrillation is indicative of serious trouble in the heart, yet the outlook is not always bad; indeed, under careful treatment a sufferer from this distressing condition may live out his appointed term, if there is no very grave degeneration of the heart muscle. The fibrillation comes on usually in paroxysms, which recur with ever-increasing frequency if untreated; but they can, as a rule, be greatly reduced in frequency, and sometimes prevented altogether, if treated with remedies that tone up and quiet the heart muscle.

CARLOTTA AND OTHER PEOPLE

CARLOTTA'S eyes were starry and her cheeks were the color of wild roses; she was tremendously in earnest—so much so that she beat on the table with one small clenched fist as she talked.

"But I tell you I won't be pitted, Prue Drexel. It's—it's wonderful to be doing real things. I wouldn't go back to that stupid old round of teas and receptions for anything you could give me. It isn't living till—till you begin to do something worth while for some one."

"Of course I know I'm only the veriest beginner down at the Association, but still I'm doing something. I'm eating chicken à la king and Nesselrode pudding, with you to-day because you teased me to, not because I'm getting tired down there—not one atom!"

Prue laughed. "I just wanted to find out," she admitted. "But you haven't been at it long yet. I'm going to test you this way every month, and see whether you're holding out. You'll be at the assembly Friday?"

"I should say so!" Carlotta retorted. "You needn't think I'm forgetting how to play, merely because I don't want life all play. I'm going to stop at Madame Claire's about my gown on the way home. I must run now. I've had a lovely time, even if I did sputter, which was your fault anyhow, because you made me. I wish you'd come down and help us, Prue."

"Maybe sometime, if I'm convinced," Prue answered lightly.

Carlotta waved good-by and hurried away. The car was crowded and Carlotta had to stand. There was a sign in the middle of the door: "Kindly move forward for the sake of your neighbor." Carlotta, however, did not move forward—she hated to stand in the middle of a car; and so everyone who came in had to crowd by her.

The afternoon was busy, as afternoons usually were at the Association. Suddenly Carlotta remembered that she had forgotten to buy some lace that she had promised to bring to Mme. Claire that afternoon. She looked round the rooms. In the library a pale girl was reading. Carlotta knew that the girl seldom had half an hour for resting, but—that lace!

"O Irma!" she called.

Irma looked up brightly. She greatly admired Miss Carlotta.

"Irma, I hate to ask you, but there's something I must do. Could you keep office here till five? Miss Staines comes in then."

Without a word, Irma took her place, Carlotta, with hurried thanks, flew out on her errand. At the dressmaker's there was more trouble. Mme. Claire brought up an old bill; she said things about paying her girls. But dressmakers should expect to wait, Carlotta contended. She would pay on the first of the month.

No, Carlotta was not a selfish girl, really; she had not learned to think very far, that is all.

Won't Mamma be S'prised?

"Pour it out of the Safety Bag," Dorothy says.
"Put hot water on it," says Nan.
"Won't mamma be s'prised?" Bobbie says.
Mamma is down town shopping, and the three, afraid she will not be back in time to make the promised Jell-O dessert, are making it themselves.

JELL-O

is probably the only fine dessert that requires no work at all in its preparation.

"It gives one," a Chicago lady says, "more spells of rest than anything else ever did."

The Jell-O "Safety Bag," made of waxed paper and air-tight, encloses Jell-O inside the package, keeping it pure and sweet and preserving the fruit flavor in full strength.

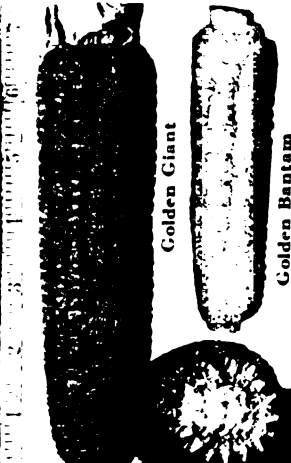

There are seven flavors: Strawberry, Raspberry, Lemon, Orange, Cherry, Peach, Chocolate. Each in a package by itself, 10 cents at any grocery or any general store.

The new Jell-O Book, just out, describes new Jell-O salads, "whips," knickknacks, and dainties of almost unlimited variety. Recipes for every-day salads and desserts are given first place in it, of course, and particularly the new things in fruity Jell-O desserts. A copy will be sent to you free if you will send us your name and address.

THE GENESEE PURE FOOD COMPANY, LeRoy, N. Y., and Bridgeburg, Ont.

DE LUE'S GOLDEN GIANT SWEET CORN

The most important horticultural acquisition of recent years. Awarded the only Silver Medal ever given by the Massachusetts Horticultural Society for novelty and excellence in Sweet Corn.

DE LUE'S GOLDEN GIANT is the result of eleven years' selection by Dr. Frederick S. De Lue of Boston, Mass., from the product of "Howling Mob" crossed with "Golden Bantam."

With its 12 to 16-rowed ears it gives nearly four times the yield per acre that the Golden Bantam does with its smaller 8-rowed ears. The stalks are short and frequently produce two ears each. Its orange golden color is richer; it is more delicious in flavor and is equally early.

To introduce DE LUE'S GOLDEN GIANT we offer a limited quantity in packets containing 25 kernels each at 25 cents the packet—not more than 4 packets to any one customer—postpaid anywhere in the United States and possessions.

Our 170-page Annual Catalog and Gardeners' Guide, 450 illustrations, several colored plates and cultural directions, will be mailed on application.

JOSEPH BRECK & SONS
New England's Leading Seed Store for Nearly 100 Years
51 and 52 No. Market Street, Boston, Mass.

This is the Second Notice of the Closing of the Special Book Offer

FAIR WARNING

After March 15 no more Copies of Wright's Latest Book will be Distributed at Present Low Terms

IN ACCORDANCE with our promise to give due notice of the expiration of this most popular book Offer of the season, we now announce that the present special terms will be continued until March 15 only. After that date the Book can be obtained only upon payment of an extra in cash in addition to the new subscription.

Harold Bell Wright's Latest Book When a Man's a Man

has broken all sales records—even high records of his former stories. Nothing like it in history of fiction publishing. Enormous edition requires five hundred tons of paper—fifty carloads. Largest paper order ever placed for first edition of a book. Printing presses running day and night for six months to fill orders. When a Man's a Man is a story of Western life. Big. Wholesome. Fascinating. Worth while. Everyone wants to read it.

YOUR COPY FREE Until March 15 Only

Send us one new yearly subscription for The Youth's Companion, with \$2.00 to pay for it, and we will present you with a copy of Harold Bell Wright's newest and best novel, When a Man's a Man, author's regular copyrighted edition, sending the book to you postpaid. This book cannot be bought anywhere for less than \$1.35. We do not offer the book for sale.

It is given only to a present subscriber to pay him for securing a new subscription.

NATURE & SCIENCE

OUR FOSSIL CORALS.—In recent years beautiful well-preserved specimens of small disk-shaped corals have been discovered in the Upper Cretaceous deposits of the Atlantic and Gulf coastal plain. Some specimens were obtained from a well near Mineola, Texas, at depths between 3146 and 3160 feet. Others were found in surface outcrops in Mississippi, Georgia, North Carolina and Maryland. The corals are described and pictured in a recent pamphlet. Such contributions to knowledge are important parts of the great history of life that the patient labors of paleontologists and biologists are slowly translating. Not only are they of scientific interest, but they are being more and more utilized in a practical way to find the position of geological formations likely to yield oil or gas, to determine how far it will be necessary to drill, and to find and determine the position of other economically important strata, such as clay, lignite and coal.

FEATHERED FISHERS.—The cormorant fishers of Japan ply their trade by night from May to October, when the rivers are full of small migratory fish. The birds can work only on dark nights, for when there is a moon the fish can see both the birds and the men, and the torches that help to attract the fish are then of no avail. The boat, which is very much like the Venetian gondola, carries four fishermen, one of whom stands in the bow with twelve cormorants, and another in the middle with four birds; the remaining two men propel the boat with poles. Generally one cormorant catches seven or eight fish every time it dives. The fishermen take the birds out one by one from their cages and put round the neck of each a small metal ring, which prevents the gullet from expanding to its natural capacity. Consequently none of the fish that the bird swallows, except very small ones, reach its stomach. The fisherman also attaches a long string to the bird, and holds the other

end of it in his hand. During the fishing season the birds are never fed in the daytime, and so are always furiously hungry at night. The fisherman must exercise great skill and dexterity to control the cords without getting them hopelessly entangled. He must constantly encourage the birds and watch their movements, for when they have completely filled their gullets they swim lightly upon the surface. Under water, in quest of its prey, the cormorant is tremendously active, and in a shallow part of the river rarely misses a fish unless it takes refuge under a stone or in the mud. When the bird has taken all it can carry, it returns to its keeper, who by manipulating its neck forces it to disgorge the fish. He then looses the bird again to renew its thankless task.

ATOMIC ENERGY.—In an address before the southern California section of the American Chemical Society, Dr. Willett L. Hardin of Los Angeles, in discussing the growth of knowledge concerning the internal constitution of matter, intimated that we are nearing the solution of the problem of the actual structure of the atom, and that we may also be near to the means of unlocking great stores of energy that are now unavailable. "I know," said Dr. Hardin, "that it would be presumptuous to assume that we shall some time be able to utilize the energy that is stored up in the atom; but, on the other hand, it would be equally presumptuous to assume that the atom is the barrier beyond which science cannot go. The history of science contains numerous examples of such barriers, placed by men of science themselves, but in many cases subsequently overcome by the investigations of the same men. Maxwell said the atom is incapable of growth or decay, of generation or destruction. We now know that certain atoms are continually disintegrating and new atoms forming. Less than a century ago men of science assumed that a vital force was essential in the formation of organic compounds. To-day thousands of such compounds are synthesized in the laboratory, and many useful products are made that, so far as known, the vital force has never produced. When Hertz succeeded in producing electromagnetic waves, which are now the basis of wireless telegraphy and telephony, he thought it would be impossible to make use of such waves to transmit signals to any great distance. So the unknown and apparently the unknowable of one generation may become the commonplace knowledge of the next. We do not know to what extent we shall be able to solve the mysteries of the atom, and we are unable even to predict the consequences of such a discovery; but we do know that the problem is beset with almost insurmountable difficulties, and that our knowledge on the subject can never reach finality. The interior of the atom is the common ground where chemistry and physics meet, and there is probably no problem before the scientific world to-day that offers greater difficulty or promises greater reward than that of determining the nature and arrangement of the constituents of the atom. The discoveries already made have broadened the range of scientific research and advanced our knowledge of the mysteries of nature; and it is largely the mastery of man over the laws of nature that marks the progress of the world."

HUGE BULLFROGS.—The largest bullfrogs in this country are to be found, not in Canada, as has been generally supposed, but in our southernmost states. The New York Zoological Park has about a dozen specimens of these immense frogs (*Rana catesbeiana*), each of which weighs over two pounds. One of them weighs two and one half pounds and is eighteen inches long. Its head is over three inches wide. Its voice is like a prolonged deep bass chord from a great organ. The true Southern bullfrog (*Rana gryllus*), on the other hand, seldom weighs over half a pound.

The Greatest Fun
and Surest Protection

For Little Outdoor Folks

Raynster

Reg. U. S. Pat. Off.

DON'T be a shut-in, afraid of the storms. Wear a Raynster and be a little Rain-in-the-Face. There's heaps of fun in it. But little outdoor folks must have protection for health and clothes and a Raynster is just what you need.

Raynsters are made by a big, well-known company of men who have been making things out of rubber for years and years, men who know all about rubber and how to make the very best kind of stormcoats of it—the kind that will stand the strain and wear and tear of school days and play days. Raynsters are made for little full-of-life boys and girls, made for all kinds of folks, big and little, and at all kinds of prices.

Look for this label on your coat

Reg. U. S. Pat. Off.

Ask for a Raynster for your birthday or Christmas or just any time you can get it. It's the finest sort of present to have. And be sure to remember the name, so you'll know you have the best.

A ROYAL REGIMENT OF BOYS

IN the great war in Europe boys are playing an important part. Lads in their teens, often in their early teens, are serving as soldiers in the field; not a few as officers. Outside the fighting lines in most of the belligerent countries, the Boy Scouts are giving valuable service of varied kinds, often arduous and responsible. They are a body of recent origin; but more than two centuries ago there was a drilled and organized company of boys, less serviceable and more military, who were taken seriously by their commander and themselves, if not by the nation at large. They were the boy soldiers of Prince William, the little Duke of Gloucester.

He was the only one to survive babyhood of the seventeen children of Princess Anne—later Queen Anne—and her consort, Prince George of Denmark. King William and Queen Mary, having no children of their own, looked on him from the first as the heir to the throne, and the greatest pains were taken to educate him as befitting a sovereign and commander. He was a frail and sickly child, but he was loyal, generous and spirited, and very proud of his company of boy soldiers, organized for him as soon as he was old enough to walk. Boy sentinels were posted at his door; tattoos beaten on the drum signaled the summons to various drills and exercises in the long court corridors; toy fortifications were erected, stormed and demolished,—sometimes even at his bedside,—and mock fights and manoeuvres occasionally became real fisticuffs, in which his tutor had to interfere. Once, when King William paid a state visit to his young namesake, he was amused and gratified to be received with full military honors.

"Have you any horses yet?" he inquired politely of the youthful commander.

"Yes," replied the little duke promptly, "I have one live one and two dead ones." The dead horses were, of course, wooden ones.

"But soldiers always bury their dead horses out of sight," said King William, laughing.

That was enough. No sooner had he gone than a burying squad was ordered out to inter the "dead" wooden horses in the garden. They were buried deep, and their bereaved little master only so far relented as to compose for them a highly eulogistic epitaph—which commanders in the field do not usually pause to do. Somewhat later, when there were rumors of a plot against King William's life, young William sent him an address of fealty, signed by himself and every one of his boy soldiers. It began:

"We, Your Majesty's subjects, will stand by you while we have a drop of blood—"

Poor little duke! He died at eleven. He had the spirit, if not the stamina, that makes a good soldier; whether he would have made a good king is less easily guessed. But in the college libraries at Oxford there exists a faded, yellowed, childish composition in his careful handwriting, which at least shows that he knew what a constitutional monarch ought not to be. It is on tyrants:

"A Tyrant is a savage hideous beast. Imagine that you saw a certain monster armed on all sides with 500 horns on all sides dreadful fatned with humane intralls drunken with humane blood this is the fatal mischiefe whom they call a Tyrant."

A VISIT TO WALT WHITMAN

I WAS a boy, and seeing Walt Whitman on Market Street, Philadelphia, as he came from the Camden Ferry, I resolved to visit him, says Mr. James Huneker in *Ivory Apes and Peacocks*. It was sometime in July, 1877, and I soon found his little house on Mickie Street. A policeman at the ferryhouse directed me. I confess I was scared after I had given the bell one of those pulls that we tremblingly essay at a dentist's door. But the old man soon stood before me, and cordially bade me enter.

"Wait," I said, for I had heard that he disliked a more ceremonious prefix, "I've come to tell you how much your poetry has meant to me."

"Ah!" he simply replied, and asked me to take a chair.

To this hour I can see the humble room, but when I try to recall our conversation I fail. That it was on general literary subjects, I know; but the main theme was myself. In five minutes Walt had pumped me dry. He did it in his quiet, sympathetic way, and, with the egotism of my age, I was not averse to relating to him the adventures of my soul. I begged for his autograph. He told me of his interest in a certain asylum or hospital, whose name has gone clean out of my mind, and I paid my few dollars for the signature. It is now one of my literary treasures.

If I forget the tenor of our discourse, I have not forgotten the immense impression made upon me by the man. As vain as a peacock, Walt looked like a Greek rhapsodist. Tall, imposing in bulk, his regular features, bright light-blue or gray eyes, clear, ruddy skin, plentiful white hair and beard, evoked an image of the magnificently fierce old man he chants in his book. But he was not fierce; his voice was a tenor of agreeable timbre, and he was gentle even to womanliness.

I left the old man after a hearty handshake and a "So long!" just as in his book, and returned to Philadelphia. Full of the day, I told my policeman at the ferry that I had seen Walt.

"That old gas bag comes here every afternoon," he said. "He gets free rides across the Delaware."

NOT USED TO THE RAILWAY

OF course everyone rides on the trains in Japan nowadays, for there are seven thousand miles of railways in the country, and every considerable town is at least connected with the railway by electric car or automobile. Not so very long ago, however, the train was a curiosity, and many ludicrous incidents occurred with persons taking their first rides.

On third-class cars in country districts there is still a broad white line painted across the middle of each car window. That was done originally to keep the country folk who had never seen a glass window from bumping their heads against the glass in the effort to look out. In the early days there were many serious accidents from that cause; hence the white lines.

A party of ladies who were taking their first ride on the train once had trouble with their shoes. A Japanese on entering a house always leaves his shoes at the door; so when these ladies got aboard they politely left their clogs on the station platform. Great was their consternation later to find that their shoes had been left miles behind.

PASADENA PUBLIC LIBRARY

WHEN the academy opened in September, a new pupil joined the class that was eligible for the prize. Mabel Graham, the only child of Watson Graham, the wealthiest man in Wenham, came over to South Hollow to live with her aunt, Mrs. Mudge, and to attend school. She was a large, very stout, very blonde girl of sixteen, with flat features and a stolid expression; but she was reputed to be an unusual scholar. She had a logical mind and a wonderfully retentive memory, and was said never to have failed in a recitation since she had begun to go to school. Wherefore she was perhaps justified in feeling that she could win the prize, which was, indeed, her purpose in leaving the Wenham high school and entering Farleigh Academy.

The regular pupils at the academy and their parents did not welcome her, and there was reason to believe that the teachers were not much pleased with her coming. Her father could easily afford to send her to college, and it seemed hardly fair that she should leave a good school and come to Farleigh to carry the prize away from some one who would not be likely to go to college without it. However, there was nothing to be done. From the beginning, girls and boys from outside had come to Farleigh to attend the academy; indeed, Mabel had as much right to try for the prize as Rusty, for the Miller house was just over the Farleigh line in Wenham.

Everyone except the teachers and Mr. Langley, who was chairman of the school board, urged the other members of the class, and especially Reuben and Rusty, to put forth valiant efforts to defeat the stranger and to make her overreaching of no avail.

Rusty hated the interloper unreservedly. It was not entirely because she resented Mabel's coming; the fat girl had a self-sufficiency of manner and a power of saying disagreeable things that irritated Rusty extremely. Reuben never had a word to say against Mabel, and now and then he even felt compelled to take up the cudgels in her defense; but he never voluntarily sought her out, and he always tried to get away when Mabel cornered him.

Mabel knew and resented his avoiding her, for she had singled Reuben out to receive her favor. At the Wenham high school her fine clothes and abundant pocket money had made her supreme among her schoolmates. So it was not long before trouble began at the academy.

The first storm broke a few weeks after the fire at the church; that happened at the end of the summer, during which numerous changes had come about.

Rusty had spent the eleven weeks of vacation at home, and Mr. Langley felt that his prediction as to her redeeming the family was being fulfilled betimes. The Millers certainly all looked and seemed better. Seth Miller had worked steadily for the first time in years. Although Mrs. Miller had not yet discarded her shapeless wrappers, she looked more trim; she no longer wore her hair in the tight, forlorn little wad at her neck, but dressed it prettily in a manner that Rusty had taught her. The boys and their father began to look healthy and even rosy, and their clothes were kept mended and neatly brushed.

No one guessed, however, the strain it had

By Joslyn Gray

Chapter Four

been upon Reuben to get Rusty's father into the habit of regular work. And of course the nature of Seth Miller's work at the straw shop did not make Reuben's task easier.

The boy had long urged Miss Penny to get another cow, so that she could make her own butter. She had so often spoken of making butter with her mother as a young girl that he urged the purchase of another cow as much for the satisfaction she would get as for the money she would save. But Reuben realized that the financial consideration was important, for Miss Penny poured out money rather recklessly for Rusty and him.

Miss Penny at last yielded to his urging and bought a pretty heifer, half Holstein, half Jersey. A place had to be made for the heifer in the barn, and Rusty's father was intrusted with the task. He was truly glad to get back to his trade, and, although he was not an expert carpenter, he did good average work; by the end of the first day he had made an excellent start.

"I'll see you to-morrow," said Reuben, as he left him at his door at night.

"Well, I don't feel quite sure, Reuben," Miller replied doubtfully, putting his hand to his back. "I feel as if I might be pretty well lamed up to-morrow. My grandfather suffered from lumbago, and I've always supposed I'd got to come to it. And then it's some exciting getting back on my old job. Like as not I don't sleep a wink to-night. Suppose we say the day after?"

"We've got to get ready for that cow," insisted Reuben. "I'll help you to-morrow. Or if you're too lame to work, won't you just come over and boss the job and I'll do it all. You could do that anyhow, couldn't you?"

"Oh, yes," Miller agreed. "And like as not I'll limber up toward noon. I never was one to turn back when I set my hand to the plough, if I could only lift my head off the pillow."

Thereafter he worked steadily, and completed the job so satisfactorily that Reuben was able to use it as an advertisement; and after only a week of his old work at the straw shop Miller was called in to help a carpenter from Wenham, who was to make over the lower part of a

house opposite the academy into a shop. Miller proved an excellent assistant, and the master carpenter was glad to employ him on another contract that lasted all summer.

So far, so good. Still Reuben looked ahead with some apprehension. The week before school was to open, Miss Penny begged him to drop Seth Miller from his mind for just seven days and enjoy himself.

"O Reuben, you're getting to be a little old man," she sighed and smiled,—"though dear knows you're not little. The first thing I know you'll be as tall as Mr. Langley. Oh, and then you can't have a good time—I mean as a boy. O Reuben dear, do hurry and make the most of being a boy before you arrive at man's stature."

Reuben smiled. "It's no use. Rusty noticed it long ago and warned me. I'm really older than her father. I call him Mr. Miller, but you know, Miss Penny, it's hard not to say Seth to his face, for he is Seth to me, as if I were his older brother. Well, anyhow, I do wish he had a steady job for the winter. Barnes says there won't be much doing after next month till spring, and not much then unless lumber goes down. If he goes back to the straw shop again, it'll seem all the worse to him, and I'm afraid he won't stick to it after school begins and Rusty comes back here."

Miller finished his job and returned to the factory, but very reluctantly, in truth. He had not worked a fortnight, however, before he had another respite.

Reuben came in one night after a little social affair at the church, which Rusty had not attended because of a cold. He had hardly entered the house when the bells began to ring for fire.

"I'm afraid it's the church!" he exclaimed, seizing his hat. "I smelled smoke, but thought the lamps had been turned too high."

When he came back two hours later, Miss Penny and Rusty were in bed. He explained at Miss Penny's door that the fire had indeed been at the church; it had started in the vestry, and, although it had burned out much of the woodwork and two doors, it had been kept there and controlled.

"And, O Miss Penny, what do you think?" Reuben added eagerly. "I was with Mr.

Langley the last thing, and he says Rusty's father can have the job of carpentering up the vestry. That'll last some time, you know."

"O Reuben!" cried Miss Penny. "You don't mean to say that you asked him? Not to-night?"

"Why, yes, Miss Penny! I thought of it before the fire was all out. Why not?"

Miss Penny was smiling to herself in the darkness.

"I suppose it's all right," she said, "only—it seems rather like asking for a man's place at his funeral."

The work in the vestry occupied Seth Miller almost a month. He was steady and faithful, and made the place as good as new and better than it had been before the fire. Mr. Langley, who visited the church every day, came to have a real liking for Miller. At his suggestion, the sexton took a holiday during the repairs and visited his daughter. Miller attended to the sexton's duties

so well that the minister was rather sorry when the other man returned. And the wise Reuben rejoiced secretly that Miller had had that extra experience.

The Mudgetts knew and discussed all that took place between the farther boundaries of South Hollow and

Wenham. Mabel Graham was an interested listener and drew her own conclusions.

One day at school, in the Latin class, she made her first failure. She mistook a word,—made a very natural mistake, indeed, and one that she could hardly have guarded against,—became confused, for it was the key word of a long passage, and lost her head. With glib ease Rusty Miller straightened out the complex place.

When school closed that night Mabel turned indignantly to Reuben, who sat near her in the main room.

"You helped Rusty Miller or she never would have known that, Reuben Cartwright!" she declared indignantly. "I don't think it's fair for you two to study together so as to be sure of getting the prize for one of Miss Penny's—er—helpers."

"We don't study together, Mabel," Reuben returned. "The reason Rusty didn't get stuck by that *malo* business was that Mr. Langley told us a rime once and Rusty was quick enough to apply it here. It was like this:

"Malo (I should rather be)
Malo (in an apple tree)
Malo (than an evil man)
Malo (in adversity)."

But anyhow, Mabel, if there were any helping, Rusty would help me. She can beat me any day."

"H'm! She doesn't seem a very good scholar to me," remarked Mabel scornfully, "though I suppose she is bright, considering what she came from. Her father's a laborer, isn't he?"

"Mr. Miller's a carpenter," said Reuben quickly, with rising color. "And he's well enough educated so that Mr. Langley enjoys his company. Excuse me, Mabel, I think Mr. Phillips wants me."

Rusty, watching at a distance, saw Reuben turn away with flushed cheeks and flashing eyes. It was so seldom that Reuben lost his patience that she felt sorry for anyone who had to face his indignation.

"Going my way, Mabel?" she asked pleasantly, as they met a little later in the cloak room.

"Which is your way, Rusty?" the girl

answered coolly, "home, or to the place where you work out?"

Rusty colored. "To the place where I work."

"No, I'm not going that way," Mabel pinned her purple tam-o'-shanter on the very top of her thick blonde hair in a way that made Rusty want to pull her brown one down over her ears. "I'm going to wait here for uncle, and then we're going down to see Mr. Langley about my attending school here. Has your father finished his job at the church, Rusty?"

"He gets through to-morrow."

"And what's he going to do then?"

"What's that to you, Mabel Graham?" cried Rusty. "You don't know my father."

"Oh, I was just wondering whether something else wouldn't take fire," returned Mabel calmly. "You know they say Reuben Cartwright set that one in the vestry to get your pa a job."

The remark was wholly untrue; but Mabel felt justified in making it because her aunt, Mrs. Mudge, had said that the fire could not have happened more opportunely if Reuben had set it. Mrs. Mudge would never have accused the boy of any wrongdoing. Everyone who knew Reuben believed in him absolutely; not a few were as extravagantly confident of him as Miss Penny herself.

Rusty had turned so white that the big girl beside her, who was almost twice her size, actually trembled and edged away.

"Mabel Graham, how dare you?" she cried, with blazing eyes. "How dare you say that wicked thing about Reuben? Tell me!" And she stamped her foot.

Mabel backed gingerly out of the alcove without a word.

"I'll tell you why," cried Rusty, "it's because you're a liar! You're almost a thief, leaving your own high school to come over here to try and cheat us Farleigh boys and girls out of the prize, and you're altogether a liar!"

Mabel disappeared. Rusty waited until she was cooler and then walked home alone, for everyone else had gone. She said to herself that of course Reuben would never in the world have done a thing like that—no, not even if it were for some one else. None the less the accusation came back to her again and again. And it continued to trouble her for some time. Would a boy like Reuben, so solidly good all through, ever do wrong for the sake of another person? Certainly he would not do that particular wrong; yet she could never feel sure in regard to the abstract question.

At the close of that school year the question came up again.

Again Rusty was to return home for the summer. Since Easter, indeed, she had gone home every week on Friday and remained until Monday morning. For just before Easter her father became suddenly discouraged; he had had no carpenter's work for months, and after weeks of steady drudgery at the shop had suddenly given up. Only his daughter's prompt action had saved the day. Rusty had striven with all the strength of her warm heart to encourage him; and Miller, upheld by the certainty of having his girl home three days of the week, had returned to the shop and worked away manfully for six.

Rusty came home for the summer vacation with a new treasure. In their senior year at the academy an experiment was to be tried; the members of her class had been presented with large, loose-leafed notebooks in which they were to keep records of lectures and original work, and thus make their own textbooks. Their pleasure in receiving them was not unmixed with awe; for no such thing had ever been seen in Farleigh, where even the academy children used slates to figure on at home, and where wrapping paper was carefully saved, smoothed out and cut up for use at school.

"Lectures?" repeated Rusty's father, as she was displaying the book to the family on Sunday. "Such as they have at the church with magic lanterns?"

"N-no," said Rusty, "but such as they have in college—the teacher talking it off or reading from a book. And we take notes of what they say. Of course I shall never put anything in here until I have it all written out on my slate or paper; then I'll copy it in ink."

Mr. and Mrs. Miller were deeply impressed. When the little boys pushed their way to the book, their father bade them in his sternest tone (which was rather mild) not to get too near.

"S'posin' there was a fire?" suggested Freddy.

"We ain't supposing," returned his father with dignity; "and of course in case of fire I should expect my sons to have some gumption and to act like men."

"O dear, I only wish I were a better writer!" sighed Rusty. "Reuben's book will look slick—he writes beautifully. And, oh, that Mabel Graham's writing's just like print! Mine's like pigeon tracks."

"Your father writes a handsome hand, Rusty," said Mrs. Miller. "What do you suppose? It took him and me together to make out a letter that Mr. Langley wrote him, and I just wish you could have seen the answer pa wrote back."

Seth Miller blushed.

"A carpenter, you know, has to; it's part of his trade," he explained apologetically. "He's

really next door to an architect, and if ever you saw an architect's plan you'd agree that the writing was as pretty as the drawing."

"Well, I shall have to pattern after you, father, and I'll begin this summer," Rusty said. "Before I put it away I want you to write my name in this white space on the cover."

"Now, Rusty, you really want me to?" cried her father, quite as pleased as if she had asked him to draw plans for a castle.

"Sure I do," Rusty declared.

Miller went to the kitchen, with the little boys tagging after him, and washed his hands with sand soap. Mrs. Miller cleared the table and brought ink and pen; she stationed the boys at a corner of the table where they could see and yet would not disturb their father. As Rusty put the book before him, Miller cleared his throat.

"What shall I write—Jane Miller?"

"Oh, no, father—*Rusty*, of course!"

He tried it first on the margin of a newspaper, and then wrote it on the book, boldly, handsomely, and accurately spaced. After the little boys had been allowed a nearer inspection, the book was put aside to be shown to Reuben when he came.

Rusty had expected him an hour earlier. Still she waited. After another hour had passed, she alternated between fear that something had happened to him and annoyance that he should let anything detain him; but although she banged things about much in the old way as she prepared tea, no one guessed that Rusty was in one of her tempers.

Just as they were sitting down at table, a neighbor came in.

"The academy's on fire—down to the South Hollow!" he exclaimed. "Been burning half the afternoon."

He was on his way to the scene, and Miller left his supper to accompany him. Rusty rushed to her room. But her first thought was not for the school; it was of Reuben, and of Mabel Graham's remark about the fire at the church. She threw herself upon the bed and burst into tears.

When she was calm enough to think, she wondered whether she should have spoken to Reuben—told him what Mabel had intimated and made him understand that he must not do any such thing for her father. The next moment she accused herself of being wicked, *abominable*, to harbor any such suspicion against him. Who except herself, hearing that the school building was on fire, would have dreamed of associating Reuben with it?

When her father returned, he called reassuringly up the stairs:

"All right, Rusty, the academy's safe! It was only in the basement, and it's all out."

Only in the basement! Rusty's heart was heavy as she went slowly downstairs.

"How did it happen, father? Do they know?" she asked.

"Rags and paper round the heating plant, and the janitor dead drunk in the midst of it all."

"Did it—do much damage?"

"Well, yes, Rusty, considerable. By and large, I should say they was more burnt out than they was at the church. Here's hoping I get the job to put it in shape."

"O father," she protested, "don't think of that—so soon!"

"Well, Rusty, to tell the truth, I shouldn't have, only Reuben put me up to it. That was his first thought after 'twas over, and I couldn't help but be pleased to have the boy so thoughtful for me."

"Reuben was there, then?"

"Yes, he must have been there first thing—soon's the fire company. You wouldn't think by his slow speech he was so spry. 'Twas him that saved the janitor. He somehow suspicioned he was in there and had dragged him part way out when they lent a hand—you know old Mason's tolerably heavy."

"Sure," said Rusty, trying to speak lightly. "Well, bed for me."

"O Rusty, you haven't had your supper!" protested her mother. "Do have a bite now with pa. You know he left his."

But Rusty could not eat. She returned to her room to go through the struggle again. She repeated that she certainly did not believe for one instant that Reuben would do any serious

wrong for the sake of anyone, unless it were a case of life and death. Serious wrong! Did she think he would do *any* wrong whatever? Rusty could not answer. If it were wholly and absolutely for some one else, and if the peril or risk were his alone, she thought that possibly he might. But not anything like this!

Several old men, who formed what was known in the village as the Watch Traders' Exchange, sat in the shade of the bank building. They had been watching Tom Aulis paint his fence, but presently their eyes turned in another direction. Far up the hot, dusty street Uncle Nate Bancroft's old white horse Bill hove in sight, drawing an ancient spring wagon loaded with blackberries. When it drew near they greeted Uncle Nate jovially.

Don't b'lieve you could manage it, Nate."

"If you fellers'd think more and talk less, you'd be better off," said Uncle Nate calmly. "Bears come round my back pastur' every year blackb'r'y time, and some of these days some one's goin' to be et up by 'em."

"If you want to practice up hollerin' like a panther, Nate," said George, "jest come right over to my barn. I've heard 'em, and I can tell in a minute when you git it right."

"Le's all go over and set as a sort of jury," said John. "He could practice runnin' on his hands and knees as well as screechin', and George can lend 'im a robe to wear. We'll help 'im git it right down fine."

"The talk I hear round here," said Uncle Nate, as he clucked to old Bill, "reminds me of the wind blowin' across the mouth of an empty bottle."

While the old man was delivering his berries and later while he was driving home, the seed that his joking friends had sown in his mind sprouted and grew. He must do something radical immediately. The Batchums, eight of them, sly and industrious beyond belief, fairly cleaned his berry patch every day. He had caught them repeatedly, and they had promised to keep out, but they broke their promises as easily as they made them.

Uncle Nate had actually caught glimpses of bears in his pasture—small black bears, such as were sometimes seen in that region; but the children had never encountered the animals, and everyone in the village scoffed at the old man's stories.

When Uncle Nate was turning his horse out into the orchard, he caught sight of a red calico dress in a clearing in the pasture. He saw only one child, but he was sure that all the Batchums were there. Hurrying as fast as his rheumatic legs would let him, he went to the barn, climbed up on the high beams and lowered an old milk can down by a rope. Dragging out of it his black goatskin robe, he shook the sprigs of cedar out of it and threw it over his arm.

From the shelter of the doorway he looked warily round. No one was in sight; his wife, Aunt Marilla, had gone to a quilting party at one of the neighbor's. The old man struck out toward the back pasture. When he was halfway there he met four of his cows trotting along the road. They seemed much disturbed; now and then they stopped, looked uneasily behind them and bawled excitedly. Uncle Nate was puzzled by their actions, but decided that the children must have been chasing them.

Half an hour passed before he found the Batchum children, for he had to move cautiously in order to avoid their seeing him before he was ready. At last he heard voices and, peering through the brush, saw the two oldest girls picking busily among his best bushes.

Draping the robe over his back, he tied it round his neck and waist with some sheep twine; then he dropped down on all fours and crawled stiffly toward the Batchums. They had moved on, and he followed along the high bank of the brook; the robe flapped over his eyes, and so he occasionally bumped his head against trees and rocks.

This peculiar method of travel proved tiring, and Uncle Nate decided to quicken his gait a little in order to end the chase; but in his haste he went too near the bank of the brook. It suddenly caved in, and the old man, losing his balance, rolled five or six feet to a little mud flat near the water. He landed almost on top of two black bear cubs!

It was hard to tell whether Uncle Nate or the bears were the more astonished. The cubs were apparently hiding from the girls, and to have this hairy apparition drop down upon them from the sky was alarming.

Uncle Nate rolled over in the mud and sat up. The cubs howled lustily and backed away under some overhanging vines. The old man knew that the mother must be near, and he was wondering which way to run, when he received a stunning cuff on the side of the head. It sent him flat on his face in the soft ooze near the water. The mother bear had arrived!

He sank so deep into the mud that the old

UNCLE NATE'S BEARS

In Two Parts

By Charles A. Hoyt

Part One

DRAWN BY F. STROTHMANN

FOR A MAN OF HIS YEARS UNCLE NATE SHOWED SURPRISING ALACRITY IN THE CRISIS

"Wal, how *be* ye, anyhow, Uncle Nate? Don't seem's if I'd seen ye for a fortnit," said John Bridgeman.

Uncle Nate stopped the old horse. "I don't complain," said he, wiping his brow. "Wouldn't git nothin' out of this crowd but sympathy if I did."

"What's the matter with ye?" asked George Kibbee. "If yer sick, I'll go over and git my drenchin' bottle and fix ye up in a minute."

Ed Shipman grinned. "Better let him do it, Uncle Nate. George's horse medicine's all alike: if it don't do ye any good, it won't hurt ye any."

"I'm sick," admitted Uncle Nate. "But George can't help any. I'm jest sick of them tormented Batchum kids. They been stealin' my blackb'r'ies. I've jest about lived in my back pastur' for a fortnit, and I can't keep 'em out. While I'm pickin' down by the brook, they're over in the slash. When I'm up there, they're somewhere else."

As he finished, Lije and Fred Batchum, uncles of the children who had been under discussion, strolled along, and sat down on the steps of the bank, within hearing. Uncle Nate would have driven on, but the old men continued to ask him questions.

"Why don't you see the bear agin?" asked Ed, with a grin.

"He has," said George. "He's seen it twice this month to my certain knowledge."

"Why don't you see suthin' worse?" said Jed Chamberlain. "Jest hide up there, and when they come after yer berries screech like a panther. I bet that'll cook 'em!"

"Panthers screech just like a child cryin'," said Grandad Marsh, chuckling, "and I

But oh, what a blessing that school was over! She felt that she could not have endured any remark from Mabel Graham on the subject of the fire. By fall, Mabel would have forgotten. Rusty made up her mind that she would not go to Wenham all summer lest she encounter her.

TO BE CONTINUED.

don't b'lieve you could manage it, Nate."

"If you fellers'd think more and talk less, you'd be better off," said Uncle Nate calmly. "Bears come round my back pastur' every year blackb'r'y time, and some of these days some one's goin' to be et up by 'em."

"If you want to practice up hollerin' like a panther, Nate," said George, "jest come right over to my barn. I've heard 'em, and I can tell in a minute when you git it right."

"Le's all go over and set as a sort of jury," said John. "He could practice runnin' on his hands and knees as well as screechin', and George can lend 'im a robe to wear. We'll help 'im git it right down fine."

"The talk I hear round here," said Uncle Nate, as he clucked to old Bill, "reminds me of the wind blowin' across the mouth of an empty bottle."

While the old man was delivering his berries and later while he was driving home, the seed that his joking friends had sown in his mind sprouted and grew. He must do something radical immediately. The Batchums, eight of them, sly and industrious beyond belief, fairly cleaned his berry patch every day. He had caught them repeatedly, and they had promised to keep out, but they broke their promises as easily as they made them.

Uncle Nate had actually caught glimpses of bears in his pasture—small black bears, such as were sometimes seen in that region; but the children had never encountered the animals, and everyone in the village scoffed at the old man's stories.

When Uncle Nate was turning his horse out into the orchard, he caught sight of a red calico dress in a clearing in the pasture. He saw only one child, but he was sure that all the Batchums were there. Hurrying as fast as his rheumatic legs would let him, he went to the barn, climbed up on the high beams and lowered an old milk can down by a rope. Dragging out of it his black goatskin robe, he shook the sprigs of cedar out of it and threw it over his arm.

From the shelter of the doorway he looked warily round. No one was in sight; his wife, Aunt Marilla, had gone to a quilting party at one of the neighbor's. The old man struck out toward the back pasture. When he was halfway there he met four of his cows trotting along the road. They seemed much disturbed; now and then they stopped, looked uneasily behind them and bawled excitedly. Uncle Nate was puzzled by

bear could not very well grapple with him, even if she had wished to do so; but she gave him a good bite in the middle of his back.

For a man of his years Uncle Nate showed surprising alacrity in the crisis. Leaving the robe for the bear to worry, he floundered through the brook and, springing up the bank on the other side, climbed the handiest tree—a small white birch.

It was the bear's turn to be astonished. She did not know how to fight a beast that shed its skin so readily, and so she dropped the robe and snarled. After she had eyed the man for a few moments, her cubs came out from their hiding place. The mother, apparently deciding to leave "while her credit was good," as Uncle Nate afterwards said, disappeared rapidly in the brush with the cubs tagging behind.

After waiting a few minutes to be sure that the beast had really gone, Uncle Nate descended. His head ached, and his back smarted where the bear's teeth had scraped him. He was wet and plastered with mud, but otherwise he was not much the worse for the encounter.

He had scraped some of the slime from his clothes and was fishing his torn robe out of the mud with a stick, when a fearful outcry rose some distance away. In a few moments the eight Batchums, with hair flying, came down the bank at a run. They were shouting at the top of their voices, and they passed by on the way to the village with never a look in Uncle Nate's direction.

He gazed reflectively after them. "They've seen the bears, all right!" he muttered to himself. "That makes up a little for bein' cuffed and chewed. Maybe they'll say now there ain't no bears up here!"

Picking up a stout club, in case he should meet the bear again, he at last started for home. It was now so late that he thought he might as well get the rest of his cows, but although he spent an hour in hunting he could find no sign of them. Deciding that the bears had frightened them all home, he started down the road with the wet robe over his arm.

He had not gone far when he met the oldest Batchum girl, accompanied by her two uncles, who carried rifles.

"We was pickin' along when it jumped right out at us, a big, big black one!" the girl was saying excitedly. "And it just growled and growled! I grabbed Annie and we run —"

At that point in the story the Batchums saw Uncle Nate with the black robe over his arm. They stopped in their tracks.

"Does that look any like the bear?" Lije Batchum asked, pointing at the old man.

The girl stared with round eyes at Uncle Nate. "It was a big black one!" she repeated mechanically. "It jumped right out at us!"

"We've found the bear, I guess," Lije broke in angrily. "You old tightwad, you! Bushels of blackb'ries rottin' on the ground, and you playin' bear on the poor kids for pickin' 'em!"

Uncle Nate tried to explain. "You see, it was this way: I—I was carryin' this robe along —"

"What did you have the robe along for?" Fred demanded. "August is a funny time to be wearin' a fur robe."

"I was carryin' this robe along," repeated Uncle Nate with dignity, "when I fell down the bank right on top of a couple of bear cubs."

"What was you doin' with the robe?" Fred demanded again. "Takin' it out to air it?"

"Two bears!" cried Lije. "Make it three or four—it'll sound worse."

Uncle Nate glared at the brothers and went on: "Then the old one run out of the brush —"

"Well, I want to know!" the Batchums cried. "It was three bears, after all!"

"If you fellers would shut up a minute and give me a chance, I could tell you all about it!"

"You don't seem to explain about the robe."

"Why didn't you take some of the little fellers down and gnaw 'em?" Lije put in. "It would 'a' scairt 'em worse!"

Uncle Nate was getting excited. "The old one got me down and gnawed me!" he shouted. "And then I clum a tree —"

The Batchums laughed uproariously. "We seem to have you up a tree wuss'n the 'old one' did," Lije said. "Yer story's too thin to go with us. Come on, Fred, we've jest about time to git this bear story into the Gazette before it goes to press."

And with that, they both turned and went down the road.

As the old man hurried along behind them his mind was very busy. What would happen when this story reached the Watch Traders' Exchange? Could he ever go to the village and get peaceably out again?

"Here, you fellers!" he cried, trotting a little faster to catch up with them. "Jest go out in the orchard when you go by, and git you a couple of bushels of harvest apples." Then he added, "The kids can jest as well pick blackb'ries up this way as not. I guess there's plenty enough for all of us!"

THE GREAT SMOKY MOUNTAINS

MOUNTAIN TREASURE SEEKERS

By Charles Egbert Craddock

An air of mystery broods over the great mountains of eastern Tennessee. So lofty and austere are they, so remote from the world, so lonely and silent, that you readily believe the stories that are told of treasure hidden deep in their almost inaccessible fastnesses.

Deposits of the precious metals have been repeatedly found in the mountains, but never in such quantities as to warrant permanent mining. Each new discovery, however, leads the prospector to believe in further and richer deposits. You can scarcely mention the possibility to one of the simple country folk without bringing a gleam into his eyes. He will tell you of mysterious "mineral fires," which are supposed to hover above precious metals in the earth, and which he says he has seen here and there in the wilderness—his visions, doubtless, as illusory as his hopes often prove to be.

A HORSELOAD OF DOLLARS

ALANDSLIDE revealed interesting evidences of the earliest mining in those mountains—an ancient shaft, remnants of a windlass, tools of curious manufacture and fragments of boards. The treasure seekers are supposed to have been either the explorers of De Soto's expedition, whose quest for gold marked their trail with blood from the Atlantic shores to the Mississippi River, or the later Spanish adventurers who are mentioned by the German traveler, Johannes Lederer.

That the mountains contained treasures in silver as well as of gold was known in colonial times. In 1775 an early historian of the region, James Adair, wrote a quaint account of some "vagrants" who discovered a deposit of great richness, from which they took unknown quantities of almost pure silver, and "milled it into dollars" in the wilderness. At last the authorities captured a "horseload of dollars" on its way from the secret mine to Augusta, Georgia, and so managed to stop the manufacture of that peculiar counterfeit money in which the metal was genuine and the stamp of the government was forged.

From the first, secrecy invariably attended a discovery of treasure in the mountains. About a century ago a certain old man showed evidences of increasing wealth, and the rumor spread that he had found a valuable deposit of almost pure silver. He was seen repeatedly to come out of the wilderness on a journey to the nearest town; he emerged sometimes at one point, sometimes at another, and always his saddlebags were heavily stuffed; but no one ever descried him entering the forests. How and where he reached his cache was then, and still remains, a mystery. Since his day many a person has tried to trace the old man's way from his home to various possible sites of the deposit, but they have never reached the goal.

There is another tradition that a valuable

silver mine, known to the Indians and the early settlers, is situated at a point from which you can see the Tennessee River in three separate windings. In mere curiosity and interest a party of tourists rode on horseback along the connecting balds, as the domes above the tree line of the Great Smoky

range are called. They beheld a multitude of purple, densely wooded mountains, a vast stretch of valley, and the Tennessee River in many a graceful convolution—but never in three distinct windings.

In 1831 the discovery of gold at Coca Creek created great excitement in that region. The ploughshare, the axe and the reaping hook were laid aside. Panning "pay gravel" was a more delightful occupation than digging potatoes or hoeing corn. Agriculture might have become a lost art there had not the golden grains in the sands of the stream dwindled in quantity and then ceased altogether.

Singularly enough, a few years ago gold was found again very near the same place. The discoverer this time was anything except a treasure seeker; it was a hen that pecked up a small nugget of pure gold, which was found in the craw of the fowl when it was being prepared for the table. The circumstance got abroad, and caused an excitement almost as great as the discovery eighty years before had caused.

The mining methods used in the mountains have as a general rule been very primitive; the miners have had little or no machinery and no expert labor. The work is usually carried on in a haphazard manner. For example, some miners were lowering a companion, by means of a windlass and bucket, into a shaft that was eighty feet deep. When the man was near the bottom the rope slipped and fell into the excavation. There the unfortunate miner had to remain while one of the men walked fifteen miles to the nearest town to get another rope.

THE JOKE ON THE PROFESSOR

EVEN more jealously than they hoard their gold and silver do the mountains hoard their treasures of precious stones. A few emeralds are found there and some amethysts; garnets are more plentiful, and so, too, are crystals of many beautiful varieties and of richest tints.

A professor of geology had taken several of his students on a tour of the mountains. One of the boys, the son of a jeweler, had brought with him two or three uncut rubies, in the rough, and with those he proceeded to "salt" a certain spot, as a joke on the professor. The boy and his fellow conspirators contrived that the professor himself should stumble on the discovery by accident, as it were. With what unhalloved joy did they watch the professor's eyes shine, his very spectacles

glow, as he held one of the tiny stones under his microscope.

"Young gentlemen," he said, "this is a genuine ruby."

A murmur, as of interest and amazement, rose from the listening students.

"But," continued the learned man, "I am surprised that you should have known no better than to place it here. The formation does not warrant it. If you have planted any more of these stones, I should advise you to dig them up; they won't grow."

Although the Indians never made any use of gold, they were persistent seekers of the beautiful fresh-water pearls of this region. The Cherokees, whose home was in the Great Smoky Mountains and their outliers immediately to the south and east, had amassed great quantities of those gems. The early Scotch traders of colonial days lament the savages' habit of piercing them with a heated copper spindle, for that reduced their value in the European market.

The fresh-water gems are taken from the pearl-bearing mussel, the *Unio margaritiferos*, and are still sold in the markets of New York and other centres. That notable chronicler of De Soto's march through the Southern country, the "Gentleman of Elvas," describes the vast quantities of those pearls that the soldiers took from the Indians; some of the gems were so magnificent that he believed they must have been taken from royal sepulchres. One of the soldiers, Juan Terron, had six pounds of pearls in a bag, worth six thousand ducats. One day, in a fit of despair of ever quitting the wilderness, he loosed the string of the bag and scattered the pearls far and wide. Repentance followed close on his rashness, but no pearls rewarded his eager search; hence the Spanish proverb—"There are no pearls for Juan Terron."

Dredge boats now take tons of the mussel shells from the river—not for the pearls they occasionally find in them, but for the shells, which are used in manufacturing articles of mother-of-pearl. The mountaineers, however, whom you see sitting at low water by the edge of a stream exploring the shells in a mussel bank are seeking the pearls themselves.

A small boy in the mountains had a little bottle half full of the fruits of his toil. Some of the pearls were misshapen and dull; others were perfect spheres of a fine lustre. When some one told him that he could sell the pearls for a good sum of money at the store in town, the boy replied with characteristic placidity:

"I'd jes' ez lief keep 'em in this hyar leetle bottle."

THE SKEPTIC'S PEARLS

ASTRANGER, who doubted that there were pearls in American rivers, recently visited the house of a relative in Tennessee. By way of entertaining him his friends took him out in a skiff on an amateur pearl-fishing expedition. They scooped up a few shells with a rake, and he, still skeptical, proceeded to open one. It contained a large, lustrous pearl, virtually perfect and very valuable. That, however, is a very exceptional instance; myriads of the shells contain nothing except the poor mussel, of no use to anyone except himself.

The Cherokee Indians were reported to possess some precious stones of great size and beauty. James Adair writes that one of those stones, an official possession of the tribe, was said to be a ruby as large as a pigeon's egg. He was disposed to believe that it was only a carbuncle or a garnet, but he had never seen it; for the Indians soon became aware of the pioneers' greed for gems and kept their jewels carefully hidden from view.

The famous ruby is supposed to have been finally buried under the residence of the chief of the tribe, and many a vain search of the place was made in subsequent years. Knowing that the Cherokees buried with the dead their most cherished possessions, the treasure seekers made a thorough search for sepulchres. They rarely succeeded in finding the deep graves of the tribe, but they did make an important discovery by unearthing the prehistoric graves of the so-called pygmy dwellers of Tennessee. The graves, which are only about two feet deep, are constructed of stone slabs and contain the bones of what was apparently a pygmy race. A noted craniologist, Dr. Morton, declared that one of the skulls was that of a child, but why scores of children only should be buried in a cemetery it is hard to say. Other craniologists argued that the wisdom teeth proved that the skeletons were those of adult pygmies. Be that as it may, the relics seem an unsolved riddle of the ages.

Tennessee is peculiarly rich in archaeological relics. The pottery in ancient mounds has proved of great interest to men of science, and now and again those treasure seekers have found something that refutes accepted theories and reveals new truths. For example, the extraordinary syllabic alphabet of the Cherokee nation was supposed to have been invented by the Indian Sequoyah, whose English name was George Guess, about 1820. But a few years ago an agent of the Smithsonian

OVERLOOKING THE TENNESSEE RIVER

Institution exhumed from a mound in Tennessee, under the head of which was a stone rudely engraved with characters of this Cherokee alphabet. That suggested the possibility that this strange alphabet, instead of being a comparatively recent invention, may be a fragment of a forgotten literature. That theory sustains the Cherokee tradition that ages ago the tribe had Scriptures, which for their sins they had lost.

Almost every museum has specimens from Tennessee. In Big Bone Cave was found the complete skeleton of a mastodon, and many great bones have been unearthed in saline quagmires. The pottery and figurines are usually taken from mounds, and the exquisitely wrought discoid chungke stones; but I found a small chungke stone while walking along a path made of gravel taken from a

river bed. Chungke was the characteristic athletic Cherokee game of ancient times.

The simple folk of the mountains look with amazement on the explorations that men of science and agents from the museums carry on in their land. The mountaineers do not understand the value of such labor to history and science. They regard the learned gentlemen as absolutely crazed, or, to use their expression, "tee-totally tetch'd in the head."

Iron pyrites, or "fool's gold," has brought many a bitter disappointment in Tennessee. It is painful to think how often the hearthstone of a mountain cabin has been the scene of a tragic disillusion when a glittering mass of the stuff, placed on a red-hot shovel, has burned easily and thus put an end to the dreams of the treasure seeker.

Singularly enough, the women of a mountain

family are immune from the fever of treasure seeking; they do not think that gold is to be found there, and they do not like mining. Many an optimistic prospector, triumphantly rushing home to show a piece of rock aglitter with particles of metal, has had his enthusiasm rudely checked. His wife surveys the rock critically as he declares:

"Thar's a power of silver in that thar rock."
"All 'cept what's lackin'," she draws sardonically.

Doubtless at some future day money, that motive power of machinery, will flow into these sequestered regions and rifle the treasures now held fast in the secret hiding places of the ranges. Meanwhile, the mountains stand austere and silent, and the simple treasure seeker scans as best he may the signs of the crags and tries to read the riddle of the rocks.

"Nick," said Agatha, "do you happen to have any old spark plugs?"

"Plenty of 'em." The boy brought out a box from a tool house. "Bub collects what folks throw away. Help yourself."

She selected one gravely. "Thank you. Don't mention it, will you? I've a reason that I can't explain."

"They can search me," said the boy.
A minute after Agatha had vanished, the gray car also slid out of the village.

Sitting slim and straight behind the wheel, the girl drove rapidly. The Kenvilles' place was a mile or so beyond the Tallants' in Cedarhurst. Cars passed her going in either direction. Under the whirl of their passing she listened vainly for the purr of the high-powered motor behind her. Had the gray car given up the chase or was it still following, but farther in the rear to avoid suspicion?

The roadster whirled into the Cedarhurst road, sped on smoothly for a mile or more and then stopped with a jerk before the Tallants' gateway. No motor cars were in sight. As she jumped out, she noticed that beyond the hedge a game of tennis was in progress. Throwing up the hood, she bent anxiously over the mechanism within. Her hands worked swiftly at the wires. Stepping back to the tool kit, she picked up a spark-plug wrench and two small black-and-white objects that she dropped into the pocket of her skirt; then she bent again over the open hood. The wrench gripped and twisted; with her ears alert for sounds from the road, the girl frantically struggled.

She was still bending over the hood, with a blackened plug in her hands, when the gray touring car appeared. It slowed up hesitatingly and paused, still purring.

"Anything wrong?" asked the man at the wheel.

Agatha lifted guileless eyes. "This spark plug is no good."

The man with goggles ran the gray car to one side of the road and jumped out. "Perhaps I can help you."

"Oh, thank you!" She relinquished her tools readily. "I ought to be able to run home without replacing this, but I think something is wrong with the ignition, too."

The chauffeur of the gray car made a rapid examination. "Your main wire's loose. We can tighten it in a couple of minutes. Have you another spark plug?"

Agatha moved toward the kit. "Fritz always keeps extra ones in the car." She hunted for a minute, and then turned helplessly back to the man in goggles. "He always does," she reiterated.

The chauffeur joined her. "None here," he reported after a brief search.

"Isn't that strange!" said Agatha. "Fritz always—" She lifted her eyes to the open gates. "The Tallants have a roadster of this make. Perhaps they can lend me a spark plug." She started toward the driveway. At that moment the tennis players, attracted by the car in distress, pushed through the hedge. Rackets in hand, they emerged, a girl and a man, tall, dark, with a long, almost imperceptibly hooked nose. Agatha's heart leaped joyfully.

"Good morning, Bess!" Thank goodness, her voice did not tremble! "Have you a spark plug lying round loose? This one is no good, and my extras are not in the tool kit."

In one full-toned breath, good-natured Bess Tallant reassured her friend and presented her companion.

"How do you do, Mr. Brent?" said Agatha. "I am sorry to have interrupted your game. No, Bess, I really can't stop. I am going on to Ruth Kenville's and then to the tournament at the club."

"We're going over this afternoon. Martin knows where the spark plugs are, Mr. Brent." Agatha could have cried, but she did not. The dark man hastened up the drive and the girls strolled over to the disabled car. The chauffeur was tightening the wires.

"I'll wait and put it in for you," he suggested.

"Oh, thank you!" said Agatha. "You're sure it won't delay you too much?"

Why could he not take himself out of the way!

"Not at all," said the chauffeur.

Agatha's hands felt dry and her mouth parched. It astonished her to hear herself laugh. The words that slipped from her tongue sounded strange in her ears; but apparently Bess noticed nothing amiss. Must she fail, after all, Agatha wondered? She seemed to hear her father saying, "Something bigger than politics, daughter." She squared her slender shoulders. "Steady!" she said to herself. "Steady!"

With smiling, careless thanks she turned to John Brent as he came up with the spark plugs. Martin, who accompanied him, was evidently in a hurry. Agatha thought rapidly. Her mission was a failure if it were suspected that she had a mission. Therefore she dared not get rid of the chauffeur; he would at once jump to the conclusion that she was a messenger. Yet how under his eyes could she deliver her letter? Her glance fell on the open tool kit. It was a chance, but the only one.

"Martin," she said, "I can see you have a

BEHIND HER SHE AGAIN HEARD THE SMOOTH WHIR OF A CAR. WITHOUT LOOKING ROUND SHE DECIDED TO TAKE NO CHANCES

AGATHA'S ERRAND By Beth B. Gilchrist

WITH a little sigh Agatha Hunt closed her book. The old brave days were uncontestedly gone, unless you lived across the water. Agatha had read of girls who did brave things over there, girls who defended their homes and saved men's lives, just as she had read of such girls in

America half a century and more ago; but here to-day a girl had no chance, thought Agatha, to do anything that required nerve. She had no chance to discover the stuff of which she was made, no chance to find out how she would act in a crisis, no chance to do any of the things that she dreamed of.

John, entering the room, interrupted the train of Agatha's regrets.

"Your father says will you step up to the study for a minute, miss."

A minute later, with the light of yearning still on her face, Agatha crossed the threshold of her father's study. Benjamin Hunt, one of the President's Cabinet officers, sat by a long table covered with piles of papers. His bandaged left foot was extended before him on a chair. His stiff, upstanding hair, beloved of cartoonists, was in its stiffest and most up-standing mood, kept so by his restless hand. With his own hand Secretary Hunt was writing a letter—he was signing his name on the last of several sheets. Agatha noticed that the stenographers were absent.

"Do an errand for me, will you, Aggie?" said her father, as he reached for an envelope.

"Gladly," said Agatha.

The secretary put the folded sheets into the envelope and handed it to her.

"There's a young man staying with the Tallants in Cedarhurst, named John Brent. I want to get a message to him privately. I don't want to send for him, and I don't want to telegraph or telephone to him. I don't want to mail him a letter. A dozen reporters and some other fellows have been watching this place and Cedarhurst for four days to detect any signs of communication between us. Should they see any such signs, they would publish it broadcast that a certain relationship has been established, which we hope will be established some day, but which it isn't as yet advisable to post on the billboards. If I weren't tied by the leg to this house, I'd fix 'em. What I want you to do is to put that letter into Brent's hands when no one's looking and without giving anyone reason to think that you have acted as a messenger. Can you do it?"

"I'll try." Agatha slipped the envelope into the pocket of her white linen skirt and rose quietly. "Politics, dad?"

"A little bigger than politics, Aggie. John Brent is a tall, dark fellow; walks like a

soldier; broke his nose when he was a boy, and it has never been quite straight since. See that he gets the letter sometime to-day. He leaves Cedarhurst to-morrow morning at eight. Good luck, daughter."

Agatha's blood quickened as she closed the door of the study behind her. She ordered the roadster to be ready, and then went to her room and pinned on a white felt hat. Bess Tallant was a friend of hers. She would go to see Bess, and trust to the inspiration of the moment when she got there.

"I shall not need you to-day, Fritz," she said to the chauffeur. "I'll drive myself."

As the roadster shot through the gate and took the road toward the village, Agatha saw out of the tail of her eye a touring car turn into the broad macadam highway behind her. She slowed up a little to let the big car pass, but it failed to take the opportunity offered. Thinking hard of her problem, the girl drove on. Unobserved to get speech with a man whom she did not know, and to hand him a letter—there it was in a nutshell. She began to see that it would not be easy. If Bess Tallant was at home, Agatha could take her into her confidence and perhaps get private speech with John Brent. But Bess might unwittingly reveal the secret; no, she could not tell Bess. Agatha wrinkled her brows in perplexity.

As she turned a corner she became aware that the touring car was still behind her. It was strange that the high-powered car should continue to give her the lead. Agatha turned another corner, then two more with deliberate intent. The touring car turned them also. Agatha wondered whether she was being followed.

The suspicion set a thrill of excitement pulsing in the girl's brain—for a moment only. Then the reaction from the thrill caught her. It was ridiculous. Such a thing might happen to a girl in a book perhaps, but not to Agatha Hunt on a New England road that she had known since childhood.

She stopped at a small brown house set close to the road, jumped out and made her way to the side door. As she knocked, the gray touring car rolled smoothly past. There were two men in it. The one at the wheel wore goggles and no hat. The other had a gray visored cap and a linen duster.

"Ask Mrs. Grace to send my waists Friday, please," Agatha said to the child who answered her knock. "I find I shall need them before Saturday."

Climbing into the roadster, she swung through dusty byways into the state road. Behind her she again heard the smooth whirl of a car. Without looking round she decided to take no chances; when she came to the Cedarhurst turn she passed it without swerving and

held straight on to the village. In front of Fiske's store, which was also the post office, her prudence reaped its reward. As she got out of the roadster the gray car slid to the curb in front of the fish market.

Of course there was no mail; the bags for the secretary's house had gone only an hour before. The little seaside village was not disturbed by many trains. Agatha purchased post cards and the stamps to mail them and consumed several minutes in writing mechanical messages with a spluttering store pen. Meanwhile she ransacked her wits for a way of escape.

The man in the linen duster and gray cap entered the store and called loudly for letters. There were none for him, and he bought a newspaper and buried his nose in its pages. Agatha had a feeling that he was listening when she purchased a squat blue pitcher and two blue cups—"for picnics," she told Mrs. Fiske. Her spirit rose; should her father's daughter be worsted by two inquisitive men in a touring car?

"Oh, and I nearly forgot, a pound of your big flat peppermints, please. Father is so fond of them. He always asks me when I come home from the village whether I have brought him some of Mrs. Fiske's peppermints."

The man in the gray cap pocketed his newspaper and went out. He would wait, no doubt, by the gray car to take up the trail again. An imp of perversity entered into Agatha. She decided that she was thirsty.

At Jordan's drug store the little tables shone smooth and round. Agatha ordered a chocolate sundae and sat down by the window. A minute later three girls entered and, following them, the chauffeur of the gray car. Aloof in her seat by the window, Agatha leisurely ate her mound of cream. When she stood up she knew exactly what she was going to do. To be sure, there were gaps in her plan,—gaps that waited on other persons' actions,—but the main outline was complete.

As she gathered up her driving gloves she bowed and smiled at the three girls. They responded eagerly.

"Are you going to the Country Club this morning?" one of them asked. "The tennis tournament begins to-day, you know."

"I'll look in on my way home." Agatha's clear, soft voice carried the words distinctly. "I had a few errands in the village and I have to run out to Ruth Kenville's now, or I'd give you a lift to the club."

Agatha took her seat in the roadster beside the peppermints and the pitcher, well content. She did not so much as glance at the gray car when she passed it. At an old shingled house smothered in ivy she stopped, and hastened on foot to the rear of the building. A boy looked up from the automobile that he was tinkering.

hundred things to do at this minute. This gentleman says he is in no hurry."

The chauffeur of the gray car took the spark plugs and set to work. Agatha stood by, ready, as she said, "to hand him things." The other two also stood by, and watched; Agatha had counted rightly on the combined charm of disabled machinery and Bess's hospitality to hold them. She went to the tool kit and, leaning over with her back to the watchful gray-capped man in the touring car, selected a hammer. As she did so, she slipped the letter from her pocket into the kit. The name on its white surface stared up at her.

Agatha strolled back to the chauffeur. "Oh," she exclaimed, with a little start, "I ought to have brought the screw driver!"

"Let me get it," said Mr. Brent.

"How do you know just exactly which tools he's going to want?" Bess asked.

Agatha laughed nervously. "I know which I'd want myself, Bess." Her eyes were on John Brent, who returned imperturbable.

"I found a number of other things, but not the screw driver." He looked at the girl keenly.

"We have the screw driver here, after all. You will think me very stupid."

"On the contrary," said John Brent, bowing. The chauffeur straightened up, and Agatha thanked him politely. In his hearing she refused Bess's eager invitation to stay to luncheon; then she drove on to Ruth Kenville's.

"John Brent's visit at Cedarhurst has occasioned considerable gossip in certain quarters,"

remarked a metropolitan newspaper two mornings later. "Those of our contemporaries who have been looking for confirmation of the rumor that the government has bought his patents would seem to have been barking up the wrong gum tree. Persons in a position to know state that at the hour Brent left Cedarhurst no word had passed between him and Secretary Hunt. We regret that the government was not sufficiently farsighted."

The secretary chuckled as he read. "Pretty good, Aggie, my girl. Pretty good. Under the fellows' very eyes, too." He surveyed her slender figure. "You don't look bulky enough to be able to secrete three spark plugs."

"Oh, I put them in my bag as soon as I got the one out of the engine. It was a white embroidered bag and it lay in plain sight all the time on the floor of the car."

The secretary pulled his daughter down on the arm of his chair and kissed her. "I'm proud of you, Aggie. What you did took nerve—and brains. You see, my girl,—I can trust you to keep this to yourself,—there were some fellows who wanted those patents mighty bad, but we decided that your Uncle Samuel needed 'em. So he got 'em. And your Uncle Samuel's business can't always be spread on the front page of the newspapers for every Siamese, let us say, to read. That's why we got 'em on the quiet. Understand?"

Agatha's face glowed. "Then what I did really mattered?" she exclaimed joyfully.

"I should say it did," said her father.

Once I looked back quickly, and I certainly saw something, a sort of shadow, slip away through the laurels."

"A bear? A man?"

"Couldn't say. If it was a man, he was stooping low."

"Maybe only a razorback," Ellis suggested.

"Who could be spying on us up here?"

"I dare say it was nothing," Tom admitted.

"Only it gave me a queer feeling, that's all."

His uneasiness spread to his cousin, and by common accord when they went to bed that night, they built up the fire brightly and laid the loaded gun beside them. After a chilly, drizzling night morning came. Nothing had disturbed them, and in the clear daylight they felt a little ashamed of their nervousness.

"It was all your weird talk about stealthy shadows in the bushes," Ellis declared.

"Probably all you saw was a rabbit."

"Enough said! I'm not going to rack my imagination about it any more."

Ellis went down to the creek to catch fish for breakfast; but in a few minutes he came hurrying back.

"The fishing tackle's gone!" he cried.

"Lost?" inquired Tom.

"Well, I left it by the creek last night, for I knew I'd want it again this morning. I had cut an especially good pole, and I left it sticking in the bank, with the line wound on it. It's clean gone."

"It must have fallen into the water," said Tom, and they both went back and began to search for it.

They soon found the deep hole where Ellis had planted the rod in the earth, but although they searched far downstream they got no trace of the missing tackle. Ellis was sure that it could not have fallen into the water; but there was no track of beast or man on the gravelly shores.

Fortunately, they had more hooks and lines, and they quickly rigged a fresh outfit; but the incident revived their uneasiness, and in searching for crystals that day they kept together, and did not go very far from camp.

That afternoon they were encouraged by finding three very fine amethysts, and they kept at work until after sunset. It was quite dark by the time they sat down to eat. They had hardly taken a mouthful when there was

"We'll make some more coffee—in the kettle," said Tom. "I reckon that pot's gone."

"But where has it gone?" demanded Ellis uneasily.

"Can't guess. None of the mountain people would steal a pot of coffee off the fire. And there aren't any tramps here."

They made more coffee, and with eyes and ears alert finished their supper. It was disconcerting to think of the mysterious prowler, perhaps still within a few rods of the camp, and neither of the boys felt much disposed to sleep; but as the evening wore on quietly they became drowsy. Tom volunteered to stay awake and watch for a few hours, and Ellis, creeping into the tent, rolled up in his blankets.

Tom sat against a tree with the shotgun across his knees, and remained awake until midnight without hearing any suspicious sound. He dozed a little after that, roused himself, and then dozed again; he must have slept a long time, for when he woke he was surprised to see the sky brightening. Everything seemed to be all right in camp, and so, with a sleepy glance round, he crept into the blankets beside his cousin and fell sound asleep.

But when the boys turned out a few hours later they were horrified to find that a large piece of salt pork was missing from the stores piled beside the tent.

"Almost the last of our meat, too!" cried Ellis indignantly. "What sort of thief have we got on our trail?"

"Well, I never heard of anything like this before," said Tom. "The mountaineers up here are honest as the day. I think we'd better not stay here much longer, or we'll lose all we've got."

"And meanwhile we must keep a real watch at night, and one of us must always stay round camp in the daytime," said Ellis.

So that day Ellis searched for crystals alone, while Tom guarded the camp. They saw no sign of the mysterious robber, and that night nothing was stolen from their equipment or supplies. Perhaps the reason was that they took turns in standing guard and kept careful watch from sunset to sunrise.

Ellis went out again in the morning, and came back at noon with two good crystals and a beautiful lump of agate. But he found Tom wild with exasperation. Tom had gone down the stream to fish. He was absent less than half an hour, and not once out of sight of camp, but on his return he found the shotgun and a box of shells gone from the tent. It was a very handsome and valuable weapon, which his father had given him on his sixteenth birthday. Tom prized it, and would rather have lost anything else, even their whole hard-won collection of crystals.

"I'm going to catch that fellow and make him give back what he's stolen!" he cried.

"But how'll we do it? He's armed, and we've got nothing except the hatchet. Besides, we can never lay eyes on him."

"We'll set a trap," said Tom. "I'm going to have him, if I have to stay here all summer."

While they hurriedly prepared dinner they discussed various methods of trapping the plunderer. Unless they could recover their gun or some of their supplies they ran a serious risk of starving.

"Grub seems to be what he mainly wants," said Tom. "We'll bait our snare with eatables, lie low, and jump on him when he comes in to get the bait."

At last they agreed on a plan. After dinner Ellis fried a fresh pan of pork, brought out the sack of corn meal into sight, and left a tin cup of coffee temptingly by the fire. Then they left the camp leisurely, singing and whistling, went down the creek for about a quarter of a mile and, hiding in a thicket, watched their back trail for some minutes.

There was no sign that they had been followed. Tom had brought the hatchet with him, and he cut a heavy oak bludgeon as a weapon for Ellis. Then the boys turned

back in a wide circle and, keeping always close under cover, approached the camp again. They crawled on their stomachs to a point about twenty feet behind the tent, and there, lying flat and grasping their weapons, waited.

The food by the fire had not been touched. For a long time all was quiet. A gray squirrel scampered down a tree and ran to pick up the crumbs. Tom suddenly nudged his cousin and nodded toward a spot about a hundred yards to the east. He imagined that he had seen something stir in the cover. A number of jays near the place began to scold loudly.

Nearly an hour passed and nothing happened. The boys were becoming cramped and stiff. Tom was beginning to think that his eyes had deceived him, when suddenly the boys started simultaneously.

Not more than twenty yards away a shadow-like form had certainly slipped from one thicket to another.

Grasping their weapons, the boys waited tensely, ready to spring up. But another full ten minutes elapsed before anything happened; then, without sound or other warning, a figure slipped out of the underbrush close to them—the wildest figure that they had ever seen.

TO BE CONTINUED

THE CRYSTAL HUNTERS

By Frank Lillie Pollock
In Eight Chapters Chapter Three

WHILE Tom bent forward to look, Ellis carefully opened his clenched hand. In it lay two tiny pale yellow flakes that looked almost like shreds of paper.

"Gold? Not likely!" Tom muttered. "Probably pyrites."

Taking one of the flakes carefully on his thumb nail, he tested it with the point of his knife. Pyrites, or "fool's gold," is brittle; but this yellow scrap bent and parted under the knife. It was soft and metallic. Tom scrutinized it through his pocket magnifier.

"I do believe it is gold; we'll test it in the camp fire to-night. Where did you find it?"

"Not far! Come along!" And as they hurried by the bank, Ellis described his discovery. "I hadn't found any crystals, and it struck me that a good way would be to wash out the gravel, as the gold miners do. I got a pan from camp, and at about the tenth painful I saw those yellow flakes at the bottom."

"Maybe our fortunes are made!" Tom cried. "We'll prospect and stake out claims. What are crystals to this?"

They came presently to the place where Ellis had dropped the tin pan, and Tom at once began feverishly to wash out gravel. The first three or four panfuls gave no result. Then he found two small amethysts, which he thrust into his pocket with an exclamation of disgust. But a few minutes later he uttered a cry of triumph. At the bottom of the pan in the sand lay a tiny yellow flake.

All the rest of that day with excited enthusiasm they washed for gold. When the sun went down they were wet, muddy and tired; but although they had found no more of the "dust," they were far from being discouraged. While they prepared supper their talk was all of gold and fortune, and they lay awake and talked about it until late in the night.

With early morning they were at their task again. All that day they waded in the creek—Ellis with the pan, and Tom with the camp kettle, which made a rather clumsy implement for washing gold; but no more of the precious flakes rewarded their efforts. That evening they were not so exuberant; in fact, they were both a little ill-tempered. Nevertheless, the next morning they set to work again; this time they followed the creek in different directions.

Tom washed gravel industriously until about eleven o'clock without finding anything; then he sat wearily down on the bank. After a while he rose and went in search of his cousin.

He found him ankle-deep in the water, and after a glance at his face knew that he, too, had labored without result.

"Ellis," said Tom, "drop it. We've got all the gold there is."

Ellis straightened himself wearily.

"We're simply wasting time," Tom continued. "I reckon all the gold we've found is worth about twenty-five cents, and we might work for a month and not find any more. Let's get over our gold fever."

"Maybe you're right," Ellis admitted. "I've

been getting rather sick of the job myself."

"We'll get back to business—to crystals, that is. And I think we've worked this creek pretty thoroughly. We'd better move higher up."

"All right," said Ellis. "It's disappointing, but after all it's a kind of relief. However, there certainly is gold in these creeks."

DRAWN BY H. C. EDWARDS

NOT MORE THAN TWENTY YARDS AWAY A SHADOW-LIKE FORM HAD CERTAINLY SLIPPED FROM ONE THICKET TO ANOTHER

"But not enough to pay for panning it out. Besides, we're not making enough progress with our crystals. At this rate we'll never get enough for the map."

The next ten days or so the boys passed in hard work. Every two or three days they moved a few miles, but their luck was bad and they found few crystals. The country had grown much rougher; they had to travel now along slopes of loose rock and fight their way through tangles of small oak, laurel and mountain shrubbery. To add to their hardships, their rations were running low.

But in spite of their hard work they had not yet found half the crystals required for the railway map. Tom was becoming uneasy. It was almost the middle of August, and the stones were to be delivered early in September.

One evening, after a hard day's work in loose gravel, Tom came in looking disturbed. He said nothing until after supper; then he asked, with some hesitation:

"Have you felt anything queer round here, Ellis? As if some one or some thing were prowling about?"

"Not a bit of it. Have you?"

"Well, to-day when I was out alone I had a feeling that some one was watching me.

a sudden stamping and scurrying in the shrubbery where the mule was tethered.

"Something's wrong! Peter's loose!" cried Ellis, as they both rushed for the place.

The mule was loose indeed, and had run several rods down the creek, as if he had been badly frightened; but he let them catch him without much difficulty, and they led him back and tethered him again; they could not make out how he had slipped his rope.

"Where's the coffee?" Tom exclaimed, when they returned to finish their interrupted meal.

They had left the pot full of coffee on the hot ashes at the edge of the fire; it had vanished.

"Some one's been here!" Ellis exclaimed, catching up the gun.

"Hold on!" said Tom quickly. "It must be some one needing it—some one starving—lost!"

Stepping forward, he put his hands to his mouth and gave a long, resonant call.

"Hello-o-o!" he shouted. "Come back with that coffee! We'll give you more!"

The echoes answered from the hills, but nothing else.

Again and again he called, but there was no answer. The boys looked at each other.

DR. WALTER JAMES DODD

FACT AND COMMENT

WHEN a man loses his temper he is sure to find his tempter.

You know your Neighbor's Wish beyond a doubt:
His Hedge, however low, means, "Please Keep Out!"

THE bane of the shoe man is the people who wish to fit, not their feet, but their pride.

WESTERN hunters who have despised the coyote as a worthless creature, to be killed if the sheep are to be protected, now find that a dead coyote is worth more than a live sheep. They are getting eight dollars or more for each coyote pelt. The tough hide and warm fur make coyote skins especially valuable for clothing for the soldiers in the trenches in Europe.

IT is now a hundred years since gas was first used for illumination in this country, and this is supposed to be "the age of electricity"; yet the amount of gas consumed is still increasing. There has indeed been a falling off in the amount used for lighting, but a great gain in the amount used for fuel. This is not only the age of electricity but also the age of the gas-burning cookstove.

SOME persons have accused the presidents of our great railways of not understanding the work and the problems of the men at the other end of the pay roll; but if they do not, it is because they have short memories. Of ten railway presidents who recently met in a conference, three began as clerks, three as rod-men with construction gangs, two as section hands, one as a telegrapher and one as an office boy.

THE Companion has mentioned several notable instances in which successive generations of the same family, or in which many brothers, have served in the Christian ministry. A reader reminds us that such cases are not limited to the servants of any one faith. He calls attention to the seven children of Patrick Hickey and his wife—the five sons all priests in the archdiocese of Cincinnati, and the two daughters Sisters in the order of Notre Dame.

WE have all been aware that many young Americans have gone to Europe to take part in the war, but few of us were prepared for the figures that a Paris correspondent recently compiled. They show that about fifty thousand of our fellow citizens have enlisted in the ranks of the Allies, and that about four fifths of that number are now under Gen. Haig in France. The total is larger than the number of Americans who were engaged in actual hostilities in the war with Spain.

THERE are few needs created by the great war that some benevolent person has not undertaken to meet. The following advertisement, which we take from the London Times, reveals a real lover of animals, and has, moreover, a pleasant touch of humor:

DOGS OF WAR.—"Togo," a black spaniel, appeals to all dogs who are "sports" to help the Dogs of the brave Belgian Army, who drag the machine guns and do outpost duty. Naturalized Dachshunds and Cats can lend a paw.—"Togo," Ingham Manor, Statham.

THE horse-meat shops in New York City have either failed outright or been but indifferently successful. Why? Horseflesh has long been a staple article of food in Paris, Berlin and other cities of Europe, and in nutritious quality, in flavor and in cleanliness it is at least comparable to other meats that are everywhere regarded as fit for food. It may be that our prejudice has its roots in our appreciation of the horse as the best friend of man, and in a consequent feeling that hippophagy is something akin to cannibalism; but more probably it is just prejudice, of the sort that makes it

impossible for some people to eat muskrat, porcupine, eels, or frogs' legs, although all are wholesome and of good flavor.

GIVING CARRANZA HIS CHANCE

WHILE the United States was moving swiftly toward the break with Germany it was taking the necessary steps to reestablish complete amity between itself and the government of Mexico. Whether or not the Mexican government is yet worthy of confidence and respect, the action was wise; no nation can afford to have more than one international crisis on its hands at once.

When Gen. Pershing's "punitive expedition" came home and Mr. Fletcher was instructed to take up his post of ambassador in Mexico City, we came to the end of an unusual episode in our diplomatic history. The episode began four years ago, when President Wilson refused to recognize Huerta as the ruler of Mexico, because he held him responsible for the murder of Madero; it ends with the recognition of Carranza, who is the inheritor of the Madero tradition.

Throughout those four years President Wilson has been guided in his course by an ideal; but it is an ideal that is unusual among statesmen and that is understood or appreciated by only a part of his own countrymen, and by almost no one outside America. Most Presidents would have set themselves first of all to protecting all American life and property in Mexico, and next to helping or to forcing Mexico to restore order within its boundaries. Mr. Wilson has tried to prevent the country from falling into the hands of the exploiter, and to give its own people the chance to decide in their own way and in their own time what sort of government they want to have. In doing so, he has more than once exposed himself to the charge of neglecting legitimate American interests in Mexico, and of pursuing a weak and complaisant policy toward revolutionaries who were destroying the prosperity and the honor of their country. More than once, too, he has been reminded that only the preoccupation of Europe with the war has permitted him to carry out his policy undisturbed; in ordinary circumstances England and France and Germany would have had at least a finger apiece in the Mexican pie long ago.

But the President has persisted. Satisfied that Carranza represents the will of the Mexican people, he recognizes him, although he has found him a disobliging and intractable person to deal with. Now we are to see whether the Wilson policy pursued attainable ideals. Will Carranza succeed in establishing a stable government, or will he shortly go down before some rebel like Villa or some traitor in his own party, in another paroxysm of bloodshed? And if peace and good order return to Mexico, has our patient forbearance gained us its good will or lost us its respect?

We dare not be too hopeful. But we shall all wish Señor Carranza good luck with his opportunity. Perhaps he will prove himself a wiser and a stronger man than he seems at this distance to be. That will mean several years of peace between the two countries, and perhaps the beginning of a better and more sympathetic understanding.

THE OTHER NEUTRALS

IF President Wilson really expected the other neutral nations to follow the example of the United States in breaking off relations with Germany, he was disappointed. In all of those countries there was a great deal of popular sympathy with our course, and almost every government has protested strongly against the German view of the legality of unrestricted submarine warfare against merchant ships. But in this as in other crises of the war the special circumstances that affect the different neutral nations have unfortunately made it impossible for them to act together.

Holland, Denmark and Switzerland all lie open to invasion from Germany and naturally hesitate to take a step that might bring upon them at once all the horrors of modern warfare. Switzerland of course has a very numerous population of German blood and, since it has no seacoast and no merchant navy, is less affected than other countries by the German edict. In Holland there is a court party led by the Prince Consort, who is a German, that is friendly to Germany, and another party that has found trade with Germany so profitable that it hopes for closer relations with the empire instead of a diplomatic break. Sweden is still so hostile to Russia that it hesitates to make common cause with an alliance that includes that country. Norway, which has

suffered from the submarines more than any other neutral, might be glad to do more than protest, but it has agreed to act in concert with Sweden and Denmark.

In Spain and in the South American republics there is real sympathy not only with the United States but with the Entente Powers. Spain and Brazil have made the most outspoken protests against the submarine edict; and if events bring any of the neutrals to our side, they are likely to be the first.

It is gratifying to observe that, although the governments of the smaller nations have only partly followed our lead, public opinion generally approves it. No great newspaper in any of the neutral countries thinks we acted unwisely; the only criticism we hear is that we ought to have taken our present stand earlier in the war. That our course was not without immediate moral effect is shown by the haste with which Germany offered concessions to Spain and Holland, which were the countries most likely to carry their dislike of the submarine order beyond the point of protest.

MAKING OTHERS WORK

MAKING other people work seems easy enough. We all know the parasite type, which never works when work can be avoided, and which relies on others for food and drink and clothes and amusement and even for its thoughts.

Such shirking is not what we mean to discuss; we speak of the faculty of using the labor of others for some common end, of directing it, of coordinating it so that there shall be no haste, no waste, and the maximum of achievement. Such direction often requires colossal labor. It is a far rarer gift than the ability to labor with your own muscles. Indeed, it is one of the rarest of gifts, and the freakishness of its distribution makes you feel more than almost anything else that all men are not born equal. You meet every day hard-working people who cannot manage others, who do not discern the aptitudes of others, who do not trust others, who persist in attending to every little detail of great tasks in person. So the great tasks often remain undone.

This executive faculty of getting the very best out of others is of course most appreciated in men who fill great positions in armies or in nations, where the chief can only map out the large lines of an enterprise and must leave all detail to subordinates in their respective degrees; but precisely the same faculty appears in the housekeeper who has perhaps one maid to direct, perhaps merely her own daughter. Lack of that faculty is one of the chief causes of the servant problem.

The gift of domestic management, as of all management, is inborn, but to a large extent it can be learned, and certain simple rules are of great importance. First, when you give orders, see that they are obeyed. That in itself implies that orders should not be ill-considered, or confused, or conflicting. Bid no one to do what cannot be done. Second, put yourself in the place of those under you. Napoleon was walking with a lady in Saint Helena, and they met a man carrying a heavy load who obliged them to turn out of the path. The lady was indignant. "Consider the burden, madam," said the great emperor. If you at all times consider the burden, you will find your servants glad to give you their best. Third, learn system. Work thoroughly planned is half done. It is amazing how a task is lightened when you see the end of it and its relation to other tasks. And the beginning of system for others is to understand its working for yourself.

The thorough comprehension and application of these rules form a large part of housekeeping, which is an art, and which can be learned, like other arts. Do not let your girls neglect this elementary training while they are practicing the finer graces of social life.

A HERO OF PEACE

THE X ray, which Röntgen twenty years ago introduced to the world, has become familiar through actual experience to many persons who have watched the doctor use it in searching their anatomy up and down for a hidden cause of ailment. With its aid the physician nowadays frequently traces rheumatism to the teeth and indigestion to the appendix, and as a matter of course he uses it to make sure that he has set a broken bone correctly. Latest discovery of all: the X ray now seems to reveal a certain healing property that renders unnecessary some of the most serious surgical operations. Evidently we have still a great deal to learn about it.

The layman who sees a tremendous force

such as the X ray harnessed for service marvels at the ingenuity of man, but he seldom realizes the danger that attends its use. He knows that he himself is protected; but his imagination does not take in the tremendous risks to which everyone who experiments inevitably exposes himself. In the early days of the X ray no one guessed its destructive effect on human tissue; if the Röntgenologists of to-day are able to practice their profession in safety, it is because their predecessors risked and sometimes lost their lives.

One of the most distinguished of the X-ray pioneers was Walter James Dodd, who was photographer at the Massachusetts General Hospital in Boston when, in 1895, Röntgen gave to the world his discovery of the X ray and of its probable diagnostic value in connection with the human body. With characteristic zest Dr. Dodd threw himself into the work of using and experimenting with the new agent. A year later he had to be treated for burns; in another year his wounds had suffered a cancerous change that made necessary an operation. From that time until his recent death he submitted to ether more than fifty times; he lost most of his fingers, suffered terrible pain, and died at the age of forty-seven, long after he and others like him had discovered how to render the rays harmless.

His pluck and complete devotion to his work were beyond praise; in 1915, as soon as he was up from his latest operation, he went abroad and rendered splendid X-ray service in the British field hospital. His cheeriness, humor and tenderness won him the love of everyone who knew him. To the well he was an inspiration; to the sick and unfortunate he was a ministering angel. Peace hath her victories no less renowned than war.

DEMOCRACY IN THE EAST

IN the hurry of great events that more immediately concern us we have paid little attention to the parliamentary crisis in far-away Japan, although what has been going on there is well worth watching. The Emperor has dissolved the Diet because it would not support the Terauchi ministry, which was put into power by imperial fiat and which has again and again asserted its responsibility, not to the Diet, but to the Emperor alone. This is not the first time that constitutionalists and imperialists have clashed in Japan, but it is the first time that some peaceful way has not been found out of the difficulty. It will be interesting to see what sort of parliament the new elections produce. If the constitutionalists control it, their victory will be a landmark in the history of Japan, where, until lately, the Mikado has been revered as a god, whose will it would be impious for the elected representatives of the people to question.

As the Napoleonic wars, provoked in the first instance by the aggressions of a triumphant French democracy, ended at last in the victory of reaction over Europe, so the present war, which was urged on by a military autocracy, bids fair to result in a world-wide movement toward greater popular control of government. In Russia the Duma, despised and neglected before the war, has asserted itself more than once against the bureaucracy and even against the Czar himself. No one who has observed the march of events there doubts that great political changes, whether peacefully or violently brought about, are in store for Russia. In Germany the government has several times made real concessions to the representatives of the people in the Reichstag, and has promised still others after the war. No German Emperor will ever again exercise the personal dominion that William II has enjoyed. And now Japan, where even the idea of democracy was unheard of until a generation ago, demands a government responsive to the will of the people.

It is reassuring also to see that Japan is not united in support of the policy of aggression toward China and the United States, with which Terauchi and his cabinet have been credited. We have never believed that all Japanese are jingoes; the crisis through which the nation is passing proves that there is a strong party that is more interested in building up a democracy in Japan than in treading on the toes of its neighbors, east or west.

CURRENT EVENTS

CONGRESS.—On February 16 the Senate passed the Post-Office appropriation bill, after inserting a provision that makes it a crime to ship liquor into states that prohibit

its manufacture and sale, and another that forbids the circulation of newspapers that contain liquor advertisements in states where such advertisements are forbidden by law. — The proposed prohibitory amendment to the Constitution of the United States was favorably reported to the House. — The Senate passed the espionage bill, putting into the hands of the President extraordinary powers for suppressing conspiracies and punishing alien spies. — The Senate considered the naval bill, carrying appropriations of nearly half a billion dollars, and the Commerce Committee reported a bill authorizing the government to take over merchant ships in case of war. On February 22 the House passed the army appropriation bill. — The bill that gives United States citizenship to Porto Ricans and establishes a form of independent civil government in the island passed the Senate on February 20. — The Rules Committee of the House finished the "leak" investigation; it had got no information of real significance.

WOMAN SUFFRAGE.—The Ohio Legislature passed the bill giving women the right to vote for presidential electors, and Gov. Cox signed it. Ohio is the thirteenth state to give women the vote, although, like Illinois, it has not yet permitted them to vote for state officers. A change in the constitution of the state is necessary for that.

THE PAPER SITUATION.—On February 16 the news-print paper manufacturers suggested to the Federal Trade Commission that it fix a reasonable maximum price for paper to rule for six months, beginning this month. The offer grew out of the manufacturers' belief that the President would otherwise recommend Congress to consider the issue between the manufacturers and the newspapers at a special session. — In New York a special grand jury began an investigation into the causes for the high price of print paper.

RELATIONS WITH GERMANY.—The events of the week did not visibly bring the two countries any nearer to war, although there was the greatest activity in both war and navy departments in preparing for whatever might happen. The State Department, on learning definitely that the seventy-two American sailors brought into Germany by the prize ship Yarrowdale were still detained there, sent, through the Spanish ambassador at Berlin, a demand that they be released at once. — There was a further congestion of freight at New York and other ports, for a good many vessels, among them those of the American line, would not sail unless they were permitted to carry guns with which to protect themselves against submarines. Up to the closing of this record the government had not given the necessary permission. The railway presidents met in New York and agreed on plans that were expected to relieve the situation by stopping the rail shipment of goods for export. — In court proceedings in Boston, the captain of the Kronprinzessin Cecilie, which is under a libel order from the Federal Court, pending a civil suit against its owners, testified that he had ordered the machinery of the ship to be disabled under orders from the German Embassy at Washington.

FOOD RIOTS.—The rapidly increasing prices of food, owing to the large exports of stocks, the small crops of last summer and the difficulties of transportation, have led to a rather serious situation in many large cities. In New York there was a demonstration by the women of the East Side that might be called a riot, in protest against the high prices of the necessities of life.

MEXICO.—Mr. Fletcher, the American ambassador, was cordially received at Queretaro, which he reached on February 18. — A raiding party of Mexicans, supposed to be attached to the Villista forces of Gen. Salazar, killed three Americans near Hachita, New Mexico. It is not certain on which side of the border the men were killed.

RECENT DEATHS.—On February 18, Carolus Duran, the French portrait painter, aged 79. — On February 19, Maj. Gen. Frederick Funston, aged 51.

CUBA.—The events of the week indicated that the government would be able to suppress the revolution without the necessity of intervention by the United States. A lively battle was fought about seventeen miles from Havana, in which the rebel forces were dispersed. Government troops also took Sancti Spiritus and Ciego de Avila, inflicting heavy losses on the rebels in both cases. The revolutionaries, who are under the direction of former President Gomez, were still in control of Santiago and much of the eastern end of the

island. Several United States war vessels were in near-by waters, but they did not enter the Cuban harbors. The United States government has made it clear that it will not recognize any government established by unconstitutional means.

THE EUROPEAN WAR

(From February 15 to February 21)

The third week of unrestricted submarine warfare did not show any sensational results. About forty ships in all were sunk, according to reports from Lloyds. Berlin reported the sinking of several others in the Mediterranean, including one Italian transport "crowded with troops." The total tonnage sunk between February 1 and February 21 was about 300,000, which is about half what German officials declared their submarines could do, and little, if any, more than the under-sea boats were sinking before the famous order of January 31 was issued. Nevertheless, the loss is serious enough, and, unless it can be further diminished by the protective activities of the British navy, will amount to twice the new tonnage that the British shipyards can supply.

Berlin declared that one submarine had sunk an auxiliary cruiser of 20,000 tons, two transport steamers of 13,600 tons each, and another of 4600 tons. The vessels were not named, and the report was not confirmed from other sources.

There are no statements from London about the number of submarines sunk or captured. One circumstantial, although quite unofficial, report puts the number at 187. The French liner Guyane, which arrived at New York on February 19, reported that it had sunk a submarine in the Bay of Biscay.

In spite of the wintry weather there was a good deal of activity on the French front. The

AN ITALIAN MINE-LAYER AT WORK

British along the Ancre made one really important thrust at the Germans near Miraumont and almost took the village. They pushed the German line back more than half a mile along a front a mile and a half long. They also made lively attacks in the vicinity of Lille.

There was steady and heavy cannonading at Verdun. In Champagne the Germans attacked and drove the French out of a mile and a half of trenches near Ripont, and took nearly a thousand prisoners. Both sides are ready to enter on a great campaign as soon as the spring comes in earnest. Which army will first take the offensive we cannot tell.

The only other region in which real fighting occurred was in far-off Mesopotamia. There the British still hammered at the Turkish front near Kut el Amara, but, although they took the famous Sannayyat positions once, they were driven out again. The British reported taking two thousand prisoners.

The German government changed its mind about sending all American relief agents out of Belgium. For the present such agents may remain on the same terms as heretofore.

The United States government instructed Mr. Pensfield, the ambassador at Vienna, to request the Austro-Hungarian government to define finally its attitude concerning submarine warfare. If, as is probable, it supports the German edict, a break with this country can hardly be avoided.

Berlin heard that a tremendous explosion occurred in an ammunition factory near Archangel in Russia, and put the death roll at 1500.

Great Britain announced that Halifax would be made an examining port for neutral vessels crossing the Atlantic, in order to avoid taking them into Kirkwall or Falmouth, where they would be especially liable to attack by German submarines. That plan will permit the Dutch and Scandinavian ships to avoid the submarine zone altogether.

The new British war loan has resulted, according to London dispatches, in the subscription of more than \$3,500,000,000 exclusive of the bank subscriptions. The number of individual subscribers was much larger than in the case of any previous loan.

The statements in this advertisement referring to performances of Hudson Super-Sixes in certified trials and in competition are approved as to facts

Richard Kennerdell
Chairman Contest Board American Automobile Association.

The Long-Life Record HUDSON SUPER-SIX

Will Hold First Place Forever We Believe

One year of the Super-Six seems to mark it the permanent leading type. Many other sensations had their day and departed. But the Super-Six gains prestige every month. And it comes too close to a perfect motor to ever be far excelled.

For your own sake, don't get a wrong conception of the Hudson Super-Six.

It is a Six, but not like other Sixes. This basic invention, controlled by our patents, added 80 per cent to our six-type efficiency.

It does, in a better, simpler way, what we attempted in our Eights and Twelves. For we built those types for testing, as did others, when the seeming trend was that way.

This Problem Solved

The Super-Six gets its wondrous power, speed and endurance by minimizing friction.

That's what every type attempted. That's why men once thought that V-types would supersede the Six. Vibration causes friction, and friction causes wear. And the type which brings vibration lowest will hold first place forever, just as now.

The Super-Six is that type. Every block test proves it. And a hundred road records confirm it. It now holds every worth-while record of endurance and speed for a stock car.

Another Possible Error

Some men still tell Hudson dealers that our records show qualities not wanted. They cannot use such speed, such power. "And other cars are good-enough hill-climbers."

But you must presume we know that.

We have not increased our motor size. We are using a small, light Six—exactly the size we used before this invention. And a size now very common.

The Super-Six principle gets from that size all of this extra

efficiency. It does it by saving friction. Would you have less speed, less power in a motor, because of more friction and wear?

To Double Endurance

The Super-Six was invented to double endurance. That it makes the car a record-breaker is simply incidental.

The records we value most are long distance records. Under sanction of the Contest Board of the American Automobile Association the Super-Six broke the 24-hour stock chassis record by 328 miles. And in the famous non-stock Pike's Peak Hill Climb, sanctioned by the Contest Board of the American Automobile Association, a Super-Six Special made the best time through endurance.

A Super-Six Touring Car twice broke the Transcontinental record in one continuous 7,000-mile round trip. All Super-Six speed records have been made because of endurance.

It Offers You This

It offers you a car which, by a hundred records, is the most capable car in the world.

It offers you endurance, far beyond any previous attainment.

It offers you pride of ownership—the feeling that you rule the road. The knowledge that yours is the greatest car in performance that's built.

It offers you beauty and luxury which make the car look its supremacy.

It offers you, in our latest models, a wonderful gasoline saver.

Will you want a car which offers less when you buy a car to keep?

MARCH

By M.M. Parks

OH, Dear-my-heart, don't call it rain!
'Tis springtime's thrilling drum.
On rooftop and on windowpane
We hear its rousing thrum.
And hark! The shrill wind's bugle call
In chimney tops and trees
Is saying, "Waken, waken, all
Brave blossoms, if you please!
Spring's hosts must take their stand again
'Neath maple, oak and larch,
And end harsh winter's cruel reign.
Attention! Upward, March!"

Oh, Dear-my-heart, 'neath winter's snow
The flowers' sleep is sound.
That's why grim March must bluster so
To fetch them from the ground.
With wild, wild winds that pipe and blow
And loudly beating drum,
'Tis March that says to them, "What ho!
Glad blossom time has come!
Shrink not from skies still dark and drear,
From winds that sting and parch,
But rise and face them without fear.
Attention! Upward, March!"

WHAT SHE COULD

IN a large mining city in California, thirty years ago, lived an invalid. Twice in a single week death had stricken her home; her two children had left her so suddenly that for many years the shock had left her virtually paralyzed. But, although her body was stricken, her mind was clear, and her heart was rich with unselfish love for other persons who suffered and for the children of other homes.

She always had a smile and a kind word for the school children who trooped by her home, and as she sat there in her window day by day there came to her mind the vision of a service that she might do. It was such a simple service that it would have seemed to many persons scarcely worth while. Nevertheless, she asked the children to help, and they responded gladly. On one day of the year, toward Thanksgiving time, each of them was to bring "a stick of wood and a potato," and their collective offering was to be distributed to the poor of the town. In that way "donation day" began.

That happened a third of a century ago. The invalid went away from the mining town not long after she had started the custom, and soon after that was laid away in her grave; yet "donation day" is still an annual event. The children who first brought a stick of wood and a potato have grown up and have children of their own who now are the ones that bring their offerings for the poor. The schools close; the townspeople gather as if on a holiday; the ministers pass in and out among the crowds that line the street, offering their hats in which to receive contributions; and an organization of responsible persons administers the offerings for the whole town. In a recent year the offerings amounted to about four hundred dollars, besides great quantities of food and clothing, enough to provide for the comfort at least during the holiday season of every unfortunate family in the town.

Nor is that all. Four miles away is a neighboring mining town, once the larger of the two, and still the county seat. The rivalry between them has been very sharp at times during these thirty years, but in regard to "donation day" there is harmony. By common agreement the town where the custom started observes the day on the Friday before Thanksgiving and the other town on the Friday before Christmas.

There are few, strangely few, even in the towns where this beautiful custom prevails, who know the story of its origin; but the visitor in Grass Valley and Nevada City, California, will find there such care for the poor and such an outpouring of social fellowship on the part of the whole community as is rarely seen—and all because one woman who had suffered much and who was much circumscribed in her opportunity did what she could.

CONCERNING CLARISSA PAYNE

"WELL, now!" Mrs. Perry's eyes shone with amusement. "Have you heard the story of Clarissa Payne's vanishing?"

"What was it?" Mrs. Osborne asked, with a note in her voice that Mrs. Perry, absorbed in the story, did not notice.

"Why, Clarissa started to vanish her sitting-room floor one day. She began at the outside and vanished in to the centre. About four o'clock Agnes Dresser was passing, and heard Clarissa calling, so she went in. There sat Clarissa on a little island in the middle of her floor. Not only had she no way of getting off her island, but—of course, being Clarissa, she had used the stickiest varnish on the market—her skirt had got caught in it, and there she was, stuck down like a fly on fly paper. She had been sitting there almost an hour, afraid to move for fear of getting in a worse muddle still. Agnes had to get a board to lay across the floor and then fairly pry her off. Did you ever hear anything funnier? It was Clarissa Payne all over."

But Mrs. Osborne was not laughing.

"Paula Perry," she said, "I want to ask you something. I know you well enough to—I don't anyone else. Is Clarissa Payne really—not bright?"

"Why, Ruth Osborne, of course she is bright! She has ways of her own; but then, most people have. What in the world do you mean?"

"I mean this. I've been here three weeks, and in the three weeks I've heard that story of Clarissa Payne eleven times. And every time the one who told it has implied that the incident is typical of Clarissa Payne, till now, to save my life, I can't think of her as having common sense. You don't know how I dread meeting her."

"Dread meeting Clarissa! Why, she's the kindest-hearted soul in the village. Just let anyone be in trouble—"

"Why didn't some one say that before?" Mrs. Osborne cried.

"I think," Mrs. Perry spoke gravely now, "you'd better meet Clarissa as soon as you can. I'm ashamed, Ruth Osborne, for all of us. We didn't realize."

"Of course you didn't," Mrs. Osborne agreed quickly.

But she did not meet Miss Payne at once. On the way home she stopped at old Mrs. Webster's. Mrs. Webster presently spoke of Clarissa Payne.

"Oh—"

"You ought to meet Clarissa," she said. "She's

just a born gardener—the kind that can put a stick into the ground anywhere, and make it grow. She's such a hand for all little things—animals and birds and babies!"

"O Mrs. Webster, you're such a comfort!" Mrs. Osborne cried.

BARGAINING WITH A ZULU CHIEFTAIN

A STORY of the cool daring of Gen. Louis Botha, whose name is so intimately associated with dramatic episodes in the history of South Africa, appears in his biography written by Mr. Harold Spender. It happened one winter when young Botha had taken sheep for pasture across the Drakensberg Mountains and down to the warmer coastal lands, which were still in the grip of the Zulus.

One tranquil day a young native rushed into Botha's camp. He breathlessly warned the young Boer to fly and save his life. Mapelo was "out." The most bloodthirsty of all the ruffianly gangs that were then ravaging Zululand was the well-mounted and well-armed gang of Mapelo. Only an hour or two before, said the native, he had cut the throat of a missionary at the old mission station about six miles from Botha's camp; the native himself had just left the body of the unhappy man lying still warm on his own dining-room table.

Botha had little time to make up his mind, but one thing was clear: he could not desert his sheep. Most of them belonged to his brothers. So he began to prepare to face the raider. Looking at his bandoleer, he found to his dismay that he had only one cartridge left. Scarcely had he discovered the fact when a troop of Zulu horsemen appeared about a quarter of a mile away over a rise of ground in extended order and charged toward the wagon, waving their rifles over their heads and shouting like demons possessed.

Louis Botha rose and very deliberately mounted the box seat of his wagon. He laid his rifle in a conspicuous place next him. Then he proceeded, with an outward calm very foreign to his own inner feelings, to light a match and apply it slowly to his pipe.

Throwing away the match and looking up, he found that the native horsemen had drawn rein in a cloud of dust within a few yards of the front of the wagon. They were halted in a semicircle.

A few seconds of dead silence followed, the natives glancing at Botha and Botha eying them with a steady gaze of surprise. Then Mapelo advanced, and said that his men were very hungry and wanted something to eat. Botha gravely demurred at this stormy way of approach, and coolly bargained with the invader of his peace. At last he agreed to give them one sheep on the strict condition that they should withdraw some distance from his camp and not disturb him again. The condition was accepted; and so ended an incident that Botha has always described as one of the most disturbing in his whole life.

THE POLITE PRISONER

THE author of Tales of the Flying Services gives his readers a fine account of the courtesies of war. The story is of a naval aviator and his first prisoner. Owing to his engine's falling, the aviator had landed in Belgium near a wood toward which the Germans were known to be advancing. He set off to one of the British camps for assistance, and soon returned with a mechanic and a guard of marines. When he got back he was told by some Belgians that there were a number of uhlan in the wood; and so he decided to clear it of the enemy, in order to prevent any sniping while he and the mechanic were working over the machine.

With his dozen or so marines he approached the wood and opened fire. Soon afterwards they caught sight of a uhlan officer and one trooper in full retreat. The marines opened fire and hit the two horses. The trooper's horse fell on him and pinned him down, but the officer jumped clear and began to run. The aviator chased him, firing at him with a revolver. The uhlan replied to his fire as he ran.

Finally the uhlan held up his hands and cried, in perfect English, "Don't shoot! I surrender! I'm an officer!"

Whereupon the aviator lowered his revolver and said, "Oh, that's all right! So am I." The German took off his sword and handed it to the aviator, who offered him a cigarette, and the two strolled back to where the horses were lying.

As they went along the German told how fond he was of his horse and how sorry he was that he had been hit instead of himself, and asked the aviator to be good enough to shoot her, as her leg was broken by a bullet. The aviator said he would rather not, and suggested that the German do it himself.

"But I can't," said the uhlan. "I emptied my revolver at you before I surrendered."

"Well, then, you had better use mine," replied the aviator, calmly handing over his only weapon. The German took it, shot the poor little mare and handed the revolver back.

Afterwards the two strolled back to camp together, chatting amicably. As it turned out, the German knew London well and a great many persons there. Later a friend asked the aviator what they talked about, and he said, "Oh, any old thing, just as we are talking now—what was on at the theatres, and so on."

When they reached camp and the German was being duly handed over to the proper authorities, the aviator offered to return the prisoner's sword.

"Thanks awfully," said the German. "But you see I can't do much with it in prison, and it might be lost. I'd much rather you kept it for me and let me have it when the war is over," and he handed him his card. So the two shook hands and parted the best of friends. And the sword is now in care of the aviator's family, awaiting restoration to its rightful owner when the war ceases.

THRIFT BEFORE BUSINESS

LAST spring the spirit of local enterprise hovered over the village long enough to allow an eloquent salesman to talk Mr. Merrill into placing a small soda fountain in his store. The new "fixings" drew so much petty trade during the summer that the grocer was "nearly flabbergasted," as he described it. The problem of keeping a supply of ice cream always on hand without having some left over to melt was a constant torment, and the rashness with which his customers spent nickels and dimes on their stomachs affronted his sense of economy.

One warm evening a party of ten young summer guests from the hotel stormed the store and ordered

college ices. Mr. Merrill set out a row of glasses rather hesitatingly. Peering over his spectacles, he demanded, "Who's goin' to pay the bill?"

"I am!" answered three youths simultaneously.

The grocer waited until this rivalry had been settled. Then he said, "A hull dollar for ice cream! That's more'n any young feller'd ought to pay. I'll tell ye. I hear some city stores give a five-cent dish with the fancy dressin' on. I might concoct a set of them for ye—that'd be only fifty cents."

While astonishment kept the party silent, he proceeded to arrange tiny pats of frozen cream in several glasses. But a babel of protest broke out before he could add the syrup: "Don't you worry, Mr. Merrill!" "Haven't you got enough ice cream?" and so on. But Mr. Merrill refused to serve the full order until one of the girls suggested that all the boys present "chip in" to raise the dollar.

"There, now," he said triumphantly, "that puts another face on the matter!"

THE TREACHEROUS LILY OF THE NILE

ONE of the very unusual flowers of the world is the lily of the Nile, a member of the Araceae family. It is not uncommon in Egypt, however, where it grows rankly in marshes and stagnant water. But not many people living in other parts of the world have seen the flower; even the best botanists tell little or nothing about it.

Merely to handle the peculiar and treacherous plant is to risk poisoning your skin, and to take any part of it internally would be certain death. A skilled and careful botanist who preserved a specimen that grew in a Los Angeles private garden received a severe headache that lasted for a week.

The bulb at the base of the flower, as large as a croquet ball, is a bowl of rank poison. The food of the plant is not drawn from the water and dank earth in which it roots so much as it is from the insect life lured into its magnificent "parlor" and eaten alive! It is said that the plant actually assimilates mice.

Fortunately, it blooms only once a year. And do not imagine that it is a snow-white lily of purity

THIS LILY OF THE NILE IS TWENTY-EIGHT INCHES HIGH

rising from the black soil. Instead, it has an immense, gorgeously purple enveloping leaf; or spathe, that surrounds a tall club-like spadix as thick as a woman's wrist. The shape of the whole is like that of the little jack-in-the-pulpit that we marveled over in our first nature-study days. The big leaf spreads and crinkles like a wonderful shell of royal purple velvet and shades to red down in the heart of the bloom; and the rigid, upright "club" in the centre is as smooth, as spotted and as repulsive as a snake. Snake-like, too, it sheds its skin when the blooming is over.

But the worst thing about this treacherous lily, aside from its poisonousness, is the horrible odor that rises from it during the first few days of its opening, while it is shaking out a fine black powder—its own satchet, as it were. It is the odor of decayed meat—the lure that doubtless attracts the carrion-feeding insects.

MR. PEASLEE'S PECULIAR BOARDER

"EVER since my wife and I began to keep summer boarders," remarked Caleb Peaslee, "we've tried to give 'em what they wanted, if 'twas anything you could call within the bounds of reason."

Mr. Hyne caressed his chin with the back of his hand and looked at Caleb keenly.

"What you tryin' to get at?" he asked; and then, without waiting to learn, "What kind of a critter is that oldish man that I've noticed round your place lately?" he demanded.

"That's the critter I had in mind when I begun to tell you," Mr. Peaslee replied, "and in some ways he's about the most cur'us boarder we've ever took. We've tried hard to satisfy him, and fr'm what he told us this mornin' I guess we've made out."

"When he fust come," Caleb went on, "he told us that he'd ben born in the country and lived there till he was fifteen year old, and then his folks moved to the city and he'd lived there ever since. He'd never had a chance to get back to the country for's much as a week till this summer, and he wanted to have things as near the way they was when he was a boy as we could make 'em."

"The fust night," Caleb continued, "we put him in a big room in the front part of the main house, with four winders and a good spring bed. Come morning, he didn't c'mplain exactly, but give more or less p'ticulars 'bout the room he used to sleep in when he was a boy; so after breakfast I sot myself to the task of findin' out, if I could, jest what he did want, and when I fin'ly got it through my head I couldn't b'lieve it for a spell, nor my wife, either. What he really wanted, 'cordin' to him, was an open room in the attic, where he could sleep on a hunk bed."

"That was yest'day, and last night he went to sleep up in the attic. You know what a brillin' hot day it was yest'day? Well, I mistrust that attic must have ben a good deal like an oven, and the only way to get any comfort at all would be to open the winders, and they ain't screened. I had an idea that he'd find the mosquitoes full's thick as he'd care 'bout havin' 'em, but I wain't p'pared for anything like his looks when he come downstairs this mornin'. His eyes looked 'sif they was swelled 'bout shut and his hands and neck—well, they was a sight. He had better

grit than I'd ever had to stay there an hour, let alone all night."

"And further'n that," said Caleb, "he stood there in the doorway this mornin', tryin' to grin, and owned up to his mistake in a way that I'd call handsome!"

"For a number of years," he says, "I've ben lookin' for'ard to the time when I could get back to things as I had 'em when I was a boy," she, "and last night I did—good and plenty. I guess," he says, "that I'm like a good many others—I didn't remember the discomforts of boyhood as well as I did the pleasures, but last night brought 'em back to me plain!"

"That hunk bed," he says, kind of hunchin' up his shoulders, "was jest as hard and jest as full of lumps as the one I used to have, and the room was full as hot—I ain't sure but it was a mite hotter," s'he, grinnin' kind of sheepish. "But," he says, "I've got to give up that even when I was a boy I never saw any such mosquitoes. They prob'ly wain't anywhere near as big as doves nor as savage as wolves," he says, "but it seemed to me they was—and wuss'n that!"

"Now," s'he, "I want you both to understand that I ain't complainin' at all. I'm jest satisfied that I've had things as I've ben wantin' to have 'em for a number of years. And now," he says to my wife, sudden-like, "how 'bout that witch-hazel? Ain't that good for insect bites?"

"And that's the way I left him," Caleb concluded, "docterin' up his bites and listenin' to my wife sympathizin' while she told him how comfortable she was goin' to make him in the front room from now on."

HER HONEYMOON FISH

THE bride was a bonnie Highland lassie, born and bred among heather-clad mountains and she was a first-rate angler. The bridegroom was a city man who had found his "sport" and excitement in life on the stock exchange. He had no knowledge of angling beyond a dim idea that anglers sat or reclined on the banks of gently flowing streams with a plentiful supply of provisions beside them the while they patiently waited for a gayly painted float to signal a bite.

Now, says Field, it is usual for a prospective bride to choose where the honeymoon shall be spent, and this bride selected an angling tour to one of her beloved Highland rivers. Arrived on the scene, the bridegroom, having seen his bride fairly started, ensconced himself in the shelter of an overhanging "brae." Beside him he deposited the lunch basket, gaff and landing net, and then, the weather being "saft," hoisted his umbrella. Having made himself quite comfortable, he drew a newspaper from his pocket and was soon deeply absorbed in the latest financial news.

Anon he was roused from his studies by piercing shrieks. His wife must be drowning, he thought; so, leaving all else behind save the umbrella he held, he tore down the riverside in the direction of the sounds. Some two hundred yards off he found his bride—but far from drowning. She stood knee-deep in the river with bending rod, holding a beautiful five-pound grilse, which now, exhausted with its struggles, lay broadside on the surface of the water.

"Give me the gaff—quick!" she cried.

"But, my dear, I didn't bring it."

"Then the landing net."

"I haven't got that. I thought you had tumbled in and were drowning."

"Oh, you stupid! Then scoop the fish out with that silly umbrella."

To do this, it was necessary to descend six feet of precipitous bank and then to wade; but the Londoner was equal to the occasion, and, although an umbrella full of water with a floundering fish in it as well as by no means easy to carry, he successfully bore it to the top of the bank.

"Am I forgiven now?" he asked.

"Oh, yes, dear, quite!"

But just at that moment the umbrella tipped outward, with the result that the angler received a good bucket of water full on her upturned, smiling face, and was completely drenched from head to foot!

A USEFUL TREE

IN a report for the government, United States Consul Yerby, stationed at Dakar, Senegal, describes a wonderful tree, known as the shea, or butter tree. It supplies the natives not only with nuts, which they highly prize, but with a butter that may become an article of commercial importance. It is already exported to Europe, where makers of artificial butter find use for it.

On the nuts that this tree produces there is a soft covering of pulp, which in turn is covered with a smooth skin that comes off easily when the nut ripens. This pulp is sweet and wholesome. Almost two thirds of the nut is vegetable butter. The tree begins to bear when it is fifteen years old and reaches its prime in twenty-five years. Chocolate manufacturers could easily utilize the product. It might also be of use in making candies and soap.

A GREAT DISCOVERY

LITTLE Doris is very polite. The other day she offered her aunt a share of her candy.

"Will you have a sugared almond, Aunt Mary?" she asked sweetly, at the same time tendering the paper bag.

"Thank you, I will," replied her aunt. And as she was particular what she ate, she selected a white one.

"Auntie," said little Doris, "do you know the difference between the pink and the white almonds?"

"No, dear," said auntie with a kindly smile.

"Well, I'll tell you," explained Doris. "They were all pink once, and I sucked all the pink off the white ones. Didn't I do it nicely?"

REAL OPTIMISM

THE following amusing anecdote of former Speaker Cannon's early days appears in Everybody's Magazine: One of my friends, he said, was a struggling physician. Neither fame nor fortune had come to either of us, but we were always hopeful. The hard life told on my friend, however, for he became quite bald while he was still young.

One day I greeted him with a beaming countenance and exclaimed:

"What do you think, Henry? I have just bought an office safe!"

"Then, Joe," said he, with the utmost gravity, "I think I shall buy a hairbrush."

THE CHILDREN'S PAGE

THE RIME OF THE MERRY HEART

By Harlow Wilson

Oh, many have sought but few have found
The treasures of Capt. Kidd,
For a part was buried in the ground,
And a part by the sea is hid.

But the best of all in the pirate's store
Lies hidden, I'll tell you where,
So that when you have read this carefully
You can seek and find it there.

You must follow the coast of Cheerful
Bright
From the first Glad Rock you see;
Then turn to your left—or else to your
right—
Till you come to the Ha-Ha Tree;

Then climb to the Tiptop Laugh, or more,
And cling to the Broadest Grin;
And straight behind you—or else before—
You will see a Chuckle's Fin.

And then beyond the Ha-Ha Tree
You must a journey make,
Until the smiles you smile are three
And the Chuckle's Fin is awake.

Then raise the Fin with fingers three
And toss it into the air,
And where it falls on land or sea
You will find the treasure there;

A treasure rarer than Spanish gold,
And from it you must not part;
Some call it "Fortune," and others "Luck,"
But I call it the "Merry Heart."

A VISIT TO THE SAP ORCHARD

By John Clair Minot

THE sap orchard was a mile from the house—beyond the field and the pasture, and on the other side of the big hill. But what was a mile to Jack and Edna? They had their sleds, the crust was firm, and the March morning was bright. It was Saturday morning, and all the week they had looked ahead to a whole day in the sap orchard, where Uncle Hartley was making maple syrup and maple sugar.

They had planned to get an early start with Uncle Hartley, but he had been gone an hour when they woke up. Aunt Emily filled the lunch boxes, saw that they had scarfs and mittens, and gave them a final pat as they took their sleds and started off.

"Don't get lost!" she called after them. "And be sure to get home before dark!"

"All right!" they shouted back. "Don't worry about us!"

They ran over the crackling crust to the brow of the hill beyond the barn and then leaped on their sleds and fairly flew down the long slope. So it was all the way across the field and the pasture—running and sliding over the smooth, hard surface of the snow. There were a few bare spots on the hills, but in the valleys the snow was still over the tops of the fences. At last they reached the big hill and coasted down the slope toward the woods where the sugarhouse was. They saw the smoke curling above the trees, and knew that Uncle Hartley was busy not far away.

DRAWN BY EDNA S. JONES

A FEW SWEET DROPS TRICKLED FROM THE SPOUTS TO THEIR TONGUES

On the edge of the woods they found the first big maple that had been tapped. It was still so early in the day that the sap had barely begun to drip into the buckets; but they held their mouths under the spouts and felt a few sweet drops trickle to their tongues.

"Isn't it sweet!" cried Edna. "And how wonderful that the spring makes the sap climb from the roots to the trunk and the branches!"

"And there is enough to spare for maple sugar," said Jack. "I think that is the best part of it. Come, let's hurry on to the camp!"

Before they reached the sap house they heard a cheery voice call out:

"Well, well, pretty late for sap-orchard workers to get round, but I've saved a job for you!"

It was Uncle Hartley. He was hauling a sled piled high with buckets to put under trees newly tapped. Of course Jack and Edna rushed eagerly to help him, and by noon he said that he knew they had saved him a thousand steps—or maybe it was a million; anyway, it was enough to give them a right to be very hungry. And how hungry they were when at last they opened their lunch boxes in the little sap

LITTLE BEAR AND THE WOODCHUCK BABIES

By FRANCES MARGARET FOX

LITTLE BEAR loved the old Ground Hog, whose other name is Woodchuck. The reason why he loved him was because every year, on February 2, Mr. Ground Hog used to wake from his long winter's sleep and

go out for a walk. If he saw his shadow, back to bed he went, to sleep six weeks more; but if he did not see his shadow, he traveled joyfully about to tell the world that spring had come.

Little Bear liked to get up early in the year, while there was still snow on the ground, and that is another reason why he loved the old Ground Hog. Every autumn that old Ground Hog used to wink at Little Bear and promise, "Yes, yes, Little Bear, I will call your father early, if I do not have to go back to bed myself for another long nap."

Naturally, Little Bear loved the Woodchuck babies, who sometimes played in the woods with him the livelong day; but he always wondered why they laughed when he would say, "It is time now to run home to your mother, little Woodchucks, because my mother is calling me."

At last the all-dressed-up Blue Jay told Little Bear that Woodchuck babies are turned out to take care of themselves when they are

DRAWN BY WALT HARRIS

Just a moment!

house, with overturned buckets for seats and table! They were close beside the big fire, where the great pan of sap was bubbling away, and they declared that never before had they eaten in a dining room where the air smelled so good.

During the forenoon the clear, blue skies had turned to dull gray; and once, when they were

laughing, as he piled more wood on the fire. "The storm cannot last long, and we're snug as a bug in a rug."

But somehow Jack and Edna could hardly feel so cheerful over it. Who could know how long such a wild storm might last? And who wanted to be like a bug in a rug, anyway? Coasting on the crust and playing in the sap orchard had been great sport, but it gave them a queer feeling to be shut in a dim little camp, with a great storm roaring through the forest.

"How can we ever get home?" Edna ventured to ask at last.

"Don't worry," said Uncle Hartley. "We shall get home all right, and we're lucky to have such a tight little shelter in the meantime. Even if we have to stay all night, we have enough to eat and we can keep warm. Aunt Emily will know we are safe here; and she can get out through the shed to the barn to feed the stock."

"I think it would be a fine adventure to stay all night," said Jack bravely; but as he spoke the wind howled louder than ever and the force of the storm shook the little sap house until he wondered if it would not be pleasanter to read about such an adventure than to go through it.

The afternoon wore slowly away, but the storm did not slacken. Then it grew so dark outside that the one little window let in no light at all; but there was oil enough in the lantern, the fire roared up the chimney, and they made themselves as comfortable as they could, while Uncle Hartley told stories of his adventures when he was a boy. And what big pieces of maple sugar Jack and Edna ate as they listened!

Suddenly Uncle Hartley stopped in the middle of a story. "The wind has gone down," he said. "I guess the worst of it is over."

When he swung wide the door a great pile of snow tumbled in, but the children shouted when they saw that it was no longer snowing and that the moon was showing its face between the dark clouds that were scudding across the sky.

"Now for home!" cried Uncle Hartley. "No danger now of getting lost in the storm, but it is going to be slow traveling. Leave the sleds here. You climb up on my back, Edna; and you, Jack, follow behind in the tracks that I make."

So they started out. It was indeed slow traveling and they had to stop many times to rest. The newly fallen snow was not damp and heavy, but everywhere it was knee-deep or more; and in places, after they left the woods behind, it was drifted so badly that Uncle

only a few weeks old. Little Bear was feeling distressed over that news, when Father Ground Hog himself came along and explained that it is a custom in the Woodchuck family, and that no harm comes to the little ones if they obey their parents and stay in the woods; but that if they visit farmers' gardens and eat the farmers' beans and peas, they run the risk of being shot or taken in traps or killed by dogs.

"So long as our children stay in the woods or the meadows, and eat grass and clover, they are safe and happy," he said to Little Bear. "You never saw a little Woodchuck crying!"

Little Bear laughed when he remembered that he never had seen a baby Woodchuck crying.

"I'll take care of the Woodchuck babies," he promised their father, "if you will tell me what traps are like, so I can look for them."

"Very well," said Father Woodchuck, "I will tell you how a steel trap works. It lies on the ground like an open book, only it is hidden by grass and leaves. In the middle of the trap is a little platform or pan, and on that pan is placed something good to eat. When the little Woodchuck sees the good thing to eat, he tries to get it, and in doing it he either steps on the pan or presses it down with his nose. That makes the spring shut quickly, and there the little fellow is caught in the trap. He cannot get away by dragging the trap, because it is fastened to a log or a stump by a chain."

The old Woodchuck then walked away slowly; he was laughing to himself, because he did not believe that there was a steel trap in all that ancient wood.

After Little Bear had told his father and mother about his talk with their old friend, he inquired, "What shall I do if I find a trap?"

Father Bear did not suppose that Little Bear would ever find a trap in the forest; so he laughed and said, "Take a long stick, Little Bear, and let the stick step on the pan and get caught. Then the trap cannot catch anything else for a while."

"I will do it," promised Little Bear, "and I will look and look and look for traps, so that the baby Woodchucks will be safe."

"If you ever should find a trap," cautioned Mother Bear, "be careful to stand away from it when you poke the stick on the pan. Do it this way." And Mother Bear, with a broom, did her best to show Little Bear how to spring a trap.

She looked so funny, leaning over, thumping the floor with a broom, that Little Bear forgot to feel sorry for the young Woodchucks. Father Bear laughed, too, and when he laughed of course Mother Bear laughed, and straightway the three had a jolly dance.

The next time Little Bear took the baby Woodchucks to play in his playground, he looked and looked and looked for a trap, because he wished to protect the baby Woodchucks, and sure enough, he found one. That is, he saw a most tempting bit of honeycomb, dripping with honey, lying in the grass. For a second he thought of nothing except the honey, and was about to help himself, when he thought of the baby Woodchucks. What if there should be a trap under it to catch them! So he cried out, "Just a moment!" and held back the baby Woodchucks.

Sure enough, when he poked away the leaves and grass, there was the trap, and there was the chain fastened to a stump! And it was such a big trap that Little Bear did not dare to spring it with a stick; so home he ran for his father and mother to come and show him how it worked.

When Father Bear saw the trap, he looked steadily into the bushes for a moment, and then, before Little Bear had time to wink, away Father Bear went, crashing after something! The next thing Little Bear knew, four big boys were running like deer through the woods, away and away!

When Father Bear came back, out of breath and laughing, he pressed the end of his cane on the spring, and—*clang!* went the trap.

"Little Bear," said Father Bear solemnly, "it is a good thing for you and for us all that you took such good care of the little Woodchucks, because that is a bear trap, and those boys were trying to catch you. But I frightened them so much that they will never venture into your playground again."

Sure enough, they never did. As for the baby Woodchucks, they thanked Little Bear when he taught them how to look out for traps themselves; and then they lived happily for a long time afterwards.

Hartley had to set Edna down and make a way through it as best he could, and then come back for her.

At last they were in the field, and how good it seemed to see the light of the house ahead! When they finally reached the door, Aunt Emily had a warm welcome for them. She first hugged Uncle Hartley, and then she hugged Jack and Edna again and again.

"We didn't mean to break our promise about getting home," said Edna. And all Jack could say was, "My, how much longer that mile was this evening than it was in the morning!"

Ask any questions you wish about the contents of this page. They will be gladly answered.

MAKING AND APPLYING DESIGN

II. A Stencil Design for Window Curtains

IN selecting the material for the window curtains that you intend to decorate you must consider the purposes of the curtains and the demands of the medium in which you intend to carry out your design. Presumably you want the curtains to admit as much light as possible; therefore you will not use a heavy material. A soft, fine scrim—the cheaper scrim is too stiff and wiry—satisfies the requirement of admitting light, and also adapts itself admirably to stencil decoration. Other suitable and inexpensive materials are cotton crape, net, and even cheesecloth.

In order to have as much light as possible in the room, use two curtains and let them hang from the top of the window to the sill. Stitch rings to them that you can slip on a rod; then you can have the curtains at the sides of the window, where they will keep out no light, or you can draw them together if you wish.

The daffodil is an admirable motif for a design for window curtains in a girl's room. When you have analyzed the flower as the preceding article, printed in February, suggested, you will notice that its most striking characteristics are its suppleness, its grace of contour and its freshness of color. You must strive, therefore, to suggest those characteristics in your design.

The design for window curtains shown on this page is intended as an example, not necessarily to be copied, but to lead you to create your own design by following the suggestions given in February.

The design here given was carried out in green and yellow on ecru scrim. The curtains themselves were made with a hem four inches deep at the bottom and two and one half inches deep at the top and the sides, and were double hemstitched—with four or more threads drawn—at the bottom and along both sides. The wider border, eight inches high, was put at the bottom of the curtain because it suggests greater weight. Since the entire curtain could be seen from every part of the room, some decoration seemed necessary at the top to correlate the design below and to repeat the two tones. Hence the border five inches high was placed five inches from the top of the curtain.

After allowing for the hems, the space to be filled by each border was twenty-eight and one quarter inches wide. Accordingly, the unit of each was made seven inches wide and was repeated four times.

If you use a fabric of neutral color for material the colors in the design must also be neutral. In the curtains for which this design was planned the green was made grayer than in the real leaf and the yellow less vivid than in the real flower. That is generally a safe rule to follow in rendering a conventional design, for the natural colors, however charming they may be in their normal surroundings, assert themselves a little too emphatically when used in a design.

You will notice in the two borders that illustrate this article a good example of how the character of your design should determine the degree of conventionality with which you must render it. The lower border, suggesting the edging of a flower bed, is more naturalistic than the upper border. In the lower one the flower stands erect and the leaves waver. In the upper border such a suggestion of an upward growth would be undesirable, for the space above it is cut short and so limits ascent. Therefore in the upper border there is no attempt to give the suggestion of growth, and although the same elements are used, they are combined more conventionally; the flower is detached from the stem and the leaves form a running interlacement.

When you have made the design that you wish to use on the curtain you are ready to prepare your stencil. Pin a strip of stencil paper flat on your worktable and lay a sheet of carbon paper face down upon it; then fasten your unit with thumb tacks over the carbon paper, and trace heavily round the outline of the design with a sharp lead pencil or a stiletto. When you have lifted the pattern and the carbon paper from the stencil paper you can cut out the design with a sharp penknife. In cutting, keep the blade of the knife perpendicular, and take care not to haggle or tear the edges.

It is well to repeat the unit at least two and a half times on the stencil, for you will need the half unit as a "key" when you move the stencil forward. The "key" fits over the figure last painted on the fabric.

Artists' oil paint mixed to a creamy consistency with benzine is the best medium to use on wash fabrics; but a dye that comes in large tubes like those in which oil paint comes is best for airy materials that do not have to be laundered. To keep the dye in good condition when not in use, put it away in preserve jars with screw tops. The oil paint you can mix in jelly glasses with tight lids. By pouring a little turpentine over it from time to time you can keep it in the proper state of softness.

Chrome green and chrome yellow are good foundation colors for this kind of work, and they are not expensive. If a color is too bright and you wish to "gray" it, that is, to make it a little duller, add a touch of lampblack. To lighten a color, add flake white.

Curtains that have been stenciled in oil paint and benzine should be laundered in lukewarm suds made from pure soap. Wash them quickly

and do not let them stand long in the tub. Fabrics that have been stenciled in dye should be dry-cleaned.

STRAWBERRIES IN CLAY SOIL

[The second in The Companion series Earning Money at Home]

A GIRL twelve years old who lived on a small farm in the Middle West earned her first dollar by picking ten gallons of blackberries for a traveling huckster. It was hard, hot work, and required three trips into the blazing fields; but the dollar, when it was finally in her hand, looked as big as a wagon wheel. After thinking the matter over, she came to the conclusion that there must be some easier way to turn berries into money—and after a while she found it.

The near-by farmers were making "big money" raising strawberries, but in the clay soil of her home farm early strawberries would hardly grow at all. By questioning her neighbors and studying seed catalogues, she discovered that there is a large, late variety called the Gandy that will grow in clay, especially if the Sharpless, a strong berry of poor flavor, is planted with it for fertilization.

The next step was to find a place for her experiment. The farm was rented out, and only little, undesirable corners—the largest of them not more than half an acre—were at her disposal. But she took what she could get and went to work.

She hired a man to do the ploughing, but all the rest of the work she did herself. Early in the spring she set out her plants, three rows of the Gandy variety to one of the Sharpless, with the rows four feet apart and the plants eighteen inches apart. All the spring and the summer she hoed those rows, although it would be a full year before she could harvest one ripe berry. At least once a week she went over the vines to train the runners back into line, where they would root themselves in to make more plants.

After the first good freeze she covered the ground with a thick mulch of straw. She then had nothing to do until the February thaw, when she spread a commercial fertilizer over the sprouting plants. Later she had the spaces between the rows ploughed out and began the regular fortnightly hoeing.

While the early strawberry growers were rushing their crops to market and reaping their profits, she kept patiently at work. As fast as a grower got through she bargained for his left-over crates and boxes, and when the first berries turned on her rows she was ready. Her crop was not heavy, but each berry was so large that packing was easy. Moreover, the berries were of so fine a flavor that they sold readily at high prices on the now empty market. After paying all expenses, she made between sixty and seventy-five dollars on each half-acre patch. It seemed a fortune to her, and she was elated at the thought that next year the patches would produce a much larger crop.

She decided to can a part of the next year's

THEY SOLD READILY ON THE NOW EMPTY MARKET

white hats, you can blacken with the preparations sold for that purpose by druggists and department stores. Stains can also be had in various colors.

After you have cleansed or recolored the hat, dry it thoroughly; and if it is of chip, Milan or any other smooth straw, press it. Cover the brim with a wet cloth, and continue the pressing with a small iron until the hat is dry. If the brim is rounded, you can keep it in shape by pressing the hat over an inverted pan; the crown can be pressed over a bowl or a mould of hard-packed newspapers.

Black felts and beavers should be thoroughly brushed with the nap, rubbed with a cloth dipped into ammonia water and then steamed. White or gray felts can be cleansed by brushing and sprinkling them with powdered pipe clay or French chalk, which should be left on for some time before it is shaken off. The process should be repeated until the hat is clean. Another method is to rub the hat well with corn meal or stale bread.

Should the shape of the hat be undesirable, you can change it within certain limits. If the hat is of sewed braid, you can rip it apart, cleanse the braid, and sew it to a new wire frame, which should first be covered with milliners' mull or soft crinoline, and bound about the edge with velvet or braid. Tam-o'-shanter crowns of leghorn or Panama can sometimes be turned wrong side out, pressed and redraped.

If the crown of the hat is too low, remove it and sew a band of buckram round the lower edge of the crown. That will raise it to the desired height. Replace the crown on the brim and conceal the buckram with trimming. You can give a suggestion of height to a low crown by covering it with flowers, or widen a narrow crown by arranging the trimming judiciously. It is still easier to make alterations in the brim. To freshen ribbon, first brush it with a piece of old velvet, then lay it right side up on a slab of marble or other smooth surface, soak it thoroughly with water, and rub it with the hand or a wet cloth until all the creases are removed. Let the ribbon stay on the marble until it is perfectly dry, and then peel it off.

You can cleanse velvet, even if it is much soiled, by putting it in a gasoline bath—at a safe distance from any fire or artificial light—and brushing it with another piece of velvet.

After it has been well dried in the open air, steam it to raise the nap. To do that successfully, turn a large, hot iron upside down in a vessel that will hold it flat; then place a thick, very wet cloth over the iron, hold the wrong side of the velvet toward the iron and draw it carefully across the steaming cloth, at the same time brushing the nap with a soft brush in order to take out the creases.

Another way is to dampen the back of the velvet, fasten it on a frame, or have some one hold it for you, and rub an iron over the wrong side. This will cause the steam to pass through the velvet and raise the nap. The effect of mirror velvet can be obtained by dampening the velvet on the back and pressing it on the right side with a moderately hot iron in the direction of the nap.

Artificial flowers that have become faded and soiled can be renovated by trimming the ragged edges of the petals and touching them up with water colors or oil paints mixed with gasoline. The gasoline cleanses, and at the same time serves as a thinning medium for the paint. New, inexpensive flowers, well shaped but not of choice coloring, can also be treated in that way. The petals of the flowers should be reshaped before they are tinted. That can be done by heating the round end

output. In order to get help for that extra work, she took in sewing during the winter. Most of the girls in her neighborhood knew more about housework than about needlework; so she made their dresses and "charged up" her labors, which they were to pay back in canning and other help during the spring, when she herself should be busy looking after the berry patches. In that way she got a start that enabled her, in a surprisingly short time, to build up a successful business.

MAKING OVER HATS

TO girls of limited income, making over hats offers many chances to practice economy. Surprisingly good results in remodeling last season's hat to conform to the prevailing style can often be attained by exercising a little patience and care.

All materials that need renovating should be ripped and carefully brushed, and the threads should be removed. Straw braids can be freshened by brushing them with a piece of velvet or a soft brush dipped in alcohol, and afterwards steaming them over the mouth of a boiling teakettle or over a hot iron on which a wet cloth has been laid. Braids that are made of a composition of silk and glue to represent straw will not stand being steamed, but you can treat them with alcohol.

You can freshen black chip hats by rubbing them with sweet oil or olive oil. Brush horsehair braids with alcohol and then steam them. White straw or chip hats you can restore by rubbing them with soap and water. If the hat is slightly sunburned, bleach it with lemon juice and salt, or oxalic acid and water,—a teaspoonful of the acid to a half pint of cold water,—and then rinse it several times in clear cold water.

Wash leghorn hats with soap and water, and bleach them by rubbing a paste of sulphur and water over them; when they are thoroughly dry, brush off the sulphur. Black hats that have become rusty, and much-discolored

of a hammer and pressing the petals with it over a soft pincushion.

THE WINDOWPANE BIRD HOUSE

THE windowpane nest box is a bird house with the back left open. You fasten it against the windowpane, where you can see the infinite patience and nicety with which the two birds build the nest cup, fibre by fibre, and all the tireless and amazing industry with which they go about the raising of their young.

Of course the more like a real bird home it looks, the better it will suit the birds. For thousands of years bluebirds, wrens and chickadees, tree swallows and woodpeckers have been making and hunting for holes in trees. No wonder they do not know what to make of houses modeled after human houses. Birds are also particular about the size of the houses. They usually like a snug fit. The table below is the result of experiments with some of the more common birds to discover what sizes of entrance holes, what sizes of cavities and what heights from the ground are most satisfactory:

Bird	Cavity	Entrance	Elevation
Bluebird	6 x 4 in.	1 1/2 in.	8-15 feet
Chickadee	10 x 4 in.	1 1/4 in.	10-25 feet
Swallow	6 x 5 in.	1 1/2 in.	8-20 feet
Wren	7 x 5 in.	1 1/4 in.	6-8 feet
Flicker	6 x 4 1/2 in.	3 in.	4-30 feet
Robin	8 x 6 in.(sq.)	Open	4-40 feet

In addition to the birds mentioned in the table the following are known to nest in bird houses:

wood duck, crested flycatcher, purple martin, starling, tufted titmouse, red-headed woodpecker, house finch, sparrow hawk and screech owl. The provision for robins indicated in the table is somewhat problematical—a guess at something that is likely to work very well. They are being driven out of the trees by the omnipresent cat, and are crowding into corners of window ledges, gutter troughs, and all sorts of crannies protected by the unclimbable walls of buildings to secure safe places for their nests. Because birds object to nesting too close to other birds, you must not expect to have two nests on the same side of the house tenanted at the same time. Choose a window where the light is good for photographing, and fasten the bird house on the upper sash, at either the lower or the upper corner, so that you can still open the window.

THE BIRD HOUSE OUTSIDE THE WINDOW

The illustrations show the best type of house. The materials are box boards for the frame and bark from the woodpile or post pile for the covering. Of course you must smooth the back so that it will fit nicely against the windowpane. The only need for special directions is in the matter of the hangers that hold the house in place. They are

merely bits of tin bent to a right angle near the middle. One flap is meant to be tacked to the bird house; the other has a narrow slit cut in the lower edge to fit over a brass-headed tack in the window frame. The piece for the side of the house (Fig. 1) should have a notch an inch deep, the piece for the bottom (Fig. 2) a notch only half as deep. When you have attached the two flaps, hold the house in the window and mark with the point of a sharp pencil where the tops of the notches come. Drive two brass-headed tacks at these points, not quite to the heads, and then slide the notches down under the tack heads.

If you wish to hang the house in the top corner of the sash, punch a hole in the hanger large enough for the tack head to slip through, and cut the notch upward from this. (Fig. 3.) A wire loop will serve equally well as a hanger.

Since birds usually build their nests in dark cavities, the more timid pairs may object to a transparent back door. If they show fright or annoyance, pin a piece of cardboard on the inside of the pane. When they grow tame you can take this away to make observations or photographs. As soon as the brood have flown, burn the old nest and scald or bake the house, or treat it with gasoline. If you do a thorough job of housecleaning, the birds may build a second nest in it during the same season.

BULBS TO PLANT IN THE SPRING

MANY amateur gardeners, when they have planted gladioli, caladiums and tuberose, suppose that they have exhausted the list of good bulbs that can properly go into the ground in the spring. But there are several other flowers that are just as easy to grow—such flowers as the dainty montbretias, the gaudy shell flowers and the milk-white Mexican star of Bethlehem.

It is a pity that more people are not acquainted with montbretias, for they are among the most satisfactory of all August and September flowers. The bulbs cost only a few cents each. Plant them early in May and set them in clumps three inches deep or less, according to the size, and four or five inches apart. The flowers are like miniature gladioli, but instead of sending up a single spike each bulb yields a long succession of flowers, all varieties of which last well when cut. Montbretias are not so showy as gladioli, but they are exceptionally cheerful and friendly. In the most northern states it is best to take up the bulbs in the fall and store them in sand, but farther south they will live through the winter if you cover them lightly with leaves.

The shell flower, or tigridia, as it is called in the

After Meals— Billiards!

Yes, you can play Carom or Pocket Billiards right at home and pay for a Brunswick Table a little every month. Your chums and your parents will pay a few cents to play—and 10 cents a day buys a scientific Brunswick!

Saturdays, holidays, after school and after meals—any spare hour can be filled with rollicking sport. Practice will soon develop your skill. Learn to be the champion shot of your neighborhood.

BRUNSWICK HOME BILLIARD TABLES

"Quick Demountable" Brunswick Home Tables can be set up easily and folded away in a closet when not in use.

Other styles for homes with a spare space for a table.

Beautifully built of mahogany and oak—scientific playing qualities. Cues, Balls, etc., all included free!

CONTINUING THE GIRLS' PAGE FOR MARCH

catalogues, presents a sharp contrast to the montebretias. It is rather bizarre in appearance, and is useless for cutting; but it is gorgeously handsome—large, and curiously formed, and shows brilliant shades of scarlet, yellow and blue. Each flower lasts for but a day. About four o'clock in the afternoon it collapses; but another is already crowding up to take its place, and so they continue in a long, glorious procession. The bulbs like rich, sandy soil and full exposure to the sun. You must take them up in the fall, and store them in a cool, dry place.

Milla biflora is the catalogue name for the Mexican star of Bethlehem. You may plant the bulbs in May, but it is much better to start them in pots indoors, with their noses just under the surface of the soil. The waxy-white flowers appear before the end of July, and have a curious, frost-like sparkle and a delicious fragrance. They are interesting, too, from the fact that three of the six petals are quite different in form from the other three. From five to ten stalks will come up from one bulb, and if you cut the flowers in the bud they will open in the house and fill the rooms with delicate perfume. Although the *Milla biflora* is not a showy flower, it blooms with certainty and has the further advantage of being inexpensive. You can buy the bulbs for fifty cents a dozen. In the fall you must take the bulbs up and store them.

THE SHELL
FLOWER, OR
TIGRIDIA

Of the little-known spring bulbs, those three may be considered on the whole as the most desirable; but several others are worthy of a place in any garden. The summer hyacinth, *Hyacinthus candicans*, for example, is a luxuriant, free-growing plant that throws up stout, four-foot spikes from which dangle twenty or thirty white bell-like flowers. It is a showy plant for borders, but the bulbs must be stored in winter. In buying new bulbs,—which usually cost five cents apiece,—it is well to avoid those of the so-called jumbo size, for they are likely to decay in the centre after you plant them.

Probably tuberous-rooted begonias are more often grown than most of the bulbous plants named here; but amateur gardeners have never fully appreciated their real value, perhaps because they have the reputation of being rather hard to handle. Yet you can grow them easily enough if you start the tubers in the kitchen in March. Set them singly in pots or in shallow boxes two inches apart. If the only soil available is heavy, mix sand with it. Take care to get the tuber into the soil right side up; you can usually recognize the crown, or top, because it is slightly depressed. Half an inch of soil over the crown is sufficient, and only a little water is needed until growth starts. The first of June is early enough to set the tuberous-rooted begonias in the ground. By that time the beautiful, velvet-like blossoms will have begun to appear. A strong recommendation for these plants is the fact that they are seldom attacked by insects or blight.

The flower is especially desirable for the reason that it thrives best in partly shaded situations that most plants dislike. Almost every garden has corners where it can be used to advantage. It needs an abundance of moisture all the season, and since the bulbs are very tender, you must dig them before the first hard frost. Dry them slowly and store them in sand or chaff for the winter. Take care to select for their cold-weather quarters a dry place of moderate temperature.

There are two lilies that you can plant in the spring—the speciosum lily and the auratum, which is the gold-banded lily of Japan. As they are hardy, you can put them into the ground early and leave them through the winter. Two of the callas also grow well in the garden in summer, and are charming among the shrubbery. One is the spotted-leaf calla, the green leaves of which are covered with white blotches. It bears white flowers with black centres. The other is Elliott's lily, *Richardia Elliottiana*, which has beautiful yellow flowers of the true calla type. You can treat the summer-flowering callas exactly as you do gladioli, and can store them as easily as you store potatoes.

Most garden makers are familiar with gladioli, but many of them make the mistake of planting them all at one time instead of extending the time of planting until the first of July. Put the largest bulbs five inches underground, the smallest, three inches. It is well to remember that they will flourish best in a sandy loam soil. When cutting the flowers use a sharp knife, and let two leaves remain for the proper ripening of the bulb. In the fall, when frost cuts down the tops, dig the bulbs and dry them; store them in sand in a cool, dry, but frost-proof, cellar. If there are numerous little bulbs, break them off and store them in paper bags hung to the cellar beams. They will grow to flowering size in a year or two if you carefully plant them in the spring. When you grow gladioli for cut flowers, plant them in rows and cultivate them like corn; but when you grow them in a bed it is better to sow sweet-alyssum seeds as soon as you have planted the bulbs, for sweet alyssum makes a beautiful white background all summer for the taller and showier blossoms.

Caladium is the book name for that fast-growing and curious plant known to most people as elephant's ear. It is best started indoors, and should not be planted out until all danger of frost has disappeared. Being one of the thirstiest plants known, it must have great quantities of water all summer. If you make a depression two inches deep all round the plant when you set it out you will avoid much waste. At the first hint of frost the caladium must be lifted, dried and stored in a warm cellar.

At one time tuberose were exceedingly popular. They are less often seen now, but many people are fond of them and grow excellent specimens. They are not so easy to grow as most of the flowers mentioned above, for they require a long season and often do not start to bloom until frosts are at hand. It is best to start them in the house in March, to give them a sunny spot in the garden when you plant them in June, and to use only the single varieties. Moreover, it is of supreme importance to obtain large-sized bulbs, for small bulbs will not bloom during the first season. The bulbs that have bloomed will not flower a second time. When you dig them, however, you will find that they are surrounded by many bulblets that will grow into flowering bulbs in two or three summers. But it hardly pays to keep them when you can buy large flowering bulbs for about thirty cents a dozen.

These Children Won't Be Cheated Of the Flavor in the Oat

Nature gives to some oat grains a most delightful flavor. Other grains she stints.

Our plea is, Get the flavory grains. They alone are used in Quaker Oats.

The little, starved grains are insipid. So we sift them out. We get but ten pounds of Quaker Oats from a bushel.

But those are the queen grains; and they make the big, luscious flakes. They make the oat dish inviting.

Be careful of this breakfast dainty. It's an all-important food. These premier flakes cost you no extra price. And a call for Quaker Oats will bring them, wherever you abide.

Quaker Oats

With the Flavor That Won the World

It is this flavor which has made Quaker Oats the favorite oat food the world over.

In millions of homes in every clime this is the household dainty. And countless soldiers, now away from home, buy it in their canteens.

Don't think that oats are oats—that flavor is unimportant. All the delight in oat food lies in taste. And for everybody, young and old, the oat is the food of foods.

You will never find it half so welcome with the Quaker flavor missing.

10c and 25c per package
Except in Far West and South

An Aluminum Cooker for \$1.00

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us our trademarks—the picture of the Quaker—cut from the fronts of five Quaker Oats packages, or an affidavit showing the purchase of five packages of Quaker Oats. Send \$1.00 with the trademarks or affidavit, and this ideal cooker will be sent to you by parcel post prepaid. We require the trademarks or affidavit as assurance that you are a user of Quaker Oats. The trademarks have no redemption value. This offer applies to United States and Canada. We supply only one cooker to a family.

BATTING

[This is the first of two articles on baseball that The Companion will offer to readers of the Boys' Page this spring. Base Running will appear in the Boys' Page for May.]

WITH some players batting seems to come by a sort of instinct—they bat well without paying special attention to form. With others it is the one part of the game that they seem incapable of mastering. You always have the consolation of knowing that care and practice will do much to remedy your faults and to increase your chances of hitting the ball safely.

A good bat is usually the thing that a ball player values most highly. He is more fond of it than a golfer of his pet driver. He knows every grain and mark of it; he handles it with almost as much affection as he would if it were a living thing. It is sound and straight-grained, with no paint or stain to mar the beauty of the wood. Its perfect balance makes it seem light in his hands, but there is a solidity about it that brings to his mind the sharp smack of the ball and the swift flight of a clean hit.

The way to become a good hitter is to bat every time you can get the opportunity. Any boy who will throw a ball for you to tap back to him is your friend. Constantly practice getting the bat back, coming through with even swing and step, and keeping the bat parallel to the ground. If you have a good eye and plenty of nerve, and acquire the habit of even, clean swinging and of meeting the ball well in front at the finish of the stroke, you are on the road to success as a hitter.

AN EASY SIDE-ON STAND

SWINGING THE BAT

It is impossible to insist too much on the matter of even swinging, with the bat parallel to the ground. It makes all the difference between lining a ball out and hacking and chopping or popping up flies. On the forward stroke the bat should come round with a steady swing, not with any nervous haste or stiff slowness.

To get the freest swing, hold your bat well toward the end with the hands close together. Some players prefer to "choke" the bat a little,—that is, to hold it short,—and some like to keep their hands somewhat apart; but those methods are generally a sign of some weakness of which a clever pitcher will take advantage. In any event, a good firm grip on the bat is absolutely essential; a ball rebounds poorly from a loosely held bat. You will get the best grip by having the palms of your hands exactly opposite each other, or rather in parallel planes. The forward hand on the bat ought to be well underneath, an excellent deterrent from the practice of "swinging in circles."

On assuming a position at bat, a young player generally manages to get his left elbow up in the air and his right shoulder about six inches below his left. That is bad form. Perhaps he can bat a low ball from that position effectively enough, but he cannot touch a shoulder ball, for the bat will always swing under the ball. Besides, anything that he bats from that position except a low ball will probably go up into the air rather than out straight or along the ground. The proper position is a natural one with the shoulders almost even in height. Slightly face the pitcher, so that you have him plainly in view and are not striving to get a glimpse of him out of the corner of your eye over your shoulder. Keep your weight slightly more on the right foot at first, and shift it to the left as you make the forward swing and step. But the weight must be on the toes, not on the heels. A man is never more unstable and helpless than when he is trying to balance on his heels; he is ready for nothing except an accident.

About the question of keeping your feet together or apart there is not much to be said. Whichever way feels the better is the right way. Much more debatable is the question whether to face the pitcher completely or to stand with the side somewhat toward him.

HOW TO STAND
